"Subsidence of the prohibition wave will be exactly in proportion to the growth of information on the subject among the taxpayers. As soon as the man who foots the bills absorbs the essential facts that he will be compelled to increase his taxes without securing a better or cleaner government and a diminution of the liquor evil, he will begin to vote more carefully on excise questions. He will learn, from an examination of the figures, that prohibition is an expensive luxury. He will find that it does not decrease crime, that it often tends to advance it by encouraging perjury, that it removes from tax an article that ought to pay a tax. Prohibition does not prohibit, yet it prevents the man who makes or sells or uses liquors and beers from paying a license that should be paid.

"I must hurry to a conclusion. I have said enough to convince any rational mind which is at all open to argument that as a cure for inebriety prohibition is worse than the disease; hence I plead for that sane regulation which, rendering the business decent and respectable and letting the sun of heaven shine on it, will not only mitigate the evils of inebriety, but practically eradicate them. To get drunk is certainly a sin and a disgrace. Drunkenness, as a Southern paper recently put it, menaces the happiness of the home—murders it, in fact. The drunkard debases himself, disgraces his family, puts the whole community to shame. It is a moral duty to prevent drunkenness when we can. It is a legal duty to punish it. Prohibition picks up this sin, this disgrace, and says: 'Behold, it is this beast we fight and which fights us. Choose ye between the two.' As a matter of fact, however, the battle is not between the sin of drunkenness and prohibition; for the battle against drunkenness is one which the law has waged from time immemorial and which society, commerce, and business wage and have waged for years. One, too, which religion fights, and which that general spirit called civilization helps to struggle against. All of us know well enough that long ere this prohibition movement materialized drunkenness had become a low thing in the lives of men. It is not necessary to be a very old man to recall the time when business employed men who could drink hard and 'hold' lots of liquor; when society not only tolerated, but condoned drinking to excess, and when men who spent their money freely over the bar were called 'jolly good fellows,' and looked upon as proper persons for responsible business positions and public trusts.

"All this has changed—changed without calling in the aid of prohibition; changed because religion had shaped public opinion, and business and commerce and the spirit of civilization all had been at work demonstrating to humanity the requirements of humanity, one of which is temperance and sobriety. Why, the tendency of man—because of the things the age requires, demands, exacts of him—is toward sobriety. It is as a stone rolling down hill. Unaided, without another push or the slightest further shove, it rolls and rolls to the bottom. So sobriety, long ago, has been set in motion, not by prohibition, but by influences far greater, grander, and more irresistible, and is rolling on and on to its destiny.

"Thus there is no need for this party calling itself 'prohibition,' no actual work for it to do in the cause of temperance, and none recognizes this better than the politicians who jump into prohibition's band wagon. Therefore we find them minimizing the actual fight against drunkenness, though preaching this fight in public. Their efforts are aimed at the temperate as well as at the intemperate, and many good people, though seeing the inadvisability and unwisdom of fighting the temperate, yet pass laws to this effect because they fear the people will construe contrary action as supporting intemperance.

"No wonder these laws are not enforced. They do not strike the real crime at all, which is drunkenness; or, if they do, they at the same time tear at the roots of that which is no crime at all, which is temperance, and thereby they trespass upon the natural liberty of man. Excoriate drunkenness, pass rigorous laws against drunkenness. There is the crime. Whip it. Scourge it. Stamp it with the law's heel, as in larceny; but when the drastic law punishing this crime is made to scourge man for something which is no crime, then common sense and political liberty teach us that such a law is a hideous mockery and a senseless piece of tyranny.

"Mr. Chairman, I conclude my remarks with an extract from a pamphlet entitled 'Plea for Justice,' whose author is a professor of an American university. He says:

"The fundamental argument of the Prohibitionists is that the use of alcoholic beverages is the principal cause of vice, crime, and poverty, and that the only right way of dealing with the matter is to prohibit, by stringent laws rigidly enforced, the making and sale and, consequently, the use of such liquors.

"Distinct issue is taken with both positions taken. 'First, it is not true that crime, vice, poverty, and insanity are in the great majority of cases caused by drunkenness.'

"Second, it is not true that prohibition will prevent those evils. 'And in the third place, the sacrifice of personal freedom is too great a price for so doubtful a good.'

"In the first place, I contend that while drunkenness is one of the many causes of human unhappiness, it is not the sole nor the chief cause. The nations that are notoriously opposed to the use of alcoholic beverages are not any freer from the burden of misery than is our own. It is generally admitted that oriental nations are not accustomed to the use of alcohol, but it has not yet been observed that their lives are any happier than the lives of people in Christian lands. And in our own country, while intemperance leads to the commission of crimes against persons, yet the most serious crimes against life and property are effected by other causes. It would be tedious to enumerate in detail the several causes of crime. But let us select murder as a sample. The most awful and sensational crimes against human life have, as a rule, been instigated by other feelings than that of intoxication. Neither of our three martyred Presidents was slain by a drunkard. Nor have the most sensational crimes against life been induced by drunkenness. Jealousy is more of a menace to life—and causes more murders and more mischief than does intemperance.

"It is difficult to conjecture where the reason of Prohibitionists is when, in view of the numerous crimes against women and against property, that one thing alone, and that not the chief, is singled out as the cause of all human misfortune. The truth is, the charge is not true.

"The question of insanity is subject to the same consideration. Unquestionably, drunkenness may lead to insanity. So do some other excesses. The most reliable statistics of insanity give as the causes—

"First. Self-pollution and sexual excess.

"Second. Religious fanaticism, or excessive zeal.

"And intemperance is given as the third cause.

"If the logic of prohibition is to prevail it would be right to unsex mankind, or to forbid those religious bodies whose practices or teachings lead to insanity. This shows the fatuity of unscientific reasoning on a profound and intricate social problem.

"Let us glance at the problem of poverty. What causes it? Are total abstinences, other things being equal, richer than those who are not? (I am not here referring to drunkards. That question comes under another consideration.) It is well attested, beyond the possibility of any dispute, that poverty, wherever and whenever it exists, whenever it becomes a general social condition, is not in any sense attributable to the use of beer and wine. And any man whose opinion has any value as a student of social economy knows that the causes, not cause, of poverty are complex; are far beyond the reach of the human will, and defy any and every attempt at removal by any act of legislators.

"What is the cause of human misery? What is the verdict of history and experience? Primarily the lack of intelligence, the lack of moral energy, the lack of thrift and of prudence. And further, and not least, long-established customs and modes of living that defy reason and morals.

"It is illogical and unjust to single out instances of want, of crime, and of ordinary wrongdoing to intemperance, when human life for ages past bears testimony to other things more productive of suffering. What shall we say about religious fanaticism, which like a scourge has cursed nations and communities and families? No nation has been exempt from this awful evil. But what is the remedy? Legislation? Force? Only so far as to keep the right of the individual inviolate. The panacea for narrow-mindedness, for religious intolerance, is education.

"Whenever a government has undertaken to rectify religious errors by force of law, it has become the abettor of persecution—the friend of hypocrites, the ally of tyranny.

"Is it the duty of the Government to deprive every man of his personal freedom because there are instances where men abuse their freedom? Are there no other forces at work for sobriety except prohibition? Is the American home without power and influence for good? Is education powerless in forming habits of temperance and sobriety? Is the influence of woman for good waning? Must the civil power stigmatize as a crime what is not a crime?

"The writer answers all these questions satisfactorily, but I leave it to the American people, in whose sound sense I have abounding faith, to answer them at the ballot box after they have given the question their mature thought.

"I thank you, Mr. Chairman and gentlemen, for your time and attention."

Conference Report on Financial Bill.

SPEECH

OF

HON. THEODORE E. BURTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. BURTON of Ohio said:

Mr. SPEAKER: The bill agreed upon in conference embodies two conflicting theories relating to currency, and gives to each a trial. The one denies the sufficiency of commercial paper or the ordinary assets of banks as a basis for the issuance of circulating notes. This theory is in accordance with the settled law of the United States for more than forty years, under which Government bonds are the only accepted security for bank notes. It is represented in the bill by the Senate provision for making public bonds—State, county, municipal, and so forth—security for bank notes, in support of which it is alleged that our present system of note issue has not only worked well, but has been characterized by undoubted security; and that it is desirable to depart in the least possible degree from established methods. This class of bonds, it is claimed, comes nearest to Government bonds and they are entitled to a special standing because of their public character. Their advocates maintain they will be free from the wide fluctuations which pertain to railroad bonds and industrial securities, and the currency which will be provided in reliance upon them is merely supplementary to that which now exists, and is made necessary by the diminished volume of Government bonds.

The other theory is that no currency based upon a specific class of bonds, or, in fact, upon any securities except such liquid assets as are readily available with all banks, can provide an elastic and workable currency system. Those who sustain the latter theory point to the experience of other countries, and to the obvious advantage of a system under which the amount of outstanding notes will keep pace with the volume of credits and

the shifting demands of commercial transactions. This method of issue, under carefully guarded restrictions, was adopted by the House and is included in the conference bill.

The Senate provision as agreed upon by the conference committee gives the right to any individual bank to issue currency up to 90 per cent of the value of the public bonds described; but in no case shall the amount issued exceed the par value. The House bill gives the right to associations of banks, not less than ten in number, having an aggregate capital and surplus of not less than \$5,000,000, to issue currency to an amount not exceeding 75 per cent of the value of securities deposited, including commercial paper. These two plans are accordingly combined. It will be noted that the percentage is 15 per cent less in the case of commercial paper and miscellaneous securities than in that of public bonds. This distinction is grounded upon the alleged superior stability of bonds issued by States or political divisions. It is clear that this difference will not work hardship, because associations of banks would not lack ample quantities of commercial paper, the volume of which would naturally be greatest at the time when additional circulation would be required.

There is another concession in favor of bonds and long-time securities, in that not more than 30 per cent of the capital and surplus of any bank can be issued in bank notes based upon commercial paper. The highest possible aggregate amount of currency which could be issued upon commercial paper, if all of the national banks should join in associations, would be approximately \$438,000,000. Railroad and other than public bonds can not be used as security by individual banks under the Senate provision, though they may be deposited with the associations provided for under the House bill, but only when approved by the officers of the association; also the notes issued in reliance upon them must be further secured by the joint and several liability of all the banks in each association.

The provisions for the two methods of issue are alike in essential particulars:

1. The issuing bank must, as a condition of issuing any bank notes, have its capital unimpaired and a surplus of 20 per cent and must have outstanding 40 per cent of its capital in circulating notes secured by Government bonds.
2. No currency can be issued under the provisions of the bill except with the approval of the Secretary of the Treasury, and the securities deposited by the banks must be approved by him.
3. Both kinds alike are subject to a tax at the rate of 5 per cent per annum for the first month, which increases at the rate of 1 per cent per annum for each succeeding month until it reaches 10 per cent.
4. The bills are to be alike in form. A change is to be made so that there shall be engraved upon each bill the statement that it is secured by United States bonds or other securities and the promise of the bank issuing the same to pay on demand.
5. The percentage for the redemption fund to be deposited in the Treasury is doubled, so that it shall be 10 per cent on the amount of the notes issued instead of 5 per cent as on notes secured by Government bonds. This was agreed upon as a substitute for the reserves, which, in the House bill, it was proposed should be the same as against deposits. It is evident that at the time when this class of currency would be issued it would be extremely difficult for banks to provide reserves of 25 and 15 per cent, respectively, in reserve and nonreserve cities; and on full consideration it seemed that the double redemption fund would provide for prompt payment of notes and give all needed security.

The whole plan rests upon the idea that this additional or supplementary currency will not be issued except in times of stress, when there are largely increased demands for currency outside the banks and among the people, and no appreciable additional strain will be imposed upon the gold redemption fund. The tax imposed, which will be considerable in amount, is added to the one hundred and fifty millions gold reserve. It would afford a compensation to the Treasury in case any notes should fail of redemption, for it is a feature of the plan that the Government, as in the case of existing bank notes, shall redeem these emergency notes. No other security would commend itself as entirely safe and workable, though the security of the Government is ample.

Many will be disappointed because their theories do not receive greater recognition in this bill, but to anyone who is familiar with the sentiment of the country it must be clearly apparent that no radical change can be made in our currency system at present. A natural conservatism, very deeply seated, combined with a sentiment of satisfaction with our present monetary system, prevents any such radical change. Indeed, it may be said that no such change would be desirable at this time. New forms of currency must carry with them more or less of

experiment; and one of the chief arguments for the compromise measure is that it gives a trial to circulating notes issued in accordance with the most widely advocated theories now prevalent in the country.

No one can with confidence venture a prediction of the method which will ultimately be adopted. The most advanced sentiment among students of finance, as well as the great majority of bankers, favors circulating notes based upon the resources or assets of banks. The country would be more ready to accept this opinion if a plan were proposed which is free from danger and entirely equitable as between the banks and the public, but it must be said that no method has yet been set forth in any bill which is free from very valid objections.

The so-called "Fowler bill," dividing the banks of the country into twenty districts and providing for the issuance of currency by every bank in each district, involves revolutionary changes which the country would not accept. It must also be said that it does not give undoubted assurance of security to the notes. The so-called "McKinney bill" has much in its favor, but it does not impose upon the bank the obligation of redemption in gold, nor does it provide for security beyond question. In many respects it must be said for this latter measure that it is the simplest and most nearly in accordance with the principles of modern banking.

It is possible that for some years to come the present general plan will be continued under which national bank notes, secured by Government bonds, will furnish the nucleus or the great body of our currency; but to this must be added some means which will furnish flexibility and provide for additional demands. The objection to the present bond-secured currency is that it is entirely lacking in elasticity. When banks purchase bonds as a basis for bank notes they are reluctant to withdraw their outstanding issues in times when currency is redundant, because it necessitates the frequent purchase and sale of Government bonds. This fact that the ownership of something outside of their ordinary resources is made the condition for the issuance of currency is a vital defect in the present system. The same objection also lies to currency based upon municipal or public bonds, because it requires banks either to carry a class of securities outside of their ordinary resources or else to purchase them at a time of stress, when their resources are at a minimum.

It is my confident belief that the time will come when the chief aim in view will be to make our paper currency responsive to the varying demands of business, and that the most natural basis for note issues will be found in the credits and resources of banks. The principle to be followed is plain, but the method of execution presents a question of very considerable difficulty. The most obvious provision would be for a central national bank dealing only with the Government and national banks. Other methods would be by the deposit of commercial paper, backed by adequate banking capital, as under the Vreeland bill, or by a combination of banks, all of which would be responsible for all their note issues. It may well be questioned whether any guaranty fund of 5 per cent would prove absolutely safe. It should also be added that no system of issue by banks should be accepted as a final solution of the question, unless each bank or combination of banks is compelled to redeem its notes in gold, not only at its own counter, but at convenient financial centers.

The Democratic Filibuster.

REMARKS OF

HON. ALBERT F. DAWSON,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. DAWSON said:

Mr. SPEAKER: With the close of the first session of the Sixtieth Congress it is possible to measure the extent of the attempt of the minority to obstruct legislation by the useless and wasteful filibuster which has been in progress in this House for the past two months under the direction of the distinguished gentleman from Mississippi [Mr. WILLIAMS], the leader of the minority on this floor.

The chairman of the Committee on Appropriations [Mr. TAWNEY] has pointed out how this filibuster has resulted in the appropriation of many millions of dollars more than would otherwise have been appropriated, because the adoption of this

obstructive policy by the minority made it necessary for the majority, in order to transact any public business, to adopt rules under which the House was unable to prevent many of the increases that were finally agreed to.

Aside from the extravagance and wastefulness of this foolish filibuster in dollars and cents, it was even more wasteful in consuming the time of the House in useless roll calls—time which might have been profitably spent in the enactment of legislation.

This filibuster began about April 1—most significant day—and since that time the roll has been called in this House 272 times. The average time consumed in a roll call is thirty minutes, so that a total of one hundred and thirty-six hours of the time of the House has been wasted by this remarkable performance. The average length of the daily sessions of the House is five hours. On this basis more than twenty-seven legislative days were wasted in the monotonous call of the roll. Computed on the basis of a working day of eight hours, seventeen days of the entire membership of this House were lost by this obstructive policy.

The full monstrosity of this filibuster is not apparent, however, until we compute the time lost in one continuous stretch. It did not waste seventeen working days of eight hours each simply for one man; it wasted that much time for each of the 391 Members of this House, or a total of six thousand six hundred and forty-seven days. On the basis of three hundred and twelve working days in a year, this filibuster wasted twenty-one years three months and five days' time.

If the distinguished gentleman from Mississippi [Mr. WILLIAMS], who was the architect and chief engineer of this unparalleled folly, had been compelled to bear alone the burden of this filibuster, instead of distributing it upon the shoulders of all his colleagues in the House, if he had been required to supply the time which he wasted for the other 390 Members of this House, he might have begun answering these roll calls on his fifty-fourth birthday, and if he had worked eight hours a day and three hundred and twelve days a year, he would have been past seventy-five years of age when the final roll call was completed.

The Industry Ought to Bear the Cost of All Accidents; Risk as Well as Labor Should be Paid For.

The law should provide for certain, definite, and fixed compensation, though justly limited in amount, for all injuries in the ordinary course of employment which are not caused by the act or default of the injured.

SPEECH

OF

HON. GEORGE A. BARTLETT,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. BARTLETT of Nevada said:

Mr. SPEAKER: Under the general leave to print, I desire to submit the following upon the subject of legislation concerning accidents in industrial undertakings:

The wonderful growth of our industries, made possible by reason not only of the inventive genius of our people, but the widening fields and rapidly increasing knowledge of our natural resources and the more practical utilization of the forces of steam, gas, and the scientific application of the power of electricity, have brought not only untold blessings and great prosperity and natural growth, but also bring responsibilities that we are but now beginning to realize.

In the transition from petty industry to manufacturing on a large scale; in the use of those dangerous elementary forces of steam, gas, and electricity, and in the use of new, complicated machinery have arisen dangers to the safety of life and limb of the workers hitherto unknown.

The accidents which have gone hand in hand with all this splendid development are appalling, and it becomes the immediate duty of all earnest men, upon whom rests the responsibility for progress, to work for a solution of the problem, and to endeavor to prevent the widespread suffering and financial hardship which falls upon and strikes down not only those workers without whom this development would be impossible, but also their families, their children, and their aged who in their failing years have become dependent upon them for support.

The act relating to the liability of common carriers by railroad just reenacted in constitutional form by Congress follows the present tendency of legislation throughout the country. That tendency has been to increase the number of accidents compensated, by increasing the number of employees for whose negligent acts the employer is held responsible in suits under the negligence law, and by changing the burden of proof in those suits from the shoulders of the employee to the employer.

The expansion to its utmost limit of the negligence law, however, while affording some measure of relief by compensating more employees than are compensated to-day, could never justly meet the requirements and satisfy the needs of employees, while it is often in practice most unjust to employers who, under the negligence law, are at any moment subject to a verdict rendered against them solely as a result of ignorance or prejudice or even vindictiveness on the part of a jury for the negligent act of another employee over which act they had no control whatever, and on the amount of which verdict the law puts no limit, some verdicts going as high as \$25,000, of which but very little ever reaches the employee, while others rendered are totally inadequate. The obvious drawback to employees is that under such a system the very great number of accidents which are traceable to no negligence remain entirely uncompensated; that if any compensation is obtained, it is generally obtained through litigation; and owing to the uncertainty inherent in all litigation, when he most needs it, an injured employee has no assurance that he will receive any compensation; and at a time when he is unable to earn wages for his family he has to wait, without any means of support, for his case to be reached (often for several years) on the court docket. It is very little consolation to a man seriously or permanently injured by an accident, who is denied redress for it and whose family has to be supported by the charity of the community, to be told that another workman has recovered a very large verdict.

The greatest drawback to both employers and workmen lies in the uncertainty of their position when an accident happens, in that, respective rights and obligations are a matter of opinion and not a predetermined fact; and wide abuses have grown up around the workings of the negligence law in consequence; a great class of personal-injury lawyers have grown up who are supported by it; negligence suits crowd the court dockets; employers, in order to defend themselves from being mulcted in heavy damages, are forced into the position of fighting their injured employees at a time when humane instincts would make them most desirous of helping them.

The machinery, therefore, for the distribution of any amounts of compensation that ultimately reach the injured employees is enormously expensive; no adequate system of cooperation between employers and employees can be fostered to prevent accidents and to provide the necessary prompt surgical and hospital treatment of the employees who are injured, and who often fall into the hands of unskilled doctors, with most serious injury and lasting ill effects to themselves and to their families.

With these conditions before us, our duty is clear; the difficulties must be faced and overcome. A system of dealing with accidents of industry must be devised that is both just to employers and meets the needs of employees, and which will also result in minimizing the possibility of the occurrence of accidents.

Safety-device laws have been enacted for several years, and the skill and ingenuity of thoughtful minds is actively and continuously engaged in inventing new ways and means for the prevention of accidents. The principle of these laws has its latest evidence in the law passed by the present Congress entitled "An act to promote the safety of employees on railroads," which requires that locomotives be equipped with ash pans that can be dumped or emptied without the necessity of the employees going under the locomotive.

In this session of Congress a bill has become law that contains new principles in dealing with accidents in the United States, though those principles have now been for some time acknowledged in all other important industrial countries of the world. I refer to an act granting to certain employees of the United States the right to receive from it compensation for injuries. The two principles it embodies are:

First. The absolute responsibility of the Government to pay the compensation specified in it, without any question of negligence on its part; and

Second. The avoidance of necessity for suit by the employee to obtain such compensation.

This legislation pays greater regard to the fact that accidents in industry are a product of the trade itself and are traceable to the trade more properly than to the negligence, if any, which may be involved in any particular accident.

In view of the recognition of these principles and the marking of a new trail in this character of legislation in the United States, it will be obvious that a careful examination of what has been done in the countries of the Old World will materially assist our endeavors to meet the situation in our own country as far as our systems and conditions may make it possible for us to adopt their general ideas and to profit by their experience, and I am therefore constrained to take this opportunity of gathering for the benefit of those who are studying this question the information that is to-day obtainable as to the legislative history, the legislative arguments, and the experience of the working of compensation laws in England, and a careful synopsis of the laws of all the foreign countries which have adopted the principle of compensation irrespective of negligence, published in a recent bulletin of the Bureau of Labor, in the hope that it may be found that "compensation" can be substituted for "litigation" throughout the length and breadth of the United States, and that we shall here prove the truth of the statement of Lord Salisbury, the prime minister of England, that the history of the law of compensation is the history of a great machinery for saving human life.

Launcelot Packer, LL. B., who has had many years of practical experience under existing conditions and study of the question, has contributed a most valuable article to a bulletin of the Bureau of Labor, issued in May, 1907. This article evidences such a thorough grasp of the subject, as well as a careful and painstaking examination of the conditions under which the compensation laws were enacted in England, and is so replete with information bearing on the practical application of the principles involved, that its republication at this time will prove of great value in the further development of the ideas in this country, and I therefore attach his article as an appendix to my remarks, together with the synopsis of the foreign laws and the several acts hereinbefore referred to.

APPENDIX.

[Public—No. 100.]

H. R. 20310. An act relating to the liability of common carriers by railroad to their employees in certain cases.

Be it enacted, etc., That every common carrier by railroad while engaging in commerce between any of the several States or Territories, or between any of the States and Territories, or between the District of Columbia and any of the States or Territories, or between the District of Columbia or any of the States or Territories and any foreign nation or nations, shall be liable in damages to any person suffering injury while he is employed by such carrier in such commerce, or, in case of the death of such employee, to his or her personal representative, for the benefit of the surviving widow or husband and children of such employee; and, if none, then of such employee's parents; and, if none, then of the next of kin dependent upon such employee, for such injury or death resulting in whole or in part from the negligence of any of the officers, agents, or employees of such carrier, or by reason of any defect or insufficiency, due to its negligence, in its cars, engines, appliances, machinery, track, roadbed, works, boats, wharves, or other equipment.

Sec. 2. That every common carrier by railroad in the Territories, the District of Columbia, the Panama Canal Zone, or other possessions of the United States shall be liable in damages to any person suffering injury while he is employed by such carrier in any of said jurisdictions, or, in case of the death of such employee, to his or her personal representative, for the benefit of the surviving widow or husband and children of such employee; and, if none, then of such employee's parents; and, if none, then of the next of kin dependent upon such employee, for such injury or death resulting in whole or in part from the negligence of any of the officers, agents, or employees of such carrier, or by reason of any defect or insufficiency, due to its negligence, in its cars, engines, appliances, machinery, track, roadbed, works, boats, wharves, or other equipment.

Sec. 3. That in all actions hereafter brought against any such common carrier by railroad under or by virtue of any of the provisions of this act to recover damages for personal injuries to an employee, or where such injuries have resulted in his death, the fact that the employee may have been guilty of contributory negligence shall not bar a recovery, but the damages shall be diminished by the jury in proportion to the amount of negligence attributable to such employee: *Provided*, That no such employee who may be injured or killed shall be held to have been guilty of contributory negligence in any case where the violation by such common carrier of any statute enacted for the safety of employees contributed to the injury or death of such employee.

Sec. 4. That in any action brought against any common carrier under or by virtue of any of the provisions of this act to

recover damages for injuries to, or the death of, any of its employees, such employee shall not be held to have assumed the risks of his employment in any case where the violation by such common carrier of any statute enacted for the safety of employees contributed to the injury or death of such employee.

Sec. 5. That any contract, rule, regulation, or device whatsoever, the purpose or intent of which shall be to enable any common carrier to exempt itself from any liability created by this act, shall to that extent be void: *Provided*, That in any action brought against any such common carrier under or by virtue of any of the provisions of this act, such common carrier may set off therein any sum it has contributed or paid to any insurance, relief benefit, or indemnity that may have been paid to the injured employee or the person entitled thereto on account of the injury or death for which said action was brought.

Sec. 6. That no action shall be maintained under this act unless commenced within two years from the day the cause of action accrued.

Sec. 7. That the term "common carrier" as used in this act shall include the receiver or receivers or other persons or corporations charged with the duty of the management and operation of the business of a common carrier.

Sec. 8. That nothing in this act shall be held to limit the duty or liability of common carriers or to impair the rights of their employees under any other act or acts of Congress, or to affect the prosecution of any pending proceeding or right of action under the act of Congress entitled "An act relating to liability of common carriers in the District of Columbia and Territories, and to common carriers engaged in commerce between the States and between the States and foreign nations to their employees," approved June 11, 1906.

Approved, April 22, 1908.

[Public—No. 176.]

H. R. 21844. An act granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment.

Be it enacted, etc., That when, on or after August 1, 1908, any person employed by the United States as an artisan or laborer in any of its manufacturing establishments, arsenals, or navy-yards, or in the construction of river and harbor or fortification work or in hazardous employment on construction work in the reclamation of arid lands or the management and control of the same, or in hazardous employment under the Isthmian Canal Commission, is injured in the course of such employment, such employee shall be entitled to receive for one year thereafter, unless such employee, in the opinion of the Secretary of Commerce and Labor, be sooner able to resume work, the same pay as if he continued to be employed, such payment to be made under such regulations as the Secretary of Commerce and Labor may prescribe: *Provided*, That no compensation shall be paid under this act where the injury is due to the negligence or misconduct of the employee injured, nor unless said injury shall continue for more than fifteen days. All questions of negligence or misconduct shall be determined by the Secretary of Commerce and Labor.

Sec. 2. That if any artisan or laborer so employed shall die during the said year by reason of such injury received in the course of such employment, leaving a widow, or a child or children under 16 years of age, or a dependent parent, such widow and child or children and dependent parent shall be entitled to receive, in such portions and under such regulations as the Secretary of Commerce and Labor may prescribe, the same amount, for the remainder of the said year, that said artisan or laborer would be entitled to receive as pay if such employee were alive and continued to be employed: *Provided*, That if the widow shall die at any time during the said year, her portion of said amount shall be added to the amount to be paid to the remaining beneficiaries under the provisions of this section, if there be any.

Sec. 3. That whenever an accident occurs to any employee embraced within the terms of the first section of this act, and which results in death or a probable incapacity for work, it shall be the duty of the official superior of such employee to at once report such accident and the injury resulting therefrom to the head of his bureau or independent office, and his report shall be immediately communicated through regular official channels to the Secretary of Commerce and Labor. Such report shall state, first, the time, cause, and nature of the accident and injury and the probable duration of the injury resulting therefrom; second, whether the accident arose out of or in the course of the injured person's employment; third, whether the accident was due to negligence or misconduct on the part of the employee injured; fourth, any other matters

required by such rules and regulations as the Secretary of Commerce and Labor may prescribe. The head of each Department or independent office shall have power, however, to charge a special official with the duty of making such reports.

SEC. 4. That in the case of any accident which shall result in death the persons entitled to compensation under this act or their legal representatives shall, within ninety days after such death, file with the Secretary of Commerce and Labor an affidavit setting forth their relationship to the deceased and the ground of their claim for compensation under the provisions of this act. This shall be accompanied by the certificate of the attending physician, setting forth the fact and cause of death, or the nonproduction of the certificate shall be satisfactorily accounted for. In the case of incapacity for work lasting more than fifteen days, the injured party desiring to take the benefit of this act shall, within a reasonable period after the expiration of such time, file with his official superior, to be forwarded through regular official channels to the Secretary of Commerce and Labor, an affidavit setting forth the grounds of his claim for compensation, to be accompanied by a certificate of the attending physician as to the cause and nature of the injury and probable duration of the incapacity, or the nonproduction of the certificate shall be satisfactorily accounted for. If the Secretary of Commerce and Labor shall find from the report and affidavit or other evidence produced by the claimant or his or her legal representatives, or from such additional investigation as the Secretary of Commerce and Labor may direct, that a claim for compensation is established under this act, the compensation to be paid shall be determined as provided under this act and approved for payment by the Secretary of Commerce and Labor.

SEC. 5. That the employee shall, whenever and as often as required by the Secretary of Commerce and Labor, at least once in six months, submit to medical examination, to be provided and paid for under the direction of the Secretary, and if such employee refuses to submit to or obstructs such examination his or her right to compensation shall be lost for the period covered by the continuance of such refusal or obstruction.

SEC. 6. That payments under this act are only to be made to the beneficiaries or their legal representatives other than assignees, and shall not be subject to the claims of creditors.

SEC. 7. That the United States shall not exempt itself from liability under this act by any contract, agreement, rule, or regulation, and any such contract, agreement, rule, or regulation shall be pro tanto void.

SEC. 8. That all acts or parts of acts in conflict herewith or providing a different scale of compensation or otherwise regulating its payment are hereby repealed.

Approved, May 30, 1908.

[Public—No. 165.]

H. R. 19795. An act to promote the safety of employees on railroads.

Be it enacted, etc., That on and after the 1st day of January, 1910, it shall be unlawful for any common carrier engaged in interstate or foreign commerce by railroad to use any locomotive in moving interstate or foreign traffic not equipped with an ash pan which can be dumped or emptied and cleaned without the necessity of any employee going under such locomotive.

SEC. 2. That on and after the 1st day of January, 1910, it shall be unlawful for any common carrier by railroad in any Territory of the United States or the District of Columbia to use any locomotive not equipped with an ash pan which can be dumped or emptied and cleaned without the necessity of any employee going under such locomotive.

SEC. 3. That any such common carrier using any locomotive in violation of any of the provisions of this act shall be liable to a penalty of \$200 for each and every such violation, to be recovered in a suit or suits to be brought by the United States district attorney in the district court of the United States having jurisdiction in the locality where such violation shall have been committed; and it shall be the duty of such district attorney to bring such suits upon duly verified information being lodged with him of such violation having occurred; and it shall also be the duty of the Interstate Commerce Commission to lodge with the proper district attorneys information of any such violations as may come to its knowledge.

SEC. 4. That it shall be the duty of the Interstate Commerce Commission to enforce the provisions of this act, and all powers heretofore granted to said Commission are hereby extended to it for the purpose of the enforcement of this act.

SEC. 5. That the term "common carrier" as used in this act shall include the receiver or receivers or other persons or corporations charged with the duty of the management and operation of the business of a common carrier.

SEC. 6. That nothing in this act contained shall apply to any locomotive upon which, by reason of the use of oil, electricity, or other such agency, an ash pan is not necessary.

Approved, May 30, 1908.

BRITISH WORKMEN'S COMPENSATION ACTS—HISTORY OF LEGISLATION AND ATTEMPTED LEGISLATION LEADING UP TO THE BRITISH WORKMEN'S COMPENSATION ACTS—CHANGING ATTITUDE OF PUBLIC OPINION AS TO RELATIONS OF MASTER AND SERVANT.

[By Launcelot Packer, LL. B.]

The attitude of public opinion in England toward the relations of master and servant, of which the latest law regulating the accidents of industry is an outcome, is shown by the current decisions of judges, by attempted legislation, and by the legislation adopted.

That this attitude has changed greatly with the times is illustrated by Parliament's expression of view in 1825, that "all combinations of workmen are injurious to trade," while in 1875 a diametrically opposite view was held, and legislation was enacted in accordance with that view, it being then admitted by the Conservative leader, Lord Beaconsfield, that "for the first time in the history of the country employer and employed sit under equal laws." Again, in 1837 it is said that "principles of justice and good sense" require "that a workman should take on himself all the ordinary risks of his employment," while in 1897 the legislature said, "sound economic doctrine requires that the employer shall take all the ordinary and extraordinary risks involved in the carrying on of his industry."

Examination of the workmen's compensation act of 1897, as amended in 1900, of the parliamentary steps by which it became law, and of its working, leads at the outset to an inquiry into judicial decisions of sixty years before, and the measures subsequently introduced into Parliament dealing with accidents which were the result of the growth and concentration of industries.

COMMON LAW OF NEGLIGENCE.

In 1837 the general principles of the common law of negligence formed the only basis of recovery by a workman from his employer for an accident. Under these general principles a man was held to be responsible to others, including his servants, for injuries resulting from his own negligent acts, or from the negligent acts of his agents in the scope of their employment.

FELLOW-SERVANT DOCTRINE.

A decision rendered by Lord Abinger in 1837 under the common law of negligence, in the case of *Priestly v. Fowler* (3 Mees. & W. 1, Murph. & H., 305), is largely responsible for subsequent attempted legislation and for legislation enacted affecting a master's responsibility to his servant in case of negligence. In this decision was enunciated the doctrine "that a master could not be held responsible for an accident to his servant if such accident were caused by the negligence of a fellow-servant," this being called "the fellow-servant doctrine," or "the doctrine of common employment." This doctrine, whether rightly or wrongly expounded in this decision, has operated as a defense to actions by servants against their masters for damages for injuries resulting from the negligence of their master's agents, if such agents were fellow-servants, and has thus left the workman no redress in many cases where a stranger would have had redress.

The fellow-servant doctrine has been supported on the ground of its expediency (as preventing accumulation of alarming liability), on the ground of "its tending to prevent accidents" (by making each servant watch his fellow-servant), and on the ground of "contract" (it being held to be one of the "implied terms" of the contract of employment). On the other hand, it has been the subject of bitter attack ever since it was enunciated, the statement having been made that it was an exception to the general law of negligence, putting workmen in a worse position than strangers to their employer; that it tended to make employers less careful in the selection of their employees, and that it was founded on a legal fiction, not on a voluntary contract.

The doctrine was entirely repudiated in Scotland until imposed on that country by a House of Lords' decision in 1858 (*Bartonshall Coal Company v. Reed*, 3 McQ., H. L. Cas., 266). Though it remains operative to a certain extent, as modified by the employers' liability act of 1880, the practical workings of the workmen's compensation acts have largely counteracted its effect in the trades to which these acts apply. From allusions to it in debates in 1897 on the workmen's compensation act it seems likely to be soon entirely extinguished by Parliament.

Opinions of lawyers have differed as to the soundness of the decision, some holding that it rightly interpreted the existing

* See lectures by A. H. Ruegg, K. C.

common law, and others that it entirely without warrant engrafted a new doctrine into the law, but it is now according to high English legal authority almost universally admitted to be not only unjust, but also based on illogical reasoning.

DOCTRINE OF ASSUMED RISK.

The doctrine of assumed risk was another defense against an employer being held liable for accident, a doctrine generally based on an "implied term" in the contract of service. It was laid down in the case of *Priestly v. Fowler* (supra) that a servant "assumes all the ordinary risks which are incidental to his employment." (An important corollary of this doctrine of assumed risk is the aforementioned doctrine of fellow-service, namely, that one of the risks incident to the service which the workman agrees to assume is the risk from the negligence of a fellow-servant.) This implied term of his contract of service left the workman to bear the risks he knew or ought to have known, including the burden of dangers inherent in the business, such as unavoidable accidents, etc.

This doctrine has been justified on the ground that the servant is as well able to guard against the risk as his employer and that it is calculated to secure fidelity and prudence on the servant's part; on the other hand, it has been doubted whether it has the effect claimed for it, and it has been suggested that the "dread of personal injury" has always proved sufficient to bring into exercise the vigilance of the servant. Another attempt to justify the doctrine, on the ground that the amount of the workman's wages is adjusted with reference to the character of these risks, is answered by the statement that this theory is borne out only to a very limited extent by the actual facts of everyday life. (Labatt, sec. 259, etc.)

This principle was applied to the relations of master and servant in the case of *Dynen v. Leach* (26 L. J. Exch. N. S., 221) in 1857, and also in *Saxton v. Hawkesworth* (26 L. T. N. S., 851) in 1872, in such a manner that it was made to operate as a defense against a claim by the servant for damages for injuries resulting from "negligence actually existing" on the part of his master, on the theory that the servant had voluntarily agreed to encounter the risks from nonfulfillment of his master's legal duty as to system and appliances.

At the time of these early cases cited the voluntary agreement of the servant was implied from his continuing in the service of the employer, "with knowledge of the defects," so that if the servant remained in the service, with knowledge, he was debarred thereby from maintaining any action for recovery from the master for injuries resulting from such defects.

DOCTRINE OF VOLENTI NON FIT INJURIA.

This old defense of assumed risk, enumerated as a defense peculiar to the relation of master and servant, has been thought by some authorities to be only a form of the wider and more comprehensive doctrine of "volenti non fit injuria" of the common law, which means that "one who voluntarily incurs a risk can not recover." The latter has, by other authorities, however, been stated to be different from the doctrine of assumed risk, as the doctrine of assumed risk arises out of the contract of service between master and servant, while the doctrine volenti non fit injuria is a general principle applicable whether the relation of master and servant exists or not. (Thomas v. Quartermaine, L. R. 18 Q. B. Div., 685; 56 L. J. Q. B. N. S., 340. See Labatt, sec. 370, note.)

This doctrine of volenti non fit injuria was thought not to be a hardship on the servant in the same sense as were the fellow-servant doctrine and the assumed-risk doctrine, as it was common to the whole law of negligence and would be a good defense to a stranger's action against the master for damages for injuries resulting from negligence.

CONTRIBUTORY NEGLIGENCE.

The doctrine of contributory negligence was another defense against claims for damages for injuries resulting from negligence and, in very many instances, defeated a workman's claim against his employer. It is sometimes stated thus: "A plaintiff can not recover damages if but for his own negligence the accident would not have happened, though there was negligence on the part of the defendant." This was also recognized by Lord Abinger in *Priestly v. Fowler* (supra), and applied to a master and servant case, when he laid down that "the relation of master and servant can not imply an obligation on the part of the master to take more care of the servant than he may be reasonably expected to do of himself," thereby recognizing that the servant's right to recovery for an accident was conditioned on his showing that he did not contribute to his own injury. (See Labatt, sec. 313.) This defense, however, was available against the claim of a stranger as well as against the claim of a workman upon his employer. It was based upon the idea that if the plaintiff was negligent, his negligence and not that of the defendant was the real or proximate cause of the injury. (Thomas v. Quartermaine, supra.)

This doctrine was never accepted as sound in the admiralty courts, where, if both parties were negligent, the loss was divided.

EFFECT OF DEATH UPON PERSONAL ACTIONS.

Another defense that operated to defeat a workman's claim was the rule of the common law that every personal action dies with the person entitled to bring it, or on the death of the person against whom it can be brought (*actio personalis moritur cum persona*). This rule of the common law, which relieved an employer from responsibility for all injuries causing death, was, however, abrogated by parliamentary enactment in 1846, under the statute commonly called "Lord Campbell's Act." Until that act the representatives of a workman killed by accident had no redress whatever against his employer.

BURDEN OF PROOF ON PLAINTIFF.

A final stumbling block to recovery by an injured workman lay in the fact that at common law in an action for damages for injuries resulting from negligence the burden of proof lies upon the plaintiff. He has to show (1) negligence, namely, a duty and a breach of that duty; and (2) injury, as a consequence of that breach. In many cases, therefore, even where a workman had a legal right of recovery, he got nothing, as he was unable to prove his case.

ATTEMPTED LEGISLATION, 1875 TO 1879.

An examination of attempted legislation and legislative enactments shows that bills were introduced in 1875 and 1876 to abolish entirely the doctrine of common employment and the defense of assumed risk. These bills were doubtless introduced because the principles so laid down were being pressed more and more severely against the workmen until the restrictions which were conceivably equitable to apply in the case of the smaller industries of former years were made to apply in the case of more recent and indefinitely extended undertakings. Thus the doctrine of common employment was applied to the slight relationship existing between a miner and the engineer of the mine and between the general manager of a railway and a trackman in the service of the same company, resulting in the master in a large undertaking escaping responsibility by delegating authority. These bills were withdrawn, however, on the undertaking that Lord Beaconsfield, who was the prime minister, should cause an inquiry to be made into the subject by a select committee of Parliament.

This committee was duly appointed, and in 1877 submitted a report.

This report recommended that where a master delegates his duty of selecting proper servants, material, and plant wholly to agents, instead of performing them himself, such persons to whom those duties are delegated should be held to be the "alter ego" of the master and not to be fellow-servants of the injured servant.

During the proceedings of the committee, before the adoption of the report, it had been proposed that the committee recommend that the defense of common employment should be abolished in the case of accident through the negligence of any employee exercising authority, however low in the scale he might be, so long as he was not employed in actual manual labor. This recommendation, however, was rejected in favor of the report above given.

About the same time a report from the royal commission on accidents on railways was brought in, to the effect that the master should be made liable for damages for injuries resulting from the negligence of those to whom the master's authority had been delegated on railways.

The following year, 1878, one of the bills to totally abolish the doctrine of common employment was reintroduced. It, however, was "talked out" and then dropped. The attorney-general, however, promised to bring up a bill later. It was then contended that there was no difference between railways and other industries.

In 1879 three bills were introduced, none of which passed. Of these, one proposed to abolish the doctrine of common employment and the other two to modify that doctrine. One of the latter was introduced by the government and was limited in its operation to "railways, mines, factories, and works." It made the employer liable for damages for injuries resulting from the negligence of servants with "managerial" authority; it failed to pass, as there was a dissolution of the government before it had left committee.

EMPLOYERS' LIABILITY ACT OF 1880.

In the following year, 1880, a bill was introduced by Mr. Gladstone's government, which was finally enacted into law and became known as the "employers' liability act of 1880." At the general election, following the dissolution of Lord Beaconsfield's government, the abolition of the doctrine of common employment became an election cry. Therefore, at the entry of

the next government Mr. Gladstone said: "The present law is unsatisfactory and further protection to workmen is necessary," and immediately reintroduced the bill introduced by Lord Brassey in 1879. Mr. Dobson, whose name was on the back of the bill, showed, in his statement, that "the common law had ended in giving the workmen no compensation at all unless he could trace the accident to personal negligence on the part of his employer." He stated that the bill reverted to the ancient state of the law and would take a middle course, making the employer liable for injuries resulting from the negligence of those to whom he deputed his duties, or from defects in the plant due to negligence of his deputies.

Many amendments, which became interesting from their frequent reappearances in later Parliaments, were introduced. One provided for a general system of insurance, and though this amendment was negatived the Government said that while they did not deem compulsory insurance practicable, they would consider proposals thereto. Another amendment, which was negatived, allowed a workman to recover, if injured by a fellow-servant, "in a separate department." An amendment to extend the benefits of the bill to Her Majesty's arsenals and dockyards was negatived on the ground that they now had greater benefits, although it was said that the Government employees would ultimately be treated the same as others. It was claimed by the opponents of the bill that if passed it would result in the ruin of industries. Mr. Chamberlain strenuously denied this in debate.

When the bill became a law it was restricted to a limit of seven years, but it was subsequently extended, year by year, until the passage of the workmen's compensation act of 1897, and is still in force. It, however, imposed a limit upon the amount of damages (previously unlimited at common law) that could be recovered for an accident, namely, "three years' wages of the injured person, or of a person in the same grade in the same district." This limitation has operated as a hardship upon injured children, since their earnings were usually only a few shillings weekly.

The act being a compromise, was imperfectly drawn, and resulted "in a large crop of litigation."

While in introducing the bill the Government had intended to bring back the law to what it was supposed to be in England before the case of *Priestly v. Fowler*, and in Scotland up to the decision in the *Bartonshall Coal Company v. Reed* (3 McQ., H. L. Cas., 266), the result of the act was to *prima facie* entitle the workman to recovery for injuries resulting from the negligent performance of master's duties and powers delegated to superintendents and to other persons. It therefore only obliterated the doctrine of common employment, as far as the five causes of injury to a workman mentioned in section 1 of the act was concerned. That doctrine therefore remained in force as to accidents from other causes than those mentioned in section 1 of the act, but placed the workman in the same position as if he had been a stranger to his employer, so far as the five causes mentioned in that section were concerned. The five causes mentioned were as follows:

(1) Defective ways, works, machinery, and plant (if due to the negligence of the employer or of the person to whom had been delegated his duty thereabout).

(2) Negligence of a superintendent (if superintendence was his principal duty and he was not ordinarily engaged in manual labor).

(3) Negligence of persons to whom the employer had delegated his power of giving orders.

(4) Acts or omissions in obedience to rules or by-laws or in obedience to instructions of persons authorized by employers to give them.

(5) In the case of railway companies, the negligent management of trains, points, and signals.

The act was also at first thought to have taken away the defense of *volenti non fit injuria* (see *Weblin v. Ballard*, 17 Q. B. D., 125); however, the later leading case of *Thomas v. Quartermaine*, supra, showed that this defense still survived, although the subsequent case of *Smith v. Baker* (60 L. J. Q. B., 683), in the House of Lords, minimizes its application.

CONTRACTING OUT.

After the passage of the employers' liability act of 1880 it was found that employers were, by special contracts with their men, freeing themselves from the liability imposed by that act, and the case of *Griffiths v. Earl Dudley* (9 Q. B. D., 357) decided that such contracts were "not contrary to public policy." Therefore, in 1881, a bill was introduced to prevent an employer from contracting himself out of the act. The bill failed, and in the following years, 1882 and 1883, similar bills again failed. It was stated that "it was inexpedient to interfere with freedom of contract and with private schemes that made provision for

every accident, whether under the employers' liability act or not." In 1886 a similar bill contained a further clause that the definition of a person intrusted with superintendence was not thereafter to be limited to "one who is not ordinarily engaged in manual labor, and whose principal duty is that of superintendence." The bill was dropped on the appointment of a select committee to inquire into the workings of the act of 1880.

The committee's recommendations were as follows:

(1) The repeal of the "limiting definition" of a superintendent.

(2) That no contracting out should be allowed, unless for adequate consideration (namely, a contribution to insurance approved by outside authority and guaranteed against deficiency by the employer).

In 1887-88 a bill was introduced by a labor member practically abrogating the doctrine of common employment, and while not affecting existing "contracts out," providing that in future there should be none, but that the "court in any suit" should "reduce the damage" if it was found the plaintiff had received benefits from insurance funds. The bill was dropped on the Government itself introducing a bill on the lines of the select committee's recommendations. That bill was emasculated in committee, and thereafter dropped on opposition by labor members, who insisted on abolishing the defense of common employment and contracting out.

In 1890 another bill was introduced by a labor member abolishing common employment as a defense, and repealing the act of 1880. But the Government again reintroduced its bill, allowing contracting out only when "a written request was made by a workman," and even then allowing the court, in any subsequent suit, to pass on the question of the adequacy of consideration received by him for so doing, and to see that it was a substantial one, other than "continuance in service."

The following year a labor member introduced a bill, which did not pass, entirely prohibiting contracting out, and actually invalidating all such existing contracts.

It will therefore be seen that the Government was on the horns of a dilemma:

On the one hand, it was shown that from the workmen's standpoint there seemed to be no equitable reason for the distinction of the existing law between accidents, the result of negligence, traced to a superior servant, and accidents traced to an inferior servant, the neglect of one being as liable to cause an accident as the neglect of the other, or for the law treating workmen less liberally than strangers, even where the accident was caused by an inferior servant. Again, if a distinction were maintained making "mere authority" on the part of the offending servant the test, it would still be unjust and would practically amount to no distinction at all. The elimination therefore of the distinction by abolition of the doctrine of common employment was put forward as one remedy.

On the other hand, the only other remedy would have been to change the general law by taking away from the master his liability to anyone, to a stranger as well as to a servant, for his servant's acts. This would have caused altogether too great an upheaval of general legal relations, and probably could not have been enacted, owing to opposition not only by the workmen interest, but also by the public interest.

The difficulties that confronted the Government, if they permitted contracting out, were:

(1) Examination of adequacy of contracting-out schemes beforehand would necessitate a Government department.

(2) To allow the adequacy of contracting-out schemes to be passed on by a court in suits would take from the employers "the prevention of suit feature," their chief incentive to contract out.

The Government found, on inquiring into how far contracting out had been carried, since the act of 1880, that as regards mines, a very large number did contract out, and desired to; in railways contracting out was general; in the building trades, the iron trades, and other trades there was generally no contracting out.

Among the reasons advanced for prohibiting contracting out were:

(1) That the act tends to safety through exposing negligent employers in court. But the Government found the number of cases in court were insignificant, and from such statistics as were available concluded that the claim was not borne out.

(2) That if allowed to contract out, workmen will be coerced to contract out for no consideration. The Government found practically no such cases, and also found that employers' contributions to benefit societies under contracting-out schemes exceeded vastly the amount payable under the act.

The contracting-out schemes covered all accidents, both those for which the master could be held liable and those for which the master could not be held liable. They seemed to work advantageously to both parties, the workmen getting larger pecuniary benefits for every accident, and also having an incentive to insure, while the master was freed from suit and was placed on better terms with his men. Therefore it was felt that an absolute prohibition of contracting out would be disadvantageous to both parties.

ATTITUDE OF POLITICAL ECONOMISTS.

The Government had before it, on the one hand, the view of lawyers, employers, and workmen, who argued as if there was then practically no indemnity recoverable for accident, and further that abolishing the doctrine of common employment would give such an indemnity, but that contracting out, if allowed, would take it away again.

On the other hand was the view, from the political-economy standpoint, which admitted that industry ought to bear the cost of all accidents (as risks as well as labor should be paid for), but maintained that it actually did so, in whatever state of the law, in a fractional reduction of the current rate of wages which the employer took from the men and ultimately paid back to them in occasional damages recovered against him for accidents. Political economy was not, therefore, concerned with such changes, since, if the law were made more drastic by abolishing common employment, a slightly larger amount would be retained by the employer from the wages, and if contracting out were permitted again a less amount would be retained by him.

The political economists' view was, therefore, that there was no sound economic reason for making distinctions between accidents which were the result of negligence and pure accidents; that all accidents might be properly compensated; that it merely made the employer an insurer, who took the premiums from the wages in a greater or less degree, and that it was only a political and not an economic question.

THE ASQUITH BILL.

In 1893 the Liberal government, then in power, through the home secretary, Mr. Asquith, introduced a bill to amend the existing employers' liability law. This bill provided for the repeal of the act of 1880 and for the abolition of the doctrine of common employment entirely and the limit of damages recoverable; it prohibited contracting out entirely. Though it did not take away the defense of contributory negligence and acquiescence (*volenti non fit injuria*), it left the servant in the same position as a stranger, thus practically going to the limit of previous contemplated legislation.

At once, on the introduction of this bill, Mr. Chamberlain, who was a member of the opposition (the Conservative party), introduced an amendment to the effect that no change of the law "will be final or satisfactory which does not provide compensation for all injuries in the ordinary course of employment not caused by injured's own act or default." This departure eliminated the question of whether the master was negligent or not.

The attitude toward industrial accidents as expressed in this amendment had for some time past found expression in legislation in Germany and Austria, as well as in other European countries. There the basis of recovery for accidents had been changed from that of the general common law of negligence to the principle that "workmen should receive certain compensation, but limited in amount, for all accidents of industry," irrespective of whether negligence attributable to the master caused them or not; contracting out was prohibited. In one country (Germany), as a machinery for carrying this out, a general system of insurance had been adopted, the industries of equal degree of danger being formed into mutual insurance guilds.

A second bill was therefore introduced by private members making the employer liable to pay "compensation for all injuries due to employment," excepting the willful default of the injured workman, placing limits on such compensation, however, and providing that it should take the form of purchase of annuities from the post-office of the amounts specified in the schedule of the bill. This bill was only tentative, and was withdrawn, as was Mr. Chamberlain's amendment to the Asquith bill.

PRINCIPLE OF THE BILL.

Mr. Asquith, in debate of the Government bill, said the principle of it was exactly similar to the act of 1880, namely, that "if a man, for his own profit, sets on foot industrial operations he ought to be made responsible for the selection of his servants and the supervision of his business, so as to reduce the risks to the smallest possible number," and that this bill would diminish

the area of accidents. The opposition pointed out that masters could not control the acts of the fellow-servants.

After lengthy debate throughout the session, and the introduction of a new clause dealing with employments injurious to health, the Government bill passed the House of Commons.

In the House of Lords an amendment, passed by 148 votes to 28 (known as the "Dudley amendment"), permitted the continuance of existing contracts out, if subsequently approved by a two-thirds vote of the men, and future contracts out on the granting of a certificate by the board of trade "that the scheme compensates all cases of injury, that the employer contributes at least one-fourth, and that an actuary certifies that contributions are proportionate to the liabilities of the fund."

On the House of Lords refusing to eliminate their amendment and concede the unrestricted prohibition of contracting out, on the ground that the workmen were opposed to the prohibition and that it would minimize the prevention of accident feature of the bill, the House of Commons rejected the amendment and threw up the whole bill.

It will be seen that the attitude in England toward the subject of industrial accidents, and the law in force there at the time of the failure of the Asquith bill, corresponded very closely to the attitude toward the subject and to the laws in force in the United States to-day, with the exception that verdicts higher in amount are rendered here by juries. The law in England then was the common law of negligence, subject to the defenses of contributory negligence, assumption of risk, and fellow-servant negligence, as modified by the employers' liability act of 1880. The legislation attempted indicated clearly the tendency of public opinion toward trade compensation for accident irrespective of negligence. In the United States the existing law is the same common law of negligence, subject to the same defenses of contributory negligence, assumption of risk, and fellow-servant negligence, as modified in some States by similar employers' liability acts, and in others by a more limited interpretation of the defense of fellow-servant negligence. In the United States, as then in England, in certain States (as in Massachusetts) there have been suggested changes to laws of compensation irrespective of negligence.

ARGUMENTS ADVANCED WHEN THE BRITISH WORKMEN'S COMPENSATION ACTS WERE ADOPTED—WORKMEN'S COMPENSATION ACT OF 1897—PRINCIPLE OF THE BILL.

The next serious attempt to deal with the subject of accidents to workmen was the introduction by the Conservative Government of a bill which became the workmen's compensation act of 1897. The Government in introducing the bill said: "The present law is notoriously inadequate; it fails to compensate for accidents if caused by fellow-servants, if contributed to by the injured, and if resulting from the risks of occupation; it causes costly litigation, 35 per cent of the amount recovered being legal expense; it leaves the employer ignorant of what his liability is."

The home secretary said that the Asquith bill had attempted the prevention of accidents by making the master responsible for accidents from the negligence of fellow-workmen, as well as from his own, and without limiting the amount of damage, putting the workmen in the same position as strangers; that such legislation rendered proof of negligence necessary, which meant increased litigation, and such a law would still reach only 50 per cent of the accidents that happened.

The Government held that giving a right of action for injuries resulting from negligence could not adequately meet the serious results of accidents to workmen, that they should be put in a better position toward their employers than a stranger and be given a certain but limited compensation for all accidents, not at the expense of taxes or public charity, and that this would tend to prevent accident, though the true method of prevention was by criminal statutes.

The Government said the purpose of their bill was to define and limit the liability and devise a simple and inexpensive method of settling doubtful questions. That the principle was new, based on the doctrine that "When a person on his own responsibility and for his own profit sets in motion agencies which create risks for others, he ought to be civilly responsible for the consequences," but in applying this and granting compensation it was the general opinion that a limit of liability should be adopted with it.

The opposition (Mr. Asquith) admitted the principle of universal compensation and of giving "some solatium for a pure accident, the result of no negligence, to soldiers in the army of industry." He said it was revolting to sentiment and judgment that "men who met with accidents through the necessary exigencies of daily occupation should be a charge upon their own families," and though the bill created a new legal right, so did the poor law, which recognized everyone's right to State food and shelter. He, however, criticized the bill as drawn.

ARGUMENTS FOR AND AGAINST THE BILL.

The following are the leading arguments, pro and con, of the extended debates that followed, grouped under their respective heads, and referred to the different provisions of the bill.

By its opponents the bill was called "a radical revolution" and "a plunge into socialism." It was said to exceed the proper function of government, which was the protection of property and liberty, transferring the burden of accidents from one set of people to another; it was said to put legal responsibility where no moral responsibility existed, and to be contrary to the tenets of the Conservative party introducing it.

This was answered by Mr. Chamberlain, the author of the bill, who admitted that it was a new principle, only applicable if a "great public human interest is involved," but said that the bill dealt with "a great scandal;" not with absolute rights, but with questions of humanity and expediency. He stated that it contained two principles, as follows:

(1) That a workman was entitled for all accidents of occupation to a moderate and reasonable compensation.

(2) That the compensation should be a charge on the trade, like repair of machinery.

He said, moreover, that the bill distinguished between an employer's moral negligence (employer's willful or wrongful act) and an employer's technical negligence (his foreman causing an accident) and an employer's criminal negligence (employer's neglect of precaution after warning).

Mr. Balfour (afterwards prime minister) said that the bill was consistent with previous legislation, the country felt it desirable to "diffuse the shock" of accidents, and had already granted such a relief to the public, and it should be granted to a workman in his vocation. He answered the objection that it put a legal where no moral responsibility existed by showing that the law already did that, as it made a railroad responsible for an injury to a passenger, even where caused by the mistake of a good engineer.

Lord Salisbury (the prime minister) said that the existing law was socialistic and not the bill, since the existing law made the taxpayer through the poor law pay for a railroad engineer killed by an outsider obstructing the track, and so transferring the burden to the industry itself (the railroad) was less socialistic.

He said that there was a proper distinction between State interference when saving life as against saving property; that in no well-regulated State was mere liberty allowed to endanger lives; that it was the supreme duty of the State to see that the claims of property must bow to the interest of citizens represented by safety, life and limb. He added that the bill was part of the series of old factory legislation preventing disease and death. He said the history of the law of compensation was a history of a great machinery for saving life.

The following objections to the bill and answers to these objections were also made:

(1) That it was unfair, as it made the employer liable for acts of strangers, and as a social experiment, if it was expedient for the country, the country should pay for it; but it was answered that it was "fair, moral, and right;" that those for whose emolument the trade was carried on should pay; that as the employer risked only his capital, but the workman his life, he had a right to compensation when injured at his employment; that wear and tear should be borne by the industry; that a maximum of one-half wages lost was fair.

(2) That the German system was better, as under it trade responsibility existed, as opposed to individual responsibility under the bill, and that the state should insure or assume the pensions; but Mr. Chamberlain answered that the German system was too elaborate and was impossible for English people, and that state insurance was a gigantic question.

(3) That it would cause social strife, as it was alleged the German law had done; but its advocates maintained that it would insure social peace and diminish litigation, as they alleged the German law had done.

(4) That the trades unions and friendly societies would suffer through it; but this was denied by the labor-union members.

(5) That it would take away self-reliance and thrift from the workman; but it was said that individualistic theories about the rights and habits of grown men had become obsolete.

(6) That it would reduce wages; but this was not admitted.

(7) That it would increase accidents, as it was alleged the German law had done; but this was denied.

(8) That it would injure old men, as employers would not employ them; but (though the Government was willing to limit the provisions of the bill to men under 60 years) this was strenuously denied by the representatives of labor, who said older men were more careful.

(9) That it was illogical, as it excluded health. The Government admitted this, but said that health was too large a question to tack onto it.

(10) That it would injure trade, especially export trade, and that the bill taxed industry; but it was answered that the employers' liability act of 1880 had been said to impose "terrible liabilities on trade," which experience had shown to be unsound.

Mr. Chamberlain said the Asquith bill was a punishment bill covering 10 per cent of accidents and this bill was a benefit bill covering 80 per cent of accidents.

Other members admitted it would relieve poverty, distress, and ruin to thousands of workmen through accidents.

Mr. Rugg, a leading English commentator on this subject, states the principle of the bill to be that "the pecuniary results from loss of life and injury incident to the carrying on of industrial enterprise" should be regarded as "a part of the expense of production;" that the employer who initiates it should, for convenience sake, pay this expense in the first instance, and that "ultimately it will be paid by the community" for whose use and enjoyment industry is carried on.

SCOPE OF THE BILL.

The act of 1897 is limited in its application to employment on or in or about a railway, factory, mine, quarry, or engineering work, and a building which exceeds 30 feet in height being constructed or repaired by means of a scaffolding, or being demolished, or on which machinery driven by power is being used for those purposes. (Sec. 7 (1).) The act of 1900 added agriculture.

The scope of the act of 1897 was criticised generally as being too exclusive and covering only selected industries; as failing to cover large classes of workmen, such as seamen, agricultural laborers, employees in workshops (factories without mechanical power), and other small employers' work people; as only partially covering building employees; as failing to cover the first two weeks' disability from accident; as failing to cover injuries to health, and as covering trades like coal mining, which would be ruined by the bill.

Generally the Government said that the bill was a tentative measure, and as it involved a new principle it was limited to the more dangerous industries, i. e., to those which had the most accidents; that it covered 6,000,000 work people (leaving 7,000,000 unprotected), but it had covered 60 or 70 per cent of all accidents; that the two exceptions to liability were serious and willful misconduct on the part of the injured employee (sec. 1 (2) (c)) and the exemption of employers from liability for the first two weeks of accidents (sec. 1 (2) (a)), which would foster benefit societies and knock off 25 per cent of accidents (which were trivial) and 30 per cent of the compensation payable; that injury to health was too large a question to add to this.

In discussion Mr. Balfour indicated that a reason for omitting small employers and selecting the great organized trades was to obviate what would be merely transferring the "shock of accident" from one individual to another, the shock being diffused if applied to the great organized trades. It was admitted that when experience had proved there was no injury to the trades covered, such experience would be an unanswerable argument in favor of the extension of the scope of the bill.

In debate it was said that there were three tests of the scope: (1) Risk, (2) capital in industry, (3) insurance feasibility.

SEAMEN.

The arguments against inclusion of seamen, presented by Mr. Chamberlain, were that shipping was a great industry "of special circumstances," and therefore separate legislation was necessary; that the great steamship lines were different from the merchant service; that the inclusion of seamen under the bill would breed opposition; that already injured sailors were paid their wages and medical attention according to special laws. It was said that deaths on sailing vessels were 50 to 1 of deaths on steamers; that it would kill the sailing-vessel industry and the fishing business to include them; that the owner had no control over accidents at sea. Several owners in big steamship lines recommended inclusion, and Mr. Havelock Wilson (who had fought to have the act of 1880 applied to sailors, but failed) pointed out, as to payment of wages when a seaman was injured, that there was no loss to the owner, as the other sailors did the injured sailor's work; that shipowners paid no poor-rate tax, and therefore "landsmen paid for injured sailors;" that there was no medical attention supplied except in the big liners; that the trade was a most dangerous one.

WORKSHOPS.

It was urged that women and children were employed in workshops, that there were no "compassionate allowances" in

workshops, and that the tendency of modern legislation was to unite workshop and factory; but it was answered that they were not dangerous, the proportion being only 2 deaths in workshops to 188 in factories.

BUILDINGS.

The Government refused to eliminate the restriction and cover buildings under 30 feet in height, saying that the inclusion of buildings was a compromise, and that 30 feet was an arbitrary line, based on the factory act.

GOVERNMENT EMPLOYEES.

Persons in the naval and military service of the Crown were excluded (sec. 8); otherwise Government employees were covered.

MALINGERING.

It had been claimed by the opponents of the bill that the German law had increased malingering on the part of injured workmen, and that this bill would have the same effect, but the Government felt that these provisions for medical examination would prevent it, and, further, that cooperative schemes formed under the contracting-out clause, as they would be controlled by workmen, would also prevent it.

ACTS OF STRANGERS.

In reply to the criticism that the bill was unjust in making an employer responsible for injuries to his men caused by acts of strangers, the answer was made that all employers with their fellow-men in their power through industry should "be forced to make them safe." The Government said if the employer was not made liable it would necessitate the inquiry, "Who caused the accident?" and result in litigation, defeating the object of the bill, which was to compensate without inquiry. With a view to this principle, and chiefly to include under it subcontractors' workmen (sec. 4) as employees of the chief employer, so enabling them to get their benefits, section 7 (1) provides that "the act shall apply only to employment by the undertakers," though in all cases, except those in section 4, the injured's own employer is the undertaker (sec. 7); (2) defining the undertaker as "the company" in a railway, "the occupier" in a factory, quarry, or laundry, "the owner" in a mine, "the person undertaking the construction, etc.," in engineering work and in building. Section 4, however, gives the undertaker a right of indemnity against the subcontractor.

COAL MINING.

It was urged that 80 to 90 per cent of the coal in Northumberland competed with foreign coal, and that, therefore, employers could not transfer the burden to the foreign consumer; that any raise in the price would destroy the glass trade and injure the steel trade; that the bill would shut down a number of coal mines. The Government answered that foreign competitors had compensation laws.

AGRICULTURAL LABORERS.

It was urged that agricultural laborers should be covered, as accidents occurred from agricultural machinery, and their poor wages did not enable them to insure; that they presented the most pathetic figure in the social system—a life of unremitting toil, followed by the poorhouse in old age. The Government in 1897 said the bill was only tentative, and agriculture was not a dangerous trade. They did, however, by a separate bill in 1900, include agriculture, which covers horticulture, forestry, husbandry, inclusive of keeping live stock, poultry, or bees, and the growth of fruit or vegetables.

PREVENTION OF ACCIDENTS.

The Asquith bill had been put forward as effecting the prevention of accidents, and his party urged that this bill would not prevent accidents; that the criminal law was ineffectual to prevent them; that there was nothing incompatible in granting universal compensation, and at the same time providing special liabilities for preventable accidents; that the German system provided compensation with prevention under its danger schedule; that in Germany the trades had a remedy against a negligent employer; that under this bill there would be insurance, and that insurance deprived the master of incentive to care.

It was answered that the Asquith bill only made the master responsible in a greater number of accidents than the preexisting law, and that the master could not prevent the accidents caused by fellow-servants, by which only that bill increased his responsibility; that this bill covered a still greater number of accidents than the Asquith bill, and so was more powerful than it to prevent accidents; that increased responsibility meant increased care; that the employers' financial responsibility was a greater preventive than State financial responsibility; that the true method of prevention was by criminal enactment, by factory and workshop acts, and other health and safety acts, and that section 1 (5) of the bill made special reference to the fines applied for the benefit of the injured workmen, and provided that the act should in no way restrict proceedings for

such fines. In regard to insurance, it was stated that employers had always been able to insure; that want of care would affect employers' pockets, as insurance companies would differentiate rates; that they saw to it that machines were well guarded; that it was cheaper, however, not to insure at all, which was feasible now that compensation was definite and limited.

BURDEN IMPOSED BY THE BILL.

On the question as to where the burden imposed by the bill would and should fall, Mr. Asquith said that in trades with foreign competition it could not be transferred to the consumer, but that it would fall on the employer and workman, with consequent injury to the small employer. To prevent the latter happening and to insure the workman getting his benefits, he advocated placing it on the trade as a whole, as in Germany, and, to prevent injury to the trades with foreign competition, he suggested placing the burden of the bill on the community as a whole. He admitted it would not be crushing to industries generally, and that it would be perfectly fair even if the burden fell on wages.

Other members said that the small employer was being crushed out of existence, and advocated some government scheme of insurance, as well for small employers as for trades with foreign competition like the coal trade, which would be ruined, because they could not stand the burden; the foreigners now (though they already had accident compensation laws) were winning in competition. They also said that mine owners would run the risk themselves of bankruptcy through a mine disaster, since rates of insurance would be so heavy to cover them; it was no help to a mine owner with an explosion costing £80,000 (\$389,320) on his hands to be told that the average cost was 1 per cent.

Mr. Chamberlain answered that the cost fell ultimately on the consumer; that it would not be a burden on wages, but would become a part of charges which in foreign countries were called trade charges, as such as fire insurance, and an addition to the cost of raw material; that the price of wages was settled by the supply of labor and not by these charges, unless it could be shown that every business charge became a charge on wages; that wages in Germany had advanced. He characterized the cry of ruining trades as ridiculous and said that generous employers already made similar contributions, and they were glad their competitors were to be brought up to their level.

The attorney-general said the main criticism, "that the cost would be 2d. (4 cents) a ton on coal," meant that the cost would only be 10 to 20 per cent more than the Asquith bill, and that catastrophes like explosions were not arguable; that the bill covered every-day accidents.

Mr. Broadhurst, who had taken a keen interest in labor matters as a member for twenty years, said that a great principle had been established by the bill, but there was "no answer to where the burden would fall." Sir Edward Clark said the burden would fall first on the employer, second on the consumer, and third on wages, which was fair. It was believed that it would only fall on wages when the bottom price in foreign markets had been reached.

It was pointed out that the income tax showed an industrial profit of £336,000,000 (\$1,635,144,000), so that industry could well bear the bill; that the fears of coal owners in 1860, 1872, and 1877 had not been borne out by subsequent facts; that the bill, in reality, was not a serious burden, as improving the conditions of labor by shortening hours, etc., always benefited a trade; that the charitable donations of employers, who voluntarily did as much now, would be saved.

COST OF THE BILL.

The cost of the bill to the trades involved was urged as the strongest argument against it. Mr. Chamberlain believed that on the basis of the government experience, 1 per cent on the wages in coal mining would cover the cost, and one-fourth of 1 per cent in factories, less the cost of present charitable payments and the cost of the employers' liability act of 1880, and that in textile trades one-twentieth to one-tenth of 1 per cent would be sufficient.

Other estimates advanced showed that the existing English law cost one-eighth to one-fourth of 1 per cent, while for the Asquith bill the cost would have been one-half of 1 per cent, and that the cost would be three-fourths of 1 per cent if this bill passed.

One member, an employer in a large engineering firm, said that examination of his experience for ten years past showed that the result of the bill would be one-eighth of 1 per cent on his wages, and another member, the head of another large engineering firm (also manufacturing iron and steel), reached precisely the same result. Still another member gave figures of one-third of 1 per cent for a trade involving 15,000 men.

COAL.

On the figures of the Cheshire Miners' Protective Relief Fund the result of practically 1 per cent of wages on coal was reached, but other estimates varied from two-thirds pence (1.35 cents) a ton (Professor Merivale, Newcastle) to as high as 3d. (6 cents) a ton (Sir William Lewis, South Wales) and from 1 per cent on wages (Government) to 4½ per cent on wages (Mr. Neison), and it was said that 2d. (4 cents) a ton would ruin the trade. The Government answered that Germany now paid 2 per cent, and Lord Salisbury pointed out that freights varied from 5s. 11d. to 8s. 3d. (\$1.44 to \$2.01) a ton, so that 2d. (4 cents) a ton would be insignificant and only the equivalent of carrying 4 miles farther, as freight cost one-half pence (1 cent) a ton.

BANKRUPTCY OF THE EMPLOYER.

Bankruptcy of the employer might be caused by a disastrous accident or might arise in the ordinary course of business. In the first event the workman would lose his benefits and in the latter any annuity he was receiving.

To deal with the difficulty of bankruptcy of the employer remedies were urged (1) making the whole particular trade responsible for accidents affecting each individual employer by compulsory masters' combination, like the German system, (2) adopting compulsory insurance, or (3) inaugurating State insurance. It was answered that though a hardship the workman must take his chance; that bankruptcy was just as likely through an action for damages for injuries resulting from negligence as through this bill.

An amendment to allow the substitution of an approved insurance for the liability under the bill was negatived, as the Government could not undertake to certify the solvency of insurance companies.

To deal with the difficulty of losing annuities the payment of lump sums instead of annuities was urged, it being pointed out that those sums could then be invested to produce an annuity.

The Government later accepted amendments to make the undertaker liable to subcontractors' men (sec. 4) and giving workmen a lien on any insurance the master had if the master became insolvent (sec. 5), but refused an amendment to make him a preferential creditor on the insolvent master's total assets.

CHOICE OF REMEDIES AND LIABILITY OF EMPLOYER.

The bill left a choice of remedies to the workmen—i. e., of claiming at his option under the bill or suing under the common law or under the employers' liability act of 1880—but did not leave the employer liable to pay compensation both independently of and under the act. (Sec. 1 (2) (b).)

It was the intention in passing the bill to restrict the workmen's rights at common law and under the employers' liability act of 1880 somewhat in inserting the words "personal" and "willful" (personal negligence or willful act of the employer or of some person for whose act or default the employer is responsible). Mr. Asquith moved to omit those words and leave the old rights intact, but Mr. Chamberlain, who had said the bill distinguished between "moral, technical, and criminal" negligence, refused to sanction the omission, saying the old remedies were only left for cases of moral negligence and liability—i. e., where there was deliberate and peculiar negligence corresponding to the serious and willful misconduct which defeated the claim of the workman. However, the words have not limited the previous rights to any extent. Mr. Ruegg, who discusses the point in his treatise, says: "None of the workmen's rights, either under the employers' liability act of 1880 or at common law, are taken away by the workmen's compensation act." As the act of 1880 also limited the compensation recoverable for death or disablement to three years' wages, Mr. Haldane said, "There would be no incentive to sue under it," and an amendment taking away the existing rights under that act and the common law, but also taking away the limits of compensation under the bill, was lost by only twenty-four votes.

If a workman sued independently of the bill and lost his suit, section 1 (4) provided that he should not thereby lose his compensation under the bill, but the court should then and there on his request assess it, deducting the costs of suit therefrom, if justifiable, and give a certificate of it, which should be the equivalent of an award under the act. If he proceeded under the bill and failed through any technicality, he could not, however, subsequently sue.

If a stranger was liable for the accident, section 6 gave the workman the option of suing the stranger or of proceeding under the act, and, if he chose the latter course, gave the employer a remedy against the stranger for indemnity.

DEFENSES OF FELLOW-SERVANT NEGLIGENCE AND ASSUMPTION OF RISK.

Amendments to the bill were introduced to eliminate the defenses of fellow-servant negligence and assumption of risk. It was urged that these defenses still applied in the trades not

covered by the bill if suit were brought independently of the bill, and also in the small injuries of less than two weeks' duration excluded by the bill. Mr. Chamberlain pointed out that the amendment would necessarily be limited in effect to the trades within the bill, and that, so far as those trades were covered, the bill practically obliterated those doctrines and in no way defended them; that only a small part of the trivial injuries were traceable to the negligence of fellow-servants. The amendments were lost.

DEFENSE OF CONTRIBUTORY NEGLIGENCE.

The question of eliminating the defense of contributory negligence was a difficult one. Mr. Chamberlain said that, morally, cases caused by the injured's own negligence should not be compensated, but as a matter of expediency, to avoid litigation, they should be.

The Government, however, later approved and passed an amendment to exclude payment for injury to a workman if it was the result of his "serious and willful misconduct" (sec. 1 (2) (c)). Mr. Chamberlain said the wording of the clause destroyed the old doctrine of contributory negligence; but it was unfair to penalize the employer where grossly negligent and not the employee also, and it would tend to prevent accident.

Even this amendment was urged to be contrary to the principle of the bill, and it was feared would open inquiry into the cause of accidents and so promote fictitious defenses and litigation, in an attempt to provide for cases necessarily rare, and it was said that the real beneficiaries, i. e., the family of the negligent employee, were innocent even if he was negligent.

Amendments were then introduced to define serious and willful misconduct, but were negatived, as being a question for the arbitrator in each case. Lord Salisbury, however, said that any breach of rules justifying fine or imprisonment would bar compensation.

ARBITRATION AND LITIGATION.

In furtherance of the Government's purpose to get rid of litigation about accidents of employment and the friction and expense involved, and to devise a simple and inexpensive method of settling doubtful questions, the bill provided (sec. 1 (3)) that on a dispute arising (and then only) it must be settled by arbitration, and the decision of the arbitrator be registered as a judgment, in the way provided in the second schedule (1), (2), (3), namely:

First. By a committee formed by the workmen and their employer for the purpose. This committee might settle the matter or refer it to a single arbitrator.

The Government said the workmen would predominate on the committee or refuse to form a committee.

Second. If there be no committee, or if the committee is objected to by either party before it meets, or if the committee fails to settle the matter or refers it, by a single arbitrator agreed on by the parties.

Third. In the absence of agreement on an arbitrator, then by the county court judge of the district sitting as an arbitrator without fees.

Fourth. If the county court judge is unable to act, then by an arbitrator appointed by him (paid by the State).

APPEALS.

The right of appeal was limited to reduce litigation. There was no appeal from the arbitrator on questions of fact, but he might, if he saw fit, submit questions of law to the county court judge (second schedule (4)), whose decision was final, unless either party appealed direct to the court of appeal. At first appeal was not contemplated, but the appeal on the law to the court of appeal was admitted as necessary to reduce the numerous county court decisions to authoritative general principles. It was then intended that such appeal should be final, but though no appeal to the House of Lords lies for Scotch and Irish cases, it has been decided that it does for English cases.

COSTS.

The payment of the cost of arbitration by the State was urged, but the Government said so doing would promote litigation. Second schedule (6) therefore leaves the costs to the discretion of the arbitrator, but limits them to the ordinary county court costs, none to be paid prior to the award (second schedule (11)).

REGISTRATION.

Second schedule (8) provides that all agreements and decisions by committees or arbitrators shall be recorded by the registrars of county courts as judgments.

LAWYERS.

Lawyers were entirely barred from the proceedings at first, but before the passage of the bill the clause barring them was eliminated on the recommendation of the attorney-general, as

otherwise the conduct of them would fall into the hands of advisers of a low type. Mr. Chamberlain said he had changed his mind on the point and approved the change, as their fees were restricted, and a clause (second schedule (12)) was inserted controlling their fees, in the discretion of the arbitrator and by the court taxing scale. Any party could appear in person as advocate, instead of lawyers, and appearance was also permitted, on leave of arbitrator, to others, including trades-union secretaries, etc., but without any right to fees.

DOCTORS.

The estimate of the disability sustained being one of the most important questions of the bill, it was provided (first schedule (3)) that a workman, on giving notice of accident, must submit himself for examination by the employer's doctor, and on refusal to do so his benefits were to be suspended. During disability he must again submit himself for examination, if required, with the option, however, if he objected to the doctor or his certificate, of submitting himself to examination by one of the doctors appointed by the secretary of state (first schedule (11)), the certificate of the doctor appointed by the secretary of state to be final, and his fees to be paid by the state, as also those of other doctors appointed under the same authority "to report on any matter arising in the arbitration" (second schedule (13)).

Against this whole system of arbitration it was urged in debate that arbitration was really the equivalent of litigation, and that in the previous year in Germany there had been 38,000 appeals from associations of employers and 12,000 appeals to Berlin, but the government felt that the bulk of accidents would not need to be arbitrated, and that the arbitration machinery was simple and would save expense.

COMPENSATION PAYABLE.

The benefits or amount of compensation under the act were based on the wages earned by the injured. It was pointed out in debate that this worked a hardship on children permanently injured, as their wages are small.

It was suggested that, if based on the wages at the time of the accident, that might prove too little or too much, so the average weekly wage was fixed upon as a basis. For the three years' death benefit, if deceased had not been under the same employer for three years, "156 times his average weekly earnings during the period of his actual employment under the same employer" was fixed by the first schedule (1) (a), and for the incapacity benefit, the average weekly wages over twelve months or such less period as he had been employed by the same employer, was fixed as a basis by the first schedule (1) (b).

DEATH BENEFITS.

Where the deceased leaves persons wholly dependent, the first schedule (1) (a) (i) provides a compensation equal to three years' earnings, but not less than £150 (\$729.98) nor more than £300 (\$1,459.95).

Where the deceased leaves persons partially dependent, first schedule (1) (a) (ii) provides a compensation of what may be agreed on or determined by arbitration as reasonable and proportionate to the injury to the dependents, but not more than three years' earnings nor £300 (\$1,459.95).

Where deceased leaves no dependents, first schedule (1) (a) (iii) provides reasonable medical and burial expenses up to £10 (\$48.67).

An amendment to make the death benefits equal, whether there were any dependents or not, on the ground that inequality would injure married men and prevent their employment, was lost, Mr. Chamberlain pointing out that the friendly societies had the same distinctions without that result.

The dependents were limited (sec. 7 (2) (a)) to the persons mentioned in the fatal accidents act, 1846, i. e., to wife, husband, parents, and children (an amendment to add brother and sister having been negatived, as the government would not extend the scope); and questions as to dependency and amounts payable therefor to be arbitrated in default of agreement. (First schedule (5).)

The minimum sum being omitted from the first schedule (1) (a) (ii), dealing with partial dependents, compensation to parents for the death of a child who contributed to the family fund could be properly restricted to the pecuniary loss occasioned, and be fixed by the arbitrator or otherwise at a proper proportionate sum instead of allowing the family to gain by the death. The same rule applied to amounts payable to other partial dependents, the attorney-general saying that they got nothing unless they suffered pecuniary loss through the death.

INCAPACITY BENEFITS.

For injuries causing incapacity, temporary or permanent, and total or partial incapacity, the first schedule (1) (b) provides for a compensation, after the second week, up to a limit of £1

(\$4.87) a week, of not exceeding 50 per cent of injured's average previous weekly earnings.

In fixing the amount of compensation actually payable within those limits (which is done by agreement or arbitration), clause 2 provides that regard should be had to the difference between his earnings before and his ability to earn after the accident.

LUMP-SUM PAYMENTS.

Before adopting the above benefits there was much discussion in debate as to the merits of adopting lump-sum and weekly payments, respectively, as the benefits under the bill.

By those advocating lump-sum payments it was said that the benefits under continued weekly payments would aggregate more than the benefits for death; that payment of a lump sum would be better for a man; that investments of lump sums were possible which would prevent loss of benefit through the employer becoming insolvent; that the continuance of weekly payments during incapacity would be hard on employers; that lump sums would facilitate the employer obtaining insurance.

Amendments were introduced, but lost, making the benefits of the bill for death and permanent injuries lump-sum payments, like an ordinary accident-insurance policy, namely, a definite sum down, three years' wages for death or permanent total disablement, and six months' wages for permanent partial disablement.

It was pointed out that payments of lump sums to widows, dependents, and persons unaccustomed to manage money would result in loss and its being quickly squandered, thus defeating the object of the bill. Mr. John Burns strongly advocated weekly payments in lieu of lump sums. Other members said lump sums would bankrupt and ruin employers.

Mr. Chamberlain said that the permanent incapacity weekly benefit might be hard on an employer if he had no insurance, but if he had insurance it would be trivial; that the limits enabled insurance to be got. He said that disability payments should be more than the death payments, as beneficiaries got the latter.

The views as to lump sums and weekly payments were compromised as follows:

First. By giving authority to the arbitrator in his discretion to invest the lump sums awarded (see First Schedule (6) to (10))—i. e., by agreement or by order of arbitrator a dependent's compensation may be either invested or not. If invested, to be either by way of deposit in or purchase of annuity through the Post-Office Savings Bank, subsequently to be drawn out only on written order of the treasury or county court judge, and,

Second. By providing for liberty to commute the weekly benefits payable.

COMMUTATION OF BENEFITS.

Mr. Chamberlain introduced a clause allowing a commutation of future weekly benefits to be agreed upon, after weekly benefits had been paid for twelve months, either at the request of the workmen or at the request of the employer, limiting such commutation amount, however, to three years' full wages.

Strong argument was introduced against this proposal, pointing out that commutation reduced benefits under the bill, and Mr. John Burns said it would after seven years "relegate the injured people to charity."

For the clause arguments were advanced that, as the indefinite continuation of weekly payment was defined by commutation, insurance would be cheaper; also, that commutation would protect workmen against insolvent employers. The Government said that commutation was very different from putting a stop on weekly payments, since the sum paid down in commutation would purchase an annuity.

When this clause, however, reached the House of Lords they took away from the workmen the power to commute, and as a quid pro quo eliminated the limit of three years' full wages imposed on the amount of commutation. The House of Commons approved this change.

The first schedule (13), therefore, provides that where any weekly payment has continued for not less than six months the liability therefor may be redeemed by the employer by payment of a lump sum, fixed by agreement or arbitration, which may be ordered to be invested or otherwise applied by the committee or arbitrator.

REVIEW OF AWARD.

First schedule (12) also provides that either the master or the workman may, on request, have any weekly payment reviewed, so that it may be ended, diminished, or increased according to the facts then found by agreement or arbitration.

MANNER OF PAYMENT.

The first schedule (4) requires death payments to be made "to the legal personal representative," and if none, "to or for the benefit of his dependents;" and if no dependents are left,

"to the person to whom the expenses are due;" while the Second Schedule (12) specifies that compensation shall be paid on the receipt of the person to whom it is payable. The Second Schedule (10) empowers the county court to make its necessary rules.

NOTICE OF ACCIDENT AND CLAIM.

It was urged that requiring notice of accident and claim would protect employers against bogus claims, and would protect employees against losing their claims; that notice should be given before workmen left the service.

On the other hand, it was said that requiring notices would cause litigation, as attorneys would urge they were necessary in order to have the notices properly given, and further, that no notices were required under the general law of negligence.

After considerable debate, following the precedent of the employers' liability act of 1880, the act provides (sec. 2 (1)) for notice of accident as soon as practicable thereafter and before the workman has voluntarily left the service, while claim must be made in six months from date of accident, if not fatal, and in six months from date of death, if fatal; but to prevent the claim of the workman from being prejudiced through want of or any defect or inaccuracy in notice of accident by a bona fide mistake or other reasonable cause (as through a trivial accident later developing into a serious one), the section provides that such want of or defect in notice shall not be a bar if it is found in the claim proceedings that the employer is not prejudiced in his defense by such want or defect or that it was occasioned by mistake or other reasonable cause.

CONTRACTING OUT.

Contracting out was the question on which the Asquith bill had been wrecked, and was debated at length. The Government introduced a clause into their bill on the lines of the Dudley amendment to the Asquith bill (which the House of Commons had then rejected). The home secretary said that under it the workman could not deprive himself of the benefits of the bill, but was to have freedom to arrange his own wants in his own way, provided that such arrangement was not less favorable to him than the benefits of the bill; in the words of Mr. Chamberlain, that he should have freedom to "contract out" provided he was "not a pecuniary loser" by so doing; that the Government held to the principle of contracting out with that proviso.

To effect this, the bill as passed repealed existing contracts by section 9, but by section 3 permitted the employer to substitute, by contract with his workmen, any "scheme of compensation, benefit, or insurance," which was certified to beforehand by the registrar of friendly societies (a permanent Government official), after taking steps to ascertain the views of the employer and workman, as "not less favorable to the general body of workmen and their dependents than the provisions of this act;" but save that, the bill was to apply notwithstanding any contract to the contrary.

Section 3 (2) provides that the registrar's certificate might expire at the end of a limited period of not less than five years, and section 3 (3) prohibited the issue of a certificate for any scheme "which contains an obligation upon the workmen to join" as a "condition of their hiring." Section 3 (4), moreover, made it the duty of the registrar to examine into any complaint on behalf of the workmen that the scheme is no longer so favorable or is not being fairly administered, and so forth, and revoke his certificate if good cause exists, unless such cause is removed.

It was urged by the opposition (Mr. Asquith) that a workman should not be permitted to waive advantages given in the interest of the community, but it was answered there was no objection, if he gets better terms. Other objections to the clause were that the schemes would localize men; that the clause would injure friendly societies, as the workmen's contributions to schemes would take the place of contribution to the benefit and friendly societies whose income was mainly from that source; that the workmen and trades unions were against it.

It was answered that the clause would give a great impetus to friendly societies and would allow existing associations to use their own machinery and go further than the bill, since employers would figure out the cost of accidents over five to ten years, and contribute the necessary amount to the existing associations, allowing the workmen to manage them; that the latter would deal with the slight accidents themselves and prevent malingering, and reduce the cost of accidents so as to have more to spend on their sickness features. It was also urged that friendly societies were based on considerations other than pecuniary ones, and that the clause compelled the registrar to ascertain the views of workmen and employers before certifying a scheme.

Mr. Chamberlain introduced an amendment to make the employer liable if the funds of the scheme failed, but against this it was urged that such a liability would prevent the clause

being used, as employers would consider it a "heads you win, tails I lose" clause.

Mr. Balfour said the employers' inducement to form schemes was the establishment of better relations with their men, and the workmen's inducement to get more money from their employers. But the clause guaranteeing the solvency of the fund was ultimately eliminated by the House of Lords on the ground that as the workmen would spend the money, it would prevent all contracting out, and the elimination was subsequently agreed to by the House of Commons on the ground that the registrar had to be satisfied that the employers' liability was the equivalent of the bill.

The House of Lords passed an amendment allowing the registrar to consider as a basis for his certificate all the circumstances of the case, which was disagreed to by the House of Commons, however, and failed.

EXPERIENCE OF WORKING OF THE BRITISH WORKMEN'S COMPENSATION ACTS—PRACTICAL WORKING OF THE ACTS AND RECOMMENDATIONS.

In November, 1903, a committee was appointed by the home secretary to inquire and report to the home office—

(1) What amendments in the law relating to compensation for injuries to workmen are necessary or desirable, and

(2) To what classes of employments not now included in the workmen's compensation acts those acts can properly be extended with or without modification.

This committee consisted of the following gentlemen: Sir Kenelm Digby, K. C. B. (chairman); Sir Benjamin Browne, D. C. L. Memb. Inst. C. E.; His Honor Judge Lumley Smith, K. C.; Capt. A. J. G. Chalmers, of the Board of Trade; Mr. George N. Barnes, secretary of the Amalgamated Society of Engineers, and Mr. Robert Reid Bannatyne, of the home office (secretary).

The committee utilized information furnished by the labor department of the board of trade and other Government departments, by inspectors of factories and mines and other Government officials, and by the judges of the county courts. It took extended evidence from representatives of both employers and workmen in the chief industries, from employers' associations and trades unions, from mutual and ordinary insurance companies, and from numerous other sources. It made an exhaustive report in August, 1904, which has been accepted as a basis for future legislation, and its evidence and findings are therefore referred to at length here.

SCOPE OF THE ACTS.

The restriction of the scope of the acts to a few industries was carefully considered by the committee, and they concluded that the experience justified extension to other industries.

The act of 1900 including agriculture had taken away the dangerous employment test for inclusion, and that test could not therefore be adopted as the general principle in extension to other occupations.

The two alternatives presented were to amend the acts (1) by a general extension of their scope to cover all occupations with certain definite exceptions, such as (a) small employers, (b) some forms of casual labor, (c) employments which are not by way of trade or for the purpose of profit, as limited in the factory acts; or (2) by extension to further specially specified industries.

The committee recommend the latter course, suggesting inclusion of any industries which were dangerous, and also those to which the advantage of the act could be applied without imposing an undue burden on the employers, provided that the industry to be included was not one composed largely of small employers who did not insure. As to the limitations on the employments already covered in the act which had been found to be unsatisfactory, they recommended changing section 7 (1) limiting the act to accidents "on or in or about" the places or works, to cover accidents "while on the business of the employers," since they found that, though they were intended to limit responsibility to places which were under the employers' control, those words of the act had resulted in dissatisfaction and incongruity, a mechanical engineer, for instance, being covered in the factory, but not while superintending erection for his employer. They recommended covering all building, all quarries, and practically all laundries (except only those without more than two persons outside of the family). They also recommended including under the definition of engineering, road making, well sinking, and other excavating operations, also the construction of telegraphs, telephones, and other electric appliances.

TRADE DISEASES.

The committee did not, however, consider it advisable to include trade diseases, thinking it better to leave those to special legislation for sickness, and to still leave to the courts such questions as "whether anthrax is an accident."

SEAMEN.

Employers urged the hardship and impracticability of including seamen under the act, owing to prolonged absence of ships and absence of owners' control, frequent changes in crew, and consequent impossibility of securing evidence, as well as the fact that the "whole venture is frequently imperiled through act of God," and consequently compensation should be undertaken by the State. On the other hand, Mr. Havelock Wilson, who has strongly advocated the cause of seamen, urged that exactly the same conditions as to compensation should prevail at sea as on shore. He testified that shipowners were heavy insurers and could bear a loss.

The committee found that as the principle of the act established compensation, whether blame existed or not, the absence of control, etc., gave no reason (nor did they find any) why the principle should not extend to those afloat as well as to those on land. However, after considering the construction of the existing merchants' shipping act, which already amply provided for minor injuries, they recommended an extension of that act to cover death and permanent total and partial disablements of seamen rather than an extension of the workmen's compensation act. As coasting and fishing vessel owners frequently had no assets if their vessels were lost, and as the lives of master and crew frequently had to be risked at sea in the cause of humanity, the committee recommended compulsory insurance with State contribution for seamen, recommending, however, further inquiry as to the fishing trade.

CARRIERS.

They recommended inclusion of all carriers by land or inland navigation.

WORKSHOPS.

They recommended inclusion of the larger workshops, excluding all employing not more than five persons.

SHOP ASSISTANTS.

They did not recommend inclusion of shop assistants, unless there was a general extension of the act, as this was not a hazardous occupation, and "there would also be considerable difficulty as regards small shops."

DOMESTIC SERVANTS.

For a similar reason, as well as on the ground of not further extending the principle to persons not employed in trade or for purpose of gain, they did not recommend the inclusion of domestic servants, unless under special circumstances of danger, such as coachman, etc.

PUBLIC SERVANTS.

As to public servants, the committee saw no reason for treating them differently from other work people.

DEFENSE OF SERIOUS AND WILLFUL MISCONDUCT.

Section 1 (2) (c).—The evidence of both employer and workman indicated that this defense had been in practice infrequently enforced or sustained by the courts (perhaps with the exception of coal-mine cases), though employers who desired a more specific definition had possibly suffered hardship from it rather than the men. The committee felt it better to leave it open to the arbitrator to look at the surrounding circumstances whenever the defense was set up, and they, therefore, did not feel justified in recommending any change in the wording or clause.

TWO WEEKS' IMMUNITY—MALINGERING.

Section 1 (2) (a) and first schedule (1) (b).—In the evidence before the committee from the workmen's side it was almost universally represented that a reduction of the period of nonpayment from two weeks to two or three days, and in the case of serious accidents dating the compensation back to the day of the accident, would save much hardship, especially in those trades where women were employed, where pay was low (in which connection it was stated that 150,000 railroad employees earned less than 18s. (\$4.38) a week), or where the injured people were not members of any friendly society; while from the employers' side it was shown by figures submitted that the two weeks' nonpayment prevented malingering by workmen absenting themselves from work for injuries that were trivial and more or less unreal.

The committee concluded that while it was true that a large number of workmen were put to suffering by this provision, if it were eliminated a large number who had also allowances from friendly societies, etc., would prolong the period for trivial accidents, which it was impracticable for employers to supervise, and that dating back the compensation, if the disablement lasted for two weeks, would also produce malingering. Again, having regard to the additional cost involved of including all cases during the first two weeks, shown by insurance companies to be from 25 to 50 per cent, varying with the different trades, and by the registrar of friendly societies for the schemes he

had certified to be 39 per cent of the total cost, while dating compensation for disablements lasting two weeks back to the day of accident produced estimates of a somewhat less addition to the cost, the committee found no sufficient reason to justify them in recommending a departure from the principle of two weeks' immunity deliberately adopted by the legislature.

ACTS OF STRANGERS.

Employers liable under the act being limited by section 7 (1) to "undertakers," with a view to prevention of the workmen's loss of benefits or evasion of employers' responsibility by subcontracting, it was found that section 4 of the act, which made the undertaker liable to subcontractors' men, might become a dangerous extension of liability if the act were changed to cover work being done off the premises of the undertaker (for instance, it might make a cloth manufacturer liable to the cloth dyers' men), and the committee recommended avoiding the extension of undertaker's liability away from his works.

It was also pointed out that while it was the intention of the act (sec. 4) that the undertaker should have an indemnity over against the actual employer of the injured man, technical interpretation of the wording of the act had precluded him in many cases from getting it, as in the case of railways, factories, mines, and quarries. The committee therefore recommended treating the undertaker more as a surety in any judgments rendered, etc., and making him, in fact, merely a guarantor of compensation payable by subcontractors.

ACT OF 1900.

This act, in adding agriculture, was different from the act of 1897 in that it attempted to exempt small employers and was not confined to trade or industry but extended to persons in private employment.

One difficulty found in the application of this act was the legal interpretation of the limitation of the act to employers who habitually employ one workman, and it was recommended that this be changed to "employ throughout the year at least one workman in agriculture;" it was also recommended that the casual laborer, including harvesters, etc., at hay time, be not covered. Another difficulty was that the small farmer did not insure, with consequent danger of ruin to him financially and failure to compensate his workmen.

PREVENTION OF ACCIDENTS.

As to the effect of the workmen's compensation act in the direction of the prevention of accident, the committee found it extremely difficult to estimate it.

The evidence of the chief inspector of factories showed that the act somewhat tended to eliminate the probability of recovering penalties for failures to guard machines, etc., owing to the fact that a provision in the act (the latter part of section 1 (5)) dealt with penalties and limited the amount of their payment to the injured workmen. Other evidence showed that there had been some tendency to make employees more careless.

On the other hand, a coal mining employers' association said that the act had resulted in a great diminution of real accidents, namely, serious cases, but that it had been accompanied by a great rise in obscure accidents, namely, cases like sprains and trivial accidents; and other testimony was to the effect that increased precautions to avoid accidents had resulted.

The committee, on the whole, came to the conclusion that the act had not had any marked or ascertainable effect one way or the other upon the safety of the workmen. They, however, recommended the repeal of the latter part of section 1 (5), as they did not consider there was any serious objection, where negligence caused an injury, to the injured workman receiving additional compensation by having a penalty, recovered under criminal enactment, paid over to him in whole or in part by the secretary of state.

BURDEN OF THE ACTS.

The committee took testimony as to the extent of the pecuniary burden resulting from the acts, with a view to seeing that no excessive burden was thrown on the employer, with consequent injury to the trade and ultimate loss to the workmen.

They expressed the opinion that employers might be reaping an advantage from having a defined obligation by law imposed on all employers, instead of trusting to moral obligations, which were met by some employers and not by others; that in some instances employers threw the burden on the consumer (as, for instance, they found stevedores to be including the cost in their contract prices); that when labor was unorganized it was sometimes directly thrown upon wages (which they suggested might be checked by extending legislation in line with the Truck acts). One of the members of the committee, Sir Benjamin Browne, had estimated that the act affected trade profits to the extent of reducing a 5 per cent profit on capital

to 4½ per cent, saying also that English manufacturers had so much competition with foreign trade that it would restrict employment and fall, as permanent burdens do, on workmen. The committee, however, believed from the evidence submitted that so far as employers were concerned their chief desire seemed to be for greater certainty in their liability, as certainly made insurance premiums less, and they found that the steady growth of the burden of the permanent weekly payment benefits was a difficulty preventing employers arriving with certainty at the cost, as these necessarily go on accumulating year by year until the point is reached at which the number of new pensioners is balanced by the dropping off of the old.

COST OF THE ACTS.

The committee took the effect on the coal-mine industry as a crucial test of the act. In the evidence before them on the subject of cost one coal owners' mutual insurance association, which had been formed by the large coal owners in the north, after the passing of the act, testified that the cost of all the accidents in their mines had been 0.36d. (0.73 cent) per ton in 1899, increasing to 0.64d. (1.30 cents) in 1903, or a trifle over one-half of 1 per cent on wages in 1899, increasing to nearly nine-tenths of 1 per cent in 1903, the increase being attributed to the growth of the permanent weekly payments. The association itself paid for the cost of supervision and for all legal expenses, as well as for all disasters (accidents involving more than four deaths), and latter for all deaths, leaving the employers individually to pay for nonfatal cases. Another similar association in the Midlands gave similar evidence, namely, that their increase in cost was most marked in the accidents which fell into their classification of nonfatal cases over twenty-six weeks' duration. A similar Yorkshire association, covering 20,000,000 tons of coal raising yearly, testified that their actuary estimated on their experience that the cost, including medical, which was a trifle higher than the first association quoted, would, through the permanent allowances, go nearly as high as 1½ per cent of wages before reaching the maximum. And a South Wales association, covering 80,000 men, showed that the cost had risen from a little over one-half of 1 per cent on wages in 1900 to three-fourths of 1 per cent in 1903, attributable to the permanent allowances, with a guess that it might reach double the last figure. The committee therefore felt that the rapid growth of compensation in the coal industry, its uncertainty, and the liability to disasters in that trade were reasons for caution in materially increasing the benefits payable under the act.

One cotton-trade mutual insurance association, covering 40,000 work people, originally estimated the cost at one-eighth of 1 per cent on wages for weaving, and three-eighths of 1 per cent for spinning, but found that one-sixteenth of 1 per cent was adequate for weaving, and thought a little more than one-fourth of 1 per cent would suffice for spinning. The Master Cotton Spinners' Association, paying £3,000,000 (\$14,599,500) a year wages, which had estimated the cost of spinning up to one-half of 1 per cent, gave evidence showing a similar cost, though it had secured insurance at less.

A mutual builders' accident insurance company that "insured some thousands of firms," found without, however, reserving for permanent injuries, that the cost was one-half of 1 per cent. A large firm of building contractors courteously related their own experience. They stated that they transfer the cost to the purchaser in their contracts, and that they also protect themselves by contract with their subcontractors against claim by the subcontractors' men, though in practice the latter invariably proceed against the subcontractors.

Ratio of accidents to total workmen employed and of compensation to total wages paid by a firm of building contractors, 1901 to 1906.

Year.	Accidents.		Compensation for accidents.	
	Number.	Per cent of total workmen.	Amount.	Per cent of total wages paid.
1901	84	6.6	\$1,645	0.15
1902	72	4.8	3,601	.68
1903	84	5.4	3,256	.50
1904	114	7.8	4,034	.64
1905	133	8.2	5,358	.75
1906	94	6.6	7,412	1.19

As to the regular commercial insurance companies, the committee quoted especially the evidence of Mr. S. Stanley Brown, general manager of a leading company, who said that rates of insurance against accidents charged by an association of these insurance companies, which were at first based on the German and Austrian experiences, had been found too high, and in June,

1899, were reduced one-third, resulting in the percentage of rates on wages shown in the second column of the following table, while his own company's rates for December 31, 1903, are shown in the last column of the table. His company gives the average of all rates charged by them as nearly 1 per cent.

Rate per cent on wages imposed for insurance against accidents in various industries by an association of insurance companies in 1899 and by a leading commercial insurance company in 1903.

Industry.	Rate per cent on wages imposed by—	
	An association of companies, 1899.	A leading insurance company, 1903.
Builders, general	1.25	1.00
Contractors	1.67 to 2.38	1.20 to 2.50
Stevedores	2.38	2.38 to 10.00
Quarries	1.50	1.20
Engineers and iron smelting	1.00	.50 to 1.00
Textiles	.33	
Manufactures, light		.20
Manufactures, heavy		.55

The reports of the same insurance company show an almost steady yearly increase in the average cost of each accident settled, as follows:

Each death case cost £113 (\$550) during 1901, increasing to £117 (\$569) during 1905; each permanent disablement case cost £55 (\$268) during 1901, increasing to £87 (\$423) during 1905, and in 1906 to £97 (\$472); each temporary disablement case cost about £5 (\$24), with little fluctuation during the period.

The committee said that it was through such associations of masters and men, respectively, and the ordinary insurance companies that the financial burden was removed from the shoulders of the individual employer and distributed more or less equally throughout the trade.

The actual cost of the compensation acts to the different trades is not to be had officially, with one exception, that of railways. In the home office returns it is stated that the total amount paid by the railway companies as compensation under the act in the whole country was £118,849 (\$578,379) in 1899, £146,027 (\$710,640) in 1900, £153,928 (\$749,091) in 1901, £144,155 (\$701,530) in 1902, £155,495 (\$756,716) in 1903, and £162,155 (\$789,127) in 1904.

BANKRUPTCY OF EMPLOYER.

It was found that so far, owing to prosperous times and the act being limited to the larger employers, there had been little difficulty from this source; however, the committee felt that the danger of distress to workmen through it happening was very real and should be provided for, especially if the act were extended to cover small employers. They advocated substituting for the personal responsibility of the individual employer the security of a solvent insurance fund. The committee attached great weight to recommendations of statutory regulation of all insurance companies undertaking the risk, such as exist in America, etc., to provide against dangerous competition, and drew attention to the necessity of seriously considering a State or compulsory insurance, in some form or other; especially was this necessary to enable the workmen of the small employer to get his benefits, since through ignorance or inability his employer failed to insure in many instances.

The committee concluded that this evidence showed that the burden on employers had as yet not been excessive, but that it tended to increase. This suggested caution in legislation increasing it and especially in adding to its indefiniteness or uncertainty.

CHOICE OF REMEDIES AND LIABILITY OF EMPLOYER.

The committee reached the conclusion that the provisions of section 1 (2) (b) and (4), permitting choice of the remedies of suit under the employers' liability act of 1880, or common law, or proceeding under the workmen's compensation act, and also allowing the benefits under the latter to be assessed on failure of suit under the former, had worked largely to the disadvantage of both employers and workmen and were responsible for a large amount of illegitimate legislation, in that they had resulted in the illegitimate use or threat of use against the employer of the remedies at common law and under the employers' liability act of 1880, either for the purpose of benefiting the unscrupulous lawyers, who could thereby run up the costs, or for the purpose of improperly forcing settlement under the workmen's compensation act, and that the judge's power to assess the costs of an unsuccessful suit against the compensation under the workmen's compensation act was in practice rarely used and was therefore ineffective as a check. That this abuse had assumed somewhat extended proportions was shown in the fact that, according to Mr. Troup's testimony, in litigated cases in 1902 the cases under the employers' lia-

bility act amounted to about half the workmen's compensation cases in Scotland, as against one-third in England, and that the costs under the employers' liability act averaged £25 (\$121.66), as against £11 (\$53.53) under the workmen's compensation act.

A simple remedy for these abuses would have been to repeal the employers' liability act and common-law rights or consolidate them with the workmen's compensation act; however, while admitting that the testimony showed that the advantages to workmen were great of proceeding under the workmen's compensation act in preference to taking the risks, uncertainty, and costs of suit under the old remedies, they believed repeal of those old remedies was not justified, as there were cases where they were the more appropriate remedies, though they anticipated they would fall more and more into disuse.

Another suggestion considered was to grant higher benefits under the workmen's compensation act where there was much pain or suffering, disfigurement, extraordinary expenses of cure, or wrongful act or default of employer. This they believed would only be reenacting the employers' liability act as part of the workmen's compensation act and would be more of an incentive to attorneys to litigate in a larger number of cases, on the chance of securing the higher benefits than the existing election, which tended to prevent litigation somewhat.

Therefore, to prevent these abuses without preventing recourse to those old remedies in cases where they were really appropriate and at the same time without inflicting any real loss upon the workmen, the committee recommended the repeal of section 1 (4), which gave the court power to assess compensation after unsuccessful suit under the employers' liability act of 1880 or at common law and the adoption of provisions enabling employers to apply to the judge for a stay of any such suits (commenced or threatened) on evidence that the workman had an adequate remedy under the workmen's compensation act; also, that a plea to that effect might be made available as a defense to suits under the employers' liability act of 1880 or at common law.

This would leave it open to the court, if it thought the workmen's compensation remedy inadequate or that there was good ground for a suit at common law or under the employers' liability act of 1880, to refuse the application or, if it thought otherwise, to stop the suit.

DEFENSES OF FELLOW-SERVANT NEGLIGENCE, ASSUMPTION OF RISK, AND CONTRIBUTORY NEGLIGENCE.

The committee said that the principle of the workmen's compensation act was essentially different from that on which the old remedies were based, and that it had largely superseded the old remedies and would in future entirely supersede them; that it was, therefore, undesirable to bring those old remedies into more active operation, which would result from any attempt to abolish the doctrine of fellow-servant negligence, and so forth, and that so doing would open the flood gates to a stream of litigation without affording any more effective remedy than now provided by the workmen's compensation act. They therefore recommended leaving the common law and employers' liability act unchanged, on the expectation that they would gradually cease to be used.

The wisdom of this is illustrated by the home office returns of the figures for death, which is more likely to result in suit than less serious injury, given in the following table:

Average damages in case of death under employers' liability act and average compensation under workmen's compensation acts, 1899 to 1904.

Year.	Employers' liability act.		Workmen's compensation acts.	
	Cases of death.	Average damages.	Cases of death.	Average compensation.
1899.....	14	\$556.18	219	\$842.29
1900.....	7	772.94	245	785.37
1901.....	9	436.77	301	916.75
1902.....	8	561.55	264	817.59
1903.....	14	*1,198.44	323	880.84
1904.....	9	575.54	451	864.03

* Including two cases of special damages.

The average amount of lawyers' costs was approximately £25 (\$122) under the employers' liability act and £13 (\$63) under the workmen's compensation act.

ARBITRATION AND LITIGATION.

The committee inquired as to how far criticism of the act was justified on the score of litigation and how far it was due to preventable causes.

They found that the vast majority of cases were settled by agreement, without litigation.

Secretaries of the leading trade unions gave details showing that many unions had all accidents reported, and settled the

bulk of the cases for the men without any cost, and that some cases of difficulty were settled by their lawyers. The use of lawyers varied somewhat in the different trades, as did the arbitration and court cases, the latter being covered in most trades by 5 to 10 per cent of the cases. In the South Wales Miners' Federation (130,000 men) the number of court cases was said to be "infinitesimally small," and then were cases only where a question of principle existed to be settled, or a dispute as to facts, although there had been several disasters in the trade. Employers' associations and mutual insurance associations corroborated the trades union testimony that 95 per cent of the cases were settled out of court. Other insurance societies and two leading railways said that only 1½ per cent of claims were arbitrated, the rest being settled by agreement. The secretary of the Cotton Trades' Insurance Association (formed after the 1897 act) said that his practice was to settle with the trades union secretaries; that he had only 1 per cent of cases in court, and that only two cases had been brought under the employers' liability act of 1880, and those in the first year of the association's existence; that it was in the nonunion trades that men went to attorneys, who ran up the costs.

The limitations of employment covered by the acts were found to be responsible for most of the litigation. In 1902 forty-three appeals out of ninety-five turned on the question as to whether the employment was or was not within the act. The committee felt that the inclusion of all building operations under the act, even the small builders, would obviate litigation arising out of the limit to over 30 feet in height, the requirement of scaffolding and the employment of machinery, etc., and that the removal of the 20 feet deep limit from quarries and the removal of the special requirements as to laundries would also obviate litigation.

Definitions which had also caused litigation were considered, such as "accidents arising out of and in the course of the employment." No change as to these was recommended, however, as they had been so often judicially passed on and were best left to the courts. The committee had no recommendation to make as to factories proper, railways, or mines. As to constructive factories, although the House of Lords' decisions had modified the difficulties as to loading and unloading on docks, the committee recommended that employment on docks, wharves, quays, and warehouses be specifically stated in the act, covering also the incidental machinery or plant, and they recommended a change in the definition of engineering.

The committee drew especial attention to the fact that in the one district (the Durham coal mining district) where under second schedule (1) a committee of employers and men had been formed and exercised their statutory power of arbitration, a most excellent example of satisfactory reduction of litigation was shown. It resulted in the benefits being paid automatically, even the committee having, during five years, to pass only on 205 cases out of 28,000 nonfatal cases and on 204 out of 664 fatal cases, while of these only 29 nonfatal and 27 fatal cases were taken into court, and some of those were accidents in which the men's own committee told them they had no case.

ARBITRATION PROVISIONS.

It was found that the arbitration by the system of committee of employer and workman (second schedule (1)), which, however, had not been extensively used, had been most successful where used, practically rendering the operation of the act automatic, nor was there any complaint of the provision (2), that the parties appoint a single arbitrator. But the provisions (2) and (3) for use of the county-court judge or his appointee as arbitrator, had resulted in the arbitrations thereunder being practically county-court trials somewhat simplified; however, no recommendation was made to change that.

A strong recommendation of change was, however, directed to the clause (second schedule (8)) as to registration of memoranda of agreements, with a view to controlling the agreements made; it took the form of placing a duty on the employer to register them, empowering the court to enforce a penalty for failure to do so, and rendering them, if unregistered, unavailable as a defense to future claim for weekly payments.

APPEALS.

The creation of a special court (two county-court judges and one permanent judge) to hear appeals on both law and fact, with appeals therefrom to both the court of appeals and the House of Lords, was suggested by Mr. Ruegg, in order to obviate the delay of appeals, and bring the different county court decisions more into harmony. The committee, however, recommended that no appeal be allowed on questions of fact, and no change be made except in the direction of unification of decisions on law, by permitting appeal on law to the House of Lords from both Scotland and Ireland, the chief dispute on fact being as to serious and willful misconduct, which was dealt

with by the arbitrator. Greater facility of appeal would, they believed, add to delay and expense.

DOCTORS.

As the clauses of the act dealing with doctors (first schedule (3), (11), and second schedule (13) made provision for calling in the official medical referee in arbitration proceedings only after the other medical testimony had been heard, practically no use was made of him, nor was he much used when a review of compensation being paid was contemplated, as then it was only optional with the workman to go to him at his own expense. The committee therefore recommended that the medical referee should be used at a much earlier stage; that after the examination by the employer's doctor, the result should be communicated to the workman, in order that the workman might then be examined by his own doctor, and if a dispute existed, it should then and there be submitted to the medical referee before the disputed case goes to court, and that his decision should be final for any subsequent proceedings. One modification, however, was suggested for new accidents, namely, of leaving to the discretion of the registrar, after the reports of both the doctors of the employer and the workman had been filed with him, the question of using the medical referee.

It was thought advisable to leave the judge his power of summoning the medical referee to sit with him as assessor in the actual trial if a case reached the court.

It was further suggested that the medical referee should have the duty of giving employment certificates as to aged, infirm, or maimed persons for their special rate of compensation, which the committee had recommended.

As to the position of the medical referee himself, it was strongly urged that he should be a public officer rather than a medical man in practice, paid by salary, not by fees. In other words, a civil servant in the permanent civil service—one to act for each district, and to prevent making him a partisan by his employment either by one side or the other, that he should have his salary paid by the State.

The committee found that where the organization of the master and men was most complete there was the least amount of litigation, the workmen who had no organization to resort to necessarily having to call in the assistance of lawyers. They concluded that authoritative decisions being necessary the actual litigation produced by the act had been very small, and they felt that providing more effective machinery for settling doubtful questions and increasing the functions of the medical referee would further reduce it.

From the official figures of the proportion of cases that reach the courts, it will be seen that in the home-office statistics for 1904 it is stated that even in cases of death (including cases finally settled out of court, and also those in court solely to apportion benefits among beneficiaries) not 25 per cent came in anyway before the courts, while probably less than 1 per cent of incapacity cases did.

COMPENSATION PAYABLE—THE BENEFICIARIES.

As to the persons entitled to receive compensation, though the definition of workman in the act was wide (covering all employees, whether in manual labor or otherwise, etc.), the committee recommended the inclusion of brother and sister in the beneficiaries, in addition to descendants and ancestors (i. e., the English definition of dependents). This was opposed by employers, who said it would tend to increase their difficulty, in that they now had to pay compensation exceeding what was necessary for the support of dependents, as, for instance, to pay a father earning good wages for the death of a son, provided as a fact the son contributed slightly to the family fund.

Aliens killed or injured within the United Kingdom have the same right of recovery (as have their beneficiaries while resident also) that British subjects have under the act. The committee, however, recommended that the act be made not to extend to beneficiaries who are nonresident aliens, or to beneficiaries who are nonresident British subjects, so as to obviate difficulty in determining the liability involved.

DEATH BENEFITS.

The committee found little criticism, when the deceased left persons wholly dependent, of the amount of the limits payable—minimum £150 (\$730), maximum £300 (\$1,460)—and concluded they had been found satisfactory in practice, and though they found some complaint from employers of decisions as to what constituted partial dependency and awards that disregarded consideration of whether such dependency was for necessities or not, they concluded that no change in that definition was desirable.

INCAPACITY BENEFITS.

Interpretation of the courts as to what constituted average weekly earnings resulted at one time in excluding all casual labor, through the difficulty of reaching an average for a man

employed spasmodically, casual labor covering not only men employed for a job, but large classes, like dock labor. Although the House of Lords reversed this decision, the committee recommended that the duty of "estimating" the injured man's own earnings should be placed upon the judge, guided somewhat by the standard of the district for like employment (as provided by the employers' liability act of 1880), instead of taking the district standard of wages alone, though the latter would be a simpler method. They also recommended an amendment to base it on the net and not on the gross earnings, as the latter often included pay for helpers, tools, etc.

LUMP-SUM PAYMENTS.

Evidence submitted showing the squandering and loss of lump sums paid to widows and the advantage to them and to children of weekly payments in lieu of lump sums, as well as evidence showing the cost to the employer in getting valid releases, led the committee to recommend more elasticity in the powers conferred on the arbitrator in this regard under first schedule (6) by payment of the money into court by the employer and granting the arbitrator a voice in the method of distribution. They recommended that the mode of payment be settled in each case by the county court judge, with power to reduce the amount of any weekly payment to a widow on remarriage, neglect of children, etc., and to decide on the amount, time, and mode of payments to beneficiaries other than the widow, using the office of the county court as the machinery for that purpose whether the amount and compensation was settled by agreement or otherwise.

OFFICIAL COUNTY COURT RETURNS.

The official returns of cases under the workmen's compensation acts, dealt with by county court judges, and their arbitrators in England and Wales, show that in the six years, 1899 to 1904, the average award for deaths where there were dependents varied from £163 8s. 9d. (\$795.37) to £188 7s. 7d. (\$916.75); for total incapacity, from 10s. 11d. to 12s. 2d. (\$2.66 to \$2.96) per week, and for partial incapacity, from 9s. 2d. to 10s. 9d. (\$2.23 to \$2.62) per week, while in 1894 the average lump-sum award for incapacity was £34 12s. 8d. (\$168.54), there being in that year 105 lump-sum against 650 weekly-payment awards.

MINORS.

Both employers and workmen agreed that one-half wages paid to minors permanently injured had proved to be often insufficient compensation. Proposals were made to consider, in fixing compensation, the full wages earned by the highest-grade workmen in the same employ; to fix a higher scale than one-half wages—say full wages; to fix a minimum of 10s. (\$2.43), with power to increase that on reaching 21 years of age. The committee recommended fixing a maximum and leaving it to the discretion of the judge to assess an amount up to that maximum.

OLD MEN AND MAIMED AND DISEASED PERSONS.

The committee found from extended evidence of both employers and workmen that the acts had largely increased the difficulty already existing of old men getting and retaining employment. They found further that employers were being compelled to discharge persons maimed, as, for instance, one-eyed men, and to refuse to reemploy them after accident. While the case of *Lysons v. Knowles* (1 Q. B., 780; 69 L. J. Q. B., 449; 82 L. T., 189), decided by the House of Lords, finally settled that casual labor was not excluded from the act, it was felt, too, that this decision would further operate to bar old men from employment.

This the committee considered to be such a serious drawback to the other advantages of the act that they recommended amendments to be made enabling employers to hire such persons upon special terms as to compensation for accidents, and they suggested an age limit of 60 as desirable if hale, and under that age if infirm or maimed, to which the amendment should apply, with a minimum compensation of 5s. (\$1.22) a week for injury and £25 (\$121.66) for death.

COMMUTATION OF BENEFITS.

The evidence showed that in practice the employer's right under first schedule (13) to apply for a redemption by arbitration of weekly payments by a lump sum was rarely used; that few agreements for commutation were registered even under second schedule (8), but that great numbers of unregistered commutations had actually taken place by voluntary agreement. The latter permitted the defense of accord and satisfaction to subsequent claim for weekly payments. These commutations were often made at figures very much below what the weekly benefits justified, and in many cases were improvident and also oppressive settlements, brought about by improper pressure on the workmen. Though it was found undoubtedly advantageous to workmen, as well as masters, that

commutation should be possible, the committee said that better control over it should be adopted. They considered that the evidence showed it would be disadvantageous to give the workman a right to demand a commutation, as likely to increase the evils attendant on lump-sum payment generally, but in order to render the principle of compulsory commutation workable, if demanded by the masters, the committee recommended the adoption of a maximum limit on the amount of commutation of £500 (\$2,433), and urged, after making the obligation to register commutations stringent by rendering an unregistered agreement inoperative, and so forth, also the giving of discretion to the registrar as to registering, and to the judge as to reopening an entry within six months for fraud or undue influence.

REVIEW OF AWARD.

The difficulty arose of determining, under first schedule (2) and (12), when and to what extent the compensation granted should be reduced.

From the workmen's standpoint, as they got only one-half of their loss to begin with, it was advocated and decided by some judges that this one-half wage compensation allowance should not be reduced until they could again earn full wages, and that no reduction of compensation should take place so long as what they earned, while partially incapacitated, added to the compensation allowed, was not more than their full wages before the accident. Other judges divided the loss, holding that the difference between their partial earnings and their full wages should be divided, the employer bearing one-half the loss and the workman bearing one-half. The committee recommended a more explicit clause adopting the latter mode, thus making the workman share the loss with the employer.

The test of earning capacity had proved to be another difficulty, as, for instance, to determine whether a man who had lost one eye was incapacitated, and so forth. It was suggested that in the highly organized trades something approaching a tariff for injuries might ultimately be agreed on, apart from parliamentary enactment. The committee thought earning capacity, not only at the same kind of work as before the accident, but at any kind of work, should suffice, and strongly recommended clearer enactment. They advocated bringing the medical representatives of employer and workman together at an earlier stage, with the official medical referee as arbiter.

As to increase of weekly payments, it was found that in practice the maximum payment had been so universally allowed that the provision for increase had become unimportant.

NOTICE OF ACCIDENT AND CLAIM.

The requirement in section 2 (1) for notice of accident as soon as practicable after the happening thereof caused laxness in practice and resulted in employers' complaints that it failed to attain the object of enabling them to verify the facts and ascertain the nature and extent of the injury. The committee recommended a limit of six days for notice. As to the claim for compensation, the House of Lords had decided that a mere demand was sufficient to entitle the workman at any time thereafter to institute proceedings. The committee recommended that a written notice of claim be required in three months after the accident. After the expiry of these periods, however, they recommended that leave be given to the workman to file a sworn statement before the registrar showing sufficient reason for the necessary steps not having been taken within the limited time, that notice of this action be served on the employer, and if the latter should object to waiving notice that the registrar should refer the matter for decision of the judge.

CONTRACTING OUT.

As to the effect on mutual benefit and friendly societies, the committee found that where these were supported jointly by the workmen and employers such schemes had been practically put an end to by the act, except in those cases where schemes were framed under section 3 of the act, through the discontinuance of employers' contributions. They found, however, that in some cases voluntary arrangements continued unaffected by the act, where employers were already providing benefits on a more liberal scale than the act, and that workmen's benefit clubs, which were entirely supported by the workmen, continued. There was evidence submitted that through these benefit funds, and so forth, workmen sometimes received more when disabled than if working.

The committee, in considering the contracting out of the act by contracting into definite schemes under section 3, found that, owing to the expense and trouble such schemes entail on both employers and workmen, no extensive use had been made of the section, and they also found that under those schemes which had been certified under the section, the actual payments exceeded the maximum that the act would have paid by

75 per cent, 65 per cent of that excess being pay for the first two weeks not covered by the act. Both workmen's and employers' representatives testified that the schemes, being based on the active cooperation of and being jointly administered by masters and workmen, brought special advantages over the act provisions, such as permitting provision for minor accidents, allowances for old age, and annuities instead of lump sums. They testified that the schemes led to prevention of accident, to litigation being reduced to a minimum, and to good feeling being promoted.

Mr. J. D. Stuart Sim, the chief registrar of friendly societies, characterizes section 3 as a splendid opportunity for regulating the relations between workmen and masters in a thoroughly satisfactory manner and on a sound financial basis; while Sir George Livesey, the chairman of the extensive South Metropolitan Gas Company, has succeeded in demonstrating the practicability of such a regulation in his ten years' operation of a successful copartnership arrangement with all employees, one feature of which is his jury system, namely, having all accidents in his plants submitted to a jury of workmen, resulting in a large reduction of accidents, which feature was specially commended by the committee, who thoroughly indorsed the fact that the above advantages from the section existed, and recommended that it remain practically unchanged.

The following is a summary of receipts and expenditures of workmen's compensation schemes authorized by the registrar of friendly societies, under the workmen's compensation acts of 1897 and 1900, for the seven years from 1898 to 1905:

Summary of receipts and expenditures of workmen's compensation schemes authorized by the registrar of friendly societies under the workmen's compensation act for the seven-year period, 1898 to 1905.

[From Report of the Chief Registrar of Friendly Societies for the year ending December 31, 1905, Part A.]

SCHEME ADOPTED BY GOVERNMENT EMPLOYEES.

Following are the benefits under the scheme authorized by the registrar of friendly societies for Government establishments:

For death of a workman leaving dependents wholly dependent, three years' earnings, or not less than £150 (\$729.98) nor more than £300 (\$1,459.95), payable to the dependents or to a trustee; if the dependents are only in part dependent, one-half of the above; if there are no dependents, not more than £10 (\$48.67), for medical attendance and burial. In the discretion of the treasury, a portion of the lump sum payable, up to one-half if there is one dependent child or up to two-thirds if there are more than one, may be set aside, and a pension equal to the annuity which the remainder of the lump sum would purchase granted to the widow or mother.

For incapacity, up to six months, one-half the average wages and hospital or medical attention while the beneficiary is on the hurt list, but "more favorable treatment while on the hurt list" if he is entitled to this under the regulations of his department.

For incapacity beyond six months, the following proportions of his average weekly earnings, according to degree of inca-

capacity: Capacity totally destroyed, twenty-four-sixtieths of his earnings; materially impaired, eighteen-sixtieths; impaired, twelve-sixtieths; slightly impaired, six-sixtieths. If he continues in or returns to the Government service after the injury, the above allowance to be paid in addition to the earnings he then receives, up to the average full earnings before the injury, with periodical adjustments as sanctioned by the treasury. If he leaves the service and is entitled to a pension, the above allowance to be added to the pension, provided both together shall not exceed his earnings at time of injury or £300 (\$1,459.95) a year, whichever is the less.

If the workman is a minor, the above compensation may be increased, in the discretion of the treasury, upon his reaching the age when in ordinary circumstances the pay of an adult workman would be granted him.

Commutation of allowance to a single payment may be made on agreement between the workman and the authorities of the department, with sanction of the treasury.

A claim for an injury which occurred more than three years before such claim was preferred can not be entertained unless such injury caused the applicant's discharge from the service or diminished his prospects for future employment.

BENEFICIAL EFFECT OF THE ACT.

As regards workmen, the committee found that the acts had conferred substantial benefits on those included in them; that prior to them practically the whole burden of industrial accident had fallen on the workmen, and it was right and necessary that some systematic provision for relief by law should be provided; that the act gave substantial relief, not complete indemnity, and there was little complaint from workmen of the limitation to one-half wages and other maximum limits in them.

Personal inquiry by the author concerning the practical workings of the act made during 1906 of Government officials, of employers, and of representatives of labor disclosed a unanimity of opinion that the principle of the act was sound, the extent to which it should be carried being the only question. The act was said to have proved a great boon to the workmen covered by it, labor strongly advocating its extension, while employers generally accepted it. In the building trades the secretary of one of the conciliation boards of a large master builders' association said that the principle was accepted by employers; that the burden was transferred to the building owner and not to wages, which had risen; that the act had tended to prevention of accident, as it had stimulated employers to have better plans; that it had reduced litigation, which was largely confined to nonunion workmen. In the cotton trade a gentleman who was thoroughly informed as to its effect on that trade said that there had been no risk of injury to the trade through the burden of the act; that it had not, however, fallen on wages, which had increased 10 per cent; that the act had operated strongly as a prevention of accident, the monetary liability for every accident, as well as the trade mutual insurance inspection, conducting thereto; that it had caused a large reduction in negligence claims, and that litigation on test cases under the act had practically disappeared, so that friction was reduced to a minimum, while the administration cost nothing, as no lawyers were necessary. As regards railways, an influential employees' organization said that the principle was regarded as absolutely just and valuable to the recipients of the benefits and had kept many from the poorhouse; that the burden was generally conceded to have been transferred to the public; that it did not come out of wages, which had increased (only reaching them to the extent of 25 per cent of the compensation paid in unorganized trades); that litigation on questions of law had now practically disappeared, most cases being settled without even arbitration, and that arbitration cost little, generally under £5 (\$24.33) a case; that the act had tended to prevent accidents, owing to expense now arising for every accident; moreover, that there had been no case of deliberate self-injury on railroads. A representative of the coal miners corroborated the fact that all labor was in favor of the act and illustrated the almost automatic working of it in the case of the Durham miners.

The parliamentary attitude toward workmen's compensation is shown by the fact that the compensation act of 1897 had been introduced and passed by the Conservative party, while, in 1906, the opposite party, then in power—the Liberal party—introduced and passed an amending bill, extending the principles of the act to practically every relation of master and servant, and adding thereto compensation for certain specified trade diseases. The act of 1906 becomes operative after July 1, 1907. The text of this act is given in full in this bulletin.

Laws of a similar character to the workmen's compensation acts have superseded the negligence basis for treatment of industrial accidents in almost all the countries of Europe, as well

as in the colonies of England. However, when it is remembered that England is a free-trade country, with consequent difficulty in transferring the burden of the act to their foreign consumers, their nine years' experience of the satisfactory working of it is the strongest possible argument in favor of the feasibility of such legislation. Considering the overwhelming extent to which the energies of this country are directed into mechanical industry and the high ratio of accident to population therefrom, entailing such widespread hardship through the haphazard treatment of each accident on the negligence basis, with its result of serious injustice in so many cases to employer and workmen alike, as well as the enormous waste of energy and money in the ever-increasing volume of personal-injury litigation, which clogs our courts, it is manifest that the subject requires the earnest and careful consideration of serious people. Nor is it unlikely that the principle of a wise and practical step toward the solution of this difficult, but most important, subject may be found in the British workmen's compensation acts.

WORKMEN'S COMPENSATION ACT, 1897.

Following is the text of the workmen's compensation act, 1897, and of the workmen's compensation act, 1900, which extends the benefits of the act of 1897 to workmen in agriculture: An act to amend the law with respect to compensation to workmen for accidental injuries suffered in the course of their employment [6th August, 1897].

Be it enacted by * * * Parliament assembled, and by the authority of the same, as follows:

1.—(1) If in any employment to which this act applies personal injury by accident arising out of and in the course of the employment is caused to a workman, his employer shall, subject as hereinafter mentioned, be liable to pay compensation in accordance with the first schedule to this act.

(2) Provided that:

(a) The employer shall not be liable under this act in respect of any injury which does not disable the workman for a period of at least two weeks from earning full wages at the work at which he was employed;

(b) When the injury was caused by the personal negligence or willful act of the employer, or of some person for whose act or default the employer is responsible, nothing in this act shall affect any civil liability of the employer, but in that case the workman may, at his option, either claim compensation under this act, or take the same proceedings as were open to him before the commencement of this act; but the employer shall not be liable to pay compensation for injury to a workman by accident arising out of and in the course of the employment both independently of and also under this act, and shall not be liable to any proceedings independently of this act, except in case of such personal negligence or willful act as aforesaid;

(c) If it is proved that the injury to a workman is attributable to the serious and willful misconduct of that workman, any compensation claimed in respect of that injury shall be disallowed.

(3) If any question arises in any proceedings under this act as to the liability to pay compensation under this act (including any question as to whether the employment is one to which this act applies), or as to the amount or duration of compensation under this act, the question, if not settled by agreement, shall, subject to the provisions of the first schedule to this act, be settled by arbitration, in accordance with the second schedule to this act.

(4) If, within the time hereinafter in this act limited for taking proceedings, an action is brought to recover damages independently of this act for injury caused by any accident, and it is determined in such action that the injury is one for which the employer is not liable in such action, but that he would have been liable to pay compensation under the provisions of this act, the action shall be dismissed; but the court in which the action is tried shall, if the plaintiff shall so choose, proceed to assess such compensation, and shall be at liberty to deduct from such compensation all the costs which, in its judgment, have been caused by the plaintiff bringing the action instead of proceeding under this act.

In any proceeding under this subsection, when the court assesses the compensation it shall give a certificate of the compensation it has awarded and the directions it has given as to the deduction for costs, and such certificate shall have the force and effect of an award under this act.

(5) Nothing in this act shall affect any proceeding for a fine under the enactments relating to mines or factories, or the application of any such fine, but if any such fine, or any part thereof, has been applied for the benefit of the person injured, the amount so applied shall be taken into account in estimating the compensation under this act.

2.—(1) Proceedings for the recovery under this act of compensation for an injury shall not be maintainable unless notice of the accident has been given as soon as practicable after the happening thereof and before the workman has voluntarily left the employment in which he was injured, and unless the claim for compensation with respect to such accident has been made within six months from the occurrence of the accident causing the injury, or, in case of death, within six months from the time of death. Provided always that the want of or any defect or inaccuracy in such notice shall not be a bar to the maintenance of such proceedings, if it is found in the proceedings for settling the claim that the employer is not prejudiced in his defense by the want, defect, or inaccuracy, or that such want, defect, or inaccuracy was occasioned by mistake or other reasonable cause.

(2) Notice in respect of an injury under this act shall give the name and address of the person injured, and shall state in ordinary language the cause of the injury and the date at which it was sustained, and shall be served on the employer, or, if there is more than one employer, upon one of such employers.

(3) The notice may be served by delivering the same to or at the residence or place of business of the person on whom it is to be served.

(4) The notice may also be served by post by registered letter addressed to the person on whom it is to be served at his last known place of residence or place of business, and if served by post shall be deemed to have been served at the time when the letter containing the same would have been delivered in the ordinary course of post, and in prov-

ing the service of such notice it shall be sufficient to prove that the notice was properly addressed and registered.

(5) Where the employer is a body of persons corporate or unincorporate, the notice may also be served by delivering the same at or by sending it by post in a registered letter addressed to the employer at the office, or, if there be more than one office, any one of the offices of such body.

3.—(1) If the registrar of friendly societies, after taking steps to ascertain the views of the employer and workmen, certifies that any scheme of compensation, benefit, or insurance for the workmen of an employer in any employment, whether or not such scheme includes other employers and their workmen, is on the whole not less favorable to the general body of workmen and their dependents than the provisions of this act, the employer may, until the certificate is revoked, contract with any of those workmen that the provisions of the scheme shall be substituted for the provisions of this act, and thereupon the employer shall be liable only in accordance with the scheme, but, save as aforesaid, this act shall apply notwithstanding any contract to the contrary made after the commencement of this act.

(2) The registrar may give a certificate to expire at the end of a limited period not less than five years.

(3) No scheme shall be so certified which contains an obligation upon the workmen to join the scheme as a condition of their hiring.

(4) If complaint is made to the registrar of friendly societies by or on behalf of the workmen of any employer that the provisions of any scheme are no longer on the whole so favorable to the general body of workmen of such employer and their dependents as the provisions of this act, or that the provisions of such scheme are being violated, or that the scheme is not being fairly administered, or that satisfactory reasons exist for revoking the certificate, the registrar shall examine into the complaint, and, if satisfied that good cause exists for such complaint, shall, unless the cause of complaint is removed, revoke the certificate.

(5) When a certificate is revoked or expires any moneys or securities held for the purpose of the scheme shall be distributed as may be arranged between the employer and workmen, or as may be determined by the registrar of friendly societies in the event of a difference of opinion.

(6) Whenever a scheme has been certified as aforesaid, it shall be the duty of the employer to answer all such inquiries and to furnish all such accounts in regard to the scheme as may be made or required by the registrar of friendly societies.

(7) The chief registrar of friendly societies shall include in his annual report the particulars of the proceedings of the registrar under this act.

4. Where, in an employment to which this act applies, the undertakers as hereinafter defined contract with any person for the execution by or under such contractor of any work, and the undertakers would, if such work were executed by workmen immediately employed by them, be liable to pay compensation under this act to those workmen in respect of any accident arising out of and in the course of their employment, the undertakers shall be liable to pay to any workman employed in the execution of the work any compensation which is payable to the workman (whether under this act or in respect of personal negligence or willful act independently of this act) by such contractor, or would be so payable if such contractor were an employer to whom this act applies.

Provided that the undertakers shall be entitled to be indemnified by any other person who would have been liable independently of this section.

This section shall not apply to any contract with any person for the execution by or under such contractor of any work which is merely ancillary or incidental to and is no part of or process in the trade or business carried on by such undertakers respectively.

5.—(1) Where any employer becomes liable under this act to pay compensation in respect of any accident, and is entitled to any sum from insurers in respect of the amount due to a workman under such liability, then, in the event of the employer becoming bankrupt or making a composition or arrangement with his creditors, or if the employer is a company of the company having commenced to be wound up, such workman shall have a first charge upon the sum aforesaid for the amount so due, and the judge of the county court may direct the insurers to pay such sum into the Post-Office Savings Bank in the name of the registrar of such court and order the same to be invested or applied in accordance with the provisions of the first schedule hereto with reference to the investment in the Post-Office Savings Bank of any sum allotted as compensation, and those provisions shall apply accordingly.

(2) In the application of this section to Scotland, the words "have a first charge upon" shall mean "be preferentially entitled to."

6. Where the injury for which compensation is payable under this act was caused under circumstances creating a legal liability in some person other than the employer to pay damages in respect thereof, the workman may, at his option, proceed either at law against that person to recover damages or against his employer for compensation under this act, but not against both, and if compensation be paid under this act, the employer shall be entitled to be indemnified by the said other person.

7.—(1) This act shall apply only to employment by the undertakers as hereinafter defined, on or in or about a railway, factory, mine, quarry, or engineering work, and to employment by the undertakers as hereinafter defined on, in, or about any building which exceeds 30 feet in height, and is either being constructed or repaired by means of a scaffolding, or being demolished, or on which machinery driven by steam, water, or other mechanical power is being used for the purpose of the construction, repair, or demolition thereof.

(2) In this act—

"Railway" means the railway of any railway company to which the regulation of railways act, 1873, applies, and includes a light railway made under the light railways act, 1896; and "railway" and "railway company" have the same meaning as in the said acts of 1873 and 1896;

"Factory" has the same meaning as in the factory and workshop acts, 1878 to 1891, and also includes any dock, wharf, quay, warehouse, machinery, or plant to which any provision of the factory acts is applied by the factory and workshop act, 1895, and every laundry worked by steam, water, or other mechanical power;

"Mine" means a mine to which the coal mines regulation act, 1887, of the metalliferous mines regulation act, 1872, applies;

"Quarry" means a quarry under the quarries act, 1894;

"Engineering work" means any work of construction or alteration or repair of a railroad, harbor, dock, canal, or sewer, and includes any other work for the construction, alteration, or repair of which machinery driven by steam, water, or other mechanical power is used;

"Undertakers" in the case of a railway means the railway company; in the case of a factory, quarry, or laundry means the occupier thereof within the meaning of the factory and workshop acts, 1878 to 1895; in the case of a mine means the owner thereof within the meaning of the coal mines regulation act, 1887, or the metalliferous mines regulation act, 1872, as the case may be, and in the case of an engineering work means the person undertaking the construction, alteration, or repair; and in the case of a building means the persons undertaking the construction, repair, or demolition;

"Employer" includes any body of persons, corporate or unincorporate, and the legal personal representative of a deceased employer;

"Workman" includes every person who is engaged in an employment to which this act applies, whether by way of manual labor or otherwise, and whether his agreement is one of service or apprenticeship or otherwise, and is expressed or implied, is oral or in writing. Any reference to a workman who has been injured shall, where the workman is dead, include a reference to his legal personal representative or to his dependents or other person to whom compensation is payable;

"Dependents" means—

(a) In England and Ireland, such members of the workman's family specified in the fatal accidents act, 1846, as were wholly or in part dependent upon the earnings of the workman at the time of his death; and

(b) In Scotland, such of the persons entitled according to the law of Scotland to sue the employer for damages or solatium in respect of the death of the workman as were wholly or in part dependent upon the earnings of the workman at the time of his death.

(3) A workman employed in a factory which is a shipbuilding yard shall not be excluded from this act by reason only that the accident arose outside the yard in the course of his work upon a vessel in any dock, river, or tidal water near the yard.

8.—(1) This act shall not apply to persons in the naval or military service of the Crown, but otherwise shall apply to any employment by or under the Crown to which this act would apply if the employer were a private person.

(2) The treasury may, by warrant laid before Parliament, modify for the purposes of this act their warrant made under section 1 of the superannuation act, 1887, and notwithstanding anything in that act, or any such warrant, may frame a scheme with a view to its being certified by the registrar of friendly societies under this act.

9. Any contract existing at the commencement of this act whereby a workman relinquishes any right to compensation from the employer for personal injury arising out of and in the course of his employment shall not, for the purposes of this act, be deemed to continue after the time at which the workman's contract of service would determine if notice of the determination thereof were given at the commencement of this act.

10.—(1) This act shall come into operation on the 1st day of July, 1898.

(2) This act may be cited as the workmen's compensation act, 1897.

SCHEDULES.

FIRST SCHEDULE.

SCALE AND CONDITIONS OF COMPENSATION.

Scale.

(1) The amount of compensation under this act shall be—

(a) Where death results from the injury—

(i) If the workman leaves any dependents wholly dependent upon his earnings at the time of his death, a sum equal to his earnings in the employment of the same employer during the three years next preceding the injury, or the sum of £150 (\$729.98), whichever of those sums is the larger, but not exceeding in any case £300 (\$1,459.95), provided that the amount of any weekly payments made under this act shall be deducted from such sum, and if the period of the workman's employment by the said employer has been less than the said three years, then the amount of his earnings during the said three years shall be deemed to be 156 times his average weekly earnings during the period of his actual employment under the said employer;

(ii) If the workman does not leave any such dependents, but leaves any dependents in part dependent upon his earnings at the time of his death, such sum, not exceeding in any case the amount payable under the foregoing provisions, as may be agreed upon, or, in default of agreement, may be determined, on arbitration under this act, to be reasonable and proportionate to the injury to the said dependents; and

(iii) If he leaves no dependents, the reasonable expenses of his medical attendance and burial, not exceeding £10 [48.67];

(b) Where total or partial incapacity for work results from the injury, a weekly payment during the incapacity after the second week not exceeding 50 per cent of his average weekly earnings during the previous twelve months, if he has been so long employed, but if not, then for any less period during which he has been in the employment of the same employer, such weekly payment not to exceed £1 [\$4.87].

(2) In fixing the amount of the weekly payment, regard shall be had to the difference between the amount of the average weekly earnings of the workman before the accident and the average amount which he is able to earn after the accident, and to any payment not being wages which he may receive from the employer in respect to his injury during the period of his incapacity.

(3) Where a workman has given notice of an accident, he shall, if so required by the employer, submit himself for examination by a duly qualified medical practitioner provided and paid by the employer, and if he refuses to submit himself to such examination, or in any way obstructs the same, his right to compensation, and any proceeding under this act in relation to compensation, shall be suspended until such examination takes place.

(4) The payment shall, in case of death, be made to the legal personal representative of the workman, or, if he has no legal personal representative, to or for the benefit of his dependents, or, if he leaves no dependents, to the person to whom the expenses are due; and if made to the legal personal representative shall be paid by him to or for the benefit of the dependents or other person entitled thereto under this act.

(5) Any question as to who is a dependent, or as to the amount payable to each dependent, shall, in default of agreement, be settled by arbitration under this act.

(6) The sum allotted as compensation to a dependent may be invested or otherwise applied for the benefit of the person entitled thereto, as agreed, or as ordered by the committee or other arbitrator.

(7) Any sum which is agreed or is ordered by the committee or arbitrator to be invested may be invested in whole or in part in the Post-Office Savings Bank by the registrar of the county court in his name as registrar.

(8) Any sum to be so invested may be invested in the purchase of an annuity from the national debt commissioners through the Post-Office Savings Bank, or be accepted by the Postmaster-General as a deposit in the name of the registrar as such, and the provisions of any statute or regulations respecting the limits of deposits in savings bank, and the declaration to be made by a depositor, shall not apply to such sums.

(9) No part of any money invested in the name of the registrar of any county court in the Post-Office Savings Bank under this act shall be paid out, except upon authority addressed to the Postmaster-General by the Treasury or by the judge of the county court.

(10) Any person deriving any benefit from any moneys invested in a post-office savings bank under the provisions of this act may, nevertheless, open an account in a post-office savings bank or in any other savings bank in his own name without being liable to any penalties imposed by any statute or regulations in respect of the opening of accounts in two savings banks, or of two accounts in the same savings bank.

(11) Any workman receiving weekly payments under this act shall, if so required by the employer, or by any person by whom the employer is entitled under this act to be indemnified, from time to time submit himself for examination by a duly qualified medical practitioner provided and paid by the employer, or such other person; but if the workman objects to an examination by that medical practitioner, or is dissatisfied by the certificate of such practitioner upon his condition when communicated to him, he may submit himself for examination to one of the medical practitioners appointed for the purpose of this act, as mentioned in the second schedule to this act, and the certificate of that medical practitioner as to the condition of the workman at the time of the examination shall be given to the employer and workman, and shall be conclusive evidence of that condition. If the workman refuses to submit himself to such examination, or in any way obstructs the same, his right to such weekly payments shall be suspended until such examination has taken place.

(12) Any weekly payment may be reviewed at the request either of the employer or of the workman, and on such review may be ended, diminished, or increased, subject to the maximum above provided, and the amount of payment shall, in default of agreement, be settled by arbitration under this act.

(13) Where any weekly payment has been continued for not less than six months, the liability therefor may, on the application by or on behalf of the employer, be redeemed by the payment of a lump sum, to be settled, in default of agreement, by arbitration under this act, and such lump sum may be ordered by the committee or arbitrator to be invested or otherwise applied as above mentioned.

(14) A weekly payment, or a sum paid by way of redemption thereof, shall not be capable of being assigned, charged, or attached, and shall not pass to any other person by operation of law, nor shall any claim be set off against the same.

(15) Where a scheme certified under this act provides for payment of compensation by a friendly society, the provisions of the proviso to the first subsection of section 8, section 16, and section 41 of the friendly societies act, 1896, shall not apply to such society in respect of such scheme.

(16) In the application of this schedule to Scotland the expression "registrar of the county court" means "sheriff clerk of the county," and "judge of the county court" means "sheriff."

(17) In the application of this act to Ireland the provisions of the county officers and courts (Ireland) act, 1877, with respect to money deposited in the post-office savings bank under that act shall apply to money invested in the post-office savings bank under this act.

SECOND SCHEDULE. ARBITRATION.

The following provisions shall apply for settling any matter which under this act is to be settled by arbitration:

(1) If any committee, representative of an employer and his workmen, exists with power to settle matters under this act in the case of the employer and workmen, the matter shall, unless either party objects, by notice in writing sent to the other party before the committee meet to consider the matter, be settled by the arbitration of such committee, or be referred by them in their discretion to arbitration as hereinafter provided.

(2) If either party so objects, or there is no such committee, or the committee so refers the matter or fails to settle the matter within three months from the date of the claim, the matter shall be settled by a single arbitrator agreed on by the parties, or in the absence of agreement by the county court judge, according to the procedure prescribed by rules of court, or if in England the lord chancellor so authorizes, according to the like procedure, by a single arbitrator appointed by such county court judge.

(3) Any arbitrator appointed by the county court judge shall, for the purposes of this act, have all the powers of a county court judge, and shall be paid out of moneys to be provided by Parliament in accordance with regulations to be made by the treasury.

(4) The arbitration act, 1889, shall not apply to any arbitration under this act, but an arbitrator may, if he thinks fit, submit any question of law for the decision of the county court judge, and the decision of the judge on any question of law, either on such submission, or in any case where he himself settles the matter under this act, shall be final, unless within the time and in accordance with the conditions prescribed by rules of the supreme court either party appeals to the court of appeal; and the county court judge, or the arbitrator appointed by him, shall, for the purpose of an arbitration under this act, have the same powers of procuring the attendance of witnesses and the production of documents as if the claim for compensation had been made by plaintiff in the county court.

(5) Rules of court may make provision for the appearance in any arbitration under this act of any party by some other person.

(6) The costs of and incident to the arbitration and proceedings connected therewith shall be in the discretion of the arbitrator. The costs, whether before an arbitrator or in the county court, shall not exceed the limit prescribed by rules of court, and shall be taxed in manner prescribed by those rules.

(7) In the case of the death or refusal or inability to act of an arbitrator, a judge of the high court at chambers may, on the application of any party, appoint a new arbitrator.

(8) Where the amount of compensation under this act shall have been ascertained, or any weekly payment varied, or any other matter decided, under this act, either by a committee or by an arbitrator or by agreement, a memorandum thereof shall be sent, in manner prescribed by rules of court, by the said committee or arbitrator, or by any party interested, to the registrar of the county court for the district in which any person entitled to such compensation resides, who shall, subject to such rules, on being satisfied as to its genuineness, record such memorandum in a special register without fee, and there-

upon the said memorandum shall for all purposes be enforceable as a county court judgment. Provided that the county court judge may at any time rectify such register.

(9) Where any matter under this act is to be done in a county court, or by to or before the judge or registrar of a county court, then, unless the contrary intention appears, the same shall, subject to rules of court, be done in, or by to or before the judge or registrar of, the county court of the district in which all the parties concerned reside, or if they reside in different districts the district in which the accident out of which the said matter arose occurred, without prejudice to any transfer in manner provided by rules of court.

(10) The duty of a county court judge under this act, or of an arbitrator appointed by him, shall, subject to rules of court, be part of the duties of the county court, and the officers of the court shall act accordingly, and rules of court may be made both for any purpose for which this act authorizes rules of court to be made, and also generally for carrying into effect this act so far as it affects the county court, or an arbitrator appointed by the judge of the county court, and proceedings in the county court or before any such arbitrator, and such rules may, in England, be made by the five judges of the county courts appointed for the making of rules under section 164 of the county courts act, 1888, and when allowed by the Lord Chancellor, as provided by that section, shall have full effect without any further consent.

(11) No court fee shall be payable by any party in respect of any proceeding under this act in the county court prior to the award.

(12) Any sum awarded as compensation shall be paid on the receipt of the person to whom it is payable under any agreement or award, and his solicitor or agent shall not be entitled to recover from him, or to claim a lien on, or deduct any amount for costs from, the said sum awarded, except such sum as may be awarded by the arbitrator or county court judge, on an application made by either party to determine the amount of costs to be paid to the said solicitor or agent, such sum to be awarded subject to taxation and to the scale of costs prescribed by rules of court.

(13) The secretary of state may appoint legally qualified medical practitioners for the purpose of this act, and any committee, arbitrator, or judge may, subject to regulations made by the secretary of state and the treasury, appoint any such practitioner to report on any matter which seems material to any question arising in the arbitration; and the expense of any such medical practitioner shall, subject to treasury regulations, be paid out of moneys to be provided by Parliament.

(14) In the application of this schedule to Scotland—

(a) "Sheriff" shall be substituted for "county court judge," "sheriff clerk" for "county court," "action" for "plaint," "sheriff clerk" for "registrar of the county court," and "act of sederunt" for "rules of court."

(b) Any award or agreement as to compensation under this act may be competently recorded for execution in the books of council and session or sheriff court books, and shall be enforceable in like manner as a recorded decree arbitral.

(c) Any application to the sheriff as arbitrator shall be heard, tried, and determined summarily in the manner provided by the fifty-second section of the sheriff courts (Scotland) act, 1876, save only that parties may be represented by any person authorized in writing to appear for them and subject to the declaration that it shall be competent to either party within the time and in accordance with the conditions prescribed by act of sederunt to require the sheriff to state a case on any question of law determined by him, and his decision thereon in such case may be submitted to either division of the court of session, who may hear and determine the same finally, and remit to the sheriff with instruction as to the judgment to be pronounced.

(15) Paragraphs 4 and 7 of this schedule shall not apply to Scotland.

(16) In the application of this schedule to Ireland the expression "county court judge" shall include the recorder of any city or town.

WORKMEN'S COMPENSATION ACT, 1900.
An act to extend the benefits of the workmen's compensation act, 1897, to workmen in agriculture [30th July, 1900].

Be it enacted by * * * Parliament assembled, and by the authority of the same, as follows:

1.—(1) From and after the commencement of this act, the workmen's compensation act, 1897, shall apply to the employment of workmen in agriculture by any employer who habitually employs one or more workmen in such employment.

(2) Where any such employer agrees with a contractor for the execution by or under that contractor of any work in agriculture, section 4 of the workmen's compensation act, 1897, shall apply in respect of any workman employed in such work as if that employer were an undertaker within the meaning of that act.

Provided that where the contractor provides and uses machinery driven by mechanical power for the purpose of threshing, ploughing, or other agricultural work, he, and he alone, shall be liable under this act to pay compensation to any workman employed by him on such work.

(3) Where any workman is employed by the same employer mainly in agriculture but partly or occasionally in other work, this act shall apply also to the employment of the workman in such other work.

The expression "agriculture" includes horticulture, forestry, and the use of land for any purpose of husbandry, inclusive of the keeping or breeding of live stock, poultry, or bees, and the growth of fruit and vegetables.

2. This act may be cited as the workmen's compensation act, 1900, and shall be read as one with the workmen's compensation act, 1897, and that act and this act may be cited together as the workmen's compensation acts, 1897 and 1900.

3. This act shall come into operation on the 1st day of July, 1901.

BRITISH WORKMEN'S COMPENSATION ACT OF 1906.

In the following pages is given in full the text of the British workmen's compensation act of 1906, enacted December 21, 1906, to take effect July 1, 1907. It is given here to complete the record to date of British legislation in regard to the compensation of workmen for injuries received in their employment:

An act to consolidate and amend the law with respect to compensation to workmen for injuries suffered in the course of their employment [21st December, 1906].

Be it enacted by * * * Parliament assembled, and by the authority of the same, as follows:

1.—(1) If in any employment personal injury by accident arising out of and in the course of the employment is caused to a workman,

his employer shall, subject as hereinafter mentioned, be liable to pay compensation in accordance with the first schedule of this act.

(2) Provided that—

(a) The employer shall not be liable under this act in respect of any injury which does not disable the workman for a period of at least one week from earning full wages at the work at which he was employed.

(b) When the injury was caused by the personal negligence or wilful act of the employer, or of some person for whose act or default the employer is responsible, nothing in this act shall affect any civil liability of the employer, but in that case the workman may, at his option, either claim compensation under this act or take proceedings independently of this act; but the employer shall not be liable to pay compensation for injury to a workman by accident arising out of and in the course of the employment both independently of and also under this act, and shall not be liable to any proceedings independently of this act except in case of such personal negligence or wilful act as aforesaid.

(c) If it is proved that the injury to a workman is attributable to the serious and wilful misconduct of that workman, any compensation claimed in respect of that injury shall, unless the injury results in death or serious and permanent disablement, be disallowed.

(3) If any question arises in any proceedings under this act as to the liability to pay compensation under this act (including any question as to whether the person injured is a workman to whom this act applies), or as to the amount or duration of compensation under this act, the question, if not settled by agreement, shall, subject to the provisions of the first schedule of this act, be settled by arbitration, in accordance with the second schedule of this act.

(4) If, within the time hereinafter in this act limited for taking proceedings, an action is brought to recover damages independently of this act for injury caused by any accident, and it is determined in such action that the injury is one for which the employer is not liable in such action, but that he would have been liable to pay compensation under the provisions of this act, the action shall be dismissed; but the court in which the action is tried shall, if the plaintiff so choose, proceed to assess such compensation, but may deduct from such compensation all or part of the costs which, in its judgment, have been caused by the plaintiff bringing the action instead of proceeding under this act. In any proceeding under this subsection, when the court assesses the compensation it shall give a certificate of the compensation it has awarded and the directions it has given as to the deduction for costs, and such certificate shall have the force and effect of an award under this act.

(5) Nothing in this act shall affect any proceeding for a fine under the enactments relating to mines, factories, or workshops, or the application of any such fine.

2.—(1) Proceedings for the recovery under this act of compensation for an injury shall not be maintainable unless notice of the accident has been given as soon as practicable after the happening thereof and before the workman has voluntarily left the employment in which he was injured, and unless the claim for compensation with respect to such accident has been made within six months from the occurrence of the accident causing the injury, or, in case of death, within six months from the time of death.

Provided always that—

(a) The want of or any defect or inaccuracy in such notice shall not be a bar to the maintenance of such proceedings if it is found in the proceedings for settling the claim that the employer is not, or would not, if a notice or an amended notice were then given and the hearing postponed, be prejudiced in his defense by the want, defect, or inaccuracy, or that such want, defect, or inaccuracy was occasioned by mistake, absence from the United Kingdom, or other reasonable cause; and

(b) The failure to make a claim within the period above specified shall not be a bar to the maintenance of such proceedings if it is found that the failure was occasioned by mistake, absence from the United Kingdom, or other reasonable cause.

(2) Notice in respect of an injury under this act shall give the name and address of the person injured, and shall state in ordinary language the cause of the injury and the date at which the accident happened, and shall be served on the employer, or, if there is more than one employer, upon one of such employers.

(3) The notice may be served by delivering the same at, or sending it by post in a registered letter addressed to, the residence or place of business of the person on whom it is to be served.

(4) Where the employer is a body of persons, corporate or unincorporate, the notice may also be served by delivering the same at, or by sending it by post in a registered letter addressed to, the employer at the office, or, if there be more than one office, any one of the offices of such body.

3.—(1) If the registrar of friendly societies, after taking steps to ascertain the views of the employer and workmen, certifies that any scheme of compensation, benefit, or insurance for the workmen of an employer in any employment, whether or not such scheme includes other employers and their workmen, provides scales of compensation not less favorable to the workmen and their dependents than the corresponding scales contained in this act, and that, where the scheme provides for contributions by the workmen, the scheme confers benefits at least equivalent to those contributions, in addition to the benefits to which the workmen would have been entitled under this act, and that a majority (to be ascertained by ballot) of the workmen to whom the scheme is applicable are in favor of such scheme, the employer may, whilst the certificate is in force, contract with any of his workmen that the provisions of the scheme shall be substituted for the provisions of this act, and thereupon the employer shall be liable only in accordance with the scheme, but, save as aforesaid, this act shall apply notwithstanding any contract to the contrary made after the commencement of this act.

(2) The registrar may give a certificate to expire at the end of a limited period of not less than five years, and may from time to time renew with or without modifications such a certificate to expire at the end of the period for which it is renewed.

(3) No scheme shall be so certified which contains an obligation upon the workmen to join the scheme as a condition of their hiring, or which does not contain provisions enabling a workman to withdraw from the scheme.

(4) If complaint is made to the registrar of friendly societies by or on behalf of the workmen of any employer that the benefits conferred by any scheme no longer conform to the conditions stated in subsection (1) of this section, or that the provisions of such scheme are being violated, or that the scheme is not being fairly administered, or that satisfactory reasons exist for revoking the certificate, the registrar shall examine into the complaint, and, if satisfied that good cause exist for such complaint, shall, unless the cause of complaint is removed, revoke the certificate.

(5) When a certificate is revoked or expires, any moneys or securities held for the purpose of the scheme shall, after due provision has

been made to discharge the liabilities already accrued, be distributed as may be arranged between the employer and workmen, or as may be determined by the registrar of friendly societies in the event of a difference of opinion.

(6) Whenever a scheme has been certified as aforesaid, it shall be the duty of the employer to answer all such inquiries and to furnish all such accounts in regard to the scheme as may be made or required by the registrar of friendly societies.

(7) The chief registrar of friendly societies shall include in his annual report the particulars of the proceedings of the registrar under this act.

(8) The chief registrar of friendly societies may make regulations for the purpose of carrying this section into effect.

4.—(1) Where any person (in this section referred to as the principal), in the course of or for the purposes of his trade or business, contracts with any other person (in this section referred to as the contractor) for the execution by or under the contractor of the whole or any part of any work undertaken by the principal, the principal shall be liable to pay to any workman employed in the execution of the work any compensation under this act which he would have been liable to pay if that workman had been immediately employed by him; and where compensation is claimed from or proceedings are taken against the principal, then, in the application of this act, references to the principal shall be substituted for references to the employer, except that the amount of compensation shall be calculated with reference to the earnings of the workman under the employer by whom he is immediately employed.

Provided, That where the contract relates to thrashing, plowing, or other agricultural work, and the contractor provides and uses machinery driven by mechanical power for the purpose of such work, he, and he alone, shall be liable under this act to pay compensation to any workman employed by him on such work.

(2) Where the principal is liable to pay compensation under this section, he shall be entitled to be indemnified by any person who would have been liable to pay compensation to the workman independently of this section, and all question as to the right to and amount of any such indemnity shall, in default of agreement, be settled by arbitration under this act.

(3) Nothing in this section shall be construed as preventing a workman recovering compensation under this act from the contractor instead of the principal.

(4) This section shall not apply in any case where the accident occurred elsewhere than on or in or about premises on which the principal has undertaken to execute the work or which are otherwise under his control or management.

5.—(1) Where any employer has entered into a contract with any insurers in respect of any liability under this act to any workman, then, in the event of the employer becoming bankrupt or making a composition or arrangement with his creditors, or if the employer is a company in the event of the company having commenced to be wound up, the rights of the employer against the insurers as respects that liability shall, notwithstanding anything in the enactments relating to bankruptcy, and the winding up of companies, be transferred to and vest in the workman, and upon any such transfer the insurers shall have the same rights and remedies and be subject to the same liabilities as if they were the employer, so, however, that the insurers shall not be under any greater liability to the workman than they would have been under to the employer.

(2) If the liability of the insurers to the workman is less than the liability of the employer to the workman, the workman may prove for the balance in the bankruptcy or liquidation.

(3) There shall be included among the debts which, under section 1 of the preferential payments in bankruptcy act, 1888, and section 4 of the preferential payments in bankruptcy (Ireland) act, 1889, are in the distribution of the property of a bankrupt and in the distribution of the assets of a company being wound up to be paid in priority to all other debts, the amount, not exceeding in any individual case, £100, due in respect of any compensation the liability whereof accrued before the date of the receiving order or the date of the commencement of the winding up, and those acts and the preferential payments in bankruptcy amendment act, 1897, shall have effect accordingly. Where the compensation is a weekly payment, the amount due in respect thereof shall, for the purposes of this provision, be taken to be the amount of the lump sum for which the weekly payment could, if redeemable, be redeemed if the employer made an application for that purpose under the first schedule to this act.

(4) In the case of the winding up of a company within the meaning of the Stannaries Act, 1887, such an amount as aforesaid, if the compensation is payable to a miner or the dependents of a miner, shall have the like priority as is conferred on wages of miners by section 9 of that act, and that section shall have effect accordingly.

(5) The provisions of this section with respect to preferences and priorities shall not apply where the bankrupt or the company being wound up has entered into such a contract with insurers as aforesaid.

(6) This section shall not apply where a company is wound up voluntarily merely for the purposes of reconstruction or of amalgamation with another company.

6. Where the injury for which compensation is payable under this act was caused under circumstances creating a legal liability in some person other than the employer to pay damages in respect thereof—

(1) The workman may take proceedings both against that person to recover damages and against any person liable to pay compensation under this act for such compensation, but shall not be entitled to recover both damages and compensation; and

(2) If the workman has recovered compensation under this act, the person by whom the compensation was paid, and any person who has been called on to pay an indemnity under the section of this act relating to subcontracting, shall be entitled to be indemnified by the person so liable to pay damages as aforesaid, and all questions as to the right to and amount of any such indemnity shall, in default of agreement, be settled by action, or, by consent of the parties, by arbitration under this act.

7.—(1) This act shall apply to masters, seamen, and apprentices to the sea service and apprentices in the sea-fishing service, provided that such persons are workmen within the meaning of this act and are members of the crew of any ship registered in the United Kingdom or of any other British ship or vessel of which the owner or (if there is more than one owner) the managing owner or manager resides or has his principal place of business in the United Kingdom, subject to the following modifications:

(a) The notice of accident and the claim for compensation may, except where the person injured is the master, be served on the master of the ship as if he were the employer, but where the accident happened and the incapacity commenced on board the ship it shall not be necessary to give notice of the accident.

(b) In the case of the death of the master, seaman, or apprentice the claim for compensation shall be made within six months after news of the death has been received by the claimant.

(c) Where an injured master, seaman, or apprentice is discharged or left behind in a British possession or in a foreign country, depositions respecting the circumstances and nature of the injury may be taken by any judge or magistrate in the British possession and by any British consular officer in the foreign country, and if so taken shall be transmitted by the person by whom they are taken to the board of trade, and such deposition or certified copies thereof shall in any proceedings for enforcing the claim be admissible in evidence as provided by sections 691 and 695 of the merchant shipping act, 1894, and those sections shall apply accordingly.

(d) In the case of the death of a master, seaman, or apprentice, leaving no dependents, no compensation shall be payable if the owner of the ship is, under the merchant shipping act, 1894, liable to pay the expenses of burial.

(e) The weekly payment shall not be payable in respect of the period during which the owner of the ship is, under the merchant shipping act, 1894, as amended by any subsequent enactment or otherwise, liable to defray the expenses of maintenance of the injured master, seaman, or apprentice.

(f) Any sum payable by way of compensation by the owner of a ship under this act shall be paid in full, notwithstanding anything in section 503 of the merchant shipping act, 1894 (which relates to the limitation of a shipowner's liability in certain cases of loss of life, injury, or damage), but the limitation on the owner's liability imposed by that section shall apply to the amount recoverable by way of indemnity under the section of this act relating to remedies both against employer and stranger as if the indemnity were damages for loss of life or personal injury.

(g) Subsections (2) and (3) of section 174 of the merchant shipping act, 1894 (which relates to the recovery of wages of seamen lost with their ship), shall apply as respects proceedings for the recovery of compensation by dependents of masters, seamen, and apprentices lost with their ship as they shall apply with respect to proceedings for the recovery of wages due to seamen and apprentices, and proceedings for the recovery of compensation shall in such a case be maintainable if the claim is made within eighteen months of the date at which the ship is deemed to have been lost, with all hands.

(2) This act shall not apply to such members of the crew of a fishing vessel as are remunerated by shares in the profits or the gross earnings of the working of such vessel.

(3) This section shall extend to pilots to whom Part X of the merchant shipping act, 1894, applies, as if a pilot when employed on any such ship as aforesaid were a seaman and a member of the crew.

8.—(1) Where—
(i) The certifying surgeon appointed under the factory and workshop act, 1901, for the district in which a workman is employed certifies that the workman is suffering from a disease mentioned in the third schedule to this act and is thereby disabled from earning full wages at the work at which he was employed; or

(ii) A workman is, in pursuance of any special rules or regulations made under the factory and workshop act, 1901, suspended from his usual employment on account of having contracted any such disease; or

(iii) The death of a workman is caused by any such disease, and the disease is due to the nature of any employment in which the workman was employed at any time within twelve months previous to the date of the disablement or suspension, whether under one or more employers, he or his dependents shall be entitled to compensation under this act as if the disease or suspension as aforesaid were a personal injury by accident arising out of and in the course of that employment, subject to the following modifications:

(a) The disablement or suspension shall be treated as the happening of the accident.

(b) If it is proved that the workman has at the time of entering the employment willfully and falsely represented himself in writing as not having previously suffered from the disease, compensation shall not be payable.

(c) The compensation shall be recoverable from the employer who last employed the workman during the said twelve months in the employment to the nature of which the disease was due.

Provided that—
(i) The workman or his dependents, if so required, shall furnish that employer with such information as to the names and addresses of all other employers who employed him in the employment during the said twelve months as he or they may possess, and, if such information is not furnished, or is not sufficient to enable that employer to take proceedings under the next following proviso, that employer, upon proving that the disease was not contracted while the workman was in his employment, shall not be liable to pay compensation; and

(ii) If that employer alleges that the disease was in fact contracted while the workman was in the employment of some other employer and not while in his employment, he may join such other employer as a party to the arbitration, and if the allegation is proved that that other employer shall be the employer from whom the compensation is to be recoverable; and

(iii) If the disease is of such a nature as to be contracted by a gradual process, any other employers who, during the said twelve months, employed the workman in the employment to the nature of which the disease was due, shall be liable to make to the employer from whom compensation is recoverable such contributions as, in default of agreement, may be determined in the arbitration under this act for settling the amount of the compensation.

(d) The amount of the compensation shall be calculated with reference to the earnings of the workman under the employer from whom the compensation is recoverable.

(e) The employer to whom notice of the death, disablement, or suspension is to be given shall be the employer who last employed the workman during the said twelve months in the employment to the nature of which the disease was due, and the notice may be given notwithstanding that the workman has voluntarily left his employment.

(f) If an employer or a workman is aggrieved by the action of a certifying or other surgeon in giving or refusing to give a certificate of disablement or in suspending or refusing to suspend a workman for the purposes of this section, the matter shall, in accordance with regulations made by the secretary of state, be referred to a medical referee, whose decision shall be final.

(2) If the workman at or immediately before the date of the disablement or suspension was employed in any process mentioned in the second column of the third schedule to this act, and the disease contracted is the disease in the first column of that schedule set opposite the description of the process, the disease, except where the certifying surgeon certifies that in his opinion the disease was not due to the

nature of the employment, shall be deemed to have been due to the nature of that employment unless the employer proves the contrary.

(3) The secretary of state may make rules regulating the duties and fees of certifying and other surgeons (including dentists) under this section.

(4) For the purposes of this section the date of disablement shall be such date as the certifying surgeon certifies as the date on which the disablement commenced, or, if he is unable to certify such a date, the date on which the certificate is given.

Provided that—

(a) Where the medical referee allows an appeal against a refusal by a certifying surgeon to give a certificate of disablement, the date of disablement shall be such date as the medical referee may determine.

(b) Where a workman dies without having obtained a certificate of disablement, or is, at the time of death, not in receipt of a weekly payment on account of disablement, it shall be the date of death.

(5) In such cases, and subject to such conditions as the secretary of state may direct, a medical practitioner appointed by the secretary of state for the purpose shall have the powers and duties of a certifying surgeon under this section, and this section shall be construed accordingly.

(6) The secretary of state may make orders for extending the provisions of this section to other diseases and other processes, and to injuries due to the nature of any employment specified in the order not being injuries by accident, either without modification or subject to such modifications as may be contained in the order.

(7) Where, after inquiry held on the application of any employers or workman engaged in any industry to which this section applies, it appears that a mutual trade insurance company or society for insuring against the risks under this section has been established for the industry, and that a majority of the employers engaged in that industry are insured against such risks in the company or society and that the company or society consents, the secretary of state may, by provisional order, require all employers in that industry to insure in the company or society upon such terms and under such conditions and subject to such exceptions as may be set forth in the order. Where such a company or society has been established, but is confined to employers in any particular locality or of any particular class, the secretary of state may, for the purposes of this provision, treat the industry as carried on by employers in that locality or of that class as a separate industry.

(8) A provisional order made under this section shall be of no force whatever unless and until it is confirmed by Parliament, and if, while the bill confirming any such order is pending in either House of Parliament, a petition is presented against the order, the bill may be referred to a select committee and the petitioner shall be allowed to appear and oppose as in the case of private bills, and any act confirming any provisional order under this section may be repealed, altered, or amended by a provisional order made and confirmed in like manner.

(9) Any expenses incurred by the secretary of state in respect of any such order, provisional order, or confirming bill shall be defrayed out of moneys provided by Parliament.

(10) Nothing in this section shall affect the rights of a workman to recover compensation in respect of a disease to which this section does not apply if the disease is a personal injury by accident within the meaning of this act.

9.—(1) This act shall not apply to persons in the naval or military service of the Crown, but otherwise shall apply to workmen employed by or under the Crown to whom this act would apply if the employer were a private person.

Provided that in the case of a person employed in the private service of the Crown, the head of that department of the royal household in which he was employed at the time of the accident shall be deemed to be his employer.

(2) The treasury may, by warrant laid before Parliament, modify for the purposes of this act their warrant made under section 1 of the superannuation act, 1887, and, notwithstanding anything in that act or any such warrant, may frame schemes with a view to their being certified by the registrar of friendly societies under this act.

10.—(1) The secretary of state may appoint such legally qualified medical practitioners to be medical referees for the purposes of this act as he may, with the sanction of the treasury, determine, and the remuneration of, and other expenses incurred by, medical referees under this act shall, subject to regulations made by the treasury, be paid out of moneys provided by Parliament.

Where a medical referee has been employed as a medical practitioner in connection with any case by or on behalf of an employer or workman or by any insurers interested, he shall not act as medical referee in that case.

(2) The remuneration of an arbitrator appointed by a judge of county courts under the second schedule to this act shall be paid out of moneys provided by Parliament in accordance with regulations made by the treasury.

11.—(1) If it is alleged that the owners of any ship are liable as such owners to pay compensation under this act, and at any time that ship is found in any port or river of England or Ireland, or within 3 miles of the coast thereof, a judge of any court of record in England or Ireland may, upon its being shown to him by any person applying in accordance with the rules of the court that the owners are probably liable as such to pay such compensation, and that none of the owners reside in the United Kingdom, issue an order directed to any officer of customs or other officer named by the judge requiring him to detain the ship until such time as the owners, agent, master, or consignee thereof have paid such compensation, or have given security, to be approved by the judge, to abide the event of any proceedings that may be instituted to recover such compensation and to pay such compensation and costs as may be awarded thereon; and any officer of customs or other officer to whom the order is directed shall detain the ship accordingly.

(2) In any legal proceeding to recover such compensation, the person giving security shall be made defendant, and the production of the order of the judge, made in relation to the security, shall be conclusive evidence of the liability of the defendant to the proceeding.

(3) Section 692 of the merchant shipping act, 1894, shall apply to the detention of a ship under this act as it applies to the detention of a ship under that act, and if the owner of a ship is a corporation it shall for the purposes of this section be deemed to reside in the United Kingdom if it has an office in the United Kingdom at which service of writs can be effected.

12.—(1) Every employer in any industry to which the secretary of state may direct that this section shall apply shall, on or before such day in every year as the secretary of state may direct, send to the secretary of state a correct return specifying the number or injuries in respect of which compensation has been paid by him under this act dur-

ing the previous year, and the amount of such compensation, together with such other particulars as to the compensation as the secretary of state may direct, and in default of complying with this section shall be liable on conviction under the summary jurisdiction acts to a fine not exceeding £5 (\$24.33).

(2) Any regulations made by the secretary of state containing such directions as aforesaid shall be laid before both Houses of Parliament as soon as may be after they are made.

13. In this act, unless the context otherwise requires—

"Employer" includes any body of persons corporate or unincorporate and the legal personal representative of a deceased employer, and, where the services of a workman are temporarily lent or let on hire to another person by the person with whom the workman has entered into a contract of service or apprenticeship, the latter shall, for the purposes of this act, be deemed to continue to be the employer of the workman whilst he is working for that other person.

"Workman" does not include any person employed otherwise than by way of manual labor whose remuneration exceeds £250 (\$1,216.63) a year, or a person whose employment is of a casual nature and who is employed otherwise than for the purposes of the employer's trade or business, or a member of a police force, or an outworker, or a member of the employer's family dwelling in his house, but, save as aforesaid, means any person who has entered into or works under a contract of service or apprenticeship with an employer, whether by way of manual labor, clerical work, or otherwise, and whether the contract is expressed or implied, is oral or in writing.

Any reference to a workman who has been injured shall, where the workman is dead, include a reference to his legal personal representative or to his dependents or other persons to whom or for whose benefit compensation is payable.

"Dependents" means such of the members of the workman's family as where wholly or in part dependent upon the earnings of the workman at the time of his death, or would but for the incapacity due to the accident have been so dependent, and where the workman, being the parent or grandparent of an illegitimate child, leaves such a child so dependent upon his earnings, or, being an illegitimate child, leaves a parent or grandparent so dependent upon his earnings, shall include such an illegitimate child and parent or grandparent, respectively.

"Member of a family" means wife or husband, father, mother, grandfather, grandmother, stepfather, stepmother, son, daughter, grandson, granddaughter, stepson, stepdaughter, brother, sister, half-brother, half-sister.

"Ship," "vessel," "seaman," and "port" have the same meanings as in the merchant shipping act, 1894.

"Manager," in relation to a ship, means the ship's husband or other person to whom the management of the ship is intrusted by or on behalf of the owner.

"Police force" means a police force to which the police act, 1890, or the police (Scotland) act, 1890, applies, the city of London police force, the Royal Irish constabulary, and the Dublin metropolitan police force.

"Outworker" means a person to whom articles or materials are given out to be made up, cleaned, washed, altered, ornamented, finished, or repaired, or adapted for sale, in his own home or on other premises not under the control or management of the person who gave out the materials or articles.

The exercise and performance of the powers and duties of a local or other public authority shall, for the purposes of this act, be treated as the trade or business of the authority.

"County court," "judge of the county court," "register of the county court," "plaintiff," and "rules of court," as respects Scotland, mean, respectively, sheriff court, sheriff, sheriff clerk, pursuer, and act of sederunt.

14. In Scotland, where a workman raises an action against his employer independently of this act in respect of any injury caused by accident arising out of and in the course of the employment, the action, if raised in the sheriff court and concluding for damages under the employers' liability act, 1880, or alternatively at common law or under the employers' liability act, 1880, shall, notwithstanding anything contained in that act, not be removed under that act or otherwise to the court of session, nor shall it be appealed to that court otherwise than by appeal on a question of law; and for the purposes of such appeal the provisions of the second schedule to this act in regard to an appeal from the decision of the sheriff on any question of law determined by him as arbitrator under this act shall apply.

15.—(1) Any contract (other than a contract substituting the provisions of a scheme certified under the workmen's compensation act, 1897, for the provisions of that act) existing at the commencement of this act, whereby a workman relinquishes any right to compensation from the employer for personal injury arising out of and in the course of his employment, shall not, for the purposes of this act, be deemed to continue after the time at which the workman's contract of service would determine if notice of the determination thereof were given at the commencement of this act.

(2) Every scheme under the workmen's compensation act, 1897, in force at the commencement of this act shall, if recertified by the registrar of friendly societies, have effect as if it were a scheme under this act.

(3) The registrar shall recertify any such scheme if it is proved to his satisfaction that the scheme conforms, or has been so modified as to conform, with the provisions of this act as to schemes.

(4) If any such scheme has not been so recertified before the expiration of six months from the commencement of this act, the certificate thereof shall be revoked.

16.—(1) This act shall come into operation on the 1st day of July, 1907, but, except so far as it relates to references to medical referees and proceedings consequential thereon, shall not apply in any case where the accident happened before the commencement of this act.

(2) The workmen's compensation acts, 1897 and 1900, are hereby repealed, but shall continue to apply to cases where the accident happened before the commencement of this act, except to the extent to which this act applies to those cases.

17. This act may be cited as the workmen's compensation act, 1906.

FIRST SCHEDULE.

SCALE AND CONDITIONS OF COMPENSATION.

(1) The amount of compensation under this act shall be—

(a) Where death results from the injury—

(i) If the workman leaves any dependents wholly dependent upon his earnings, a sum equal to his earnings in the employment of the same employer during the three years next preceding the injury, or the sum of £150 (\$729.98), whichever of those sums is the larger, but not exceeding in any case £300 (\$1,459.95), provided that the amount of any weekly payments made under this act, and any lump

sum paid in redemption thereof, shall be deducted from such sum, and, if the period of the workman's employment by the said employer has been less than the said three years, then the amount of his earnings during the said three years shall be deemed to be 156 times his average weekly earnings during the period of his actual employment under the said employer;

(ii) If the workman does not leave any such dependents, but leaves any dependents in part dependent upon his earnings, such sum, not exceeding in any case the amount payable under the foregoing provisions, as may be agreed upon, or, in default of agreement, may be determined, on arbitration under this act, to be reasonable and proportionate to the injury to the said dependents; and

(iii) If he leaves no dependents, the reasonable expenses of his medical attendance and burial, not exceeding £10 (\$48.67);

(b) Where total or partial incapacity for work results from the injury, a weekly payment during the incapacity not exceeding 50 per cent of his average weekly earnings during the previous twelve months, if he has been so long employed, but if not then for any less period during which he has been in the employment of the same employer, such weekly payment not to exceed £1 (\$4.87);

Provided that—

(a) If the incapacity lasts less than two weeks no compensation shall be payable in respect of the first week; and

(b) As respects the weekly payments during total incapacity of a workman who is under 21 years of age at the date of the injury, and whose average weekly earnings are less than 20 shillings (\$4.87), 100 per cent shall be substituted for 50 per cent of his average weekly earnings, but the weekly payment shall in no case exceed 10 shillings (\$2.43).

(2) For the purposes of the provisions of this schedule relating to "earnings" and "average weekly earnings" of a workman, the following rules shall be observed:

(a) Average weekly earnings shall be computed in such manner as is best calculated to give the rate per week at which the workman was being remunerated. Provided that where by reason of the shortness of the time during which the workman has been in the employment of his employer, or the casual nature of the employment, or the terms of the employment, it is impracticable at the date of the accident to compute the rate of remuneration, regard may be had to the average weekly amount which, during the twelve months previous to the accident, was being earned by a person in the same grade employed at the same work by the same employer, or, if there is no person so employed, by a person in the same grade employed in the same class of employment and in the same district;

(b) Where the workman had entered into concurrent contracts of service with two or more employers under which he worked at one time for one such employer and at another time for another such employer, his average weekly earnings shall be computed as if his earnings under all such contracts were earnings in the employment of the employer for whom he was working at the time of the accident;

(c) Employment by the same employer shall be taken to mean employment by the same employer in the grade in which the workman was employed at the time of the accident, uninterrupted by absence from work due to illness or any other unavoidable cause;

(d) Where the employer has been accustomed to pay to the workman a sum to cover any special expenses entailed on him by the nature of his employment, the sum so paid shall not be reckoned as part of the earnings.

(3) In fixing the amount of the weekly payment, regard shall be had to any payment, allowance, or benefit which the workman may receive from the employer during the period of his incapacity, and in the case of partial incapacity the weekly payment shall in no case exceed the difference between the amount of the average weekly earnings of the workman before the accident and the average weekly amount which he is earning or is able to earn in some suitable employment or business after the accident, but shall bear such relation to the amount of that difference as under the circumstances of the case may appear proper.

(4) Where a workman has given notice of an accident, he shall, if so required by the employer, submit himself for examination by a duly qualified medical practitioner provided and paid by the employer, and, if he refuses to submit himself to such examination, or in any way obstructs the same, his right to compensation, and to take or prosecute any proceeding under this act in relation to compensation, shall be suspended until such examination has taken place.

(5) The payment in the case of death shall, unless otherwise ordered as hereinafter provided, be paid into the county court, and any sum so paid into court shall, subject to rules of court and the provisions of this schedule, be invested, applied, or otherwise dealt with by the court in such manner as the court in its discretion thinks fit for the benefit of the persons entitled thereto under this act, and the receipt of the registrar of the court shall be a sufficient discharge in respect of the amount paid in:

Provided that, if so agreed, the payment in case of death shall, if the workman leaves no dependents, be made to his legal personal representative, or, if he has no such representative, to the person to whom the expenses of medical attendance and burial are due.

(6) Rules of court may provide for the transfer of money paid into court under this act from one court to another, whether or not the court from which it is to be transferred is in the same part of the United Kingdom as the court to which it is to be transferred.

(7) Where a weekly payment is payable under this act to a person under any legal disability, a county court may, on application being made in accordance with rules of court, order that the weekly payment be made during the disability into court, and the provisions of this schedule with respect to sums required by this schedule to be paid into court shall apply to sums paid into court in pursuance of any such order.

(8) Any question as to who is a dependent shall, in default of agreement, be settled by arbitration under this act, or, if not so settled before payment into court under this schedule, shall be settled by the county court, and the amount payable to each dependent shall be settled by arbitration under this act, or, if not so settled before payment into court under this schedule, by the county court. Where there are both total and partial dependents nothing in this schedule shall be construed as preventing the compensation being allotted partly to the total and partly to the partial dependents.

(9) Where, on application being made in accordance with rules of court, it appears to a county court that, on account of neglect of children on the part of a widow, or on account of the variation of the circumstances of the various dependents, or for any other sufficient cause, an order of the court or an award as to the apportionment amongst the several dependents of any sum paid as compensation, or as to the manner in which any sum payable to any such dependent is

to be invested, applied, or otherwise dealt with, ought to be varied, the court may make such order for the variation of the former order or the award, as in the circumstances of the case the court may think just.

(10) Any sum which under this schedule is ordered to be invested may be invested in whole or in part in the Post-Office Savings Bank by the registrar of the county court in his name as registrar.

(11) Any sum to be so invested may be invested in the purchase of an annuity from the national debt commissioners through the Post-Office Savings Bank, or be accepted by the postmaster-general as a deposit in the name of the registrar as such, and the provisions of any statute or regulations respecting the limits of deposits in savings banks, and the declaration to be made by a depositor, shall not apply to such sums.

(12) No part of any money invested in the name of the registrar of any county court in the Post-Office Savings Bank under this act shall be paid out, except upon authority addressed to the postmaster-general by the treasury or, subject to regulations of the treasury, by the judge or registrar of the county court.

(13) Any person deriving any benefit from any moneys invested in a post-office savings bank under the provisions of this act may, nevertheless, open an account in a post-office savings bank or in any other savings bank in his own name without being liable to any penalties imposed by any statute or regulations in respect of the opening of accounts in two savings banks, or of two accounts in the same savings bank.

(14) Any workman receiving weekly payments under this act shall, if so required by the employer, from time to time submit himself for examination by a duly qualified medical practitioner provided and paid by the employer. If the workman refuses to submit himself to such examination, or in any way obstructs the same, his right to such weekly payments shall be suspended until such examination has taken place.

(15) A workman shall not be required to submit himself for examination by a medical practitioner under paragraph (4) or paragraph (14) of this schedule otherwise than in accordance with regulations made by the secretary of state, or at more frequent intervals than may be prescribed by these regulations.

Where a workman has so submitted himself for examination by a medical practitioner, or has been examined by a medical practitioner selected by himself, and the employer or the workman, as the case may be, has within six days after such examination furnished the other with a copy of the report of that practitioner as to the workman's condition, then, in the event of no agreement being come to between the employer and the workman as to the workman's condition or fitness for employment, the registrar of a county court, on application being made to the court by both parties, may, on payment by the applicants of such fee not exceeding £1 (\$4.87) as may be prescribed, refer the matter to a medical referee.

The medical referee to whom the matter is so referred shall, in accordance with regulations made by the secretary of state, give a certificate as to the condition of the workman and his fitness for employment, specifying, where necessary, the kind of employment for which he is fit, and that certificate shall be conclusive evidence as to the matters so certified.

Where no agreement can be come to between the employer and the workman as to whether or to what extent the incapacity of the workman is due to the accident, the provisions of this paragraph shall, subject to any regulations made by the secretary of state, apply as if the question were a question as to the condition of the workman.

If a workman, on being required so to do, refuses to submit himself for examination by a medical referee to whom the matter has been so referred as aforesaid, or in any way obstructs the same, his right to compensation and to take or prosecute any proceeding under this act in relation to compensation, or, in the case of a workman in receipt of a weekly payment, his right to that weekly payment shall be suspended until such examination has taken place.

Rules of court may be made for prescribing the manner in which documents are to be furnished or served and applications made under this paragraph and the forms to be used for those purposes and, subject to the consent of the treasury, as to the fee to be paid under this paragraph.

(16) Any weekly payment may be reviewed at the request either of the employer or of the workman, and on such review may be ended, diminished, or increased, subject to the maximum above provided, and the amount of payment shall, in default of agreement, be settled by arbitration under this act:

Provided, That where the workman was at the date of the accident under 21 years of age and the review takes place more than twelve months after the accident, the amount of the weekly payment may be increased to any amount not exceeding 50 per cent of the weekly sum which the workman would probably have been earning at the date of the review if he had remained uninjured, but not in any case exceeding £1 (\$4.87).

(17) Where any weekly payment has been continued for not less than six months, the liability therefor may, on application by or on behalf of the employer, be redeemed by the payment of a lump sum of such an amount as, where the incapacity is permanent, would, if invested in the purchase of an immediate life annuity from the national debt commissioners through the post-office savings bank, purchase an annuity for the workman equal to 75 per cent of the annual value of the weekly payment, and as in any other case may be settled by arbitration under this act, and such lump sum may be ordered by the committee or arbitrator or judge of the county court to be invested or otherwise applied for the benefit of the person entitled thereto: *Provided*, That nothing in this paragraph shall be construed as preventing agreements being made for the redemption of a weekly payment by a lump sum.

(18) If a workman receiving a weekly payment ceases to reside in the United Kingdom, he shall thereupon cease to be entitled to receive any weekly payment, unless the medical referee certifies that the incapacity resulting from the injury is likely to be of a permanent nature. If the medical referee so certifies, the workman shall be entitled to receive quarterly the amount of the weekly payments accruing due during the preceding quarter so long as he proves, in such manner and at such intervals as may be prescribed by rules of court, his identity and the continuance of the incapacity in respect of which the weekly payment is payable.

(19) A weekly payment, or a sum paid by way of redemption thereof, shall not be capable of being assigned, charged, or attached, and shall not pass to any other person by operation of law, nor shall any claim be set off against the same.

(20) Where under this schedule a right to compensation is suspended no compensation shall be payable in respect of the period of suspension.

(21) Where a scheme certified under this act provides for payment of compensation by a friendly society, the provisions of the proviso to the first subsection of section 8, section 16, and section 41 of the friendly societies act, 1896, shall not apply to such society in respect of such scheme.

(22) In the application of this act to Ireland the provisions of the county officers and courts (Ireland) act, 1877, with respect to money deposited in the post-office savings bank under that act shall apply to money invested in the post-office savings bank under this act.

SECOND SCHEDULE.

ARBITRATION, ETC.

(1) For the purpose of settling any matter which under this act is to be settled by arbitration, if any committee, representative of any employer and his workmen, exists with power to settle matters under this act in the case of the employer and workmen, the matter shall, unless either party objects by notice in writing sent to the other party before the committee meet to consider the matter, be settled by the arbitration of such committee, or be referred by them in their discretion to arbitration as hereinafter provided.

(2) If either party so objects, or there is no such committee, or the committee so refers the matter or fails to settle the matter within six months from the date of the claim, the matter shall be settled by a single arbitrator agreed on by the parties, or in the absence of agreement by the judge of the county court, according to the procedure prescribed by rules of court.

(3) In England the matter instead of being settled by the judge of the county court, may, if the lord chancellor so authorizes, be settled according to the like procedure by a single arbitrator appointed by that judge, and the arbitrator so appointed shall, for the purposes of this act, have all the powers of that judge.

(4) The arbitration act, 1889, shall not apply to any arbitration under this act; but a committee or an arbitrator may, if they or he think fit, submit any question of law for the decision of the judge of the county court, and the decision of the judge on any question of law, either on such submission, or in any case where he himself settles the matter under this act, or where he gives any decision or makes any order under this act shall be final, unless within the time and in accordance with the conditions prescribed by rules of the supreme court either party appeals to the court of appeal; and the judge of the county court, or the arbitrator appointed by him, shall, for the purpose of proceedings under this act, have the same powers of procuring the attendance of witnesses and the production of documents as if the proceedings were an action in the county court.

(5) A judge of county courts may, if he thinks fit, summon a medical referee to sit with him as an assessor.

(6) Rules of court may make provision for the appearance in any arbitration under this act of any party by some other person.

(7) The costs of and incidental to the arbitration and proceedings connected therewith shall be in the discretion of the committee, arbitrator, or judge of the county court, subject as respects such judge and an arbitrator appointed by him to rules of court. The costs, whether before a committee or an arbitrator or in the county court, shall not exceed the limit prescribed by rules of court, and shall be taxed in manner prescribed by those rules and such taxation may be reviewed by the judge of the county court.

(8) In the case of the death, or refusal or inability to act, of an arbitrator, the judge of the county court may, on the application of any party, appoint a new arbitrator.

(9) Where the amount of compensation under this act has been ascertained, or any weekly payment varied, or any other matter decided under this act, either by a committee or by an arbitrator or by agreement, a memorandum thereof shall be sent, in manner prescribed by rules of court, by the committee or arbitrator, or by any party interested, to the registrar of the county court who shall, subject to such rules, on being satisfied as to its genuineness, record such memorandum in a special register without fee, and thereupon the memorandum shall for all purposes be enforceable as a county court judgment.

Provided that—

(a) no such memorandum shall be recorded before seven days after the dispatch by the registrar of notice to the parties interested; and

(b) where a workman seeks to record a memorandum of agreement between his employer and himself for the payment of compensation under this act and the employer, in accordance with rules of court, proves that the workman has in fact returned to work and is earning the same wages as he did before the accident, and objects to the recording of such memorandum, the memorandum shall only be recorded, if at all, on such terms as the judge of the county court, under the circumstances may think just; and

(c) the judge of the county court may at any time rectify the register; and

(d) where it appears to the registrar of the county court, on any information which he considers sufficient, that an agreement as to the redemption of a weekly payment by a lump sum, or an agreement as to the amount of compensation payable to a person under any legal disability, or to dependents, ought not to be registered by reason of the inadequacy of the sum or amount, or by reason of the agreement having been obtained by fraud or undue influence, or other improper means, he may refuse to record the memorandum of the agreement sent to him for registration, and refer the matter to the judge who shall, in accordance with rules of court, make such order (including an order as to any sum already paid under the agreement) as under the circumstances he may think just; and

(e) the judge may, within six months after a memorandum of an agreement as to the redemption of a weekly payment by a lump sum, or of an agreement as to the amount of compensation payable to a person under any legal disability, or to dependents, has been recorded in the register, order that the record be removed from the register on proof to his satisfaction that the agreement was obtained by fraud or undue influence or other improper means, and may make such order (including an order as to any sum already paid under the agreement) as under the circumstances he may think just.

(10) An agreement as to the redemption of a weekly payment by a lump sum if not registered in accordance with this act shall not, nor shall the payment of the sum payable under the agreement, exempt the person by whom the weekly payment is payable from liability to continue to make that weekly payment, and an agreement as to the amount of compensation to be paid to a person under a legal disability

or to dependents, if not so registered, shall not, nor shall the payment of the sum payable under the agreement, exempt the person by whom the compensation is payable from liability to pay compensation, unless, in either case, he proves that the failure to register was not due to any neglect or default on his part.

(11) Where any matter under this act is to be done in a county court, or by, to, or before the judge or registrar of a county court, then, unless the contrary intention appears, the same shall, subject to rules of court, be done in, or by, to, or before the judge or registrar of, the county court of the district in which all the parties concerned reside, or if they reside in different districts the district prescribed by rules of court, without prejudice to any transfer in manner provided by rules of court.

(12) The duty of a judge of county courts under this act, or in England of an arbitrator appointed by him, shall, subject to rules of court, be part of the duties of the county court, and the officers of the court shall act accordingly, and rules of court may be made both for any purpose for which this act authorizes rules of court to be made, and also generally for carrying into effect this act so far as it affects the county court, or an arbitrator appointed by the judge of the county court, and proceedings in the county court or before any such arbitrator, and such rules may, in England, be made by the five judges of county courts appointed for the making of rules under section 164 of the county courts act, 1888, and when allowed by the lord chancellor, as provided by that section, shall have full effect without any further consent.

(13) No court fee, except such as may be prescribed under paragraph 15 of the first schedule to this act, shall be payable by any party in respect of any proceedings by or against a workman under this act in the court prior to the award.

(14) Any sum awarded as compensation shall, unless paid into court under this act, be paid on the receipt of the person to whom it is payable under any agreement or award, and the solicitor or agent of a person claiming compensation under this act shall not be entitled to recover from him any costs in respect of any proceedings in an arbitration under this act, or to claim a lien in respect of such costs on, or deduct such costs from, the sum awarded or agreed as compensation, except the sum as may be awarded by the committee, the arbitrator, or the judge of the county court, on an application made either by the person claiming compensation, or by his solicitor or agent, to determine the amount of costs to be paid to the solicitor or agent, such sum to be awarded subject to taxation and to the scale of costs prescribed by rules of court.

(15) Any committee, arbitrator, or judge may, subject to regulations made by the secretary of state and the treasury, submit to a medical referee for report any matter which seems material to any question arising in the arbitration.

(16) The secretary of state may, by order, either unconditionally or subject to such conditions or modifications as he may think fit, confer on any committee representative of an employer and his workmen, as respects any matter in which the committee act as arbitrators, or which is settled by agreement submitted to and approved by the committee, all or any of the powers conferred by this act exclusively on county courts or judges of county courts, and may by the order provide how and to whom the compensation money is to be paid in cases where, but for the order, the money would be required to be paid into court, and the order may exclude from the operation of provisos (d) and (e) of paragraph (9) of this schedule agreements submitted to and approved by the committee, and may contain such incidental, consequential, or supplemental provisions as may appear to the secretary of state to be necessary or proper for the purposes of the order.

(17) In the application of this schedule to Scotland—
(a) "County court judgment" as used in paragraph 9 of this schedule means a recorded decree arbitral;

(b) Any application to the sheriff as arbitrator shall be heard, tried, and determined summarily in the manner provided by section 52 of the sheriff courts (Scotland) act, 1876, save only that parties may be represented by any person authorized in writing to appear for them and subject to the declaration that it shall be competent to either party within the time and in accordance with the conditions prescribed by act of sederunt to require the sheriff to state a case on any question of law determined by him, and his decision thereon in such case may be submitted to either division of the court of session, who may hear and determine the same and remit to the sheriff with instruction as to the judgment to be pronounced, and an appeal shall lie from either of such divisions to the House of Lords.

(c) Paragraphs 3, 4, and 8 shall not apply.
(18) In the application of this schedule to Ireland the expression "judge of the county court" shall include the recorder of any city or town, and an appeal shall lie from the court of appeal to the House of Lords.

THIRD SCHEDULE.

Description of disease.	Description of process.
Anthrax.....	Handling of wool, hair, bristles, hides, and skins.
Lead poisoning or its sequelæ.....	Any process involving the use of lead or its preparations or compounds.
Mercury poisoning or its sequelæ.....	Any process involving the use of mercury or its preparations or compounds.
Phosphorus poisoning or its sequelæ.....	Any process involving the use of phosphorus or its preparations or compounds.
Arsenic poisoning or its sequelæ.....	Any process involving the use of arsenic or its preparations or compounds.
Ankylostomiasis.....	Mining.

Where regulations or special rules made under any act of Parliament for the protection of persons employed in any industry against the risk of contracting lead poisoning require some or all of the persons employed in certain processes specified in the regulations or special rules to be periodically examined by a certifying or other surgeon, then, in the application of this schedule to that industry, the expression "process" shall, unless the secretary of state otherwise directs, include only the processes so specified.

SUMMARY OF FOREIGN WORKMEN'S COMPENSATION ACTS.

By the term "workmen's compensation laws" are meant enactments which embody the principle that the workman is entitled to compensation for injuries received in the course of his employment. Such laws have been enacted in twenty-two foreign States.

Usually the injuries must cause disablement for a specified number of days or weeks before compensation becomes due. The employer may usually be relieved from the payment of compensation if he can prove that the injury was caused intentionally or by willful misconduct, or in some countries by the gross negligence of the injured person or during the performance of an illegal act.

The industries usually covered by the acts are manufacturing, mining and quarrying, transportation, building and engineering work, and other employments involving more or less hazard. In Belgium, France, and Great Britain the laws apply to practically all employments. In Austria, Belgium, Denmark, Finland, Germany, Italy, Luxemburg, Netherlands, Norway, Russia, Spain, and Sweden only workmen engaged in actual manual work, and in some cases those exposed to the same risks, such as overseers and technical experts, come within the operations of the law. On the other hand, in France, Great Britain, the British colonies, and Hungary the laws apply to salaried employees and workmen equally. Overseers and technical experts earning more than a prescribed amount are excluded in Belgium, Denmark, Germany, Great Britain, Italy, Luxemburg, and Russia. Employees of the state, provincial, and local administrations usually come within the provisions of the acts.

The entire burden rests upon the employer in all but four countries, Austria, Germany, Hungary, and Luxemburg, where the employees bear part of the expense. The laws in every case fix the compensation to be paid. Except in Sweden the compensation is based upon the wages of the injured person. It consists of medical and surgical treatment and periodical allowances for temporary disability, and annual pensions or lump-sum payments for permanent disability or death.

In most countries employers may contract with state or private insurance institutions for meeting the payments. In a number of countries such transfer is obligatory. Provision is usually made for the protection of beneficiaries in case of insolvency of employers.

The acts of nearly all of the countries are framed with the view of obviating the necessity for instituting legal proceedings. If disputes arise, the acts specify the necessary procedure for settlement by special arbitration tribunals or by ordinary law courts.

The following summary gives the most important features of the workmen's compensation acts of all countries:

AUSTRIA.

Date of enactment.—December 28, 1887, in effect November 1, 1889, Amendatory acts, March 30, 1888, April 4 and July 28, 1889, January 17, 1890, December 30, 1891, September 17, 1892, July 20, 1894, and July 12, 1902.

Injuries compensated.—All injuries causing death or disability for more than three days received in the course of employment, unless caused intentionally.

Industries covered.—Mining, quarrying, stonecutting, manufacturing, building trades, railways, transportation on inland waters, storage, theaters, chimney sweeping, street cleaning, building cleaning, sewer cleaning, dredging, well digging, structural iron working, etc.; agricultural and forestry establishments using machinery.

Persons compensated.—All workmen and technical officials regularly employed, but in agriculture and forestry only employees exposed to machinery.

Government employees.—Act applies to government employees unless an equal or more favorable compensation is provided by other laws.

Burden of payment.—Medical and surgical treatment for twenty weeks and compensation for four weeks of disability paid by sick funds, to which employers contribute one-third and employees two-thirds. Compensation for disability after fourth week, and for death, paid by territorial insurance associations, to which employees contribute 10 per cent and employers 90 per cent.

Compensation for death:

(a) Funeral expenses not to exceed 25 florins (\$10.15).

(b) Pensions to members of family, not to exceed 50 per cent of earnings of deceased, to—

Widow, 20 per cent until death or remarriage; in the latter case a lump sum equal to three annual payments; to dependent widower, 20 per cent during disability.

Each legitimate child, 15 years of age or under, 15 per cent when one parent survives and 20 per cent when neither survives; to each illegitimate child, 15 years of age or under, 10 per cent; pensions of widow (or widower) and children reduced proportionately if they aggregate over 50 per cent.

(c) When pensions to above heirs do not reach 50 per cent, dependent heirs in ascending line receive pensions, not to exceed 20 per cent of earnings of deceased, parents taking precedence over grandparents.

(d) In computing pensions, the excess of the annual earnings over 1,200 florins (\$487.20) is not considered.

Compensation for disability:

(a) Medical and surgical attendance for twenty weeks, paid by sick benefit fund.

(b) For total temporary or permanent disability, 60 per cent of average daily wages of insured workmen in the locality, paid by sick benefit funds, from first to twenty-eighth day; and 60 per cent of average annual earnings of injured person, after twenty-eighth day, paid by territorial accident insurance institutions.

(c) For partial temporary or permanent disability, benefits consist of a portion of above allowance, but may not exceed 50 per cent of average annual earnings.

(d) In computing payments the excess of annual earnings over 1,200 florins (\$487.20) is not considered.

Revision of compensation.—Reconsideration of the case may be undertaken by the insurance association of its own will, or upon petition.

Insurance.—Payments are met by mutual insurance associations of employers, in which all employees are required to be insured. The country is divided into districts, with a separate association for each district.

Security of payments.—Operations of the insurance associations are conducted under the supervision of the minister of interior, who may increase the assessments.

Settlement of disputes.—Disputes are settled by arbitration courts composed of a judicial officer appointed by the minister of justice, two experts appointed by the minister of the interior, and one representative each of the employers and the employees.

BELGIUM.

Date of enactment.—December 24, 1903, in effect July 1, 1905.

Injuries compensated.—All injuries by accident to employees in the course of and by reason of the execution of the labor contract, causing death or disability for over one week, unless intentionally brought on by the person injured.

Industries covered.—Practically all establishments in mining, quarrying, forestry work, manufacturing, building and engineering work, transportation, and telephone and telegraph services; establishments using mechanical motive power; industrial establishments employing five or more persons; agricultural and commercial establishments employing three or more persons; industries designated by royal decree as dangerous. Other industries at option of employer.

Persons compensated.—Workmen and apprentices, and salaried employees exposed to the same risks as workmen whose annual salaries do not exceed 2,400 francs (\$463.20).

Government employees.—Act covers employees of any public establishment engaged in industries enumerated above.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death:

- (a) Funeral benefit of 75 francs (\$14.48).
- (b) A sum representing value of an annuity of 30 per cent of annual earnings of deceased, calculated upon basis of his age at death, to be distributed to—
 - Dependent widow or widower, whole amount if no other heirs, four-fifths if one child under 16 years of age or one or more dependent heirs, three-fifths if two or more children.
 - Children under 16 years of age, the residue.
 - Dependent heirs in ascending line and descending line under 16 years of age, in absence of widow or widower or children under 16 years of age.
 - Dependent brothers and sisters under 16 years of age in absence of heirs above enumerated.
- (c) Allowances in case of annual wages of 2,400 francs (\$463.20) or more, or of 365 francs (\$70.45) or less, are based upon these amounts, respectively.
- (d) Payments to widow and heirs in ascending line are converted into life pensions, those to other heirs into pensions expiring at age of 16 years. Heirs may require one-third of capital value of life pensions to be paid in cash and pension reduced accordingly.

Compensation for disability:

- (a) Expense of medical and surgical treatment for not over six months.
- (b) If totally disabled, an allowance of 50 per cent of daily wages, beginning with day after accident.
- (c) If partially disabled, an allowance of 50 per cent of loss of earning power, beginning with day after accident.
- (d) If, after three years, disability is permanent, temporary allowance is replaced by life annuity. Victim may require one-third of capital value of pension to be paid in cash and pension reduced accordingly.
- (e) Allowances in case of annual wages of 2,400 francs (\$463.20) or more, or of 365 francs (\$70.45) or less, are based upon these amounts, respectively.

Revision of compensation.—Revision of compensation because of aggravation or diminution of disability, or death of victim, may be made within three years.

Insurance.—Employers may transfer burden of payment of compensation to establishment funds or approved insurance companies or to general savings and retirement fund. They may also transfer burden of payment of temporary allowances to mutual aid societies.

Security of payments.—Employers who have not relieved themselves of liability by insurance must make deposits of cash or securities or give real-estate mortgages to secure pension payments. To secure temporary disability payments of uninsured employers a State guaranty fund is maintained by a tax levied upon such employers.

Settlement of disputes.—The local justice of the peace has sole jurisdiction as a court of first resort over disputes arising under the act, and his judgment is final in all cases involving 300 francs (\$57.90) or less.

BRITISH COLUMBIA.

Date of enactment.—June 21, 1902, in effect May 1, 1903.

Injuries compensated.—Injuries by accident arising out of and in the course of the employment which cause death or disable a workman for at least two weeks from earning full wages at the work at which he was employed, unless the injury is "attributable solely to the serious and wilful misconduct or serious neglect" of the injured workman.

Industries covered.—Railways, factories, mines, quarries, engineering work, and buildings which exceed 40 feet in height and are being constructed or repaired by means of a scaffolding or being demolished, or on which machinery driven by mechanical power is used for construction, repair, or demolition.

Persons compensated.—All persons engaged in manual labor or otherwise.

Government employees.—Act applies to civilian employees in the service of the Crown, to whom it would apply if the employer were a private person.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death:

- (a) A sum equal to three years' earnings, but not less than \$1,000 nor more than \$1,500, to those wholly dependent on earnings of deceased.
- (b) A sum less than above amount if workman leaves persons partially dependent on his earnings, the amount to be agreed upon by the parties or to be fixed by arbitration.
- (c) Reasonable expenses of medical attendance and burial, not exceeding \$100, if deceased leaves no dependents.

Compensation for disability:

- (a) A weekly payment during disability after second week, not exceeding 50 per cent of employee's average weekly earnings during the previous twelve months, such weekly payments not to exceed \$10, and total liability not to exceed \$1,500.
- (b) A weekly payment during partial disability after second week to be fixed with regard to the difference between employee's average weekly earnings before the accident and average weekly amount which he is earning or able to earn after the injury.
- (c) A lump sum may be substituted for the weekly payments, after six months, on the application of the employer, the amount to be settled, in default of agreement, by arbitration under the act.

Revision of compensation.—Weekly payments may be revised at request of either party.

Insurance.—Employers may contract with their employees for the substitution of a scheme of compensation, benefit, or insurance in place of the provisions of the act if the attorney-general certifies that the scheme is on the whole not less favorable to the general body of employees and their dependents than the provisions of the act. In such case the employer is liable only in accordance with this scheme.

Security of payments.—When an employer becomes liable under the act to pay compensation and is entitled to any sum from insurers on account of the amount due to a workman under such liability, then in the event of the employer becoming bankrupt, such workman has a first claim upon the amount so due, and a judge of the supreme court may direct the insurers to pay such sum into any chartered bank of Canada to be invested or applied to payment of compensation.

Settlement of disputes.—Disputes arising under the act are settled by arbitration of existing committees representative of employers and employees, or if either party objects, by a single arbitrator agreed upon by the parties, or, in the absence of agreement, by an arbitrator appointed by a judge of the supreme court. An arbitrator appointed by a judge of the supreme court has all the power of a judge of the supreme court. Questions of law may be submitted by the arbitrator for the decision of a judge of the supreme court.

CAPE OF GOOD HOPE.

Date of enactment.—June 6, 1905, in effect September 1, 1905.

Injuries compensated.—All injuries to employees arising out of and in the course of the employment causing death or necessitating absence from work for more than three days and not being caused by or through the gross carelessness of the injured employee.

Industries covered.—Any trade, business, or public undertaking, on land or upon or within the territorial waters of the colony, except domestic, messenger, or errand service or employment in agriculture.

Persons compensated.—Employees, whether engaged in manual work or otherwise.

Government employees.—Act applies to civilian persons employed by or under the Crown to whom it would apply if employer were a private person.

Burden of payment.—Employer and every principal are jointly and severally liable for the compensations required under the act.

Compensation for death.—When death results from an injury for which a lump sum has not already been paid on account of permanent disability—

- (a) A lump sum not exceeding three years' wages of deceased, nor more than £400 (\$1,946.60), to those wholly dependent upon the workman's earnings.
- (b) A lump sum not exceeding £200 (\$973.30) to those partially dependent upon the workman's earnings; in the absence of persons totally dependent, the sum not to exceed the value of the support which they were receiving from the deceased, calculated for two years.
- (c) Temporary payments previously made not to be deducted from above sums unless they have continued longer than three months.
- (d) Reasonable expenses of medical attendance and burial not exceeding £40 (\$194.66) in case deceased leaves no dependents.

Compensation for disability:

- (a) A sum not exceeding three years' wages, less any payments received under a provisional order of court, but not exceeding £600 (\$2,919.90) in case of permanent total disability, and a smaller sum in proportion to loss of earning power and not exceeding £300 (\$1,459.95) in case of permanent partial disability.
- (b) A payment made, by order of the local magistrate, at the same intervals as the customary wage payments, not exceeding 50 per cent of wages received at time of the injury, nor £2 (\$9.73) per week if the injury causes temporary disability lasting more than three days.

Revision of compensation.—The provisional order may be set aside or altered by the magistrate, upon request of either party, if justified by a further examination of the injured person or by production of additional evidence.

Insurance.—Employers may insure in a company or association against personal injury to the workmen employed by them or in their behalf. If the employer contributes toward a benefit society of which the injured or deceased person is a member, allowance is made for such contribution by the court in its order or judgment fixing amount of compensation to be paid.

Security of payments.—When an employer or principal is adjudged or admits liability under the act and is entitled to any sum from any insurers on account of such liability, then, in the event the employer becomes insolvent, the worker or his dependents have a first claim upon such sum.

Settlement of disputes.—Compensation in cases of disability is fixed provisionally for not more than six months by the local magistrate after receiving a physician's certificate of disability and holding an inquiry. No appeal can be taken from this preliminary order except against a finding on the question of gross carelessness and then only upon leave granted by the superior court. In case the injury results in death or permanent disability, the claimants have a right of action in the local magistrate's court for the amounts due under the law. In fixing the amount, the court is required in every case to have regard to the workman's or the dependent's necessities.

DENMARK.

Date of enactment.—January 7, 1898, in effect January 15, 1899; amended May 15, 1903.

Injuries compensated.—All injuries by accident occasioned by the trade or its conditions, and causing either death or disability lasting

over thirteen weeks, unless brought on intentionally or through gross negligence of the victim.

Industries covered.—Practically all establishments in mining, quarrying, manufactures, building and engineering work, transportation, telephone and telegraph services, diving and salvage; establishments using mechanical power which makes them subject to factory inspection; other industrial establishments designated by the minister of interior.

Persons compensated.—All workmen in mechanical and technical departments, including those in supervisory capacity whose annual earnings do not exceed 2,400 crowns (\$643.20).

Government employees.—Act applies to all employees of state and the communal governments in industries above indicated.

Burden of payment.—Entire burden of payment rests upon employer.

Compensation for death:

- (a) Funeral benefit of 50 crowns (\$13.40).
- (b) A lump sum equal to four times annual earnings of deceased, but not over 3,200 crowns (\$857.60) nor less than 1,200 crowns (\$321.60), to—

Widow, whole amount, if she survives.

Child, whole amount, if it be the only heir.

Children, according to decision of insurance council, when there is no widow.

If neither widow nor children, insurance council decides whether and how far other heirs receive compensation.

Compensation for disability:

- (a) From end of thirteenth week after accident until end of treatment, or until disability is declared permanent, a daily compensation of 60 per cent of earnings, but not less than 1 crown (27 cents) nor over 2 crowns (54 cents) for total disability, and a proportionate compensation for partial disability.
- (b) In case of permanent disability an indemnity of six times annual earnings, but not less than 1,800 crowns (\$482.40) nor over 4,800 crowns (\$1,286.40) for total permanent disability, and proportionate payments for partial permanent disability.
- (c) If employee suffering from permanent disability is a male between 30 and 55 years of age, he may demand purchase of an annuity. For men of other ages, or of unsound mind, or women and children, the insurance council may substitute an annuity.

Revision of compensation.—Determination of degree of permanent disability must be made as soon as possible after one year from date of injury. If this be not possible, a temporary determination may be made, but a redetermination may be demanded within two years following.

Insurance.—Employers may transfer obligation imposed by the law, by insuring their employees in authorized insurance companies or mutual employers' insurance associations.

Security of payments.—Where liability under the law has not been transferred by insurance, indemnity for disability is a preferred claim upon assets of employer.

Settlement of disputes.—Disputes concerning compensation, unless settled by mutual consent, must be referred to insurance council. Appeals may be had to the minister of interior.

FINLAND.

Date of enactment.—December 5, 1895, in effect January 1, 1893.

Injuries compensated.—All injuries by accident during work, causing death or disability for more than six days, except when brought on intentionally or through gross negligence of victim, intentionally by any other person than the one charged with supervision of the work, or caused by some other occurrence utterly independent of the nature or conditions of work.

Industries covered.—Mines, quarries, metallurgical establishments, factories, sawmills, industrial establishments using mechanical power, construction of churches and buildings over one story high; construction and operation of water, gas, electric power plants, and operation of railroads.

Persons compensated.—All persons actually employed at work, but not those supervising only.

Government employees.—Act applies to employment on the state and communal construction works and state railways.

Burden of payment.—Entire burden of payment rests upon employer.

Compensation for death.—In addition to any prior payments on account of disability, pensions to dependent heirs, from day of death, not exceeding 40 per cent of annual earnings of deceased, to—

- (a) Widow, 20 per cent until death or remarriage; in latter case a final sum equal to two annual payments.
- (b) Each child until the age of 15 years, 10 per cent if one parent survives, and 20 per cent if neither parent survives.
- (c) In computing pensions, earnings of workman to be considered not over 720 marks (\$138.96) nor under 300 marks (\$57.90); but no adult employee to receive a pension greater than his actual earnings.

Compensation for disability:

- (a) A pension equal to 60 per cent of employee's earnings for total disability, or a pension proportionate to the degree of incapacity for partial disability, to be paid from day of recovery from illness due to injury, or after 120 days have elapsed since injury.
- (b) Pension may by mutual consent be replaced by single payment, if it does not exceed 20 marks (\$3.86) annually.
- (c) In computing pension, earnings of workman to be considered not over 720 marks (\$138.96) nor under 300 marks (\$57.90); but no adult employee to receive a pension greater than his actual earnings.
- (d) In cases of temporary disability (including all cases of disability for 120 days after injury) daily compensation of 60 per cent of earnings, beginning with seventh day after accident, for complete temporary disability, and a proportionate compensation for partial disability; but not more than 2.50 marks (48 cents) per diem.
- (e) Until recovery, injured employee may be given treatment in a hospital in lieu of other compensation; during such treatment his wife and children get a compensation equal to pension in case of death.

Revision of compensation.—Demands for revision of compensation may be made by either party before proper court.

Insurance.—Employers are required to transfer the burden of payment of compensation to a governmental insurance office, private insurance company, mutual employers' insurance association, or approved foreign insurance company, unless unable to obtain such insurance or released from this obligation on presentation of satisfactory guaranties.

Security of payments.—When exempted from the duty of insuring his employees, or unable to obtain insurance, the employer must guarantee payment of pension to the injured workman or his family by arrangement with a private insurance company.

Settlement of disputes.—In case of absence of insurance or dissatisfaction with decision of insurance company, injured employee or his dependent may carry the case into the inferior court of the locality.

FRANCE.

Date of enactment.—April 9, 1898, in effect July 1, 1899; amendatory and supplementary acts March 22, 1902; March 351, 1905; April 12, 1906, and July 17, 1907.

Injuries compensated.—All injuries by accident to workmen or salaried employees during or on account of labor causing death or disability for five or more days, unless produced intentionally by the victim. If due to inexcusable fault of victim or of employer, compensation may by a court order be decreased or increased, but not exceeding actual earnings of victim.

Industries covered.—Building trades, factories, workshops, shipyards, transportation by land and water, public warehouses, mining and quarrying, manufacture or handling of explosives, agricultural and other work using mechanical power, and mercantile establishments; other industries on request of both parties.

Persons compensated.—All workmen and salaried employees.

Government employees.—Law applies to state, departmental, and communal establishments when engaged in industries enumerated above.

Burden of payment.—Entire cost of compensation falls upon employer.

Compensation for death:

- (a) Funeral expenses not exceeding 100 francs (\$19.30).
- (b) Pensions to dependent heirs not exceeding 60 per cent of annual wages of deceased, distributed to—
Widow or widower, 20 per cent until death or remarriage, in which latter case a final sum equal to three annual payments.
Children under 16 years of age if one parent survives—15 per cent if there is but one child; 25 per cent if there are two children; 35 per cent if there are three children; 40 per cent if there are four or more children.
Each child under 16 years of age if neither parent survives, 20 per cent.

Each ascendant and each descendant under 16 years of age dependent upon deceased, if no widow or children survive, 10 per cent, the aggregate not to exceed 30 per cent.

- (c) If annual wages exceed 2,400 francs (\$463.20), only one-fourth of the excess is considered in computing pensions.

Compensation for disability:

- (a) Expenses of medical or surgical treatment.
- (b) If permanently disabled, a pension of 66⅔ per cent of annual wages for total disability and of one-half loss of earning capacity for partial disability; or, if demanded, one-fourth capital value of pension in cash, the pension to be reduced accordingly.
- (c) If temporarily disabled, an allowance of 50 per cent of daily wages, beginning with fifth day, and including Sundays and holidays, unless disability lasts more than ten days, when payments become due from the first day.
- (d) If annual wages exceed 2,400 francs (\$463.20), only one-fourth of the excess is considered in computing pensions.
- (e) Payments of pensions of not over 100 francs (\$19.30) per annum may, by mutual consent when beneficiary is of age, be replaced by a cash payment.

Revision of compensation.—Revision of compensation because of aggravation or diminution of disability of victim may be made within three years.

Insurance.—Employers may transfer burden of payment of compensation to approved mutual aid, accident insurance, or guaranty associations, or, in case of pensions, to national accident insurance or national old-age pension funds.

Security of payments.—The State guarantees against loss of pension payments on account of insolvency of employers or insurance organizations, and is reimbursed by a special tax on employers within scope of the act. For temporary disability payments, medicines, and medical or surgical attendance, and funeral expenses of the victim, his creditors or representatives have a preferred claim on property of employer.

Settlement of disputes.—Disputes as to pensions or involving more than 300 francs (\$57.90) may be carried into higher civil courts. Judgments of local justice of the peace are final in other cases.

GERMANY.

Date of enactment.—July 6, 1884, in effect October 1, 1885. Supplementary acts May 28, 1885; May 5, 1886; July 11 and 13, 1887. A codification enacted June 30, 1900.

Injuries compensated.—Injuries by accident in the course of the employment, causing death or disability for more than three days, unless caused intentionally. Compensation may be refused or reduced if injury was received while committing an illegal act.

Industries covered.—Mining, salt works, quarrying and allied industries, shipyards, factories, smelting works, building trades, chimney sweeping, window cleaning, butchering, transportation and handling, agriculture, forestry, and fisheries.

Persons compensated.—All workmen, and those technical officials whose annual earnings are less than 3,000 marks (\$714). With the approval of the Imperial Insurance Office the law may be extended to other classes.

Government employees.—Act covers government employees in postal, telegraph, and railway services and in industrial enterprises of army and navy, unless otherwise provided for.

Burden of payment.—Medical and surgical treatment for ninety-one days and benefit payments from third to ninety-first days are provided by sick-benefit funds, to which employers contribute one-third and employees two-thirds; from twenty-eighth to ninety-first day payments are increased by one-third at expense of employer in whose establishment accident occurred; after ninety-first day and in case of death from injuries expense is borne by employers' associations supported by contributions of employers.

Compensation for death:

- (a) Funeral benefits of one-fifteenth of annual earnings of deceased, but not less than 50 marks (\$11.90).
- (b) Pensions to dependent heirs not exceeding 60 per cent of annual earnings of the deceased, as follows: Widow, 20 per cent of annual earnings until death or remarriage; in latter case a final sum equal to three annual payments; dependent widower, 20 per cent of annual earnings; each child 15 years of age or under, 20 per cent; payments to consort and to children to be reduced proportionately, if the

Compensation for death—Continued.

total would exceed 60 per cent; dependent heirs in ascending line, 20 per cent or less, if there is a residue after providing for above heirs; orphan grandchildren, 20 per cent or less, if there is a residue after providing for above heirs.

(c) If annual earnings exceed 1,500 marks (\$357), only one-third of excess is considered in computing pensions.

Compensation for disability:

(a) Free medical and surgical treatment paid first thirteen weeks by sick-benefit funds, and afterwards by employers' associations.

(b) For temporary or permanent total disability, 50 per cent of daily wages of persons similarly employed, but not exceeding 3 marks (71 cents), paid by sick-benefit funds from third day to end of fourth week; from fifth to end of thirteenth week, above allowance by sick-benefit fund plus 16½ per cent contributed by employer direct; after thirteen weeks, 66½ per cent of average annual earnings of injured person paid by employers' associations.

(c) For complete helplessness, necessitating attendance, payments may be increased to 100 per cent of annual earnings.

(d) For partial disability, a corresponding reduction in payments.

(e) If annual earnings exceed 1,500 marks (\$357), only one-third of excess is considered in computing pensions.

Revision of payments.—Whenever a change in condition of injured person occurs a revision of benefits may be made.

Insurance.—Payments are met by mutual insurance associations of employers, in which all employees are required to be insured at the expense of employers. Separate associations have been organized for each industry.

Security of payments.—Solvency of employers' associations is guaranteed by the State.

Settlement of disputes.—Disputes are settled by "arbitration courts for workmen's insurance," composed of one government official, two representatives of workmen, and two of employers.

GREAT BRITAIN.

Date of enactment.—December 21, 1906, in effect July 1, 1907; replacing acts of August 6, 1897, and July 30, 1900.

Injuries compensated.—Injuries by accident arising out of and in the course of employment which cause death or disable a workman for at least one week from earning full wages at the work at which he was employed. Compensation is not paid when injury is due to serious and willful misconduct, unless it results in death or serious and permanent disablement.

Industries covered.—"Any employment."

Persons compensated.—Any person regularly employed for the purposes of the employer's trade or business whose compensation is less than £250 (\$1,216.63) per annum; but persons engaged in manual labor only are not subject to this limitation.

Government employees.—Act applies to civilian persons employed under the Crown to whom it would apply if the employer were a private person.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death:

(a) A sum equal to three years' earnings, but not less than £150 (\$729.98) nor more than £300 (\$1,459.95), to those entirely dependent on earnings of deceased.

(b) A sum less than above amount if deceased leaves persons partially dependent on his earnings, amount to be agreed upon by the parties or fixed by arbitration.

(c) Reasonable expenses of medical attendance and burial, but not to exceed £10 (\$48.67) if deceased leaves no dependents.

Compensation for disability:

(a) A weekly payment during incapacity of not more than 30 per cent of employee's average weekly earnings during previous twelve months, but not exceeding £1 (\$4.87) per week; if incapacity lasts less than two weeks no payment is required for the first week.

(b) A weekly payment during partial disability, not exceeding the difference between employee's average weekly earnings before injury and average amount which he is earning or is able to earn after injury.

(c) Minor persons may be allowed full earnings during incapacity, but weekly payments may not exceed 10 shillings (\$2.43).

(d) A sum sufficient to purchase a life annuity through the Post-Office Savings Bank of 75 per cent of annual value of weekly payments may be substituted, on application of the employer, for weekly payments after six months; but other arrangements for redemption of weekly payments may be made by agreement between employer and employee.

Revision of benefits.—Weekly payments may be revised at request of either party, under regulations issued by the secretary of state.

Insurance.—Employers may make contracts with employees for substitution of a scheme of compensation, benefit, or insurance in place of the provisions of the act if the registrar of friendly societies certifies that the scheme is not less favorable to the workmen and their dependents than the provisions of the act, and that a majority of the workmen are favorable to the substitute. The employer is then liable only in accordance with the provisions of the scheme.

Security of payments.—In case of employer's bankruptcy, the amount of compensation due under the act, up to £100 (\$486.65) in any individual case, is classed as a preferred claim; or where an employer has entered into a contract with insurers in respect of any liability under the act to any workman such rights of the employer, in case he becomes bankrupt, are transferred to and vested in the workman.

Settlement of disputes.—Questions arising under the law are settled either by a committee representative of the employer and his workmen, by an arbitrator selected by the two parties, or, if the parties can not agree, by the judge of the county court, who may appoint an arbitrator to act in his place.

GREECE.

Date of enactment.—February 21 (March 6), 1901, in effect (retroactively) December 20, 1900 (January 2, 1901).

Injuries compensated.—All injuries by accidents during or because of the employment and causing death or disability lasting more than four days, unless brought on intentionally by the injured person.

Industries covered.—Mines, quarries, and metallurgical establishments.

Persons compensated.—All workmen and subordinate salaried persons.

Government employees.—No mention of government employees is made in the law.

Burden of payment.—Employer carries full burden of payment of indemnities during first three months; after three months, half the payments of pensions are contributed by the miners' fund, which is mainly supported by a tax on the mines and metallurgical establishments, but partly by contributions from the workmen's mutual aid societies in these establishments and some minor sources.

Compensation for death:

(a) If death occurs immediately or within three months: (1) Funeral expenses amounting to 60 drachmas (\$11.58); (2) pensions to heirs aggregating pension paid for total disability.

(b) If death occurs three months after injury or later, pensions to heirs aggregating 75 per cent of pension paid during life of the injured.

(c) All pensions to heirs are distributed as follows: Equal share to widow and children, or, in absence of widow and children, equal share to father and mother.

(d) Pension to widow ceases on her remarriage; to male children at 16 years of age; to female children on their marriage, with payment of one year's pension as a dowry.

(e) If only one heir survives, he is entitled to only one-half of original pension.

Compensation for disability:

(a) Free medical and surgical treatment.

(b) An allowance of 50 per cent of earnings of injured employee during first three months.

(c) If permanently disabled, a pension of 50 per cent of earnings in case of total disability (including loss of a hand or foot); in case of partial disability, a pension of 33½ per cent of earnings, pension payments to begin after end of third month.

(d) Pension may not exceed 100 drachmas (\$19.80) per month plus 25 per cent of the excess of computed pension over 100 drachmas (\$19.80).

(e) In computing pension of apprentices and children, no wage is to be considered less than 2.50 drachmas (48 cents) per day.

Revision of compensation.—Injured employee may present a new petition, or the council of the miners' fund may order a new examination, whenever there is reason to believe that changes have occurred in the degree of disability.

Insurance.—No provision is made by the law for the transfer of the burden of payment of compensation by insurance.

Security of payments.—The miners' fund guarantees payment of pensions and other allowances, and has preferred claim upon employer's assets in cases of dissolution or forced sale of establishment, and also in cases of voluntary transfer, unless the new proprietor assumes the obligations under the law.

Settlement of disputes.—Amount of pension is settled by the council of the miners' fund, and appeals against its decisions may be carried into the ordinary courts.

HUNGARY.

Date of enactment.—April 9, 1907, in effect July 1, 1907.

Injuries compensated.—Injuries by accident in the course of the employment causing death or disability for more than three days. Injuries caused intentionally are not compensated unless fatal.

Industries covered.—All factories subject to inspection, mines, quarries, metallurgical establishments, building trades, lumbering, construction work, shipbuilding, slaughterhouses, pharmacies, sanatoria, theaters, institutes of art and science.

Persons compensated.—All employees in industries enumerated.

Government employees.—Act covers government employees in state, municipal, and communal industries enumerated above.

Burden of payment.—All benefits and cost of treatment for first ten weeks provided by sick funds to which employers and employees contribute equally. Beginning with eleventh week entire cost is defrayed by employers through the accident fund.

Compensation for death:

(a) Funeral benefit of twenty times average daily wages.

(b) Pensions to heirs not exceeding 60 per cent of annual earnings of deceased, as follows—

Widow, 20 per cent of annual earnings until death or remarriage; in latter case a final sum equal to 60 per cent of annual earnings; or to dependent widower 20 per cent during disability.

Each child 16 years of age or under, 15 per cent if one parent survives, 30 per cent if neither survives; payments to consort and children reduced proportionately if they aggregate more than 60 per cent.

Dependent parents and grandparents if there is a residue after providing for above heirs, 20 per cent or less.

Dependent orphan grandchildren 15 years of age or under, if there is a residue after providing for above heirs, 20 per cent or less.

(c) In computing pensions the excess of annual earnings above 2,400 crowns (\$487.20) is not considered.

Compensation for disability:

(a) Free medical and surgical treatment provided first ten weeks by sick fund, and afterwards by accident fund.

(b) For temporary or permanent total disability, 50 per cent of average daily wages but not exceeding 4 crowns (81 cents) for first ten weeks, provided by sick fund; beginning with eleventh week, 60 per cent of average annual earnings, provided by accident fund.

(c) For complete helplessness necessitating attendance payments may be increased to 100 per cent of annual earnings.

(d) For partial disability a corresponding portion of full pension.

(e) In computing pensions the excess of annual earnings above 2,400 crowns (\$487.20) is not considered.

Revision of compensation.—Whenever a change in condition of injured person occurs the accident fund or the injured person may ask for a revision of the benefits.

Insurance.—Payments are met by a state insurance institution, in which all employees are required to be insured at the expense of employers.

Security of payment.—Guaranteed by the State.

Settlement of disputes.—Disputes are settled by arbitration courts, consisting of a presiding judge and an equal number of representatives of workmen and employers.

ITALY.

Date of enactment.—March 17, 1898, in effect September 17, 1898. Amended June 29, 1903. Promulgated in codified form January 31, 1904.

Injuries compensated.—All injuries sustained by workmen or salaried employees during or on account of labor. If due to willful misconduct, employer may be reimbursed through criminal action.

Industries covered.—Mines, quarries, building trades; light, heat, and power plants; arsenals; maritime construction work; transportation; industries requiring the use of handling of explosives; all industrial or agricultural work in proximity to power machinery; where more than five persons are employed in engineering construction work; operations for protection against landslides, floods, hailstorms; logging and timber rafting, and shipbuilding.

Persons compensated.—All workmen and apprentices and overseers receiving not more than 7 lire (\$1.35) per day and paid at intervals of one month or less.

Government employees.—Act applies to employment in state, provincial, and communal industries enumerated above unless specially provided for, and to work performed for a government institution under contract or concession.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death.—If within two years after the accident, five times annual wages of deceased workman, with a maximum of 10,000 lire (\$1,930), distributed to—

- (a) Surviving consort two-fifths or indemnity if there are children; one-half of indemnity if there are dependent ascendants; three-fifths of indemnity if only dependent brothers or sisters; entire indemnity in absence of heirs enumerated.
- Children, amounts sufficient to purchase an annuity of equal amount for each child under 12 years of age, and one-half of such annuity for each child from 12 to 18 years of age.

Each dependent parent or grandparent, if there are no children, annuity of equal amount for life.

Dependent brothers or sisters less than 18 years of age or incapable of performing labor by reason of a mental or physical defect, if there are no children or dependent ascendants, annuities distributed upon same principle as in case of children.

- (b) In absence of heirs indemnity is turned into a special fund for immediate aid to injured, payment of indemnities for insolvent employers, and prevention of accidents.

Compensation for disability:

- (a) Cost of first medical and surgical treatment.
- (b) An indemnity in case of permanent disability of six times annual earnings, but not less than 3,000 lire (\$579) if totally disabled, and six times the loss of annual earning capacity if partially disabled, earnings in latter case to be considered as not less than 500 lire (\$96.50).
- (c) A daily allowance in case of temporary disability of one-half the wages of injured workman, payable for not more than three months, if totally disabled, and equal to one-half the reduction in wages occasioned by the injury, if partially disabled.

Revision of compensation.—Both workman and insurer may ask for a revision of compensation within two years after accident.

Insurance.—Employers must insure their employees in (a) the national accident insurance fund, (b) an authorized insurance company, (c) an association of employers for mutual insurance against accidents, or (d) a private employers' insurance fund.

Security of payments.—Payments are guaranteed by State.

Settlement of disputes.—In cases of dispute concerning temporary disability payments, the council of prudhommes or the pretor of the locality in which the accident occurred has authority to sit in final judgment if amount involved does not exceed 200 lire (\$38.60). Disputes involving larger amounts are referred for settlement to the local magistrates.

LUXEMBURG.

Date of enactment.—April 5, 1902, in effect April 15, 1903. Sick insurance law enacted July 31, 1901.

Injuries compensated.—All injuries by accident during or because of the employment, resulting in death or disability for more than three days, unless caused intentionally by the victim or during the commission of an illegal act.

Industries covered.—Mines, quarries, manufactories, metallurgical establishments; gas and electric works; transportation and handling; building and engineering construction, and certain artisans' shops having at least five employees regularly and using mechanical motive power. By administrative order other establishments may become subject to the law if regarded dangerous.

Persons compensated.—Workmen and those supervising and technical officials whose annual earnings are less than 3,000 francs (\$579). Certain other classes of persons may be voluntarily insured.

Government employees.—Act applies to government telegraph and telephone services, public works conducted by public agencies, and other governmental industrial establishments, unless other provisions are made for pensioning employees. Penal institutions are not included.

Burden of payment.—Benefits and cost of treatment first thirteen weeks provided by sick benefit funds, to which employers contribute one-third and employees two-thirds, if injured person is insured against sickness; if not, because employed less than one week, by an accident insurance association supported by contributions of employers; if not insured for other reasons, by the employer direct; all benefits and treatment after thirteen weeks paid by accident insurance association.

Compensation for death:

- (a) Funeral expenses, one-fifteenth of the annual earnings, but not less than 40 francs (\$7.72) nor more than 80 francs (\$15.44).
- (b) Pensions, not to exceed 60 per cent of earnings of deceased, to—
 - Widow 20 per cent until death or remarriage; in the latter case a lump sum equal to 60 per cent; same payment to a dependent widower.
 - Each child 20 per cent until 15 years of age, even if father survives, provided he abandoned them, or the mother who was killed was their main support.
 - Dependent heirs in an ascending line, 20 per cent.
 - Dependent orphan grandchildren, 20 per cent until 15 years of age.
 - Widow and children have the preference over other heirs.
- (c) In computing pensions only one-third of excess of annual earnings over 1,500 francs (\$289.50) is considered.

Compensation for disability:

- (a) Entire cost of medical and surgical treatment.
- (b) For temporary or permanent total disability, from third day to end of fourth week, 50 per cent, and from fifth to end of thirteenth week, 60 per cent of wages of persons similarly employed; after thirteen weeks, 66½ per cent of annual earnings of injured person.
- (c) For partial disability a portion of above (depending upon degree of disability), which may be increased to full amount as long as injured employee is without employment.
- (d) Lump-sum payments may be substituted for pensions when degree of disability is not greater than 20 per cent.
- (e) In computing pensions only one-third of excess of annual earnings over 1,500 francs (\$289.50) is considered.

Revision of compensation.—Demands for change of amount of compensation may be made within three years.

Insurance.—Payments are met by mutual accident insurance association of employers in which all employees must be insured at expense of employers.

Security of payments.—Insurance association conducted under state supervision.

Settlement of disputes.—Appeals from the decisions of the association may be carried within forty days to a justice of the peace, who is required to invite two delegates, representing employer and employee, to assist in an advisory capacity. Further appeals may be taken to the higher courts.

NETHERLANDS.

Date of enactment.—January 2, 1901, in effect June 1, 1901. Other acts February 3 and December 8, 1902, and July 24, 1903.

Injuries compensated.—All injuries caused by accident in the course of the employment and causing death or disability for over two days, unless brought on intentionally. If due to intoxication, compensation is reduced one-half, and if death results no compensation is paid.

Industries covered.—Practically all manufacturing, mining, quarrying, building, engineering construction, and transportation; fishing in internal waters; establishments using mechanical motive power, or explosive or inflammable materials, and mercantile establishments handling such materials.

Persons compensated.—All workmen, including apprentices.

Government employees.—All State, provincial, and communal employees are included when engaged in any of the industries enumerated.

Burden of payment.—The entire expense rests upon the employer.

Compensation for death:

- (a) Funeral benefit of thirty times average daily earnings of deceased.
- (b) Pensions to heirs of not over 60 per cent of earnings of deceased, distributed to—
 - Widow, 30 per cent of earnings, until death or remarriage; in latter case two years' payments as a settlement; or to dependent widower, a pension equal to cost of support, but not over 30 per cent of earnings of deceased.
 - Each child under 16 years of age, 15 per cent if one parent survives and 20 per cent if both are dead.
 - Dependent parents, and in their absence to grandparents, not over 30 per cent.
 - Orphan grandchildren, not over 20 per cent.
 - Dependent parents-in-law, not over 30 per cent.
 - Widow and children to be preferred over all other heirs, and their respective shares to be reduced proportionately when aggregating over 60 per cent.
- (c) In computing pensions, wages higher than 4 florins (\$1.61) per day are to be considered as of that amount.

Compensation for disability:

- (a) Free medical and surgical treatment, or its cost.
- (b) From day after injury until forty-third day, an allowance of 70 per cent of daily earnings, excluding Sundays and holidays.
- (c) From forty-third day a pension of above amount during total disability and a smaller pension in proportion to loss of earning power if partially disabled.
- (d) In computing pensions, wages higher than 4 florins (\$1.61) per day are to be considered as of that amount.

Revision of compensation.—An examination of condition of victim may be made whenever the Royal Insurance Bank so desires.

Insurance.—Employers may insure their employees in the Royal Insurance Bank (a State institution), in a private company or association operating under State supervision, or they may carry the burden themselves. If not insured in the Royal Insurance Bank, a sufficient guaranty must be deposited with the latter. Employers must bear a proportionate share of the expense of administration of the Royal Insurance Bank, whether they insure in it or not.

Security of payments.—Compensation payments are guaranteed by the State.

Settlement of disputes.—Appeals may be taken from decisions of the Royal Insurance Bank to local arbitration councils, in which employers and employees are equally represented, and from them to a central arbitration council whose decisions are final.

NEW ZEALAND.

Date of enactment.—October 18, 1900, to take effect at a date fixed by the governor by order in council. Amended October 3, 1902, November 23, 1903, November 8, 1904, October 31, 1905, and October 29, 1906.

Injuries compensated.—All injuries to workmen arising out of and in the course of the employment causing death or disability for at least one week, except when due to serious and willful misconduct of the workman injured.

Industries covered.—Industrial, commercial, manufacturing, building, agricultural, pastoral, mining, quarrying, engineering, and hazardous work carried on by or on behalf of the employer as a part of his trade or business.

Persons compensated.—All persons under contract with an employer.

Government employees.—Act applies to work carried on by or on behalf of the Government or any local authority if it would, in case of a private employer, be an employment to which the act applies.

Burden of payment.—Entire cost of compensation rests upon employer; but if there are contractors, then on such contractors and the principal, jointly and severally.

Compensation for death:

- (a) A sum equal to three years' earnings, but not less than £200 (\$973.30) nor more than £400 (\$1,946.60), to those wholly dependent upon earnings of deceased.

Compensation for death—Continued.

- (b) A sum less than above amount if dependents were partly dependent upon deceased, to be agreed upon by the parties or fixed by a magistrate or by the arbitration court.
- (c) Reasonable expenses of medical attendance and burial, not exceeding £30 (\$146), in case deceased leaves no dependents.

Compensation for disability:

- (a) A weekly payment during disability not exceeding 50 per cent of employee's average weekly earnings during the previous twelve months, but not to exceed £2 (\$9.73) nor to fall below £1 (\$4.87) where employee's ordinary rate of pay at time of accident was not less than 30 shillings (\$7.30) per week. Total liability of employer is limited to £300 (\$1,459.95). No payment is made for first week if disability does not continue for a longer period than two weeks.
- (b) A lump sum may be substituted for weekly payments for permanent total or partial disability, to be agreed on by the parties or, in default of agreement, determined by the court of arbitration.

Revision of benefits.—Weekly payments may be revised at request of either party.

Insurance.—Employers may contract with their employees for substitution of a scheme of compensation, benefit, or insurance in place of the provisions of the act if the scheme is shown to be not less favorable to the general body of employees and their dependents than the provisions of the act. In such case the employer is liable only in accordance with the scheme.

Security of payments.—When an employer becomes liable under this act to pay compensation, and is entitled to any sum from insurers on account of the amount due to a workman under such liability, then in the event of his becoming insolvent such workman has a first claim upon this sum. Compensation for injuries sustained in the course of employment in or about a mine, factory, building, or vessel is deemed a charge upon the employer's interest in such property and has priority over all charges other than those lawfully existing at the time of the commencement of the act.

Settlement of disputes.—Disputes arising under the act are settled by the court of arbitration under the industrial arbitration act. Where claim for compensation does not exceed £200 (\$973.30) proceedings may be instituted before a magistrate whose decision is final, except that in cases where amount involved does not exceed £50 (\$243.33) either party may, with the consent of the magistrate, and in cases where the claim exceeds £50 (\$243.33), without such consent, appeal from the decision on any point of law.

NORWAY.

Date of enactment.—July 23, 1894, in effect July 1, 1895.

Injuries compensated.—All injuries by industrial accidents, causing death, or disability for more than four weeks, or requiring treatment after that period, unless intentionally brought about by the injured person.

Industries covered.—Practically all factories and workshops using other than hand power; mines and quarries; the handling of ice, explosives, or inflammable wares; building and engineering construction, electric work, transportation, salvage, and diving, chimney sweeping, and fire extinguishing. Employees in other industries may avail themselves of this insurance system.

Persons compensated.—All workmen and overseers.

Government employees.—Act covers employees in government or communal service, when engaged in any of the industries enumerated above, unless at least equal compensation is provided by special regulation.

Burden of payment.—Cost of compensation rests upon employer.

Compensation in case of death:

- (a) Funeral benefit of 50 crowns (\$13.40).
- (b) Pensions to heirs not exceeding 50 per cent of earnings, to be distributed to—
Widow, 20 per cent of earnings, until death or remarriage; in the latter case a lump sum equal to three annual payments; or dependent widower, 20 per cent of annual earnings of deceased while disability lasts.
Each child 15 per cent of annual earnings till age of 15 years if one parent survives, or 20 per cent if neither survives; 15 per cent for each parent to each child when both parents have died as result of injuries.
Dependent relatives in ascending line, if there is a residue after providing for above-mentioned heirs, a pension of 20 per cent of earnings until death or cessation of need, to be divided equally; but living parents exclude grandparents from participation.

- (c) In computing pensions, the excess of annual earnings over 1,200 crowns (\$321.60) is not considered.
- (d) Pension payments are in addition to prior allowances granted for disability.

Compensation for disability:

- (a) Free medical and surgical treatment, or cost of same, after four weeks.
- (b) If employee is totally disabled for more than four weeks an allowance of 60 per cent of the earnings, but not less than 0.50 crown (13 cents) per diem or 150 crowns (\$40.20) per annum; and a proportionate allowance in case of partial disability.
- (c) If injured employee is forced to stay in a hospital, dependents receive allowances during that time equal to the pensions granted in cases of death.
- (d) If injured employee is not a member of a sick insurance fund he is entitled to receive from employer directly sick benefits and free medical treatment from first day of injury.
- (e) In computing allowances the excess of annual earnings over 1,200 crowns (\$321.60) is not considered.

Revision of compensation.—Compensation is subject to revision upon demand of either the beneficiary or the insurance office.

Insurance.—A state central insurance office is established for the entire Kingdom, in which all employees subject to the law must be insured by employer, unless he is, for special reasons, relieved by royal order from the obligation of insurance.

Security of payments.—Insurance office is guaranteed by the State.

Settlement of disputes.—Appeals from decisions of insurance office may be entered within six weeks with the special insurance commission.

QUEENSLAND.

Date of enactment.—December 20, 1905, in effect March 31, 1906.

Injuries compensated.—All injuries by accident, arising out of and in the course of the employment, which cause death or disable a workman

for at least two weeks from earning full wages at the work at which he was employed, except when the injury is directly attributable to his serious and willful misconduct, or when it occurs while proceeding to or from his place of work.

Industries covered.—Industrial, commercial, manufacturing, building, agricultural, pastoral, mining, quarrying, engineering, or hazardous work carried on by or on behalf of the employer as a part of his trade or business.

Persons compensated.—All persons under contract with an employer. **Government employees.**—Act applies to any work carried on by or on behalf of the Government or any local authority, if it would, in case of a private employer, be an employment to which the act applies.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death:

- (a) A sum equal to three years' earnings, but not less than £200 (\$973.30) nor more than £400 (\$1,946.60), to those wholly dependent upon earnings of deceased; but aged and infirm employees may agree in advance to accept a reduced amount.
- (b) A sum less than above if heirs are only partly dependent.
- (c) Reasonable expenses of medical attendance and burial, not exceeding £30 (\$146), if deceased leaves no dependents.

Compensation for disability:

- (a) A weekly payment during disability after second week, not exceeding 50 per cent of employee's average weekly earnings during the previous twelve months, such weekly payments not to exceed £1 (\$4.87), and total liability not to exceed £400 (\$1,946.60); except that aged and infirm employees may agree in advance to accept a reduced amount.
- (b) A weekly payment during partial disability after second week, not exceeding one-half of difference between the employee's average weekly earnings before the accident and the average weekly amount which he is earning or able to earn after injury.
- (c) Minors may be allowed full earnings during incapacity, not exceeding 10 shillings (\$2.43) weekly.
- (d) A lump sum may be substituted for weekly payments after three months, on application of employer, the amount to be agreed upon or, in default of agreement, to be determined by a police magistrate.

Revision of compensation.—Weekly payments may be revised by a police magistrate at request of either party.

Insurance.—Employers may contract with their employees for substitution of a scheme of compensation, benefit, or insurance, in place of the provisions of the act if the scheme is officially certified to be not less favorable to the employees and their dependents than the provisions of the act. In such case the employer is liable only in accordance with the scheme.

Security of payments.—When an employer becomes liable under the act to pay compensation, and is entitled to any sum from insurers on account of the amount due to a worker under such liability, then in the event of his becoming insolvent, such workman has a first claim upon this sum for the amount so due.

Settlement of disputes.—Disputes arising under the act are heard and determined by a police magistrate, whose decision is final, except that either party may appeal from this decision on any point of law with the latter's leave if the claim does not exceed £50 (\$243.33), or without his leave if it exceeds that amount.

RUSSIA.

Date of enactment.—June 2 (15), 1903, in effect January 1 (14), 1904.

Injuries compensated.—All injuries by accident occasioned by or on account of the work and causing death or disability for more than three days, unless brought on intentionally by the victim or due to gross imprudence.

Industries covered.—Metallurgical and mining establishments and factories and workshops using other than hand power, but exclusive of shops of private railroad and steamship companies and certain rural industrial establishments.

Persons compensated.—Workmen and those technical officials whose annual earnings do not exceed 1,500 rubles (\$772.50).

Government employees.—Act applies to mining, metallurgical, and manufacturing establishments of municipal and zemstvo governments, but not to national government employees, for whom special regulations exist.

Burden of payment.—Entire burden of payment rests upon employer.

Compensation for death:

- (a) Funeral expenses not exceeding 30 rubles (\$15.45) for an adult and 15 rubles (\$7.73) for a child under 15 years of age.
- (b) Pensions to dependent heirs not exceeding 66⅔ per cent of annual earnings of victim, distributed to—
Widow, 33⅓ per cent until death or remarriage; in the latter case a lump sum equal to three annual payments.
Each child until age of 15 years, 16⅔ per cent if one parent survives and 25 per cent if neither parent survives.
Dependent heirs in ascending line, 16⅔ per cent.
Each dependent orphan brother and sister until 15 years of age, 16⅔ per cent.
Widow and children take precedence over other dependent heirs, who share the remainder in equal parts.
- (c) Pension may, by mutual consent of employer and beneficiary, be replaced by single payment of ten times amount of annual pension and, in case of children, pension multiplied by the number of years remaining for pension payments, but not exceeding ten.

Compensation for disability:

- (a) Free medical and surgical treatment or reimbursement of expense of same.
- (b) If permanently disabled, a pension of 66⅔ per cent of annual earnings of victim in case of total disability, and a pension proportionate to degree of incapacity in case of partial disability, to be paid from time when degree of permanent disability was determined; if amount of pension exceeds that of previous allowance for temporary disability, difference between the two during the period of disability is paid to permanently injured employee.
- (c) Pension may, by mutual consent of employer and beneficiary, be replaced by a single payment of ten times amount of annual pension.
- (d) If temporarily disabled, an allowance of 50 per cent of actual wages of victim from day of accident until complete recovery from disability or the determining of degree of permanent disability.

Revision of compensation.—Demands for revision of payments or to secure a pension previously refused may be made by either party within three years.

Insurance.—Employers may transfer burden of payment of compensation by insuring their employees in authorized insurance companies or societies.

Security of payments.—On retiring from business employer must guarantee payments by insurance or by deposit with a state bank. In case of insolvency, payments constitute a preferred claim.

Settlement of disputes.—Disputes may be carried into courts as other civil cases. Such cases are exempt from court fees, the documents are free from stamp tax, and attorney's fees are fixed by law.

SOUTH AUSTRALIA.

Date of enactment.—December 5, 1900, in effect not earlier than June 1, 1901.

Injuries compensated.—All injuries to workmen arising out of and in the course of the employment causing death or disability for at least one week, except when due to serious and willful misconduct of the workman injured.

Industries covered.—Railways, waterworks, tramways, electric-lighting works, factories, mines, quarries, engineering and building work, employments declared by a proclamation of the governor upon addresses from both houses of parliament to be dangerous or injurious to health or dangerous to life or limb, and agricultural pursuits where mechanical motive power is used.

Persons compensated.—All persons engaged in manual labor or otherwise.

Government employees.—Act applies to civilian persons employed under the Crown to whom it would apply if the employer were a private person.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death:

- (a) A sum equal to three years' earnings, but not less than £150 (\$729.98) nor more than £300 (\$1,459.95), to those wholly dependent upon earnings of deceased.
- (b) A sum less than above amount if dependents were partly dependent upon deceased, to be agreed upon by the parties or fixed by arbitration.
- (c) Reasonable expenses of medical attendance and burial not exceeding £50 (\$243.33), if deceased leaves no dependents.

Compensation for disability:

- (a) A weekly payment during disability after first week, not exceeding 50 per cent of employee's average weekly earnings during the previous twelve months, such weekly payments not to exceed £1 (\$4.87) nor, in case of total incapacity, to be less than 7s. 6d. (\$1.83) per week, and total liability not to exceed £300 (\$1,459.95).
- (b) A weekly payment during partial disability after first week to be fixed with regard to difference between employee's average weekly earnings before the accident and average weekly amount which he is earning or able to earn after injury.
- (c) A lump sum not exceeding £300 (\$1,459.95) may be substituted for weekly payments, after six months, on application of either party, the amount to be settled by arbitration under the act in default of agreement.

Revision of benefits.—Weekly payments may be revised at request of either party.

Insurance.—Employers may contract with their employees for substitution of a scheme of compensation, benefit, or insurance in place of the provisions of the act, if the public actuary certifies that the scheme is on the whole not less favorable to general body of employees and their dependents than the provisions of the act. In such case employer is liable only in accordance with the scheme.

Security of payments.—When an employer becomes liable under the act to pay compensation, and is entitled to any sum from insurers on account of the amount due to a workman under such liability, then in the event of his becoming insolvent such workman has a first claim upon this sum, and any special magistrate may direct its payment into the savings bank to be applied to payment of compensations due.

Settlement of disputes.—Disputes arising under the act are settled by the arbitration of existing committees representative of employers and employees, or, if either party objects, by a single arbitrator agreed on by the parties, or, in absence of agreement, by a special magistrate. An arbitrator appointed by the magistrate has all the powers of a local court.

SPAIN.

Date of enactment.—January 30, 1900, in effect July 28, 1900.

Injuries compensated.—All injuries by accidents to employees in the course of and by reason of the employment causing death or disability. Compensation may be reduced if injured person was engaged in an illegal act.

Industries covered.—Manufacturing, mines, quarries, metallurgical establishments, construction work, industries injurious to health, transportation, gas and electric works, street cleaning, theaters, and agricultural and forestry establishments using power machinery.

Persons compensated.—Workmen performing manual labor, including helpers and apprentices.

Government employees.—Act applies to employees of state factories and other government establishments, to labor accidents in war and naval departments, and to establishments of provincial and communal governments.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death.—In addition to any prior benefits paid for disability—

- (a) Funeral expenses not exceeding 100 pesetas (\$19.30).
- (b) A lump sum equal to two years' earnings if widow and children or dependent orphan grandchildren under 16 years survive; eighteen months' earnings if only children or orphan grandchildren survive; one year's earnings if only widow survives; ten months' earnings to dependent parents or grandparents over 60 years of age, in absence of widow or children, if two or more survive; seven months' earnings if only one parent or grand parent survives.
- (c) For these lump-sum payments, by mutual consent, the following pensions may be substituted: Forty per cent of annual earnings when widow and children or grandchildren survive; 20 per cent of annual earnings when only widow survives; 10 per cent to each dependent parent or grand parent over

Compensation for death—Continued.

60 years of age, when no widow or children survive, but not over 30 per cent in the aggregate; compensation to widow ceases on her remarriage and to children on their attaining the age of 16 years.

- (d) In these cases the daily earnings to be considered as not less than 1.50 pesetas (29 cents).
- (e) All of these compensations are increased by 50 per cent if the establishment is lacking in the required safety provisions.

Compensation for disability:

- (a) Free medical and surgical treatment during disability.
- (b) Fifty per cent of daily earnings, including Sundays and holidays, from day of injury to day of recovery from disability, but not over one year, after which case is treated as one of permanent disability.
- (c) In case of permanent disability, in addition to the foregoing, a sum equal to two years' earnings for total disability. Eighteen months' earnings if total disability extends only to former trade.
- (d) One year's earnings in cases of partial permanent disability for usual employment, unless the employer agrees to employ injured workmen at some other work at old rate of wages.
- (e) In these cases the daily earnings to be considered as not less than 1.50 pesetas (29 cents).
- (f) Compensations are increased by 50 per cent if the establishment is lacking in the required safety provisions.

Revision of compensation.—No special provision is made in the law.

Insurance.—Employers may contract with authorized insurance companies to assume obligations imposed by law.

Security of payment.—No special provision is made in the law.

Settlement of disputes.—Disputes concerning compensation under the law may be carried to special permanent labor tribunals consisting of representatives of the State, employers, and employees.

SWEDEN.

Date of enactment.—Approved July 5, 1901; in effect January 1, 1903; amended June 3, 1904.

Injuries compensated.—Injuries by accidents to workmen resulting from the employment and causing death or disability for more than sixty days, unless due to the willful act or gross negligence of the victim or the willful act of a third person who has neither the supervision nor the direction of the work.

Industries covered.—Practically all establishments engaged in forestry work, mining, quarrying, turf and ice cutting and handling, manufacturing, chimney sweeping, rafting, railway and tramway service, handling goods, building trades, conduit, road, and other construction work, and gas, electricity, and water distribution. Employers in other industries may insure their employees in the State Insurance Institute and thereby be placed under the provisions of the act. Employees in other industries may secure the protection of the act by insuring themselves in the State Insurance Institute.

Persons compensated.—Workmen and foremen.

Government employees.—Act applies to employees in the State and communal services when engaged in any of the industries enumerated above.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death.—When death results from the injury within two years—

- (a) Funeral benefit of 60 crowns (\$16.08).
- (b) Annual pensions not exceeding in the aggregate 300 crowns (\$80.40), to be distributed to widow, until remarriage 120 crowns (\$32.16); each child under 15 years of age, 60 crowns (\$16.08).

Compensation for disability:

- (a) If permanently disabled annual pension of 300 crowns (\$80.40) in case of total disability and a smaller sum, corresponding to loss of earning power in case of partial disability, pension to begin with sixty-first day of disability, or later if permanent character of the disability was not then established.
- (b) If temporarily disabled for more than sixty days, 1 crown (27 cents) per day, beginning with sixty-first day.

Revision of compensation.—Suit may be brought in a court of first instance by injured employee for a revision of compensation within two years from the date of the fixing of the same.

Insurance.—If an injured person receives an allowance or pension from an organization which is supported entirely or in part by the employer, or if the victim is insured in a private organization by his employer, the amounts received from such a source may be deducted from payments required of employers under the act. Employers may transfer burden of payment of compensation by insuring in the State Insurance Institute, created for this purpose by the act, or in individual cases purchase annuities for pensioners from this institution. Other arrangements may be made between employers and employees if the State Insurance Institute finds upon examination that they are not unfavorable to the employees.

Security of payments.—An employer may be required to furnish adequate security for the payment of the pension to cover the contingency of his neglecting to pay the same, of his retiring from business or leaving the country, or of his becoming insolvent. If he fails to furnish security he may be required to pay a lump sum equal to the capital value of the pension plus the payments and interest due, which amount, in the case of an injured employee, must be invested in the purchase of an annuity from the Royal Insurance Institute.

Settlement of disputes.—Disputes may be settled either by arbitration or by bringing suit in a court of first instance. The demand for arbitration must be made or the suit brought within two years after the accident, or, in case of fatal accidents, within two years after the death of the victim. If the action is against the State Insurance Institute, one year more is allowed.

WESTERN AUSTRALIA.

Date of enactment.—February 19, 1902, in effect on a date fixed by the governor by order in council.

Injuries compensated.—All injuries caused to a workman arising out of and in the course of the employment causing death or disability for at least two weeks, except when due to serious and willful misconduct of the workman injured.

Industries covered.—Railways, waterworks, tramways, electric-light plants, factories, mines, quarries, engineering and building work, and

employments declared by a proclamation of the governor, issued pursuant to addresses from both houses of parliament, to be dangerous or injurious to health or dangerous to life or limb.

Persons compensated.—All persons engaged under contract in any employment.

Government employees.—Act applies to all persons employed under the Crown to whom it would apply if employer were a private person.

Burden of payment.—Entire cost of compensation rests upon employer.

Compensation for death:

(a) A sum equal to three years' earnings, but not less than £200 (\$973.30), nor more than £400 (\$1,946.60), to those wholly dependent upon earnings of deceased.

(b) A sum less than above amount if dependents were partly dependent upon deceased, to be agreed upon by the parties or fixed by local court.

(c) Reasonable expenses of medical attendance and burial, not to exceed £100 (\$486.65), if deceased leaves no dependents.

Compensation for disability:

(a) A weekly payment during disability after second week, not exceeding 50 per cent of injured person's average weekly earnings during the previous twelve months, such weekly payment not to exceed £2 (\$9.73) and total liability not to exceed £300 (\$1,459.95).

(b) In case of partial disability, regard is to be had to the difference between average weekly earnings before and after the accident and to any payment other than wages made by employer on account of the injury.

(c) A lump sum may be substituted for weekly payments, after six months, on the application of the employer, the amount to be determined by the court in default of agreement.

Revision of benefits.—Weekly payments may be revised by the court at request of either party.

Insurance.—Employers may contract with their employees for substitution of a scheme of compensation, benefit, or insurance in place of the provisions of the act, if the registrar of friendly societies certifies that the scheme is on the whole not less favorable to the general body of employees and their dependents than the provisions of the act. In such case employer is liable only in accordance with this scheme.

Security of payments.—When an employer becomes liable under the act to pay compensation, and is entitled to any sum from insurers on account of the amount due to a workman under such liability, then in the event of his becoming insolvent such workman has a first charge upon this sum for the amount so due. Compensation for injuries sustained in the course of employment in or about a mine, factory, building, or vessel is deemed a charge on the employer's interest in such property.

Settlement of disputes.—Disputes arising under the act are settled by the local court of the district in which the injury is received.

The Democratic Attempt to Compel Legislation in the First Session of the Sixtieth Congress.

SPEECH

OF

HON. HENRY T. RAINEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. RAINEY said:

Mr. SPEAKER: Under the general leave to print I desire to submit the following brief review of the attempt by the Hon. JOHN SHARP WILLIAMS, of Mississippi, the Democratic leader in the House of Representatives, to compel the enactment of the legislation demanded by the country at the present time. In his effort to compel the enactment of certain needed legislation Mr. WILLIAMS received the united and active support of the Democratic minority in the House from the moment the movement commenced until the adjournment of Congress.

At the opening of the Sixtieth Congress the following legislation was universally demanded:

1. An employers' liability bill.
2. A bill providing for publicity of campaign contributions.
3. A bill placing wood pulp and print paper on the free list.
4. An anti-injunction bill.

The first session of the Sixtieth Congress commenced at noon, December 2, 1907, and from that time until January 7, when Congress reconvened after the holiday recess, the House was in actual session just fourteen hours and five minutes. During that time the House adjourned for two weeks on account of the holiday recess. Up to the 24th day of March the House was in session ninety days. The average daily length of each session was three hours and sixteen minutes. From the beginning of the session until the 24th day of March only three bills of public importance had been passed, to wit:

An act providing for an immigration station in Philadelphia, and appropriating \$250,000 therefor;

The urgent deficiency appropriation bill; and

The bill to increase the efficiency of the personnel of the Life-Saving Service.

Up to that time only one joint resolution had been passed, to wit, a resolution inviting other countries to send representatives to the International Congress of Tuberculosis.

The above bills and the above joint resolution represent the sum total of the activities of the Sixtieth Congress for the first four months of the session which closes to-day.

There is not much a minority can do to compel legislation on the part of the majority. A minority, however, has certain rights under the Constitution which can not be taken away. Among these rights is a right to demand roll calls, and this right the minority have asserted from the 24th day of March until to-day.

On the 24th day of March, 1908, Mr. WILLIAMS, the minority leader, on behalf of the Democratic minority, demanded the enactment of certain legislation, and in his speech on that occasion he said:

The minority can not exercise much power, but it has some power, and I want to make announcement now that from this moment on to the balance of the session this is not going to be a lie-easy, wait-on-the-enemy campaign [applause on the Democratic side], and that the little parliamentary power the minority has under the rules is going to be exercised. The minority has a right to refuse unanimous consent to legislation. It has a right to call for the yeas and nays upon every affirmative matter of legislation. I now make the announcement that requests for unanimous consent from that side of the aisle, unless it be to adjourn or to take a recess—in which two cases I believe it is not from a parliamentary standpoint necessary to have unanimous consent—will not be granted during the balance of this session until the majority shows that it is alive to the demands of the country sufficiently to report for consideration in this House or to give me satisfactory assurance that they will report for consideration the following bills:

First. An employers' liability bill. [Applause on the Democratic side.] You have been wasting too much time over it. You have been permitting your Judiciary Committee to have hearing upon hearing, and you have been using that bill merely as a buffer in order to prevent hearing upon other essential legislation before that committee, which legislation you hope to evade.

Second. I shall refuse unanimous consent until you report to this House for its consideration some publicity of campaign contributions bill [applause on the Democratic side], whether it be the bill offered by the gentleman from Missouri [Mr. RUCKER] or some other bill. I care not whose name is attached to it, Republican or Democrat.

Third. I shall refuse unanimous consent for any request upon that side of the Chamber until the Ways and Means Committee of this House, in response to the overwhelming demand of the entire newspaper and magazine fraternity of this country, Republican as well as Democrat, shall bring to the consideration of this House a bill for free wood pulp and free print paper. [Applause on the Democratic side.]

Fourth. I shall make the same declination until the Clayton bill, now pending before the Judiciary Committee, or some other bill embodying like provisions, shall have been reported out of that committee for the consideration of this House. What the Clayton bill does is this: It prevents mere ex parte and temporary injunctions, where only one side has been heard from, acting as a supersedeas of a law passed by a sovereign State.

I do not deny the right, upon final hearing of the injunction, when it is made permanent, to set aside a State law if, in the opinion of the Federal court, it violates the Constitution of the United States, but I do deny the right, upon a mere ex parte hearing by means of a temporary injunction without hearing the State's side at all of a subordinate court of the United States to sit in judgment on the constitutionality of the legislation of a sovereign State. [Applause on the Democratic side.] I am reinforced in that opinion by the fact that under the original judicial act the courts had no such power, and for years and years afterwards had no such power, and could not issue an injunction until they had heard both sides, with reasonable notice to both sides. Mr. Chairman, in order that there may be no misunderstanding about that, and how far I am going, I desire to read this Clayton bill, though I do not insist upon this particular bill. Bring in a bill in the name of the chairman of the committee; bring in a bill in the name of a Republican; claim the credit for it; go before the country and get the credit for it—you have a right to do it; that I admit; and I would be glad to see you do it, for I am never better satisfied than at the unusual spectacle of the Republican party serving the country. [Laughter and applause on the Democratic side.]

The Clayton bill is as follows: "Be it enacted, etc., That hereafter it shall be unlawful for any circuit or district court of the United States, or any circuit or district judge of the United States, to issue any injunction or order prohibiting or restraining the execution of any State law in all cases except where final trial has been had and final judgment or final decree has been rendered declaring such State law to be in violation of the Constitution, laws, or treaties of the United States."

"SEC. 2. That hereafter it shall be unlawful for any circuit or district court or any circuit or district judge of the United States to issue any injunction or restraining order prohibiting or restraining any State officer or any persons from executing any State law in all cases, except where final trial has been had and final judgment or final decree has been rendered declaring such State law to be in violation of the Constitution, laws, or treaties of the United States."

The first roll call demanded by Mr. WILLIAMS in pursuance of his announced purpose occurred on March 30, just two months prior to the adjournment date, and the period of the activity of the Sixtieth Congress commenced also on that date. During the remainder of the session following the inauguration of the aggressive campaign of the Democrats, under the leadership of Mr. WILLIAMS, for needed legislation between the 30th day of March and the 30th day of May the House passed thirty-one important public bills and four important public joint resolutions. During that period of time the Committee on Rules exerted its strength against the aggressive policy of the minority

leader and, among other rules, it reported out the following, all of which were passed by a strict party vote:

(P. 4326.) Mr. PAYNE, from the Committee on Rules, reported out an order for the consideration of H. Res. 233 for the distribution of the President's message; and

(P. 4331.) Moves closure of debate.

(P. 4349.) Mr. DALZELL, from the Committee on Rules, brought in a rule the effect of which was to revoke the previous unanimous consent of the House for eight hours of debate on the District appropriation bill, allowing two hours only.

(P. 4368.) A sweeping rule was brought in by Mr. DALZELL, which provided that all Senate amendments to general appropriation bills should be agreed or disagreed to en bloc. The rule also provided that a motion for a recess should be a privileged motion. It also provided for closing debate by motion in the House before going into the Committee of the Whole—the motion not to be subject to debate or amendment. In his speech reporting this rule Mr. DALZELL admitted that the rule was brought in for the purpose of counteracting Mr. WILLIAMS's tactics.

(P. 4505.) A rule was brought in declaring recesses in advance from day to day for the current week. It also provided for the closing of debate on the naval appropriation bill.

(P. 4514.) A rule was reported providing that whenever a general appropriation bill is reported favorably from the committee on the bill it shall be in order to apply to it in the House a motion to suspend the rules under the conditions prescribed in Rule XXVIII, except a vote shall be by a majority instead of two-thirds.

The above are some of the arbitrary rules brought in to counteract the effect of the tactics of the minority leader. More time was consumed in discussing and in voting on the above rules than would have been required to have discussed and to have passed bills on all the matters referred to by Mr. WILLIAMS on the 24th day of March.

On the 26th day of March the President sent to Congress a special message advising, among other things, in substance, the legislation demanded by the minority leader. The Democrats, under the leadership of Mr. WILLIAMS, compelled the adoption of an employers' liability bill, which was approved April 22, 1908, and is known as "Public bill No. 100."

The following is a copy of the bill:

H. R. 20310. An act relating to the liability of common carriers by railroad to their employees in certain cases.

Be it enacted, etc., That every common carrier by railroad, while engaging in commerce between any of the several States or Territories, or between any of the States and Territories, or between the District of Columbia and any of the States or Territories, or between the District of Columbia or any of the States or Territories and any foreign nation or nations, shall be liable in damages to any person suffering injury while he is employed by such carrier in such commerce, or, in case of the death of such employee, to his or her personal representative, for the benefit of the surviving widow or husband and children of such employee; and if none, then of such employee's parents; and if none, then of the next of kin dependent upon such employee, for such injury or death resulting in whole or in part from the negligence of any of the officers, agents, or employees of such carrier, or by reason of any defect or insufficiency, due to its negligence, in its cars, engines, appliances, machinery, track, roadbed, works, boats, wharves, or other equipment.

SEC. 2. That every common carrier by railroad in the Territories, the District of Columbia, the Panama Canal Zone, or other possessions of the United States shall be liable in damages to any person suffering injury while he is employed by such carrier in any of said jurisdictions, or, in case of the death of such employee, to his or her personal representative, for the benefit of the surviving widow or husband and children of such employee; and, if none, then of such employee's parents; and, if none, then of the next of kin dependent upon such employee, for such injury or death resulting in whole or in part from the negligence of any of the officers, agents, or employees of such carrier, or by reason of any defect or insufficiency, due to its negligence, in its cars, engines, appliances, machinery, track, roadbed, works, boats, wharves, or other equipment.

SEC. 3. That in all actions hereafter brought against any such common carrier by railroad under or by virtue of any of the provisions of this act to recover damages for personal injuries to an employee, or where such injuries have resulted in his death, the fact that the employee may have been guilty of contributory negligence shall not bar a recovery, but the damages shall be diminished by the jury in proportion to the amount of negligence attributable to such employee: *Provided*, That no such employee who may be injured or killed shall be held to have been guilty of contributory negligence in any case where the violation by such common carrier of any statute enacted for the safety of employees contributed to the injury or death of such employee.

SEC. 4. That in any action brought against any common carrier under or by virtue of any of the provisions of this act to recover damages for injuries to, or the death of, any of its employees, such employee shall not be held to have assumed the risks of his employment in any case where the violation by such common carrier of any statute enacted for the safety of employees contributed to the injury or death of such employee.

SEC. 5. That any contract, rule, regulation, or device whatsoever, the purpose or intent of which shall be to enable any common carrier to exempt itself from any liability created by this act, shall to that extent be void: *Provided*, That in any action brought against any such common carrier under or by virtue of any of the provisions of this act, such common carrier may set off therein any sum it has contributed or paid to any insurance, relief benefit, or indemnity that may have been

paid to the injured employee or the person entitled thereto on account of the injury or death for which said action was brought.

SEC. 6. That no action shall be maintained under this act unless commenced within two years from the day the cause of action accrued.

SEC. 7. That the term "common carrier" as used in this act shall include the receiver or receivers or other persons or corporations charged with the duty of the management and operation of the business of a common carrier.

SEC. 8. That nothing in this act shall be held to limit the duty or liability of common carriers or to impair the rights of their employees under any other act or acts of Congress, or to affect the prosecution of any pending proceeding or right of action under the act of Congress entitled "An act relating to liability of common carriers in the District of Columbia and Territories, and to common carriers engaged in commerce between the States and between the States and foreign nations to their employees," approved June 11, 1906.

Approved April 22, 1908.

The other three demands of the minority leader have not been complied with by the Republicans.

PUBLICITY OF CAMPAIGN CONTRIBUTIONS.

The Republican majority, in pretended compliance with the Democratic demands for publicity of campaign contributions, compelled the passage by a strict party vote in the House of Representatives on the 12th day of May, 1908, of the following bill:

An act (H. R. 20112) providing for publicity of contributions made for the purpose of influencing elections at which Representatives in Congress are elected, prohibiting fraud in registrations and elections, and providing data for the apportionment of Representatives among the States.

Be it enacted, etc., That the term "political committee" under the provisions of this act shall include the national committees of all political parties and the national Congressional campaign committees of all political parties and all committees, associations, or organizations which shall in two or more States influence the result or attempt to influence the result of an election at which Representatives in Congress are to be elected.

SEC. 2. That every political committee as defined in this act shall have a chairman and a treasurer. It shall be the duty of the treasurer to keep a detailed and exact account of all money or its equivalent received by or promised to such committee or any member thereof, or by or to any person acting under its authority or in its behalf, and the name of every person, firm, association, or committee from whom received, and of all expenditures, disbursements, and promises of payment or disbursement made by the committee or any member thereof, or by any person acting under its authority or in its behalf, and to whom paid, distributed, or disbursed. No officer or member of such committee, or other person acting under its authority or in its behalf, shall receive any money or its equivalent, or expend or promise to expend any money on behalf of such committee, until after a chairman and treasurer of such committee shall have been chosen.

SEC. 3. That every payment or disbursement made by a political committee exceeding \$10 in amount be evidenced by a receipted bill stating the particulars of expense, and every such record, voucher, receipt, or account shall be preserved for fifteen months after the election to which it relates.

SEC. 4. That whoever, acting under the authority or in behalf of such political committee, whether as a member thereof or otherwise, receives any contribution, payment, loan, gift, advance, deposit, or promise of money or its equivalent, shall, on demand, and in any event within five days after the receipt of such contribution, payment, loan, gift, advance, deposit, or promise, render to the treasurer of such political committee a detailed account of the same, together with the name and address from whom received, and said treasurer shall forthwith enter the same in a ledger or record to be kept by him for that purpose.

SEC. 5. That the treasurer of every such political committee shall, not more than fifteen days and not less than ten days before an election at which Representatives in Congress are to be elected in two or more States, file in the office of the Clerk of the House of Representatives at Washington, D. C., with said clerk, an itemized detailed statement, sworn to by said treasurer and conforming to the requirements of the following section of this act. It shall also be the duty of said treasurer to file a similar and final statement with said clerk within thirty days after such election, such final statement also to be sworn to by said treasurer and to conform to the requirements of the following section of this act. The statements so filed with the Clerk of the House shall be preserved by him for fifteen months, and shall be a part of the public records of his office, and shall be open to public inspection.

SEC. 6. That the statements required by the preceding section of this act shall state:

First. The name and address of each person, firm, association, or committee who or which has contributed, promised, loaned, or advanced to such political committee, or any officer, member, or agent thereof, either in one or more items, money or its equivalent of the aggregate amount or value of \$100 or more;

Second. The total sum contributed, promised, loaned, or advanced to such political committee, or to any officer, member, or agent thereof, in amounts less than \$100;

Third. The total sum of all contributions, promises, loans, and advances received by such political committee or any officer, member, or agent thereof;

Fourth. The name and address of each person, firm, association, or committee to whom such political committee, or any officer, member, or agent thereof, has disbursed, distributed, contributed, loaned, advanced, or promised any sum of money or its equivalent of the amount or value of \$10 or more, and the purpose thereof;

Fifth. The total sum disbursed, distributed, contributed, loaned, advanced, or promised by such political committee, or any officer, member, or agent thereof, where the amount or value of such disbursement, distribution, loan, advance, or promise to any one person, firm, association, or committee in one or more items is less than \$10;

Sixth. The total sum disbursed, distributed, contributed, loaned, advanced, or promised by such political committee or any officer, member, or agent thereof.

SEC. 7. That every person, firm, association, or committee, except political committees as hereinbefore defined, that shall expend or

promise any sum of money or other thing of value amounting to fifty dollars or more for the purpose of influencing or controlling, in two or more States, the result of an election at which Representatives to the Congress of the United States are elected, unless he or it shall contribute the same to a political committee as hereinbefore defined, shall file the statements of the same under oath as required by section 6 of this act in the office of the Clerk of the House of Representatives, at Washington, D. C., which statements shall be held by said clerk in all respects as required by section 5 of this act.

Sec. 8. That any person may in connection with such election incur and pay from his own private funds for the purpose of influencing or controlling, in two or more States, the result of an election at which Representatives to the Congress of the United States are elected, all personal expenses for his traveling and for purposes incidental to traveling, for stationery and postage, and for telegraph and telephone service, without being subject to the provisions of this act.

Sec. 9. That the foregoing provisions of this act shall not apply to the proprietors and publishers of publications issued at regular intervals in respect to the ordinary conduct of their business, and nothing contained in this act shall limit or affect the right of any person to spend money for proper legal expenses in maintaining or contesting the results of any election.

Sec. 10. That every person willfully violating any of the foregoing provisions of this act shall, upon conviction, be fined not more than \$1,000 or imprisoned not more than one year, or both.

Sec. 11. That if, at any election for Representative or Delegate in Congress, or at any primary election for the nomination of a candidate for Representative or Delegate in Congress held in pursuance of State or Territorial law, any person knowingly personates and votes, or attempts to vote, in the name of any other person, whether living, dead, or fictitious; or votes more than once at the same election, or primary election, for any candidate for the same office; or votes at a place where he may not be lawfully entitled to vote; or votes without having a lawful right to vote; or does any unlawful act to secure an opportunity to vote for himself, or any other person; or by force, threat, intimidation, bribery, reward, or offer thereof, unlawfully prevents any qualified voter of any State or of any Territory from freely exercising the right of suffrage, or by any such means induces any voter to refuse to exercise such right, or compels or induces by any such means any officer of an election or primary election in any such State or Territory to receive a vote from a person not legally qualified or entitled to vote, or interferes in any manner with any officer of such election or primary election in the discharge of his duties, or by any such means or other unlawful means induces any officer of an election or primary election, or officer whose duty it is to ascertain, announce, or declare the result of such election or primary election, or give or make any certificate, document, or evidence in relation thereto, to violate or refuse to comply with his duty or any law regulating the same, or knowingly receives the vote of any person not entitled to vote, or refuses to receive the vote of any person entitled to vote, or aids, counsels, procures, or advises any such voter, person, or officer to do any act hereby made a crime, or omits to do any duty the omission of which is hereby made a crime, or attempts to do so, he shall be punished by a fine of not more than \$500 or by imprisonment not more than three years, or by both, and shall pay the costs of the prosecution.

Sec. 12. That if at any registration of voters for an election for Representative or Delegate in Congress, or for any primary election for the nomination of a candidate for Representative or Delegate in Congress held in pursuance of State or Territorial law, any person knowingly personates and registers, or attempts to register in the name of any other person, whether living, dead, or fictitious, or fraudulently registers or fraudulently attempts to register, not having a lawful right so to do, or does any unlawful act to secure registration for him or any other person, or by force, threat, menace, intimidation, bribery, reward, or offer or promise thereof, or other unlawful means, prevent or hinders any person having a lawful right to register from duly exercising such right, or compels or induces by any of such means, or other unlawful means, any officer of registration to admit to registration any person not legally entitled thereto, or interferes in any manner with any officer of registration in the discharge of his duties, or by any such means, or other unlawful means, induces any officer of registration to violate or refuse to comply with his duty or any law regulating the same, or if any such officer knowingly and willfully registers as a voter any person not entitled to be registered, or refuses to so register any person entitled to be registered, or if any such officer or other person who has any duty to perform in relation to such registration or election or primary election, in ascertaining, announcing, or declaring the result thereof, or in giving or making any certificate, document, or evidence in relation thereto, knowingly neglects or refuses to perform any duty required by law, or violates any duty imposed by law, or does any act unauthorized by law relating to or affecting such registration or election or primary election, or the result thereof, or any certificate, document, or evidence in relation thereto, or if any person aids, counsels, procures, or advises any such voter, person, or officer to do any act hereby made a crime, or to omit any act the omission of which is hereby made a crime, every such person shall be punished by a fine of not more than \$500 or by imprisonment not more than three years, or by both, and shall pay the costs of the prosecution.

Every registration made under the laws of any State or Territory for any State or other election, or primary election at which such Representative or Delegate in Congress may be nominated or elected, shall be deemed to be a registration within the meaning of this section, notwithstanding such registration is also made for the purposes of any State, Territorial, or municipal election, or primary election.

Sec. 13. That every officer of an election at which any Representative or Delegate in Congress is voted for, or of any primary election for the nomination of a candidate for Representative or Delegate in Congress, whether such officer of election be appointed or created by or under any law or authority of the United States, or by or under any State, Territorial, district, or municipal law or authority, who neglects or refuses to perform any duty in regard to such election or primary election required of him by any law of the United States, or of any State or Territory thereof, or who violates any duty so imposed, or who knowingly does any acts thereby unauthorized, with intent to affect any such election or primary election or the result thereof, or who fraudulently makes any false certificate of the result of such election or primary election in regard to such Representative or Delegate, or who withholds, conceals, or destroys any certificate of record so required by law respecting the election of any such Representative or Delegate, or primary election for the nomination of a candidate for such Representative or Delegate, or who neglects or refuses to make

and return such certificate as required by law, or who aids, counsels, procures, or advises any voter, person, or officer to do any act by sections 11 or 12 thereof made a crime, or to omit to do any duty the omission of which is by this or any of such sections made a crime, or attempts to do so, shall be punished by a fine of not more than \$500 or by imprisonment not more than three years, or by both, and shall pay the costs of the prosecution.

Sec. 14. That for the purpose of enabling Congress to apportion Representatives among the several States in accordance with the plan provided in the second section of the fourteenth amendment to the Constitution, the Director of the Census, as soon as practicable after the decennial census of population, shall submit to Congress a report of the population by States as shown by such census, which report shall also show the number of male citizens, white and colored, respectively, in each State, 21 years of age and over, the number of such male citizens in each State found to be illiterate, the number of votes cast by male citizens in each Congressional district at the last preceding general election, the number of such male citizens in each State that had not complied with the registration and election laws therein requiring the payment of a poll or property tax as a condition precedent to the right to register or vote, and the number of such male citizens in each State to whom the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial offices of the State or members of the legislature thereof, has been denied or in any way abridged except for participation in crime.

Sec. 15. That all prosecutions under this act shall be commenced within one year after the commission of the offense, and shall be brought in the United States circuit court within the district in which such offenses occurred.

The above measure is a combination of the McCall publicity bill, the Federal election bill, and an effort to take the preliminary steps toward reducing Southern representation in the House of Representatives. It was passed through the House against a protest of the Democrats, and with the knowledge that it could not possibly under any consideration pass the Senate. The country was demanding an act providing for publicity of campaign contributions. The investigations of the life-insurance companies in New York, recently finished, disclosed the necessity of legislation of this character. The tremendous corrupting influences of contributions by the Standard Oil Company, the steel trust, the life-insurance companies, and other great corporations of the Republican campaign funds from 1896 to date discloses the immediate necessity for publicity. This legislation was universally demanded. The bill met its fate in the Senate, as predicted in the House, on the 28th day of May—two days ago. It was impossible to get it through the Senate with the objectionable provisions attached.

I quote from a part of the debate in the Senate on that day on the subject (CONGRESSIONAL RECORD, p. 7105, first session Sixtieth Congress):

Mr. CULBERSON. There is another important matter, Mr. President, which the Senator, I trust, will pardon me for calling his attention to at this time, measures which are pending with reference to the publicity of campaign contributions. I ask the Senator if we may expect any legislation on that subject at this session?

Mr. ALDRICH. I am also without authority to speak for anybody but myself. There is a measure pending in the Committee on Privileges and Elections which comes here from the House of Representatives, and I can only say, as far as I am personally concerned, if the Senator desires a vote on that measure this afternoon or any hour to-day or to-morrow, without further debate, after the pending conference report is disposed of, I certainly shall make no objection to that request.

Mr. CULBERSON. Does the Senator refer to what is known as "the McCall publicity bill?"

Mr. ALDRICH. I refer to the bill which came here on that subject from the House of Representatives, and which is now pending in the Committee on Privileges and Elections.

Mr. CULBERSON. But my inquiry was with reference to a publicity bill pure and simple, unmixed with other political matters.

Mr. ALDRICH. The publicity bill that is before the Senate is associated with other provisions in regard to changes in election laws. The Senate can not disassociate those two items. If the Senator desires legislation upon the subject, of course it must be legislation with the concurrence of the House of Representatives, and those two things can not be separated. Of course, if we should agree to take a vote upon the subject and fix a time and the Senate should disagree to that provision, then the matter would be in conference. But I am quite willing, speaking for myself, to fix a time immediately after the disposition of the pending conference report for a vote upon the House proposition without further amendment.

Mr. CULBERSON. The Senator, then, I assume, so far as he is concerned—and of course we know the extent to which he speaks—is unable to give us any assurance that a publicity bill pure and simple, unmixed with the bill, I will state frankly, concerning representation, will be acted upon at this session and be passed.

Mr. ALDRICH. There is no possible way in which the Senate can bring the matter to a test vote except by taking up the House bill, so far as I can see. If we are to have effective legislation upon the subject, it must be, as I said before, by concurrence of the two Houses; and I shall join with pleasure the Senators upon the other side, if they desire to have a time fixed for a vote upon that proposition, in acceding to their request.

Mr. BACON. With the permission of the Senator from Texas, I desire to make a suggestion to the Senator from Rhode Island in that connection. There are some things in which parties and Senators are at variance. Of course we recognize that there are some things in which there is controversy, some things in which there is a diversity of opinion and of wish. There are other things in which there is, on the part of Senators of both political parties, a profession of unanimity of purpose and of desire.

Now, both parties represented in this Chamber, and those outside of this Chamber who are recognized as the leaders of the parties in the country at large, avow that they are at one upon one subject,

that they are in perfect unison and accord on the subject of the requirement of publicity in connection with campaign funds and contributions.

Mr. ALDRICH. Will the Senator from Georgia state to whom he refers? I would be glad to have the Senator state definitely to whom he refers as the leaders of the two parties.

Mr. BACON. I can only speak of what appeared in the press. I am not speaking otherwise than what has been given out in an informative manner. There are some who in the public press assume to be leaders and express themselves in that way. But I am not speaking of that except simply by way of a side matter. I am speaking about what concerns us in this Chamber, to wit, the profession on the part of Senators on each side of the Chamber that we are in favor of the passage of a law which shall make public the contributions for campaign purposes prior to an election. I suppose there is no Senator here who will rise in his place and say he does not favor that.

Now, that being a matter in which we are professedly in absolute accord, the suggestion I wish to make to the Senator is that if in truth we are in accord, if it is true that in good faith that profession is made, then the matter which is thus without controversy can be easily disposed of without debate and without reference to committees or anything else. We can pass the measure in five minutes if it is limited to the publicity feature, whereas the Senator well knows that to attach to it a matter which is in controversy and about which there is not a concord of sentiment it must necessarily at this time defeat the one about which there is no diversity of opinion.

That being the case, I suppose of course it has occurred to the Senator—but I thought I would take the liberty of suggesting it—that the plain, simple way, if we desire really to carry out our professions relative to requiring publicity of campaign contributions, is to limit our consideration and our action to that matter about which there is professedly no diversity of opinion.

I said I supposed there was no Senator in this Chamber who would rise in his place and say that he did not favor the publicity bill. Then I would ask every Senator to ask himself the question whether it is acting in good faith to attach to that measure relative to publicity another measure which does produce controversy and about which we are disagreed and the inevitable consequence of which must be to defeat that which they profess a desire to accomplish.

If it be true that our profession is sincere on both sides, if it be true that each of us, without exception, favors the enactment of a law which shall require publicity as to contributions for campaign funds, why is it that we can not make good that profession by an act which it is easy for us to accomplish by simply saying that we will pass a bill which shall relate to that and to nothing else?

Mr. CULBERSON. Mr. President, I am obliged to the Senator from Georgia for the suggestion which he has made and to which no reply so far has been made by the Senator from Rhode Island, to whom I yield if he desires to make a reply now. If he does not see proper to reply further, I assume—and if my assumption is not well founded, I hope that I may be corrected—that there is no possibility of passing an anti-injunction bill at this session of Congress, nor is there any probability or any possibility of passing a bill providing for the publication of campaign contributions, pure and simple.

WOOD PULP AND PRINT PAPER.

No attempt was made to pass this legislation so universally demanded by the newspapers of the country. A committee was appointed to investigate the matter. The method usually adopted for the postponing of legislation is by the appointment of committees. The committee met and heard the complaints of the publishers. They are still meeting. The investigation is not over. The Republican leaders are congratulating themselves that they have postponed action on this question until after the election. If another Republican House is elected they can simply say, "Republican policies have been indorsed. It is not necessary now to put wood pulp and print paper on the free list."

THE ANTI-INJUNCTION BILL.

No attempt was made to pass this legislation. The majority leader [Mr. PAYNE], however, introduced the following bill:

A bill (H. R. 21359) relating to injunctions.

Be it enacted, etc., That hereafter no preliminary injunction or restraining order shall be granted by any judge or court without notice to the party sought to be enjoined or restrained, unless it shall appear to the satisfaction of the court or judge to whom application for such injunction or restraining order is made that the immediate issue of such injunction or restraining order is necessary to prevent irreparable damage.

SEC. 2. That any such injunction or restraining order granted shall contain a rule on the opposite party to show cause within five days why such injunction or restraining order shall not be continued.

The above bill may therefore be considered to be the Republican measure relating to injunctions. I submit that if enacted into law it would not afford the slightest relief.

The Democratic minority in the House has done all it could to compel the enactment of the legislation so universally demanded on these questions. We are willing to go to the country on the record we have made. The charge that the Democratic party as represented in Congress will not follow a leader has been answered on all of the above questions. The party was united always and presented a solid front to the enemy.

The only measure passed by the Republicans in response to the universal demands of the people was an employers' liability bill of doubtful constitutionality. If its constitutionality had been clear it probably would not have been by the majority permitted to pass.

The Democratic effort, under the splendid leadership of Mr. WILLIAMS, to compel needed legislation has demonstrated to the country the fact that if legislation is to be had upon these questions it can only be had after the election of a Democratic Congress and a Democratic President.

Currency Bill.

SPEECH

OF

HON. JOHN S. WILLIAMS,
OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. WILLIAMS said:

Mr. SPEAKER: Under the general leave to print until the expiration of five days after the adjournment, which was passed over my protest, I insert in the RECORD the following editorial from the Philadelphia North American of to-day, May 29. I have stricken out some words that seemed to me too bitter:

THE CURRENCY CRIME.

"Dead and damned!" was the epitaph which a famous Democratic editor once wrote at the close of a Democratic Congress which had proved itself the enemy of the common interest and the servant of public enemies.

Are there not three or four Republican Senators big enough, broad enough, far-sighted enough, and sufficiently patriotic to save us the humiliation of being compelled by honesty to repeat that epitaph when this present Congress dies—none too soon?

The Republican party is about to go before the people with the mongrel, hybrid, cheating, swindling thing labeled the Aldrich-Cannon currency bill as its claim to the ballots of American workers and business men, already long-suffering and embittered victims of the gamblers of New York.

It has been whipped through the House, to the shame of the men who have stilled their own convictions and crouched cowards under the lash of the tyrant in the Speaker's chair for fear of his threat to deprive them of their slices from "the pork barrel"—their appropriations in the omnibus building bill.

It will be whipped through the Senate in like fashion, in all likelihood, thanks to the feebleness of the Democratic minority, playing the donkey's role as usual, in their inability to see the chance to gain favor by a filibuster that would be patriotic statesmanship.

Worst of all, we believe that Roosevelt will make the bill a law by signing it. He will hurt his country and his party not because of lack of courage or of good intent. He will do this sin because of lack of understanding.

In grasp of financial questions he is an infant. He trusted Cortelyou. That was excusable. But he continued to trust him after last December. And now again, with the best of motives, he will commit one of those blunders which Talleyrand rightly called "worse than a crime."

Are there not two or three men in the United States Senate not too deaf to hear the stern warning of all the legitimate business interests of America?

Has not Roosevelt enough friends there to save him from himself?

Are there not enough loyal Republicans to keep the party from being rushed into gravest peril by this foisting upon the people at the dictates of Wall street a law immeasurably worse than the one condemned by practically every organized body of business men in the nation?

Even the original Aldrich bill was better than this iniquity. Even the two-headed freakish thing promised by the conference conspirators was not so vicious as the swindle rushed to passage in the House after one hour's debate, before a single Member had a chance to read the bill upon which he voted.

It was only eighteen months or so ago that ALDRICH, on the floor of the Senate, made this declaration regarding municipal and railroad bonds: "In these days they are fluctuating widely, and no prudent banker could afford to buy bonds other than the bonds of the United States."

But that was before he had new orders from 26 Broadway and the National City Bank, and before J. P. Morgan's office boy in Washington received the message that illegal bond issues would be needed for Wall street's convenience, in addition to \$250,000,000 deposits of the people's money.

Those high financiering banks of New York owed outside banks \$410,000,000 just before last fall's panic. From August until December the country could squeeze only 5 per cent of its own money from New York's clutches. And Wall street made a virtue of paying \$20,000,000 of its \$400,000,000 indebtedness to the distressed country during a period when the accommodating Cortelyou increased the Treasury deposits in New York banks \$47,000,000.

But Wall street had bonds in plenty—railroad and municipal bonds unsalable, unacceptable by savings banks, and so speculative and unstable that many of them fluctuated from 10 to 20 per cent within a year.

New York was the defaulter of the nation, with its illegal clearing-house certificates. But there were bonds to build new skyscrapers in Broad street if heaped in bundles, flotation upon flotation.

There were bonds enough when Mr. Cortelyou opened the Treasury doors to them to increase the deposits of railroad and municipal bonds with the Government from \$87,000,000 in October to \$200,000,000 in December. And still Wall street gasped for breath under its load of dubious securities.

It was to dump upon the Government that load that ALDRICH introduced the bill that he did not himself dare defend except as a makeshift. And it was that bill which brought forth an outburst of indignation from every board of trade and commercial body throughout the land.

The protest was so universal that ALDRICH voluntarily withdrew his proposal to accept railroad bonds as security for currency. He did so

in an attempt to forestall LA FOLLETTE's tremendous indictment, of which this was an essential clause:

"For us to pass laws here that lend Government credit to railroad financier schemes that guarantee, in a measure, railroad securities, and adopt railroad securities, good, bad, and indifferent, into the currency system of the country, without either discrimination or investigation, could not be justified under any pretext of serving the public interest."

But on that same March day the Wisconsin Senator warned the country that the vicious proposal had been dropped only temporarily and would be revived. He was right. ALDRICH and his clique even then were preparing to prove themselves tricksters and faith breakers.

The anger of the people was lulled to sleep. The public watched with contemptuous indifference the Senate's passage of the emasculated Aldrich bill and the acceptance by the House of the spineless Vreeland measure, the latter at least having the merit of recognizing in a small way the only true basis of emergency currency—commercial paper.

And now, at the eleventh hour, the conspirators deliver their stab at the commerce of the country. They rush forward a bill well described as "half Senate infamy and half House infamy," embodying every rotten Wall street device that lay in the earlier bills and discarding every amendment for the protection of honest banking and legitimate business.

Commercial paper is mentioned and railroad bonds are not. Oh, the wisdom of these pirates, thinking they can mask their purpose with such word twisting! Just as if the business men of this country would not understand the meaning of "other bonds" and "any securities," including commercial paper.

State, county, and municipal bonds to be accepted at 90 per cent of their market value. "Other bonds" and commercial paper to be taken at 75 per cent only after arranging complicated and elaborate associations feasible only for the New York banks.

And even should such machinery be formed and the entire assets of the banks pledged, they could issue only 30 per cent of the unimpaired capital and surplus on the security of commercial paper, while on "other bonds" the only limitation placed is that the issue, together with the circulation based on United States bonds, must not exceed the aggregate capital and surplus of the issuing bank.

This law will mean the turning over of the Treasury of the United States to the gamblers of the New York Stock Exchange for a period of six years.

It will mean the making of "good times" and "bad times," of "bull" markets and "bear" markets, according to the pleasure of Rogers and Rockefeller in the National City Bank and J. P. Morgan in the National Bank of Commerce.

It will mean not the slow and certain movements of contraction and inflation by the natural laws of commerce, but sharp changes forced at will by the master gamblers.

It will mean the gift to the chief enemies of the nation of the power to issue or retire half a billion of dollars, exciting speculation or compelling disaster according to whichever best suits their betting book.

What the effect will be upon the coming elections we do not know. We do not know what measure of punishment a long-suffering people will inflict upon their betrayers.

It is not the time to think of politics or partisanship. A thing is being done which will affect every employer and every employee in America, every banker, merchant, manufacturer, clerk, and mechanic.

We wish merely to warn one and all. The country will be in the condition of a convalescent to whom drugs that are powerful stimulants but poisonous would be administered.

There will be a boom—a feverish but false activity. The issue of half a billion of fiat greenbacks or 16 to 1 silver would have the same effect. And then, after The North American and the few like us have been mocked at as false prophets and pessimists, pay day will come. And the price will be a bitter one.

Education.

Upon the education of the masses of its people depend the prosperity, happiness, and endurance of a self-governing nation.

SPEECH

OF

HON. RICHMOND P. HOBSON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. HOBSON said:

Mr. SPEAKER: Under the leave to print granted by the House, I desire to have printed in the RECORD the following articles and information bearing upon an important phase of education in America:

INDUSTRIAL EDUCATION IN THE SOUTH.

The deep interest which the people of the United States have always manifested in the cause of public and private education warrants a statement of some of the conditions that exist in the Southern States and which are not generally known or appreciated.

Our people generally are aware of the great number of negro children and the conditions that surround them. The several Southern States, considering their resources, have been liberal in providing for these conditions, and have done much for their improvement. Living largely in and near the towns, where facilities for education are greater than in the strictly rural districts, the negro has received his full proportionate share of the public expenditure. Private benefaction has also contributed large sums for the erection and maintenance of schools and colleges for his exclusive benefit.

It is not generally known that there are immense numbers of white children in the mountain and remote rural districts who have little or no means of education. The principal cause of this is that the proportion of public funds, usually distributed according to population, is too small for the erection of suitable schoolhouses and the maintenance of schools with competent teachers. The better teachers are employed in public schools, where the terms are longer and the salaries greater. In very many localities the people are too poor to supply schools at their own expense.

These people are of the strain that, under favorable conditions, has always taken the lead in the world's progress. The improvement of these conditions is of vital importance to the general welfare.

Everything whatsoever that contributes to good citizenship in any part of our common country contributes to the general progress of our civilization and the maintenance of our institutions. Even where better schools have been maintained in some localities the character of the education given has been such as to lead the more intelligent youth away from their surroundings instead of making them factors in the development of the communities in which they were born and reared.

Prof. Andrew J. Ritchie, who was born in the mountains, was enabled to obtain an education that fitted him to become a professor in a college of a high class in another State, and has been compelled by failing health to return to the mountains, where he is now engaged in educational work. He has made a study of the prevailing conditions and has a complete knowledge of the needs of the mountain districts. In a recent address he said:

"The old education fails to reach the mountain problem, because it is not adapted to mountain conditions. Its practical operation is to educate the brightest material out of the community and leave its social and economic life weakened and impoverished. The kind of education needed is education which shall have a larger bearing upon the life which the people are to lead. The school through which this education is to be provided must establish a practical connection between education and work. Its course of studies must have to do with the industries and environment. It must provide training in habits of industry and thrift, and teach the people to develop their resources. The mountain boy needs to be trained in agriculture, forestry, dairying, and animal husbandry, and in handicrafts in woodwork and other industries for which the materials lie at hand unused. The mountain girl needs to be trained in the art of orderly housekeeping and successful home making, which shall combine with the pure mountain air and water to give these people physical health, which is their birthright.

"The mountain school must also be an evangelizing, spiritual, and moral force. It must do the work which is not being done in the remote mountain districts by the church and the evangelistic preacher. It must set in motion influences which will soften the mountain temper and displace the spirits of the feud. It must banish the evil of whisky and its attendant evils of moral and social degradation. It must impart such a breadth and richness of social life as shall make the mountain community an attractive place in which to live.

"The natural basis for this kind of education is found in the economic condition of the people and in the industries which they must pursue. They must earn their living with the labor of their own hands. Their wealth must come from the soil and the products of the handicrafts. They are their own carpenters, their own blacksmiths, and to a large extent their own weavers. Their household furniture, farming implements, and wearing apparel are largely homemade. Their resources and industrial environment constitute a basis of wealth which, if developed by industrial education, will make them less dependent than any other people upon the outside world for their living."

Intelligent people everywhere are becoming aroused to the importance of industrial education, and coming to the opinion that in connection with the ordinary education of the primary schools it is of prime importance to fit the children of the country for the life work to which the majority are destined by natural aptitude. The great need of the districts mentioned is the promotion of such a system by the establishment of rural schools in which agriculture, horticulture, handicraft, and domestic science may be taught, thereby furnishing practical instruction that will enable the mass of children to become intelligent farmers, mechanics, and housekeepers.

Here and there philanthropic persons have established schools adapted to these conditions and ends. Dependent entirely upon private contributions they are generally poorly endowed, and most of them have a hard struggle for existence.

The problem of educating the children of those regions can not be completely solved by providing even a larger number of such schools supported by philanthropy. But industrial schools may be established and developed to the point of meeting the immediate and pressing needs, and, finally, of rendering them independent of assistance.

Mrs. Martha S. Gielow, of Greensboro, Ala., knowing the conditions and having become deeply impressed with the needs mentioned, undertook in 1906 the organization of a permanent association for the purpose of promoting industrial education. As a result of her efforts the Southern Industrial Educational Association was organized and incorporated under the laws of the District of Columbia in the last week of December, 1906.

The management of the affairs of the association is intrusted to a board of twelve trustees, composed of representative men and women of high character, whose names are a guaranty of efficiency and integrity. The electors—one hundred in number—reside in different States and are selected with care. In annual meetings these elect the trustees, receive reports from the trustees of their administration, and audit the accounts of receipts and expenditures. The funds of the association are derived from the fees of annual and life members and from contributions by patrons who have become interested in its objects.

It has been the purpose of the association to establish model industrial schools as soon as sufficient money can be obtained to insure successful establishment and maintenance. In the meantime it has inspected the private schools of the kind heretofore referred to, and confined its efforts to aiding such as have been found to give efficient instruction along the required lines.

These schools have, in general, been open to children of both sexes, and in proportion to their means have done excellent work. Some have trained students to teach in more remote parts of the mountains and have thereby greatly extended their beneficial influence. Boys have been instructed in the simple mechanical arts and modern agricultural methods. Girls have been taught sewing, cooking, washing, household hygiene, and methods of nursing the sick. Through

these means improvement has been made in the conditions of many homes. As stated in the report made by the president of the association to the annual meeting of the electors, held in Washington, D. C., February 21, 1908: "Assistance to schools has been given in two forms—that is to say, for general and special purposes. Among these special purposes are the purchase of industrial equipments, the employment of trained industrial teachers, and the creation of annual scholarships. In all cases of scholarships contracts have been entered into, and the schools are required to report the names of beneficiaries, and, from time to time, the progress made, together with the character of instruction given."

The office of the association is maintained in the city of Washington, D. C., where contributions are received by the recording secretary, Mrs. C. David White, 1459 Girard street NW.

Attitude of the Democratic and Republican Parties Toward Labor.

SPEECH

OF

HON. HENRY T. RAINEY

OF ILLINOIS, [

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. RAINEY said:

Mr. SPEAKER: At my request the Congressional Information Bureau of Washington, D. C., has made the following compilation, which I now print in the RECORD under the general leave to print heretofore granted:

The sympathies of the Democratic party, as described by the platform, are on the side of the struggling masses who have ever been the foundations of the Democratic party. There are two ideas of government. There are those who believe that if you will only legislate to make the well-to-do prosperous, their prosperity will leak through on those below. The Democratic idea, however, has been that if you legislate to make the masses prosperous, their prosperity will find its way up through every class that rests upon them. (William Jennings Bryan in his speech before the Democratic convention in 1896.)

Extracts from the Madison Square Garden speech of Hon. W. J. Bryan, New York, August 30, 1906.

If I had time to present an argument I would present an argument from three standpoints and tell you that the employer should consent to arbitration, that the employee should consent to arbitration, and that the public should demand arbitration. You cannot turn the employee over to the employer to treat the employee as he will. Sometimes they ask "Has a man not a right to conduct his business as he pleases?" and it is a plausible question; but when, in conducting his business, he attempts to fix conditions under which hundreds and thousands of human beings shall live, I deny that he has the right to deny them the right of arbitration.

Another thought on the labor question. We have a thing called "government by injunction," and its only purpose is to deny to the laboring man the right of trial by jury; and as this is its purpose, it is an attack on the jury system that ought to be resented by every lover of the jury system.

Another thought: The struggle for an eight-hour day is an international struggle, and there is no doubt how that struggle will end. It will end in the victory of the laboring man who asks for his eight-hour day.

My friends, I am convinced that many of those who oppose the eight-hour day do it out of ignorance of conditions rather than because of a lack of sympathy with the laboring man.

They forget that machinery has multiplied sometimes a hundred times the strength of a human arm, and they forget that so far the employer has received too

large a part of the benefit of the machine and the laboring man too small a part.

They forget that, with the growth of cities, the laboring man's home is farther from his workshop; they forget that when labor is removed from the home to the shop, the father is taken away from his wife and children; they forget that the demands of citizenship are more important and imperative on the laboring man than they ever were before.

It is not fair to drive the laboring man like a slave from his couch to his work and from his work back to his couch again. To do this is to deprive his family of his companionship. You deprive society of his help and you deprive politics of his influence. And when it is understood I believe that in this country, where the sense of justice is great, the people will insist that the laboring man shall have a shorter day and shall be invited to full participation in the responsibilities of citizenship and the work of human society.

cars by threats of quitting and by actually quitting their service, thereby inflicting on them great injury, where the relation between him and the companies is mutually profitable and has no effect whatever on the character or reward of the services of the employees so combining, is a boycott and unlawful conspiracy at common law.

A combination to incite the employees of all the railways of the country to suddenly quit their service without any dissatisfaction with the terms of their employment, thus paralyzing utterly all railway traffic, in order to starve the railroad companies and the public into compelling an owner of cars used in operating the roads to pay his employees more wages, they having no lawful right so to compel him, is an unlawful conspiracy by reason of its purpose, whether such purpose is effected by means usually lawful or otherwise.

Such combination, its purpose being to paralyze the interstate commerce of the country, is an unlawful conspiracy within the act of July 2, 1890, declaring illegal every contract, combination, or conspiracy in restraint of trade or commerce among the several States. (U. S. v. Patterson, 55 Fed. 605, disapproved.)

Such combination, where the members intend to stop all mail trains as well as other trains, and do delay many, in violation of Revised Statutes, section 3995, punishing anyone willfully and knowingly obstructing or retarding the passage of the mails, is unlawful conspiracy, although the obstruction is effected by merely quitting employment.

The following are the positions taken in Democratic and Republican platforms on questions of labor:

Democratic.

1868.

Resolved, That this convention sympathize cordially with the workmen of the United States in their efforts to protect the rights and interests of the laboring classes of the country.

1872.

Resolved, That the interests of labor and capital should not be permitted to conflict, but should be harmonized by judicious legislation. While such a conflict continues, labor, which is the parent of wealth, is entitled to paramount consideration.

1876.

Reform is necessary in the sum and modes of Federal taxation to the end that capital may be set free from distrust and labor lightly burdened.

Reform is necessary to correct the omissions of a Republican Congress and the errors of our treaties and our diplomacy, which have stripped our fellow-citizens of foreign birth and kindred race, recrossing the Atlantic, of the shield of American citizenship, and have exposed our brethren of the Pacific coast to the incursions of a race not sprung from the same great parent stock, and in fact now by law denied citizenship through naturalization, as being neither accustomed to the traditions of a progressive civilization nor exercised in liberty under equal laws. We denounce the policy which thus discards the liberty-loving German and tolerates a revival of the coolie trade in Mongolian women imported for immoral purposes, and Mongolian men held to perform

Republican.

1872.

Among the questions which press for attention is that which concerns the relations of capital and labor, and the Republican party recognizes the duty of so shaping legislation as to secure full protection and the amplest field for capital, and for labor, the creator of capital, the largest opportunities and a just share of the mutual profits of these two great servants of civilization.

1876.

The revenue necessary for the current expenditures and the obligations of the public debt must be largely derived from duties upon imports, which, so far as possible, should be adjusted to promote the interests of American labor and advance the prosperity of the whole country.

It is the immediate duty of Congress to fully investigate the effect of the immigration and importation of Mongolians upon the moral and material interests of the country.

servile labor contracts, and demand such modification of the treaty with the Chinese Empire, or such legislation within constitutional limitations, as shall prevent further importation or immigration of the Mongolian race.

1880.

Amendment of the Burlingame treaty: "No more Chinese immigration except for travel, education, and foreign commerce, and therein carefully guarded."

The Democratic party is the friend of labor and the laboring man, and pledges itself to protect him alike against the cormorant and the commune.

1884.

It (the Republican party) professes desire to elevate labor; it has subjected American workmen to the competition of convict and imported contract labor.

It professes the protection of American labor; it has depleted the returns of American agriculture and industry, followed by half of our people. Any change of (tariff) law must be at every step regardless of the labor and capital thus involved.

The necessary reduction and taxation can and must be effected without depriving American labor of the ability to compete successfully with foreign labor.

We believe that labor is best rewarded where it is freest and most enlightened. It should, therefore, be fostered and cherished, restricting the free action of labor and the enactment of laws by which labor organizations may be incorporated and of all such legislation as will tend to enlighten the people as to the true relations of capital and labor.

Instead of the Republican party's discredited scheme and false pretense of friendship for American labor, expressed by imposing taxes, we demand, in behalf of the Democracy, freedom for American labor by reducing taxes, to the end that these United States may compete with unhindered powers for the primacy among nations in all the arts of peace and fruits of liberty.

1888.

A fair and careful revision of our tax laws, with due allowance for the difference between the wages of American and foreign labor must promote and encourage every branch of such industries and enterprises by giving them assurance of an extended market and steady and continuous operations. In the interests of American labor, which should in no event be neglected, the revision of our tax laws contemplated by the Democratic party should promote the advantage of such labor, by cheapening the cost of necessities of life in the home of every workman, and at the same time securing to him steady and remunerative employment.

1880.

We reaffirm the belief avowed in 1876 that the duties levied for the purpose of revenue shall so discriminate as to favor American labor.

Since the authority to regulate immigration and intercourse between the United States and foreign nations rests with the Congress of the United States and the treaty-making powers, the Republican party, regarding the unrestricted immigration of Chinese as a matter of grave concernment under the exercise of both these powers, would limit and restrict that immigration by the enactment of such just, humane, and reasonable laws and treaties as will produce that result.

1884.

We therefore demand that the imposition of duties on foreign imports shall be made not for revenue only, but that in raising the requisite revenues for the Government such duties shall be so levied as to afford security for our diversified industries and protection to the rights and wages of the laborer, to the end that active and intelligent labor as well as capital may have its just reward and the laboring man his full share in the national prosperity. Against the so-called economic system of the Democratic party, which would degrade our laborers to the foreign standard, we enter our earnest protest.

The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus not by the vicious and indiscriminate process of horizontal reduction, but by such methods as will relieve the taxpayer without injuring the laborers or the great productive interests of the country.

We favor the establishment of a national bureau of labor, the enforcement of the eight-hour law, a wise and judicious system of general legislation by adequate appropriation from the national revenues, whenever the same is needed.

The Republican party * * * is unalterably opposed to placing our workmen in competition with any form of servile labor whether at home or abroad. In this spirit we denounce the importation of contract labor whether from Europe or Asia, as an offense against the spirit of American institutions; and we pledge ourselves to sustain the present law restricting Chinese immigration and to provide such further legislation as is necessary to carry out its purposes.

1888.

We declare our hostility to the introduction into this country of foreign contract labor and of Chinese labor, alien to our civilization and our Constitution, and we demand the rigid enforcement of the existing laws against it and favor such immediate legislation as will exclude such labor from our shores.

In support of the principles herewith enunciated, we invite the cooperation of patriotic men of all parties, and especially of all workmen whose prosperity is seriously threatened by the free-trade policy of the present Administration.

1892.

Since the McKinley tariff went into operation there have been ten reductions of wages of the laboring man to one increase. We deny that there has been any increase of prosperity to the country since that tariff went into operation, and we point to the dullness and distress, to the wage reductions and strikes in the iron trade as the best possible evidence that no such prosperity has resulted from the McKinley act.

SEC. 5. We recognize in the trusts and combinations, which are designed to enable capital to secure more than its just share of the joint products of capital and labor, a natural consequence of the prohibitive taxes which prevent the free competition which is the life of honest trade; but we believe their worst evils can be abated by law, and we demand the rigid enforcement of the laws made to prevent and control them, together with such further legislation in restraint of their abuses as experience may show to be necessary.

SEC. 12. We heartily approve all legitimate efforts to prevent the United States from being used as the dumping ground for the known criminals and professional paupers of Europe and we demand the rigid enforcement of the laws against Chinese immigration or the importation of foreign labor and lessen its wages; but we condemn and denounce any and all attempts to restrict the immigration of the industrious and worthy of foreign lands.

1896.

We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market, and that the value of the home market to our American farmers and artisans is greatly reduced by a vicious system, which depresses the prices of their products below the cost of production and thus deprives them of the means of purchasing the products of our home manufactories, and as labor creates the wealth of the country we demand the passage of such laws as may be necessary to protect it in all its rights.

We are in favor of the arbitration of differences between employers engaged in interstate commerce and their employees, and recommend such legislation as is necessary to carry out this principle.

We denounce arbitrary interference by Federal authorities in local affairs as a violation of the Constitution of the United States and a crime against free institutions, and we especially object to government by injunction as a new and highly dangerous form of oppression, by which Federal judges, in contempt of the laws of the States and the rights of citizens, become at once legislators, judges, and executioners; and we approve the bill passed at the last session of the United States Senate and now pending in the House of Representatives to contempts in the Federal courts and providing for trials by jury in certain cases of contempt.

1900.

We are opposed to government by injunction. We denounce the black list, and favor arbitration as a means of settling disputes between corporations and their employees.

We favor the continuance and strict enforcement of the Chinese exclusion law and its application to the same classes of all Asiatic races.

1904.

We favor the enactment and administration of laws giving labor and capital impartially their just rights. Capital and labor ought

1892.

We favor the enactment of more stringent laws and regulations for the restriction of criminal, pauper, and contract immigration.

1896.

We demand such an equitable tariff on foreign imports which come in competition with American products as will not only furnish adequate revenue for the necessary expenses of the Government, but will protect American labor from degradation to the wage level of other lands.

For the protection of the quality of our American citizenship and of the wages of our workmen against the fatal competition of low-priced labor, we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

We favor the creation of a national board of arbitration to settle and adjust differences which may arise between employers and employees engaged in interstate commerce.

1900.

In the further interest of American workmen we favor a more effective restriction on the immigration of cheap labor from foreign lands, the extension of opportunities of reduction for working children, the raising of the age limit for child labor, the protection of free labor as against contract convict labor, and an effective system of labor insurance.

1904.

We cordially approve the attitude of President Roosevelt and Congress in regard to the exclusion of Chinese labor and promise

not to be enemies. Each is necessary to the other. Each has its rights, but the rights of labor are certainly no less "vested," no less "sacred," and no less inalienable than the rights of capital.

Constitutional guaranties are violated whenever any citizen is denied the right to labor, acquire and enjoy property, or reside where interests or inclinations may determine. Any denial thereof by individuals, organizations, or governments should be summarily rebuked and punished.

We deny the right of any executive to disregard or suspend any constitutional privilege or limitation. Obedience to the laws and respect for their requirements are alike the supreme duty of the citizen and the official.

The military should be used to support and maintain the law. We unqualifiedly condemn its employment for the summary banishment of citizens without trial or for the control of elections.

We approve the measure which passed the United States Senate in 1896, but which a Republican Congress has ever since refused to enact, relating to contempt in Federal courts and providing for trial by jury in cases of indirect contempt.

Thus we see the attitude of the parties toward labor as judged by their expressions since they have been contending against each other for the confidence of the people. A seemingly trivial fact gives the correct idea of their positions. The Democrats nearly always refer to "labor and capital." In almost every case the Republicans refer to "capital and labor." With the Democrats labor comes first. With the Republicans the first place and the first thought is given to capital. The Democratic idea of providing for the capitalist is to make the laboring millions so prosperous that they can buy his goods. The Republican idea of providing for labor is to so swell the wealth of the capitalists as to make them able to pay high wages to their workmen.

The Democratic idea of prosperity begins with the masses and goes up. The Republican idea of prosperity begins with the wealthy few and goes down. Another idea goes through this comparison. Generally speaking the Democratic platforms declared in favor of some movement that would directly benefit labor or opposed to some movement that directly threatened it. The Republicans, generally speaking, declared themselves for nothing that would directly benefit labor and against nothing that would directly injure it. They mentioned labor as an excuse for piling up tariff duties that labor as well as capital would have to pay and giving tariff benefits to capitalists—the owners of tariff protected goods—hypocritically pretending that they were doing this in order that labor would be paid higher wages. Does the tariff directly add one dollar to wages? It only adds to the cost of the goods that labor produces and capital owns, and can only raise the level of wages on the idea that capitalists will pay as high wages as they can afford. Do they do this, or do they pay as high wages as they must? What does labor get without fighting for?

In a word the Republicans prepare a feast for capital pretending not thinking of the food of the men who sit down to the table but of the scraps that labor will get after capital is surfeited. No pretense was ever more palpably a pretense. No hypocrisy was ever more manifestly hypocrisy only. The veiling is so thin that the dimmest eyes can see through. To spread it for concealment is an insult to the working men and women of America who have piled up for others to enjoy a greater wealth than the world ever knew before, or than it knows anywhere else now.

But to come down to particulars: In 1868 the Democrats in convention assembled declared their allegiance to labor. The Republicans did not think to mention it.

In 1872 the Democrats declared the interests of labor "entitled to paramount consideration." The Republicans offered labor only the crumbs from the protectionist table.

In 1876 the Democrats declared themselves opposed to Mongolian immigration. The Republicans thought Congress should investigate the question. They had not made up their minds.

In 1880 the Democrats reiterated their opposition to Chinese immigration and the Republicans, having at last made up their minds, agreed with them, thus indorsing the position the Democrats had unequivocally assumed four years before.

In 1884 the Democrats denounced the Republicans for subjecting American workmen to the competition of convict and imported contract labor. They favored "the enactment of laws by which labor organizations may be incorporated and of all such legislation as will tend to enlighten the people as to the true relations of capital and labor." The Republicans expressed themselves in favor of the establishment of a National Bureau of Labor, which they had not established and the enforcement of the eight-hour law, which they had not enforced, though they had been in complete control of the Government for fourteen years and partial control for ten of the preceding twenty-four years. They expressed opposition to the importation of contract labor, whether from Europe or Asia, which, being in control, they could have stopped instead of denouncing if they had really desired the enforcement of laws in the interests of labor instead of merely bidding for the labor vote.

In 1888 the Democrats advocated a revision of the tariff "with due allowance for the difference between the wages of American and foreign labor," while the Republicans again declared hostility to the introduction of foreign contract labor and of Chinese immigration—a plank from the Democratic platform of twelve years before.

In 1892 both parties again took a stand against criminal, pauper, and contract immigration, and in 1896 they took precisely the same stand in favor of the creation of a board of arbitration to settle differences between employers and employees engaged in interstate commerce. Since that time the Democrats have never controlled any branch of the Government, and have therefore had no opportunity to carry out their pledges. Since that time the Republicans have been in complete and uninterrupted control of the Government in all its branches,

a continuance of the Republican policy in that direction.

Combinations of capital and labor are the results of the economic movement of the age, but neither must be permitted to infringe upon the rights and interests of the people. Such combinations, when lawfully formed for lawful purposes, are alike entitled to the protection of the laws, but both are subject to the laws, and neither can be permitted to break them.

and after twelve years their pledge, standing unfulfilled, brands them with insincerity. They pledged themselves to create a board of arbitration to settle differences between employers and employees engaged in interstate commerce. They have had twelve years of complete and uninterrupted power in which to redeem their pledge and they have not redeemed it. This fact says all that is needed as to their sincerity.

In addition to this declaration, in which both parties joined, but which the Republicans have since ignored, the Democrats condemned government by injunction and approved a bill, then pending in the House, relative to contempt in the Federal courts and providing for trials by jury in certain cases of contempt.

In 1900 the Democrats again opposed government by injunction, denounced the blacklist, and favored arbitration as a means of settling disputes between corporations and their employees, and both parties expressed themselves in favor of the strict enforcement of the Chinese exclusion act.

In 1904 the Republican convention confined its notice of labor to the approval of the attitude of President Roosevelt and Congress in regard to the exclusion of Chinese labor and a platitudinous concern for the rights of labor and capital to combine. On the other hand, the Democrats, among other things, denounced the use of the military for the summary banishment of citizens without trial, and for the control of elections, and again advocated the passage of a measure to regulate contempt in the Federal courts and providing for trial by jury in cases of indirect contempt.

Certain circumstances preceding the meeting of the Democratic convention of 1904 must be noticed in order to understand some of the utterances in the platform that year. The declaration against the use of the military for the summary banishment of citizens, without trial, and for the control of elections was not the announcement of an abstract principle. The matter was horribly concrete. A Republican governor in Colorado had used the troops for these very infamous purposes. Men—workmen—were taken from their homes, were imprisoned without proofs against them, and were escorted beyond the limits of the State by armed soldiers and told not to return on peril of their lives. No grand juries had indicted them. No legal charges had been filed against them. Individually unaccused, they were banished from their homes without a trial, taken from their families and dropped down in the wilderness, where there were no opportunities for them to sustain themselves.

This was the act of a Republican governor. It was the result of a dispute between capital and labor. The military was placed at the disposal of the capitalist side and labor was denied the privilege that the Constitution guarantees to every American citizen. Such a high-handed outrage could not now be perpetrated in Russia. It was perpetrated by a Republican governor in the United States without one word of protest from men high in the national councils of the party.

Later, when two of the labor leaders connected with these men were charged with a crime, the Republican President of the United States attempted to prejudice the jury against them by branding them as "undesirable citizens."

The crime with which they were charged was one of the blackest. The business of the jury was to determine whether these men were implicated in it. They were not charged with the actual deed. The only evidence against them, sufficient to secure the punishment of a dog, was the statement of the confessed murderer—a criminal who confessed that he had for years been a professional murderer. The word of such a man would be worth nothing even if he had no motive to swear falsely, but he had the highest bribe to accuse others that could be offered. He saved his own life by accusing others and he is living to-day because he accused them, while he would have been hanged if he had not accused them.

In spite of the effort of a Republican President to influence the jury against these men, and in spite of every effort that could be made to convict them, the jury promptly returned a verdict of not guilty.

Laboring men on account of their dispute with capital were banished from their homes without a charge by a Republican governor in command of the troops and not one word of protest was uttered by Republican leaders throughout the United States.

Now for a contrast.

A battalion of negro troops were quartered in a southern town. Bad feeling existed between them and the citizens. In the night a large number of shots were fired in the town. Several houses were fired into. Men were killed and wounded. It was found that the bullets fired were from army rifles which were only in the possession of the soldiers. Other evidence showed that the negro soldiers were guilty of this midnight attack. It was not possible to prove what individuals committed the outrage. It could have been proved but for the fact that the participants were shielded by some of their comrades. Failing to get evidence against individuals, and certain they were shielded by their comrades, the President discharged the entire battalion.

What a howl went up from Republicans throughout the land. A negro battalion had in its ranks murderers and others who shielded murderers, but it was possible that some were innocent of complicity in the crime, either as participants or as shielding the participants, and the innocent, if any, were being punished with the guilty, the punishment being the loss of employment and discharge without honor.

While some Republicans sided with the President many denounced his act, and a wave of sympathy went up for these soldiers from all over the land.

But the Western Federation of Miners was accused of crimes, and men belonging to this federation, against whom no charge was made, were banished from their homes, and no Republican in high position had one word to say. Nothing was said about the innocent being punished with the guilty.

Thus stand the two parties so far as platform declarations are concerned. The Democrats have had only two years of complete power in which to carry out their pledges. The Republicans have had twenty-eight years of complete power, and the fact that labor is still clamoring for legislation that should have been passed long ago is an indictment against the Republican party to which its unfulfilled pledges are pleas of guilty.

As for legislation, the following shows the record of the two parties: Mr. Rogers, of New Jersey, a Democrat, offered the first eight-hour bill introduced in the House of Representatives. The House was overwhelmingly Republican. The Republicans in control of the committee to which the bill was referred never reported it.

In the Thirty-ninth Congress another Democrat introduced an eight-hour bill. The Republicans, in control, buried it.

The Rogers eight-hour bill was reintroduced by Mr. Julian, of Indiana, in 1867. It also died in the hands of a Republican committee.

In 1868 an eight-hour law was enacted. Democrats and Republicans voting for it. After its enactment Republican administrations ignored it while Democratic administrations enforced it.

The Democrats have given their hearty support to every statute enacted by Congress for the relief of the "Workingmen of the United States" or "Organized Labor."

In the Fifty-sixth Congress Mr. Ridgely, of Kansas, elected by Democrats and Populists, introduced a bill (H. R. 8917): "To limit the meaning of the word 'conspiracy' and also the use of restricting orders and injunctions as applied to disputes between employers and employees in the District of Columbia and the Territories, or engaged in commerce between the several States, District of Columbia, and Territories, and with foreign nations."

Mr. Ridgely stated that the bill was drawn by the attorneys employed by the united labor organizations of the country "in the belief that it would come within the constitutional limits." It provided:

"That no agreement, combination, or contract by or between two or more persons to do, or procure to be done, or not to do, or procure not to be done, any act in contemplation or furtherance of any trade dispute between employers and employees shall be deemed criminal; nor shall those engaged therein be indictable or otherwise punishable for the crime of conspiracy, if such act committed by one persons would not be punishable as a crime (nor shall such agreement, combination, or contract be considered as in restraint of trade or commerce), nor shall any restraining order or injunction be issued with relation thereto."

In committee the Republicans amended this bill until it was unsatisfactory to the labor organizations, and it was defeated. The Republicans on the Judiciary Committee voted for these amendments that were unsatisfactory to labor and the Democrats voted against them.

Mr. Grosvenor introduced a similar bill in the House during the session of the Fifty-seventh Congress. The bill passed the House without a dissenting vote, but was not reported from the Senate Committee on the Judiciary until June 25—near the end of the session—when its consideration was objected to by Senator KEAN (Republican), of New Jersey, and it was indefinitely postponed.

The Republican who introduced the bill and the Republicans who voted for it may have been sincere or they may have been simply parading as the friends of labor, knowing that the bill was doomed to die the death that it died. The only fact that is absolutely certain is that the bill was held by Republican committee majorities until so late in the session that the objection of one Senator would prevent its passage, and one Senator—a Republican Senator—did object and did prevent its passage.

Mr. Grosvenor again introduced this bill in the Fifty-eighth Congress, but it was never reported by the Judiciary Committee of the House, controlled by Republicans.

In the Fifty-ninth Congress, Mr. Little (Democrat), of Arkansas, again introduced this bill. The Administration antagonized it and favored a bill (the Gilbert bill, H. R. 9328), said to have been prepared by the Attorney-General with the President's approval. This bill provided:

"That in cases involving or growing out of labor disputes neither an injunction nor a temporary restraining order shall be granted except upon due notice to the opposite party by the court in term, or by a judge thereof in vacation, after hearing, which may be ex parte if the adverse party does not appear at the time and place ordered: *Provided*, That nothing herein contained shall be held to authorize the issuing of a restraining order or an injunction in any case in which the same is not authorized by existing law."

This bill, as well as the one introduced by Mr. Little, died in the Judiciary Committee. Four others introduced in the House and one in the Senate met the same fate. The Republicans were in complete control.

The present Congress passed a bill regulating child labor in the District of Columbia and an act relating to the liability of common carriers by railroad to their employees injured in their service. Both these measures were supported by the Democrats.

A recent decision of the Supreme Court so construes the Sherman antitrust law as to make it applicable to labor unions. On this and kindred subjects the trade and labor unions of the country prepared a memorial to Congress asking relief. On the question of exemption from the Sherman antitrust law this memorial says:

"We submit for consideration, and trust the same will be enacted, two provisions amendatory of the Sherman antitrust law, which originally were a part of the bill during the stages of its consideration by the Senate and before its final passage, and which are substantially as follows:

"That nothing in said act (Sherman antitrust law) or in this act is intended nor shall any provision thereof hereafter be enforced so as to apply to organizations or associations not for profit and without capital stock, nor to the members of such organizations or associations."

"That nothing in said act (Sherman antitrust law) or in this act is intended nor shall any provision thereof hereafter be enforced so as to apply to any arrangements, agreements, or combinations among persons engaged in agriculture or horticulture, made with a view of enhancing the price of their own agricultural or horticultural products."

On this subject nine bills were introduced. Every one died in committees controlled by Republicans.

The memorial further states:

"In addition, the other most important measures which labor urges are: "The bill to regulate and limit the issuance of injunctions—Pearre bill."

"Employers' Liability bill."

"The bill extending the application of the eight-hour law to all Government employees and those employed upon work for the Government, whether by contractors or subcontractors."

Several bills in addition to the Pearre bill mentioned were introduced to limit the issuance of injunction and to provide for trial by jury of charges of contempt in certain issues. Every one of them died in Republican controlled committees.

A number of bills were introduced extending the application of the eight-hour law to all Government employees and those employed upon work for the Government, whether by contractor or subcontractor. Every one of these bills died in Republican controlled committees. An employers' liability bill was passed, applying to railways and their employees. It had the support of the Democrats as had all legislation in the interest of labor.

The Democratic filibuster was inaugurated to force the consideration of a number of important bills—among them labor bills. But for the determined attitude of the Democrats it is doubtful whether this one demand of the labor unions would have been even partially met.

The Republicans have been in complete and uninterrupted control of all the departments of the Government for eleven years. They could have done all that labor has asked of them. It would certainly be wise for laboring men to unite and drive them from power and give the Democrats an opportunity to legislate on labor questions.

Financial and Industrial Conditions.

SPEECH

OF

HON. JAMES T. LLOYD,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. LLOYD said:

Mr. SPEAKER: Hon. JAMES S. SHERMAN, of New York, took advantage of the leave to print granted by the House to insert in the RECORD what he termed a comparison of the Democratic and Republican averages of the national, financial, and industrial conditions during the Administrations of Presidents Cleveland, McKinley, and Roosevelt.

He is aware, as everyone else would be, that such a comparison does not fairly represent the Democracy, because of the financial panic of 1893.

I submit herewith a statement which shows a comparison between the last ten years of the Democratic administration between 1850 and 1860 and the Republican between 1897 and 1907. This statement is complete as far as I can make it from the statistics furnished by the Government. Several of the items mentioned in this comparative table can not be given in statistical form as early as 1860. In other instances I am obliged to use different periods.

Mr. SHERMAN calls attention to the interest-bearing debt, but he fails to inform the country of the money borrowed and the increased indebtedness since the statement of July 1, 1907. He mentions the increase in money circulation since 1897, but does not call attention to the fact that there was over a fifty million decrease in circulation in the month of May, 1908. He calls attention to the increase in imports prior to 1907, but he fails to mention the decrease since the 1st of July last. The customs receipts for the corresponding period of 1907 were \$616,000,000, compared with \$552,000,000 for the current year.

He mentions the great increase in the excess of imports of gold, but does not give the increased exports since July 1. He might have shown that for the first eleven months of 1907 the excess of receipts over expenditures was over \$67,000,000, while during the corresponding period of 1908 the excess of expenditures over receipts have been more than \$63,000,000.

The table which I submit will explain to anyone, if carefully examined, that the per cent of gain in all lines of industry and commercial enterprise was greater in the last ten years of the Democratic administration than in the last ten years of the Republican rule.

Comparison of Democratic and Republican averages.

	1850.	1860.	Per cent of gain.	1897.	1907.	Per cent of gain.
Deposits in savings banks, million dollars.....	43	149	246	1,983	3,495	76
Bank deposits, total, mil- lion dollars.....	153	407	166	5,000	13,000	160

Wealth in United States, billion dollars.....	7.1	16.1	126	65	88	35
Tonnage vessels passing through Sault Ste. Ma- rie canal, thousand tons	1855. 106	404	281	1902. 32,000	44,100	37
Post-office receipts, mil- lion dollars.....	5.5	8.5	54	82.6	183.6	122

* Decrease.

NOTE.—From 1850 to 1860 the average price of wheat, per bushel, was \$1.61; corn, \$0.75; oats, \$0.53. From 1897 to 1907 the average price of wheat, per bushel, was \$0.80; corn, \$0.47; oats, \$0.34—a decrease on each item.

Homestead Settlement.

SPEECH

OF

HON. CHARLES N. PRAY,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

On (S. 208) releasing a million acres to homestead entry in Montana—

Mr. PRAY said:

Mr. SPEAKER: Because of the importance of the subject and its relevancy to the measure under consideration, I desire to submit a few observations on homestead settlement and the agricultural development of the West, and particularly of that portion of the West with which I am familiar.

During the present session of Congress many letters have come to me from different sections of the country, seeking information as to the steps that are necessary to enable one to acquire title to public land in my State. Some of my correspondents have inquired about the mineral-land laws, others about the timber and stone act, or the desert-land laws, but the greater number by far were desirous of learning about the provisions of the homestead law and the conditions under which a person is permitted to establish a home upon one of the many desirable tracts of land that are now rapidly disappearing from the public domain and passing into the hands of men who, by perseverance and thrift, are providing for themselves and those dependent upon them a never-failing source of supply for the wants and needs common to the average American citizen. Recent years have witnessed an unprecedented growth in the population of the Western States, and the influx of settlers is steadily increasing each year on account of attractive inducements offered to enter lands under irrigation projects constructed by the Government and the possibilities for agricultural development by modern methods of farming of lands heretofore regarded as public ranges suitable only for grazing purposes.

Without consuming further time in preliminary remarks, I would like to direct attention to some of the opportunities that await the coming of the farmer into the State which I have the distinguished honor to represent on the floor of this House.

Montana, known as the "Treasure State," because of the unlimited extent and variety of its mineral resources, the output of the mines amounting to about one hundred millions a year, is the third largest State in the Union, its extreme dimensions being about 600 miles east and west by 300 miles north and south, and comprising 145,776 square miles of land surface, or 93,296,640 acres. I have attempted to make a general classification of this immense acreage, and, with the information available at this time, I should say that the mountains and forests of the State occupy about 25,000,000 acres; grazing lands, about 35,000,000 acres, most of which is probably not susceptible of cultivation, because of the uneven and in many places rocky character of the ground, although for the most part the entire acreage affords excellent pasturage. There are about 30,000,000 acres that, under the present improved methods of farming, I believe ought to be classed as farming lands.

In most places throughout this entire area the soil is rich and exceedingly productive, with irrigation or by application of the new process of dry-land farming, by which the moisture is retained in the soil. During the fiscal year ended June 30, 1907, about a million acres of land were disposed of under all forms of entry through the ten different land offices in the State. The figures compiled by the Bureau of Statistics as to the production of Montana farms during the year 1907 are significant indeed, when one stops to consider that agriculture has received but slight attention in Montana until quite recently. However, it required only a few years of close attention to the cultivation of the soil to make the names of the fertile valleys of the State familiar words in all parts of the country: The Gallatin, the Yellowstone, the Bitter Root, the Flathead, the Sun River, the Milk River—where the lands included in this bill are situated—and hundreds of other places just as fertile, but not so well known to the outside world. For a State that has so recently stepped into line with the great agricultural States of the nation the yield in various crops will stand comparison with the best, both as to quantity and quality.

Ninety thousand bushels of corn were produced in Montana during the past season. There were 4,000 acres under cultivation, and the average yield per acre was 22.5 bushels. The price per bushel December 1 was 68 cents, and the total farm value \$61,000.

Of spring wheat, Montana's farmers produced 4,003,000 bushels from 139,000 acres, the average yield being 28.8 bushels per acre. The price per bushel December 1 was 81 cents and the value on the farms \$3,243,000.

Montana raised a large crop of oats, the production being given at 11,760,000 bushels, the State ranking fifteenth among the other States in quantity produced. The acres under cultivation are given as 240,000 and the average yield per acre as 49 bushels. The price per bushel December 1 was 46 cents, and the farm value \$5,410,000.

The production of barley was also large, amounting to 646,000 bushels, grown from 17,000 acres. The average yield per acre was 38 bushels and the price per bushel 62 cents; farm value, \$400,000.

Forty-five thousand bushels of rye were also the product of Montana farmers in 1907, grown from 4,500 acres, the average yield being 10 bushels an acre. The price per bushel December 1 was \$1, only three other States—South Carolina, Georgia, and Alabama—getting a higher price. The farm value of this crop is given at \$45,000.

Montana was one of eleven States which produced flaxseed last year. The production is given at 436,000 bushels, from 34,000 acres. The yield per acre was 13 bushels, and 81 cents a bushel was the price December 1. Montana ranked sixth among the States in the production of flaxseed, the farm value of which is given at \$353,000.

Two million and seven hundred thousand bushels of Irish potatoes were produced on Montana farms in the 1907 season, 18,000 acres being utilized for the purpose. The average yield per acre was 150 bushels, and the price per bushel December 1 was 50 cents, the lowest of any of the States, with the exception of three. The farm value of the crop is given at \$1,350,000.

From 500,000 acres of land 850,000 tons of hay were produced in Montana, the price per ton of which, December 1, was \$9.50. The average yield per acre was 1.7 tons, and the farm value \$8,075,000.

The figures represent averages in yield per acre and in price, but many special instances have come to my notice where the yield in certain crops was phenomenal, and perhaps greater than in any other State. Probably the finest fruit in the country is raised in the Bitter Root and Flathead valleys; in the former last year one man near the city of Hamilton gathered 1,000 boxes of the McIntosh variety of apples from a single acre of orchard land, and disposed of the same for \$1.75 per box; another in the Yellowstone Valley harvested 600 bushels of potatoes from a single acre of ground and without irrigation. Cases innumerable showing the wonderful results attained by farmers of Montana could be given.

And it must be remembered that the era of agricultural development has only just begun. When the lands described in this bill are finally opened to settlement, after the Indians have received their allotments, a million acres at least will then remain for entry under the homestead law. Land similar in character in the neighborhood of this reservation is being taken so rapidly that public surveys during the past year have not kept pace with settlement. The building of irrigation works by the United States Reclamation Service has done much to attract settlers to the Western States. It is expected that eleven irrigation projects will be opened in 1908. Twenty-eight projects now under construction will, when completed, irrigate 1,910,000 acres in fifteen Western States.

Former Senator Paris Gibson, whose confidence in the future of Montana as a great agricultural State has remained unshaken for twenty-five years, has the following to say about the present outlook:

What will be the future of Montana as an agricultural State? In my opinion, before we have advanced far into the twentieth century, it will take its place agriculturally among the foremost of all the States, and in the quantity and quality of its annual crops of wheat, oats, and barley it will stand the first of all. It is also clear to my mind that the country that lies on the eastern slopes of the Rocky Mountains, extending north from Colorado a distance of 1,500 miles, will become the future wheat granary of this continent. While our irrigable lands will be employed in the highest grade of diversified agriculture known to the world, it will be on the unirrigated tablelands of the Rocky Mountain country that we shall largely depend for the future wheat supply of the continent. But, someone will ask, Where will our Montana farmers find a market for their wheat when the annual crop shall reach millions of bushels? This is the same question that has been asked since farmers first began to push the wheat-growing belt westward from the Great Lakes. But markets and transportation facilities have in the past and will, in the future, keep pace with the westward march of agriculture. The building of great cities on our western coast and the steady enlargement of ocean transportation will always be ample for the future distribution of inland grain crops from this vast Rocky Mountain region. A most important consideration in connection with the wheat markets of our State is the fact that we can grow No. 1 hard wheat on our tablelands and hillsides. This advantage over the soft wheat grown in the humid regions along the Pacific Ocean, should place Montana farmers at least on a plane of equality with the farmers of Washington and Oregon.

If I have correctly stated the future position of Montana from an agricultural standpoint, who can comprehend the extent of our manufacturing industries in the years to come, when the products of our farms and gardens shall be sufficient to meet the wants of a great army of miners and mill men? To supply with farm products the 600,000 people of Pittsburgh and its suburbs, the annual pay roll of whose workmen is \$250,000,000, and also the other industrial centers of Pennsylvania, the farm resources of several States like Pennsylvania are fully taxed.

My contention that Montana must become an important manufacturing State, employing its unsurpassed resources of common minerals in many diversified industries, rests on my belief in a great agricultural future for this region.

No young State in the Union has a brighter outlook to-day than Montana.

One of the clearest expositions of the homestead laws and regulations governing entry, and so forth, that has come to my notice is the letter of March 9, 1908, by Commissioner Dennett of the General Land Office, entitled "Suggestions to homesteaders and persons desiring to make homestead entries," and is as follows:

1. Persons desiring to make homestead entries should first fully inform themselves as to the character and quality of the lands they desire to enter, and should in no case apply to enter until they have visited and fully examined each legal subdivision for which they make application, as satisfactory information as to the character and occupancy of public lands can not be obtained in any other way.

As each applicant is required to swear that he is well acquainted with the character of the land described in his application, and as all entries are made subject to the rights of prior settlers, the applicant can not make the affidavit that he is acquainted with the character of the land, or be sure that the land is not already appropriated by a settler, until after he has actually inspected it.

Information as to whether a particular tract of land is subject to entry may be obtained from the register or receiver of the land district in which the tract is located, either through verbal or written inquiry, but these officers must not be expected to give information as to the character and quality of unentered land or to furnish extended lists of lands subject to entry, except through plats and diagrams which they are authorized to make and sell as follows:

For a township diagram showing entered land only.....	\$1
For a township plat showing form of entries, names of claimants, and character of entries.....	2
For a township plat showing form of entries, names of claimants, character of entry, and number.....	3
For a township plat showing form of entries, names of claimants, character of entry, number, and date of filing or entry, together with topography, etc.....	4

A list showing the general character of all the public lands remaining unentered in the various counties of the public land States on the 30th day of the preceding June may be obtained at any time by addressing "The Commissioner of the General Land Office, Washington, D. C."

All blank forms of affidavits and other papers needed in making application to enter or in making final proofs can be obtained by applicants and entrymen from the land office for the district in which the land lies.

2. Kind of lands subject to homestead entry.—All unappropriated surveyed public lands are subject to homestead entry if they are not mineral or saline in character and are not occupied for the purposes of trade or business and have not been embraced within the limits of any withdrawal, reservation, or incorporated town or city; but homestead entries on lands within certain areas (such as lands in Alaska and lands withdrawn under the reclamation act, certain ceded Indian lands, and lands within abandoned military reservations, etc.) must be entered subject to the particular requirement of the laws under which such lands were opened to entry. None of these particular requirements are set out in these suggestions, but information as to them may be obtained by either verbal or written inquiries addressed to the register and receiver of the land office of the district in which such lands are situated.

HOW CLAIMS UNDER THE HOMESTEAD LAW ORIGINATE.

3. Claims under homestead laws may be initiated either by settlement or surveyed or unsurveyed lands of the kind mentioned in the foregoing paragraph, or by the filing of a soldier's or sailor's declaratory statement, or by the presentation of an application to enter any surveyed lands of that kind.

4. Settlements may be made under the homestead laws by all persons qualified to make either an original or a second homestead entry of the kind mentioned in paragraphs 6 and 13, and in order to make settlement the settler must personally go upon and improve or establish residence on the land he desires. By making settlement in this way the settler gains an exclusive right to enter the lands settled upon as against all other persons, but not as against the Government should the lands be withdrawn by it for other purposes.

A settlement made on any part of a surveyed technical quarter section gives the settler the right to enter all of that quarter section which is then subject to settlement, although he may not place improvements on each 40-acre subdivision; but if the settler desires to initiate a claim to surveyed tracts which form a part of more than one technical quarter section he should perform some act of settlement—that is, make some improvement—on each of the smallest legal subdivisions desired. When settlement is made on unsurveyed lands the settler must plainly mark the boundaries of all the lands claimed by him.

Settlement must be made by the settler in person, and can not be made by his agent, and each settler must, within a reasonable time after making his settlement, establish and thereafter continuously maintain an actual residence on the land, and if he, or his heirs or devisees, fail to do this, or if he, or his heirs or devisees, fail to make entry within three months from the time he first settles on surveyed lands, or within three months from the filing in the local land office of the plat of the survey of unsurveyed lands on which he made settlement, the exclusive right of making entry of the lands settled on will be lost and the lands will become subject to entry by the first qualified applicant.

5. Soldiers' and sailors' declaratory statements may be filed in the land office for the district in which the lands desired are located by any persons who have been honorably discharged after ninety days' service in the Army or Navy of the United States during the war of the rebellion or during the Spanish-American war or the Philippine insurrection. Declaratory statements of this character may be filed

either by the soldier or sailor in person or through his agent acting under a proper power of attorney, but the soldier or sailor must make entry of the land in person, and not through his agent, within six months from the filing of his declaratory statement, or he may make entry in person without first filing a declaratory statement if he so chooses. The application to enter may be presented to the land office through the mails or otherwise, but the declaratory statement must be presented at the land office in person, either by the soldier or sailor or by his agent, and can not be sent through the mails.

BY WHOM HOMESTEAD ENTRIES MAY BE MADE.

6. Homestead entries may be made for a quarter section or less by any person who does not come within either of the following classes:

- (a) Married women, except as hereinafter stated.
- (b) Persons who have already made homestead entry, except as hereinafter stated.
- (c) Foreign-born persons who have not declared their intention to become citizens of the United States.
- (d) Persons who are the owners of more than 160 acres of land in the United States.
- (e) Persons under the age of 21 years, who are not heads of families, except minors who make entry as heirs, as hereinafter mentioned, or who have served in the Army or Navy for at least fourteen days.
- (f) Persons who have acquired title to or are claiming under any of the agricultural public land laws, through settlement or entry made since August 30, 1890, any other lands which, with the lands last applied for, would amount in the aggregate to more than 320 acres.

7. A married woman, who has all of the other qualifications of a homesteader, may make a homestead entry under any one of the following conditions:

- (a) Where she has been actually deserted by her husband.
- (b) Where her husband is incapacitated by disease or otherwise from earning a support for his family and the wife is really the head and main support of the family.
- (c) Where the husband is confined in a penitentiary and she is actually the head of the family.
- (d) Where the married woman is the heir of a settler or contestant who dies before making entry.
- (e) Where a married woman made improvements and resided on the lands applied for before her marriage, she may enter them after marriage if her husband is not holding other lands under an unperfected homestead entry at the time she applies to make entry.

A married woman can not make entry under any of these conditions unless the laws of the State where the lands applied for are situated give her the right to acquire and hold title to lands as a femme sole.

8. If an entryman deserts his wife and abandons the land covered by his entry, his wife then has the exclusive right to contest the entry if she has continued to reside on the land, and on securing its cancellation she may enter the land in her own right, or she may continue her residence and make proof in the name of and as the agent for her husband, and patent will issue to him.

9. If an entryman deserts his minor children and abandons his entry after the death of his wife, the children have the same rights the wife could have exercised had she been deserted during her lifetime.

10. If a husband and wife are each holding an original entry or a second entry at the same time, they must relinquish one of the entries, unless one of them holds an entry as the heir of a former entryman or settler. In cases where they can not hold both entries, they may elect which one they will retain and relinquish the other.

11. The unmarried widows of soldiers and sailors who were honorably discharged after ninety days' actual service during the war of the rebellion, or the Spanish-American war, or the Philippine insurrection may make entry as such widows, if their husbands died without making entry; but a widow may make entry in her own right as an unmarried woman, regardless of the fact that her husband may have made entry, but she can not claim credit for her husband's service.

12. A person serving in the Army or Navy of the United States may make a homestead entry if some member of his family is residing on the lands applied for, and the application and accompanying affidavits may be executed before the officer commanding the branch of the service in which he is engaged.

13. Second homestead entries for a quarter section or a smaller legal subdivision of public lands may be made, under statutes specifically authorizing such entries, by the following classes of persons, if they are otherwise qualified to make entry:

- (a) By a former entryman who commuted his entry prior to June 5, 1900.
- (b) By homestead entryman who, prior to May 17, 1900, paid for lands to which he would have been afterwards entitled to receive a patent without payment, under the "Free homes act."
- (c) By any person who for any cause lost, forfeited, or abandoned his homestead entry before February 8, 1908, of the former entry was not canceled for fraud or relinquished for a valuable consideration.
- (d) Any person who has already made final proof for less than 160 acres under the homestead laws may, if he is otherwise qualified, make a second or additional homestead entry for such an amount of public lands as will, when added to the land for which he has already made proof, not exceed in the aggregate 160 acres.

Any person desiring to make a second entry must first select and inspect the land he intends to enter and then make application therefor on blanks furnished by the register and receiver. Each application must state the date and number of his former entry and the land office at which it was made, or give the section, township, and range in which the land entered was located. Any person mentioned in paragraph (c) above must show, by the oaths of himself and some other person or persons, the time when his former entry was lost, forfeited, or abandoned and that it was not canceled for fraud or abandoned or relinquished for a valuable consideration.

14. An additional homestead entry may be made by a person for such an amount of public lands adjoining lands then held and resided upon by him under his original entry as will, when added to such adjoining lands, not exceed in the aggregate 160 acres. An entry of this kind may be made by any person who has not acquired title to and is not, at the date of his application, claiming under any of the agricultural public land laws, through a settlement or entry made since August 30, 1890, any other lands which, with the lands then applied for, would exceed in the aggregate 320 acres; but the applicant will not be required to show any of the other qualifications of a homestead entryman.

15. An adjoining farm entry may be made for such an amount of public lands lying contiguous to lands owned and resided upon by the

applicant as will not, with the lands so owned and resided upon, exceed in the aggregate 160 acres; but no person will be entitled to make entry of this kind who is not qualified to make an original homestead entry.

HOW HOMESTEAD ENTRIES ARE MADE.

16. A homestead entry may be made by the presentation to the land office of the district in which the desired lands are situated of an application properly prepared on blank forms prescribed for that purpose and sworn to before either the register or the receiver, or before a United States commissioner, or a United States court commissioner, or a judge or a clerk of a court of record, in the county or parish in which the land lies, or before any officer of the classes named who resides in the land district and nearest and most accessible to the land, although he may reside outside of the county in which the land is situated.

17. Each application to enter and the affidavits accompanying it must recite all the facts necessary to show that the applicant is acquainted with the land; that the land is not, to the applicant's knowledge, either saline or mineral in character; that the applicant possesses all of the qualifications of a homestead entryman; that the application is honestly and in good faith made for the purpose of actual settlement and cultivation, and not for the benefit of any other person, persons, or corporation; that the applicant will faithfully and honestly endeavor to comply with the requirements of the law as to settlement, residence, and cultivation necessary to acquire title to the land applied for; that the applicant is not acting as the agent of any person, persons, corporation, or syndicate in making such entry, nor in collusion with any person, corporation, or syndicate to give them the benefit of the land entered or any part thereof; that the application is not made for the purpose of speculation, but in good faith to obtain a home for the applicant, and that the applicant has not directly or indirectly made, and will not make, any agreement or contract in any way or manner with any person or persons, corporation, or syndicate whatsoever by which the title he may acquire from the Government to the lands applied for shall inure, in whole or in part, to the benefit of any person except himself.

18. All applications to make second homestead entries must, in addition to the facts specified in the preceding paragraph, show the number and date of the applicant's original entry, the name of the land office where the original entry was made, and the description of the land covered by it, and it should state fully all of the facts which entitle the applicant to make a second entry.

19. All applications by persons claiming as settlers must, in addition to the facts required in paragraph 21, state the date and describe the acts of settlement under which they claim a preferred right of entry, and applications by the widows, devisees, or heirs of settlers must state facts showing the death of the settler and their right to make entry; that the settler was qualified to make entry at the time of his death, and that the heirs or devisees applying to enter are citizens of the United States, or have declared their intentions to become such citizens, but they are not required to state facts showing any other qualifications of a homestead entryman, and the fact that they have made a former entry will not prevent them from making an entry as such heirs or devisees, nor will the fact that a person has made entry as the heir or devisee of the settler prevent him from making an entry in his own individual right, if he is otherwise qualified to do so.

20. All applications by soldiers, sailors, or their widows, or the guardians of their minor children should be accompanied by proper evidence of the soldier's or sailor's service and discharge and of the fact that the soldier or sailor had not, prior to his death, made an entry in his own right. The application of the widow of the soldier or the sailor must also show that she has remained unmarried, and applications for children of soldiers or sailors must show that the father died without having made entry; that the mother died or remarried without making entry, and that the person applying to make entry for them is their legally appointed guardian.

RIGHTS OF HEIRS UNDER THE HOMESTEAD LAWS.

21. If a homestead settler dies before he makes entry, his widow has the exclusive right to enter the lands covered by his settlement, and if there be no widow, then any person to whom he has devised his settlement rights by proper will has the exclusive right to make the entry; but if a settler dies leaving neither widow nor will, then the right to enter the lands covered by his settlement passes to the persons who are named as his heirs by the laws of the State in which the land lies. The persons to whom the settler's right of entry passes must make entry within the time named in paragraph 4 or they will forfeit their right to the next qualified applicant. They may, however, make entry after that time if no other qualified person has applied to enter the lands.

22. If a homestead entryman dies before making final proof, his rights under his entry will pass to his widow; but if there be no widow and the entryman's children are all minors, the right to a patent vests at once in them, or the lands may be sold for their benefit in the manner in which other lands belonging to minors are sold under the laws of the State or Territory in which the lands are located.

If the children of a deceased entryman are not all minors and his wife is dead, his rights under his entry pass to the person to whom such rights were devised by the entryman's will, but if an entryman dies without leaving either a widow or a will and his children are not all minors, his rights under his entry will pass to the persons who are his heirs under the laws of the State or Territory where the lands are situated.

23. If a contestant dies after having secured the cancellation of an entry of any kind, his right as a successful contestant to make entry passes to his heirs; but if a contestant dies before he has secured the cancellation of the entry he has contested, his heirs may continue the prosecution of his contest and make entry if they succeed in securing the cancellation of the entry contested.

No foreign-born person can claim rights as heirs under the homestead laws unless they have become citizens of the United States, except that aliens who have declared their intentions to become citizens may make entry as the heirs or devisees of settlers or contestants.

24. Minor children of soldiers or sailors who have been honorably discharged after ninety days' actual services during the war of the rebellion, the Spanish-American war, or the Philippine insurrection may make a joint entry, through their guardian, if their fathers failed to make homestead entry and their mothers have died or remarried without making entry after their father's death.

RESIDENCE AND CULTIVATION.

25. The residence and cultivation required by the homestead law means a continuous maintenance of an actual home on the land entered to the exclusion of a home elsewhere, and continuous annual cultivation

of some portion of the land. A mere temporary sojourn on the land, followed by occasional visits to it once in six months or oftener, will not satisfy the requirements of the homestead law, and may result in the cancellation of the entry.

26. No specified amount of either cultivation or improvements is required, but there must in all cases be such continuous improvement and such actual cultivation as will show the good faith of the entryman. Lands covered by homestead entry may be used for grazing purposes if they are more valuable for pasture than for cultivation to crops. When lands of this character are used in good faith for pasturage actual grazing will be accepted in lieu of actual cultivation. The fact that lands covered by homestead entries are of such a character that they can not be profitable cultivated or pastured will not be accepted as an excuse for failure to either cultivate or graze them.

27. Actual residence on the lands entered must begin within six months from the date of all homestead entries, except additional entries and adjoining farm entries of the character mentioned in paragraphs 14 and 15, and residence, with improvements and annual cultivation, must continue until the entry is five years old, except in cases hereafter mentioned; but all entrymen who actually resided upon and cultivated lands entered by them prior to making such entries may make final proof at any time after entry when they can show five years' residence and cultivation.

Under certain circumstances leaves of absence may be granted in the manner pointed out in paragraph 36 of these suggestions, but the entryman can not claim credit for residence during the time he is absent under such leave.

28. Residence and cultivation by soldiers and sailors of the classes mentioned in paragraph 5 must begin within six months from the time they file their declaratory statements regardless of the time when they make entry under such statement, but if they make entry without filing a declaratory statement they must begin their residence within six months from the date of such entry, and residence thus established must continue in good faith, with improvements and annual cultivation for at least one year, but after one year's residence and cultivation the soldier or sailor is entitled to credit on the remainder of the five-year period for the term of his actual naval or military service, or if he was discharged from the Army or Navy because of wounds received or disabilities incurred in the line of duty he is entitled to credit for the whole term of his enlistment.

29. A soldier or sailor making entry during his enlistment in time of peace is not required to reside personally on the land, but may receive patent if his family maintain the necessary residence and cultivation until the entry is five years old or until it has been commuted, but a soldier or sailor is not entitled to credit on account of his military service in time of peace.

30. Widows and minor orphan children of soldiers and sailors who make entry as such widows and children must begin their residence and cultivation on the lands entered by them within six months from the dates of their entries, or the filing of declaratory statement, and thereafter continue both residence and cultivation for such period as will, when added to the time of their husbands' or fathers' military or naval service, amount to five years from the date of the entry, and if the husbands or fathers either died in the service or were discharged on account of wounds or disabilities incurred in the line of duty, credit for the whole term of their enlistment, not to exceed four years, may be taken, but no patent will issue to such widows or children until there has been residence and cultivation by them for at least one year.

31. Persons who make entry as heirs of settlers are not required to both reside upon and cultivate the land entered by them, but they must within six months from the dates of their entries begin, and thereafter continuously maintain either residence or cultivation on the land entered by them for the required five-year period, unless their entries are sooner commuted.

32. The widow, heirs, or devisees of a homestead entryman who dies before he earns patent are not required to both reside upon and cultivate the lands covered by his entry, but they must, within six months after the death of the entryman, begin either residence or cultivation on the land covered by the entry, and thereafter continuously maintain their residence or cultivation for such a period of time as will, when added to the time during which the entryman complied with the law, amount in the aggregate to the required five years, unless they sooner commute the entry.

33. Homestead entrymen who have been elected or appointed to either a Federal, State, or county office after they have made entry and established an actual residence on the land covered by their entries are not required to continue such residence during their term of office, if the discharge of their bona fide official duties necessarily requires them to reside elsewhere than upon the land; but they must continue their cultivation and improvements for the required length of time.

A person who makes entry after he has been elected or appointed to office is not excused from maintaining residence, but must comply with the law in the same manner as though he had not been elected or appointed.

34. Neither residence nor cultivation is required on lands covered by an adjoining farm entry, or an additional entry of the kinds mentioned in paragraphs 14 and 15; but a person who makes an adjoining farm entry is not entitled to a patent until he has continued his residence and cultivation for the full five years on the adjoining lands owned by him at the time he made entry or on the lands entered by him, unless he sooner commutes his entry after fourteen months' residence on either the entered lands or the adjoining lands owned by him. A person who has made an additional entry for lands adjoining his original entry is not entitled to a patent to the lands so entered until he has earned a patent to the adjacent lands embraced in his original homestead entry, but if he has earned a patent under his original entry at the time he makes his additional homestead entry he is entitled at once to a patent under the additional entry.

35. Neither residence nor cultivation by an insane homestead entryman is necessary if such entryman made entry before he became insane and complied with the requirements of the law up to the time his insanity began.

LEAVES OF ABSENCE.

36. Leaves of absence for one year or less may be granted to entrymen who have established actual residence on the lands entered by them in all cases where total or partial failure or destruction of crops, sickness, or other unavoidable casualty has prevented the entryman from supporting himself and those dependent upon him by a cultivation of the land.

Applications for leaves of absence should be addressed to the register and receiver of the land office where the entry was made and should be sworn to by the applicant and some other disinterested person before such register and receiver or before some officer in the land

district using a seal and authorized to administer oaths, except in cases where through age, sickness, or extreme poverty the entryman is unable to visit the district for that purpose, when the oath may be made outside of the land district. All applications of this kind should clearly set forth:

(a) The number and date of the entry, a description of the lands entered, the date of the establishment of his residence on the land, and the extent and character of the improvements and cultivation made by the applicant.

(b) The kind of crops which failed or were destroyed and the cause and extent of such failure or destruction.

(c) The kind and extent of the sickness, disease, or injury assigned, and the extent to which the entryman was prevented from continuing his residence upon the land, and, if practicable, a certificate, signed by a reliable physician, as to such sickness, disease, or injury should be furnished.

(d) The character, cause, and extent of any unavoidable casualty which may be made the basis of the application.

(e) The dates from which and to which the leave of absence is requested.

COMMUTATION OF HOMESTEAD ENTRIES.

37. All original, second, and additional homestead and adjoining farm entries may be commuted, except such entries as are made under particular laws which forbid their commutation.

When actual residence was established within six months from the date of any entry made before November 1, 1907, and thereafter continuously maintained with improvements and cultivation until the expiration of fourteen months from the date of the entry and in cases where there has been at least fourteen months' actual and continuous residence and cultivation on any land covered by any entry made after November 1, 1907, the entryman or his widow, heirs, or devisees may obtain patent by proving such residence and cultivation and paying the cost of such proof, the land office fees, and the price of the land, which is \$1.25 per acre outside of the limits of railroad grants and \$2.50 per acre for land within the granted limits, except as to certain lands which were opened under statutes requiring payment of a price different from that here mentioned.

HOMESTEAD FINAL AND COMMUTATION PROOF.

38. Either final or commutation proof may be made at any time when it can be shown that residence and cultivation have been maintained in good faith for the required length of time, but if final proof is not made within seven years from the date of a homestead entry the entry will be canceled unless some good excuse for the failure to make the proof within the seven years is given with satisfactory final proof as to the required residence and cultivation made after the expiration of the seven years.

39. By whom proof may be offered.—Final proof must be made by the entrymen themselves, or by their widows, heirs, or devisees, and can not be made by their agents, attorneys in fact, administrators, or executors, except in the following cases:

(a) If an entryman becomes insane after making his entry, patent will issue to the entryman on proof by his guardian, or other legal representative, that the entryman had complied with the law up to the time his insanity began.

(b) If a person has made a homestead entry and afterwards died while he was serving as a soldier or a sailor during the Spanish-American war or the Philippine insurrection, patent will issue upon proof made by his widow, if unmarried, or in case of her death or marriage, then his minor orphan children, or his, her, or their legal representatives.

(c) Where entries have been made for minor orphan children of soldiers or sailors, proof may be offered by their guardian, if any, if the children are still minors at the time the proof should be made.

(d) When an entryman has abandoned the land covered by his entry, and deserted his wife, she may make final or commutation proof as his agent, or, if his wife be dead and the entryman has deserted his minor children, they may make the same proof as his agent, and patent will issue in the name of the entryman.

(e) When an entryman dies leaving children, all of whom are minors, and both parents are dead, the executor or administrator of the entryman, or the guardian of the children, may, at any time within two years after the death of the surviving parent, sell the land for the benefit of the children by proper proceedings in the proper local court, and patent will issue to the purchaser; but if the land is not so sold patent will issue to the minors upon proof of death, heirship, and minority being made by such administrator or guardian.

40. How proofs may be made.—Final or commutation proofs may be made before any of the officers mentioned in paragraph 16 as being authorized to administer oaths to applicants.

Any persons desiring to make homestead proof should first forward a written notice of his desire to the register and receiver of the land office, giving his post-office address, the number of his entry, the name and official title of the officer before whom he desires to make proof, the place at which the proof is to be made, and the name and post-office addresses of at least four of his neighbors who can testify from their own knowledge as to facts which will show that he has in good faith complied with all the requirements of the law.

41. Publication fees.—The entryman should, at the time he informs the register of his desire to make final proof, forward to the receiver sufficient money to pay the newspaper for publishing the notice, which fees will not exceed the fees provided by the State laws for the publication of legal notices of a similar kind. If the entryman does not forward the money to pay these fees, he may forward a statement from the publisher of the paper, in which the notice is to be published, showing that he has arranged with the publisher for the payment of the fees.

42. Duty of officers before whom proofs are made.—On receipt of the notice mentioned in the preceding paragraph, the register will issue a notice naming the time, place, and officer before whom the proof is to be made and cause the same to be published once a week for five consecutive weeks in a newspaper of established character and general circulation published nearest the land, and also post a copy of the notice in a conspicuous place in his office.

On the day named in the notice the entryman must appear before the officer designated to take proof with at least two of the witnesses named in the notice; but if for any reason the entryman and his witnesses are unable to appear on the date named, the officer should continue the case from day to day until the expiration of ten days, and, if necessary, are unable to appear on the date named, the officer should continue the proof may be taken on any day within that time when the entryman and his witnesses appear, but they should, if it is at all possible to do so, appear on the day mentioned in the notice. Entrymen are

advised that they should, whenever it is possible to do so, offer their proofs before the register or receiver, as it may be found necessary to refer all proofs made before other officers to a special agent for investigation and report before patent can issue, while, if the proofs are made before the register or receiver, there is less likelihood of this being done, and there is less probability of the proofs being incorrectly taken. By making proof before the register or receiver the entrymen will also save the fees which they are required to pay other officers, as they will be required under the law to pay the register and receiver the same amount of fees in each case, regardless of the fact that the proof may have been taken before some other officer.

Entrymen are cautioned against improvidently and improperly commuting their entries, and are warned that any false statement made in either their commutation or final proof may result in their indictment and punishment for the crime of perjury.

43. Fees and commissions.—When a homesteader applies to make entry he must pay in cash to the receiver a fee of \$5 if his entry is for 80 acres or less, or \$10 if he enters more than 80 acres, and in addition to this fee he must pay, both at the time he makes entry and final proof, a commission of \$1 for each 40-acre tract entered outside of the limits of a railroad grant and \$2 for each 40-acre tract entered within such limits. On all final proofs made before either the register or the receiver, or before any other officer authorized to take proofs, the register and receiver are entitled to receive 15 cents for each 100 words reduced to writing, and no proof can be accepted or approved until all fees have been paid.

In all cases where lands are entered under the homestead laws in Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming the commission due to the register and receiver on entries and final proofs, and the testimony fees under final proofs, are 50 per cent more than those above specified, but the entry fee of \$5 or \$10, as the case may be, remains the same in all the States.

United States commissioners, United States court commissioners, judges, and clerks are not entitled to receive a greater sum than 25 cents for each oath administered by them, except that they are entitled to receive \$1 for administering the oath to each entryman and each final proof witness to final proof testimony, which has been reduced to writing by them.

Taxation.

SPEECH

OF

HON. JOHN G. McHENRY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. McHENRY said:

Mr. SPEAKER: I take this opportunity of addressing the House and the country upon the question of taxation.

I have learned to look upon the administration of our Government as a business proposition of vast proportions, and to which we, as Representatives, should endeavor to bring the highest type of executive and conservative management in the performance of our official duties.

Acting as the spokesman for the people of my district, I want to call your attention to the enormous expenditures of the Government and the methods of raising money to meet these expenses. The various appropriations, needed and otherwise, authorized by Congress at this session exceeds the astonishing total of \$1,000,000,000. This, Mr. President, is an almost inconceivable sum of money, and it all must come from the pockets of the people, and, in round figures, means an annual tax for every man, woman and child of \$12 each person.

This does not include the State, county, municipal, road, school, poor tax, and so forth. All of which means in total a very much greater burden than the national tax. In the original scheme of government the land values of the country represented practically the only medium of taxation. Of later years vast corporate enterprises have been built and supported by the energy of our people, but have not contributed a due proportion, in many instances, to their just share of the burden of taxation. Even to this late day the entire burden of taxation falls almost wholly upon the farmer and home owner and consumer.

Our Government has but three direct sources of revenue, namely: The internal-revenue tax upon spirituous and malt liquors and tobacco; the import duty under our tariff law which levies a tax upon the importation of various articles. That is, when certain articles of foreign manufacture and production which are included in the tariff schedule are imported into the United States from foreign countries, the import duty is collected by the Government.

This means, of course, that in turn the people of the United States must pay a correspondingly higher price for said articles, and in this way the tariff revenue is collected from our American people.

Another source of revenue is the post-office receipts, which for the past several years have undergone a steady deficit. Last

year the post-office receipts were about \$7,000,000 less than the post-office expenditures. Up to this time no additional plan of taxation has been successfully inaugurated. The Democratic party has time and again tried the imposition of an income tax, and Mr. Roosevelt, I understand, is also in favor of the income tax. An income tax means that, when a man receives a yearly income, say, of \$5,000 or more, he should be compelled to pay a special tax to the National Government for the reason that he is not only better able to share his full proportion of taxation than the majority of his neighbors, but under the present scheme of taxation he ordinarily does not own much land nor can he consume more than the average individual, yet his income is perhaps a hundred times greater than the average citizen.

So from a standpoint of equity, an income tax which is not based upon direct human energy, which I would always oppose, would be the very essence of human equity in the adjustment of the tax burden. But it is most difficult to get Members of Congress to agree upon a proposition of this kind, especially when they draw a fair salary themselves and in addition to that receive some income from their various businesses or pursuits which they have been following prior to their entry upon Congressional life.

Such a bill did pass Congress, however, but the Supreme Court finally decided that it was unconstitutional. The time will come some day when we will have an income tax, but until that time does come we ought to make a particular effort to relieve the real-estate owners and the laborer, who is the next largest taxpayer, because of his usual large family and therefore a large consuming capacity, from the excessive burden of taxation which he must bear and in many instances not well able to bear, by shifting a portion of the burden to other shoulders who, by every reason of right and equity, ought to be willing to assume their share, and that to within constitutional limits.

The Constitution of the United States gives Congress full powers of taxation, making one proviso, that said taxation must be uniform with equal fairness throughout the entire United States. Since my election to Congress, Mr. Speaker, I have felt that I had a higher duty to perform to my constituents and my country than the mere clerical one of answering letters, looking after pension claims, and departmental affairs as they may arise, all of which are but incidents to the office and should have immediate and prompt attention and which I have faithfully tried to give them.

But with the accomplishment of these details a Congressman's work is not complete. He is employed by the people of his district as their Representative and as such he becomes an integral part in the affairs of our Government. So it becomes his sacred duty to contribute whatever executive and business ability which he may have to his Government. His Government has a right to his best thought and all his physical energy. Having this in mind, I have entered upon my work with a spirit of sincere Americanism—entirely free from any partisan duty.

After all, Mr. Speaker, this great Government of ours is a Government for all the people. There are so many things of universal usefulness to our people and which are entirely divorced from partisanship, and of these many nonpartisan questions taxation is one of the greatest importance.

I have spent several months, Mr. Speaker, in the preparation of the bill which I have presented and will ask unanimous consent to print in full in the Record:

A bill to prevent the sale of fraudulent mining stock; to provide additional revenue; to meet United States Treasury deficit; to equalize the distribution of the burden of taxation; to provide additional moneys to meet the demands for public improvements within the United States.

Be it enacted, etc., That on and after the approval of this act all corporations engaged in the mining of asphalt, copper, gas, gold, graphite, iron, lead, oil, radium, silver, tin, or zinc, or corporations organized for the purpose of mining or producing those minerals, and offering the stock of such corporations for sale, either in commercial exchanges, boards of trade, or by private subscription and solicitation, shall pay into the Treasury of the United States a tax of one-tenth of 1 per cent upon the market value, not reckoned below par, of the authorized capital stock of such corporations.

SEC. 2. That it shall be the duty of the Bureau of Internal Revenue to ascertain the name and the capitalization of every corporation engaged in mining or producing asphalt, copper, gas, gold, graphite, iron, lead, oil, radium, tin, or zinc, operating or offering shares of stock for sale, within the territory of the United States or elsewhere, to make a list of such corporations and assess said tax of one-tenth of 1 per cent upon the capital stock as above provided.

SEC. 3. That it shall be the duty of every corporation liable to tax under the provisions of this act, on or before July 31 in each year, to make a list or return, verified by oath or affirmation of the president and secretary of such corporation, to the collector or deputy collector of the district in which such corporation operates or proposes to operate, of the amount of property, condition of development, and the number and par value of shares authorized to be issued by such corporation, which list or return shall be filed in the Bureau of

Internal Revenue, according to such forms and regulations as may be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury.

SEC. 4. That if any corporation liable to tax under the provisions of this act shall fail to make such list or return as is required by this act, then, and in that case, it shall be the duty of such collector or deputy collector to make such list or return upon the best information attainable, under oath as to the facts, which return shall be received as the return of such corporation required by the provisions of this act.

SEC. 5. That in case no annual list or return has been made by any corporation subject to tax under the provisions of this act by such corporation to the collector or deputy collector as required by this act, and the persons whose duty it shall be to make such return shall be absent from their places of residence or business at the time the collector or deputy collector shall call for the annual list or return, it shall be the duty of such collector or deputy collector to leave at such places of residence or business, with some one of suitable age and discretion, if such be present, otherwise to deposit in the nearest post-office a note or memorandum addressed to such persons requiring them to send to such collector or deputy collector the list or return required by law within ten days of the date of such note or memorandum, verified by oath or affirmation.

SEC. 6. That any person on being notified and required as aforesaid shall refuse or neglect to render such list or return within the time required, or whenever any person who is required to make return of property subject to tax under the provisions of this act, or delivers any return which, in the opinion of the collector, is false and fraudulent, or contains any undervaluation or understatement, it shall be lawful for the collector to summon such person or any other person or persons having possession, custody, or care of books of accounts containing entries relating to the capitalization, property, and development of the operations of such corporation, or any person he may believe to possess information as to the facts, to appear before him and produce such books at a time and place named in the summons, and require him to give testimony or answer interrogatories under oath respecting any corporation liable to tax under the provisions of this act or the returns thereof.

SEC. 7. That the collector may summon any person residing or found within the State in which his district lies, and when the person intended to be summoned does not reside and can not be found within such State he may enter any collection district where such person may be found, and there make the examination authorized in the sixth section of this act, and to this end he may there exercise all the authority which he might lawfully exercise in the district for which he was commissioned.

SEC. 8. That the making of any false or fraudulent return, undervaluation, or understatement or the failure or refusal to make a return for the purpose of evading the provisions of this act shall be deemed a misdemeanor, and any officer of any corporation whose duty it is to make such return convicted of making a false or fraudulent return, or of failing or refusing to make a return, shall be fined not less than \$1,000, or imprisoned not less than one year, or either, or both, at the discretion of the court.

SEC. 9. That the Commissioner of Internal Revenue is authorized to call upon the Bureau of Mines and Mining whenever exigencies require it to make a physical examination of the property of any corporation which comes within the provisions of this law, and make a report thereof to said Commissioner of Internal Revenue; said report shall be accessible to the general public or to any person who may make application for a copy.

I have no hope of securing any action upon this measure at this session, but I want it brought before the country for full consideration, and will insist that the bill be called up for such amendments as may be deemed wise, and to be voted upon.

The object of this bill may be found in two distinct purposes:

First. To protect the public against the fraudulent sale of wild-cat mining stock.

Second. To provide money to meet the continued increasing demand for public improvements and to help equalize the burden of taxation.

OUR SOURCE OF GREAT PUBLIC LOSS.

Perhaps one of the greatest economic losses to the American people may be found in the losses due to unwise investment, and in the item we find the mining and oil company stocks to be the most prolific of evil results.

It may safely be said that there is not a town or village so remote in the United States as to have escaped the wiles of the mining-stock promoter. This is due both to the ignorance of the investors and the utter laxity of our laws. The education of the investor is both a matter of time and most costly to him. But that there can and should be remedial legislation for the protection of the innocent investor as against misrepresentation and dishonest management, I think we are all agreed.

MINERAL WEALTH SHOULD BELONG TO ALL THE PEOPLE.

I believe that the Creator placed the mineral wealth in the bowels of the earth for the benefit of all the people and not for the exclusive benefit of a few.

There are three natural sources of productive wealth from which all the wealth of our nation has come and must continue to come, viz:

Our mineral and oil deposits.

Our forests.

Our farm products.

Of these the great financial interests of the country have formed mighty corporations for the purpose of controlling the output of the forests and mines and then regulating prices to suit their needs.

The farm products can not be cornered, and the margin of profits between the cost of production and the amount received

from the sale of the farm products is so small and so much labor required in its collection that the proposition becomes too gigantic and the remuneration too small to invite the attention of the capitalist; so he is content to confine his energies to mines, and timber, and oil wells, provided the farmers and home owners pay all the tax.

The Constitution of the United States gives to all men equal security in life and property, and under our system of human law if a man finds a body of mineral or a deposit of oil and complies with the laws of the State in acquiring possession it lawfully becomes his property, regardless of what may have been the intention of the divine law of the Creator.

Thus far we have no desire nor right to interfere with the constitutional rights of the individual mine or oil-well owner, so long as he proceeds and continues to operate by his own energy or by the use of his own capital in the employment of other physical energy than his own. But when, in addition to absorbing all this wealth to himself, he asks for and uses public money procured from other individuals, then it becomes the legitimate functions of government to assume such degree of supervision as shall insure to the greatest degree of public good.

In the collection of this tax which I propose it becomes in a way an insurance to the people against the ultimate destruction of this source of natural and national wealth, which by every reason of moral equity rightfully belongs to all the people. In time the mineral wealth of our country will be entirely destroyed, for the minerals of the earth can not be replenished like our forests and the renewal of fertility of our fields. So it becomes the duty of our Government to both conserve our mineral wealth and the individual wealth of our citizens, for when this value is once destroyed the struggle for existence upon the part of the wage-earner will be still more fierce than it is to-day, and the conservation of our national resources in the interest of our whole people is a duty so plain that all can understand it. Aside, however, from the natural losses to the people there is not a source of artificial loss through the modern methods of capitalizing mining and oil-well corporations.

For purpose of illustration, a man will locate a trace of a mineral and immediately stake out a mining claim under the laws of the United States, without restriction or supervision whatever procure a State charter, rush to the printing office and have a few basketsful of stock certificates printed, with the capital stock issue usually at \$1,000,000 and the par value of \$1 per share. Now, it may be that all he has is a naked claim with a little surface development to show a trace of mineral. His prospectus is sent out. The newspapers are freely used—and in this respect are a party to the crime of fraud which is constantly being played upon the people—and shares of stock in this prospective mining is sold in exchange for the people's money.

An honest effort may or may not be made to develop the property. The investor finally wants information and probably the promoter is gone and nobody knows anything about it. Not only is his money gone, but with the loss of his money comes the loss of confidence in humanity and self-dependency, which is infinitely more harmful to our citizenship than even the loss of money. If this bill which I propose becomes a law, the promoter will first have to pay to the United States Treasury 1 per cent of his total capitalization. So if he wants to capitalize his company for \$1,000,000 he will be obliged to pay a Government tax of \$10,000 per year. This tax serves the Government and the people two specific purposes:

First. In the course of a hundred years the corporation will have to return to the Government and to the people the full amount of its valuation as a partial reimbursement for the loss of the mineral to the Government.

Second. It will provide a large sum of money annually, which can be used to help meet the growing Government deficit and to help pay for some of our great internal improvements which the public are now demanding. Furthermore, if a man buys a share of mining stock under this bill he will be in a position to procure authentic Government reports, both as to what has been done with the money spent and what the actual value of the property is and what the prospective chances are for future profits.

WILL AID LEGITIMATE MINING.

The mining business is just as legitimate as any other form of business and one of the most useful industries of our country. It brings to the surface the hidden wealth of the earth, whence it circulates for the benefit of all mankind. It seems to have become a most fertile field for dishonest promotion. I believe it is claimed by one of the leading mine owners and operators in the world that not 1 mine in 500 ever pays dividends. So it would seem that when a person buys mining stocks he takes

a gamble of 1 chance out of 500 of ever receiving any dividends, much less the return of the original investment. So a law can be framed in which the Government will have the power to give accurate and honest reports, the legitimate mining industries of the country will receive a very great boom, while the dishonest mining corporations will be wiped entirely out of existence. If one man or a few men want to take a mineral out themselves or use their own credit or money in a private partnership affair or a closed corporation this law will do them no harm, because their operation will not come within the jurisdiction of this law. But if they want to use the people's money to operate and exploit what could properly be termed "people's property," then the Government has the right to act in this intermediary capacity.

I have been unable to procure any exact data at this time of the mining and oil wealth of the United States, but it is estimated that this tax will provide an annual fund approximating \$50,000,000 per year. Up to this time, Mr. Speaker, in the present fiscal year our Government deficit already amounts to \$66,000,000, and if the present business depression keeps up for another ten months our Government will again be selling bonds to provide money to meet the running expenses of our Government. The sale of Government bonds always means a first mortgage against all our homes. This means that not only must we compromise in governmental expenditures, but that we must seek new avenues of taxation, for the farmer and laborer of the country are already assuming more than their share and more than they can afford.

ENORMOUS TAX FUND COLLECTED FROM THE PEOPLE IN TEN YEARS.

During the ten fiscal years, from 1898 to 1907, the receipts of the United States Government from customs and internal revenues and other sources amounted to \$6,843,603,206, a sum more than twice as much as the total money in circulation of the country; a sum equal to 6 per cent upon the total wealth of the United States. Thus the Government collected from the people in these ten years an amount equal to over \$86 for every man, woman, and child in the country. During the same time the expenditures amounted to \$6,622,800,814. Thus in these ten years the Government collected in excess of its expenditures \$202,802,392. In four of the ten years, however, there were deficits in the revenues, two of these being due to the extraordinary expenditures of the Spanish war.

The ideal financial condition of a government is one in which the revenues from taxation amount to only a little more than the expenditures. A deficit is always bad for a government, as it is for a corporation or a business house; but a large surplus also is unsound government finance, inasmuch as it means excessive taxation, and under our Treasury system it leads to the absorption into the Treasury of sums of money which could be used to better purposes in the channel of trade.

The following shows the Government receipts and expenditures in each year from 1898 to 1907:

Year.	Receipts.	Expenditures.	Surplus or deficit.
1898.....	\$494,333,954	\$532,381,201	*\$38,047,247
1899.....	610,982,004	700,093,564	*89,111,560
1900.....	639,595,431	590,068,371	⁂79,527,060
1901.....	639,316,531	621,598,546	⁂77,717,985
1902.....	684,326,280	593,038,103	⁂91,287,377
1903.....	694,621,118	640,323,450	⁂54,297,668
1904.....	681,214,373	725,981,946	*44,770,573
1905.....	697,101,270	720,105,498	*23,004,228
1906.....	762,386,905	736,717,582	⁂25,669,323
1907.....	846,725,340	762,483,753	⁂84,236,587
Total.....	6,843,603,206	6,622,800,814	⁂202,802,392

* Deficit.

⁂ Surplus.

While these figures are familiar to us, it is well for an occasional recapitulation that we may keep in mind what the collection of this enormous fund from the people and its expenditure mean. Instead of growing less the governmental expenditures are increasing at an alarming rate, in addition to our regular expenditures. We face the public demand and need for national appropriations for waterway construction and for building permanent public highways, but we can give no consideration to these important questions until we can provide a means of payment by an equitable and fair distribution of the burden.

Under the provision of this bill I wish to call attention to the fact that coal mines are not included, as a tax upon coal to this extent would be a tax upon both production and consumption. The other mining and oil corporations which I have named produce an annual wealth approximating \$5,000,000,000, or nearly as great as the farm production wealth. Our farms bear nearly all the burden of taxation, while the industries I have named, producing almost as much wealth, and infinitely more profitable than farming, contribute practically nothing toward our national taxation.

OUR PUBLIC HIGHWAYS.

As railways are important and necessary to the development of our country, of still greater importance to our whole people is the construction of permanent highways. At the present time

we have over 2,000,000 miles of public roads. The enormous burden of their construction and their maintenance has fallen almost exclusively upon the farmers. It is not fair that he should be compelled to assume all this burden. We are all dependent upon the farmer for our living, for our comforts, for our prosperity, for our government. He represents the central base around which and upon which all else depends. When he is prosperous his prosperity is shared by all classes of business men and workers. Everything of economic value radiates from him. It is the law of nature as well as the law of trade.

So again it becomes the function of our central Government to exercise its full rights under the Constitution to aid in bringing about a greater uniformity in our national taxation in the interests of all the people. Closely and inseparably interwoven in this great question of taxation is the question of the tariff, which I shall take up at another time and prove beyond all doubt that the tariff can be so revised as to not only provide greater revenue, but greater protection to American labor and greater individual prosperity to our people. When our people once learn, Mr. Speaker, how they are being robbed, not for the benefit of our Government or American workmen, but for the benefit of criminal trusts, the demand for equal taxation and equal opportunities will be such that Congress will heed.

I think they have already learned the lesson and that the Sixty-first Congress will be a Congress of the people, for the people, and by the people. The time is here for a square deal in practice, not alone in theory. This bill which I propose is fair and right and just, bringing good to all and harm to none, except, perhaps, the dishonest mine or oil well promoter.

Compensation Bill.

SPEECH

OF

HON. ADOLPH J. SABATH,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. SABATH said:

Mr. SPEAKER: Owing to lack of opportunity to deliver my views on my compensation bill, H. R. 16739, printed in its present form February 10, 1908, and to the inability to obtain the floor of the House for the purpose of considering my bill I avail myself of this opportunity to present to the American people, under the privilege of leave to print, the remarks which follow.

The vast importance of the subject, its novelty as applied to the employees of all carriers of all interstate railroads, require a certain elaboration of this, the first general compensation bill.

The vitally important subject of the general compensation bill has been approved in principle by President Roosevelt, and it is proper that the attention of the people should be called to the general provisions of my general American compensation bill H. R. 16739, which may be found printed in the course of these remarks.

In the course of an experience of over twelve years on the bench in Chicago, one of the greatest cities in the world, every kind and class of cases were brought before me. My duty not only consisted in enforcing the laws, but in attempting to alleviate the misery and the damages caused by our modern economic system. This last function was impressed on me by the horrible cases of breaking up of families, degradation of the widows, and ruin of the daughters, caused by the loss of the father's or brother's earning power. Years and years of litigation, appeals, new trials, and all the necessary steps of our modern procedure brought it about that the results of the litigation were wasted, and social degradation of the family, without any fault of their own, ensued. Gradually the idea became stronger and stronger in my mind that some method must be found whereby this can be changed.

Inquiry into the circumstances which had induced foreign governments to investigate all phases of the industrial situation abroad and enact adequate remedial legislation for the specific instances disclosed as requiring further official regulation, convinced me of the similar necessity resting upon us here to take up the problem and bring about some form of relief.

The object of my compensation bill (H. R. 16739), as of all compensation acts, is to correct what heretofore has amounted to a denial of justice.

Everyone of us is sworn to support the Constitution of the United States and, by inference, to afford to the people, our constituents and our fellow-citizens, due process of law. The Constitution is a growing and living organism and entity. It has protected commerce from the canal boat and the post rider to the steam railroad, electric traction, telegraph, and telephone; and there is no reason why the persons employed in interstate commerce should be left to remedies which were thought adequate at a time when the simple relation between master and servant were not interfered with by colossal machinery and a complicated system of industrial organization.

INADEQUACY OF THE AMERICAN SYSTEM OF DAMAGES.

The theory of American law is that the contract between the employer and his employee, called at common law "his servant," is ample to take care of the person who is injured by reason of the contract. The law furthermore proceeds on the theory that the damages may be sought primarily against the wrongdoer. As a matter of fact, the injured person in the complicated system inherent in our modern industrial conditions has no redress, because the person who primarily caused the wrong is financially unable to respond in damages. The law then allows an action against the master at common law on formal proof, with burden upon the person injured to show negligence, and puts the burden, as it should in all actions, upon the injured employee or widow, to sustain the cause of action against the master.

The reason for the rule has changed so entirely and the exceptions which have been ingrafted by the courts have become so noxious that the social problem has been overlooked or pushed aside for the benefit of legal jugglery and hair-splitting distinctions by great judges. The administration of the law has become so refined, delicate, and neat, for the purpose of maintaining the rights of the possessing classes or corporations, that the more important question, the human question, the question of humanity and of social justice of the complainant, is utterly forgotten in the defense of vested rights.

I do not go as far as Lewis, who states that vested rights may always be called intrenched wrongs; but I do claim that the maintenance of a rule which was harsh when it was started, which has become unjust in its operation, which under the totally changed industrial conditions under which great operations of manufacturing, of commerce, and of interstate commerce must be carried on, becomes a pernicious and dangerous form, because under the guise of exercising the law it brings about a denial of justice, and induces a feeling of distrust for the courts which it is hard to overcome.

When it is remembered that we hold all our property, in the last instance, through the forbearance and self-control of the vast class of persons who are at risk day by day, and who, were they united, could rend and tear not only our possessions, but our very bodies, it is surprising to see the dense carelessness of the possessing community before this great—I had almost said class; but there are no classes in America; at least it is so claimed.

But, Mr. Speaker, the method which has been pursued by the courts in enforcing the strict letter of the law has brought about a feeling that injustice is done to the employee in nearly every instance, which injustice is due not to the administration of the law, but to the inherent injustice of the theory and its perverse construction. The litigation which is necessary to enforce the rights of these persons at common law brings out the extreme of the law, which is always injustice.

The suitors in these cases are our maimed fellow-citizens, or, in the event of his death, his widow or the guardian ad litem for his orphans. In no case do they stand before the court equally prepared with a great corporation which defends the action. It is absurd on the part of any person who has ever practiced even a few years in any court to say that the poor man can hire a great lawyer. His social and economic condition, his lack of relation to the great leaders of the bar, his very maimed condition or the depressed position, through the loss of the father, all prevent him or them having access to any except the ordinary persons who take these cases on contingent fees. That is the average rule. But let us assume that the widow or the injured person has the very best counsel, that they have counsel who are so impressed with their duty to the public and to the court and so carried along by the desire to do justice that, although they have been defeated in one court, they will appeal and appeal, and follow their first victory from the lower courts to the Supreme Court of the United States, until the law ultimately says that the corporation must pay damages.

In the course of these remarks I shall have to submit so many series of statistics that I shall not burden the Record with any un-

necessary material, but a careful investigation has convinced me that the pluckiest and quickest litigants never get a final determination under four years, and that cases have been in the circuit court of appeals (*Erie Rwy. Co. v. Kane*) four times (118 F. R., 223; 142 F. R., 682; 155 F. R., 118), and the litigation has lasted ten years. The accident to Kane occurred December 17, 1897; the circuit court of appeals handed down its opinion June 26, 1907. In cases of great historical importance, such as *Johnson v. Southern Pacific Company*, the injury took place within four days after the safety-appliance act went into effect, in August, 1900. The action was finally decided by the Supreme Court on December 19, 1904 (196 U. S., 1), and finally, in May, 1908, eight years after his injury, Johnson has received a slight sum by way of settlement with the company.

In the *Schlemmer* case the injury occurred within a day or two after the safety-appliance act went into effect; the case was decided by the Supreme Court on March 4, 1907 (205 U. S., 1), in favor of *Schlemmer's* widow, who on the second trial obtained a verdict against the carrier recently, and the action is now on its indeterminable route of delay to the higher State courts, and possibly will again return to the Supreme Court of the United States. Now, what do you think, Mr. Speaker, becomes of the widow in the interim? What care is taken of the children, and what has the State done to relieve itself of the duty which it owes to *Schlemmer* and to *Johnson* and to thousands and thousands of railway employees similarly situated all over the country? The litigation which these people are forced to undertake under the process of our common law, even if successful, is inefficacious. The fruits of the litigation are wasted in attorney's fees, printing cases, and costs, and to the repayment of debts necessary to maintain the family. The social standard of the survivors has been lowered or else the family has gone to pieces; the maimed man, if he has not died of his injuries, has become a tramp; the children have been taken from school; the families have been split up and separated perhaps forever.

Or let us take the case of a woman who was injured through the violation of the master in not guarding his machinery. *St. Louis Cordage Company v. Miller* (126 F. R., 495) is a case in which *Walter Sanborn, C. J.*, of the circuit court of appeals for the eighth circuit, wrote a very painstaking, carefully thought out, and exquisitely inhuman opinion. The woman, after having had her hand mashed in a cog, was thrown out of court. The judge writing the opinion of the court claimed that, although the factory act of Missouri protected her, yet she assumed the risk of her employment and must go forth without damages. Now, what can a factory hand do who has had a right hand or arm mashed? The probabilities are that she is unfit for domestic employment; her tastes, her habits have been fixed; the court throws her out. If there is any method for that woman to earn her living except to go on the streets, it is not due to any care that the State has taken to protect her from the prospective evils; and surely the State owes these people some kind of a fair chance. These are our fellow-citizens; these are people whose places may be taken in two or three generations from among the children of those sitting in this Chamber. In this country it is three generations from shirt sleeves to shirt sleeves, and the very thing we may overlook in the case of others may happen to our grandchildren or to their children, caught by and dragged down in the maelstrom of industrial coercion.

The courts will say that the laborer is free; that he chooses his occupation; that if he takes up a dangerous occupation he takes the risk—he does it with his eyes open; he is compensated for it, and that his wages in part may be used, if properly employed, toward buying insurance in some industrial or accident corporation to compensate him for the risk which he is bound to take. Is it not a truism, which must only be stated to be understood, that the choice or freedom of the laborers is entirely illusory; that they have no choice; that the fiction which claims to treat them as free persons is overcome by the actualities of their conditions, which make wage slaves of them all; that the wages are always so small and purchase so little, thanks to the protective system and to the trusts, that adequate self-insurance is impossible, and that very, very few of them have any insurance which will, under the present régime, keep their families out of the poorhouse?

Let us briefly consider the financial burden imposed upon railroad employees by the casualties which are an incident of their calling. It is well known that employees in railroad train service are unable to procure insurance in any of the old line companies except at rates that are practically prohibitive, while most of the companies absolutely refuse to accept such risks

under any consideration. Certain of the companies will write five, ten, and fifteen year endowment policies for switchmen—a small portion of the employees under consideration—at premiums based upon a twenty-year advance in age; thus, for instance, a switchman aged 25 years may obtain such a policy by paying the 45-year endowment premium rate. Inasmuch as insurance premium rates are based upon broad observation and are always the result of careful and accurate consideration, this fact is vastly significant. It means that the man who embraces the occupation of railroad switchman thereby at once cuts twenty years off his reasonable expectancy of life. If there is any compensating advantage in this occupation to offset the horror of this grim fact, I have failed to discover it in more than twenty years' close observation of the conditions of railway labor.

Being denied the benefits of ordinary insurance, railroad employees have been compelled to establish and maintain insurance societies of their own. Those societies are *never* called upon to pay death claims as a result of old age. Their payments, however, on account of railroad accidents are surprisingly large and in most of the organizations represent a major portion of the total claims paid. In the year 1906 the Brotherhood of Railroad Trainmen, with a membership of 82,537, composed of conductors, brakemen, switchmen, and baggagemen, paid 1,350 claims, amounting to a total of \$1,671,548.96.

More than two-thirds of these claims, or 927 of the whole number, representing a cash total of considerably more than a million dollars, were paid as a result of deaths and disabilities caused by railroad accidents. During the year ending June 30, 1907, the Brotherhood of Locomotive Firemen and Enginemen, with a membership of about 63,000 engineers and firemen, paid 663 death and disability claims, amounting to \$947,100. More than 51 per cent of these claims, or 340 of the whole number, representing a cash payment of \$489,500, were paid on account of deaths and disabilities caused by railroad accidents. The Switchmen's Union of North America is a comparatively small organization, with membership confined to switchmen employed in railroad-yard service. That year (1906) this organization paid 179 death and disability claims. Three-fourths of these claims, or 128 of the whole number, were paid for deaths or disabilities incurred by members while in the ordinary discharge of their vocation.

Why should this enormous toll of life and treasure be exacted from railroad employees? Does the efficient operation of the nation's splendid transportation system require that this great burden should remain where it now lies? Suppose we admit that the terrible sacrifice of lives and limbs is a necessary concomitant of railroad operation. Suppose we resign ourselves with oriental fatalism to the belief that our transportation juggernaut must continue to crush out the lives of its operatives without abatement. Even then, can we excuse ourselves for saddling upon those operatives the financial burden of providing for the needs of their widows and orphans, made such by the very exigencies of the industry itself? Is it not more to the point and more akin to justice that this burden should be assumed by the transportation industry and, through it, by society as a whole?

DANGERS INHERENT IN ALL GREAT ENTERPRISES.

At the time when the law of master and servant received the form which we are now contending is utterly unjust, the industries were just beginning to receive the beneficent effect of the application of steam to machinery theretofore driven by human hands. The great decisions upon which the law of master and servant is based were rendered in the early thirties of the last century. They were rendered by men who had reached the place of chief justice long after the conditions under which the old theory of master and servant had developed—Ellenbrough in England and Chief Justice Shaw in Massachusetts. In laying down the law of fellow-servants, as applied to railroads, they were but expounding the law as they had learned it when economic conditions were simple, when the master knew every person employed by him, and when the employee had a chance to say to his employer: "This man is a reckless and dangerous fellow, regardless of the rights of his fellow-men, and I refuse to work with him. You have the choice between keeping me or discharging him." The mere statement of this rule, applied to modern conditions, shows that it is impossible of application.

LACK OF IMAGINATION.

Lombroso, one of the great psychologists in criminology, has well stated that great crimes—and certainly mass crimes—

never can be committed unless there is a dullness of imagination or lack of nervous sentience on the part of the perpetrator.

Probably the greatest railroad man this country has had, a man as careful as conditions allowed him to be of the welfare of his employees—Mr. Cassatt, of the Pennsylvania—would have shuddered at the idea of becoming personally responsible for the existence and the choice of men in the thousand and one different branches of the enterprises in which the Pennsylvania companies were involved. The machinery has become so colossal that the master can not inspect, can not supervise, and himself becomes a part of the carelessness induced by the modern forms of corporate management. The unavoidable requirement of specialization necessitates their devoting their intelligence and energy to one definite thing. No one man is therefore deliberately accountable for the horrors which follow the administration of the antiquated system of master and servant's law; each man can shift the responsibility upon that great entity created and sanctioned by the State or Federal governments, the corporation, and say: "We are not responsible. We are paid to do a definite amount of work, and as long as we do that work society at large—the State—should bear the burden." Were it possible to bring these men into one room with the victims and show to them the consequences of their hiding behind the forms of corporate coldness of heart, I believe that many of them would resign their places rather than resist the enactment of a humane compensation act which would avert crushing misery and a lowering of the social standard of the persons involved, if not total degradation of their fellow-citizens.

The accidents which occur in all industries involving dangerous machinery, such as factories, steel mills, coal mines, quartz mines, and other extractive industries, in their widest scope, are not subjects over which the Congress of the United States has jurisdiction directly, and do not concern us in the present discussion.

Limiting the discussion to railroads engaged in interstate commerce and to such other carriers as are subject to the power of Congress, I propose to show, principally from the statistics based on returns furnished by the carriers themselves, in accordance with law compiled by the Interstate Commerce Commission, that railroads require a regular percentage of life, limbs, and health of our fellow-citizens; that the number of men killed and injured in a regularly recurring number; that this number constantly increases, but is in regular proportion with the mileage operated; that a certain proportion of the manhood of this country is slaughtered every minute of the twenty-four hours of every day; that a regularly recurring number of our young men is each year thrown aside as "scrap," and, as far as the present system of administration of the law of master and servant is concerned, as far as prompt and effective compensation goes, is as valueless to the community at large as the rotten ties which we see moldering along the tracks of every railway in these great United States.

This is a startling statement to make, were it not proven to the hilt by statistics. These statistics cover a period of nineteen years and are taken from the figures accessible to every man, published by the Interstate Commerce Commission, pursuant to the great law of its organization.

SUMMARY A.—Comparative statement of accidents to railway employees for the years named.

[Compiled from figures shown in the Annual Reports of Statistics of Railways in the United States, issued by the Interstate Commerce Commission.]

Year ending June 30—	Employees killed.		Employees injured.		Total employees killed or injured.	
	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.
1906.....	3,929	8.10	76,701	10.59	80,630	10.41
1905.....	3,361	6.93	66,833	9.22	70,194	9.08
1904.....	3,632	7.49	67,067	9.26	70,699	9.15
1903.....	3,606	7.43	60,481	8.35	64,087	8.29
1902.....	2,969	6.13	50,524	6.97	53,493	6.92
1901.....	2,675	5.51	41,142	5.68	43,817	5.67
1900.....	2,550	5.26	39,643	5.47	42,193	5.46
1899.....	2,210	4.56	34,923	4.82	37,133	4.80
1898.....	1,958	4.04	31,761	4.38	33,719	4.36
1897.....	1,693	3.49	27,667	3.82	29,360	3.80
1896.....	1,861	3.84	29,969	4.14	31,830	4.12
1895.....	1,811	3.73	25,696	3.55	27,507	3.66
1894.....	1,823	3.76	23,422	3.23	25,245	3.26
1893.....	2,727	5.62	31,729	4.38	34,456	4.46
1892.....	2,554	5.26	28,267	3.90	30,821	3.99

ANALYSIS OF SUMMARIES.

Summary A.—The first summary presented shows the number of railway employees killed, the number injured, and the total casualties for nineteen years from 1888, the first year after the establishment of the Interstate Commerce Commission, to 1906, inclusive. During this period nearly 50,000 employees lost their lives at the post of duty and nearly three-quarters of a million employees were either maimed or crippled. The total casualties numbered 773,049, an average for the nineteen years covered of over 40,000 a year. The per cent column is introduced to facilitate comparison of the years given with the total figures for the entire period.

Summary B.—The next summary shows the number of employees in service and the proportion killed and injured. The falling off in the number employed, as indicated by the figures for the years 1894 to 1898, was due to the panic of 1893, and reflects one of the economies introduced by the railway managements during the hard times following this financial crisis. The per cent. column for employees killed clearly indicates the constant recurring death risk of the railway employee. There is hardly any perceptible fluctuation of this ratio for the years shown, and means approximately that 1 employee out of every 400 in service was killed each year. The proportion of injured has gradually increased each year until for 1906, the last year covered, the 5.04 per cent given indicates that one employee out of every twenty in service is injured, or that an employee in the service of a railway for ten years has an even chance of being injured.

Summary C.—This summary, showing the mileage operated and the number of employees killed and injured per 100 miles of line, reflects from another angle the constant recurring death risk year after year. The number injured increases each year in a greater ratio than the mileage operated, and apparently substantiates the results shown by the injured column of Summary B.

Summary D.—The last summary presented shows the number of minutes elapsing for each casualty and the average number of casualties per day. Approximately in every seven minutes of every hour of every day for the last three years named 1 employee was killed or injured. During the nineteen years covered the average was 1 killed or injured for every thirteen minutes of this entire period. The average killed each day for the whole period covered was 7 and the average injured 104.

Compare these figures with the returns of some battles in the civil war, and remember that among the men who are not employed to fight but to move the daily traffic of the nation there are no returns for "missing."

[Figures made up in Pension Office.]

Shiloh, or Pittsburg Landing, Tenn., April 6-7, 1862:

	Killed.	Wounded.	Missing.	Total.	Killed and wounded.
Union loss.....	1,754	8,408	2,885	13,047	10,162
Confederate loss.....	1,723	8,012	959	10,694	9,735
Total.....	3,477	16,420	3,844	23,741	19,897

Union victory.

Gettysburg, Pa., July 1-3, 1863:

	Killed.	Wounded.	Missing.	Total.	Killed and wounded.
Union loss.....	3,070	14,497	5,434	23,001	17,567

Union victory.

Antietam, September 17, 1862:

	Killed.	Wounded.	Missing.	Total.	Killed and wounded.
Union loss.....	2,108	9,549	753	12,410	11,657

Union victory.

It is said that more men were killed on the above date than on any other one day during the civil war.

Wilderness, Va., May 5-7, 1864:

	Killed.	Wounded.	Missing.	Total.	Killed and wounded.
Union loss.....	2,246	12,037	3,583	17,866	14,283

Confederate victory.

Malvern Hill, Va., July 1, 1862:

	Killed.	Wounded.	Missing.	Total.	Killed and wounded.
Union loss.....	397	2,092	725	3,214	2,489
Confederate loss, killed, wounded, and missing.....				5,355	
Total.....				8,569	

Vicksburg, Miss.:

Union loss.					
	Killed.	Wounded.	Missing.	Total.	Killed and wounded.
May 19, 1863.....	157	777	8	942	934
May 22, 1863.....	502	2,550	147	3,199	3,052

Confederate victory.
The siege of Vicksburg continued until July 4, 1863, when it was surrendered to the Union forces.

Atlanta, Ga., 1864:

Union loss.					
	Killed.	Wounded.	Missing.	Total.	
Campaign May 5 to 31.....	1,458	7,436	405	9,299	
Campaign during June.....	1,125	5,740	665	7,530	
Campaign of July.....	1,110	5,915	2,694	9,719	
Campaign during August.....	453	2,318	466	3,237	
September 1.....	277	1,413	212	1,902	

Making a grand total of 4,423 killed, 22,822 wounded, and 4,442 missing during the campaigns of these months.

In the above are included numerous battles, amongst others Rocky Face Ridge, May 5-9; Resaca, May 13-15; New Hope Church, May 25; Dallas, May 28-31 and June 1-4; Kenesaw Mountain, June 20-30; assault on Kenesaw, June 27; Peach Tree Creek, July 20, etc.

First Bull Run, or Manassas, Va., July 21, 1861:

	Killed.	Wounded.	Missing.	Total.
Union loss.....	470	1,071	1,768	3,309
Confederate loss.....	387	1,582	13	1,982
Total.....	857	2,653	1,806	5,316

Confederate victory.

Second Bull Run:

	Killed.	Wounded.	Missing.	Total.
Union loss (Aug. 16-31, 1862).....	1,747	8,452	4,263	14,462
Confederate loss (Aug. 21 to Sept. 2, 1862).....	1,481	7,627	89	9,197
Total.....	3,228	16,079	4,352	23,659

The above includes engagements at Rappahannock, Chantilly, and Bristoe Station.

Confederate victory.

At the battle of Fredericksburg, Va., December 11-15, 1862:

	Killed.	Wounded.	Missing.	Total.
Union loss.....	1,284	9,600	1,769	12,653
Confederate loss.....	596	4,068	651	5,315
Total.....	1,880	13,668	2,420	17,968

Confederate victory.

EQUIPMENT MORE VALUABLE THAN HUMAN LIVES!

The necessary factors of railroad operation are sentient and insentient—human beings and the tools and materials with which they work. Both are subjected to wear and tear; both are wasted in the performance of their functions. The railroads bear the expense of repairing and replacing the waste of their insentient instruments of operation—the wear and tear of road-bed and track, bridges and buildings, locomotives and cars—but for their sentient instruments of operation they have no concern. The waste of human life and limb, the wear and tear of that active, intelligent army of human beings whose labor alone makes their operation possible is not a necessary item in the expense account of railroads.

Acting under the authority conferred by section 20 of the act to regulate commerce, the Interstate Commerce Commission promulgated a classification of operating accounts to be kept by carriers by rail. Possibly the most important method introduced were the depreciation accounts, created for the purpose of providing a fund for the replacement of equipment when retired from service. These depreciation accounts are maintained by making monthly charges direct to operating expenses based on the average life of the several classes of equipment affected and crediting these amounts to a replacement fund.

The carriers maintain a fund for the replacement of the insistent factors of operation that are worn out or wrecked and have to be consigned to the scrap heap. But the human being, our fellow-citizen, of whom one risks being killed or injured every time seven minutes of the day or night elapse, if wrecked, as a consequence of his professional risk, so as to make him unfit for further service, is cast aside, and the carrier assumes no responsibility whatever for his condition. He must assume his own risk, must bear his own damage, as though it occurred by reason of his fault or his negligence, when, as a matter of fact, his damage is as much the result of the operation of the property as is the damage to locomotives and cars, bridges and buildings, roadway and track, for all of which the carrier provides without question. As was said by Professor Bushnell in a recent thought-provoking article calling attention to the alarming increase in the number of abnormal dependents in the United States:

Soldiers suffer because they are professional destroyers, but members of this great industrial army are struck down every year in this country because they are producers. This is the price they have to pay for the privilege of earning their bread in serving civilization.

It is to the credit of President Roosevelt that he has perceived the essential injustice of this situation and has earnestly endeavored to correct it, not alone by advocating the passage of employers' liability and workmen's compensation acts, but by insisting upon a rigid enforcement of Federal statutes calculated to reduce the number of accidents, as well as pointing out the need of strengthening or supplementing such legislation in the interest of greater safety.

The most commendable feature of the Roosevelt Administration, the fact that stands out most prominently as entitling it to popular approval, is the consistent effort that has been made to awaken the public conscience in industrial matters and secure justice for wage-earners. The keynote of this effort was struck by the President in his Georgia day speech at Jamestown, on June 10, when, in discussing the question of industrial accidents, he said:

Legislation should be had, alike from the nation and from the States, not only to guard against the needless multiplication of these accidents, but to relieve the financial suffering due to them. * * * It is neither just, expedient, nor humane, it is revolting to judgment and sentiment alike, that the financial burden of accidents occurring because of the necessary exigencies of their daily occupation should be thrust upon those sufferers who are least able to bear it, and that such remedy as is theirs should only be obtained by litigation which now burdens our courts.

The couplers which keep the trains together and make the vast commerce of the country possible are inspected by the carriers and in part by the Government. Skilled employees are required to make this movement possible, without whose aid, without whose intelligence, and without whose energy and watchfulness the entire commerce of the country would lie stagnant and become impossible, bringing about starvation and misery. Yet these employees, when injured through no fault of their own, through a regularly recurring risk, which is an incident of the employment, are cast aside and no effort is required by law of the carriers to heal or repair them, these men are abandoned and are left without compensation. When broken in body, maimed, and injured, they are forced, under the most disadvantageous circumstances imaginable, to combat the carriers whose commerce they have been pushing through the country.

Every statement herein made can be confirmed. The professional risk, that is, the inherent liability, of any person employed in railway traffic being killed or injured is a permanent and continuous risk. It is a risk which the man can not shift, as is shown by the above tables of the steady recurring numbers of men killed. In the case of death by a railroad accident no question of the employees' inattention, stupidity, carelessness, or similar defenses urged by the defenders of corporate selfishness can well be urged. It is as much a part of the business of the carrier to pay for the injury of the person who handles the traffic as it is to replace the various items of inanimate transportation which I have heretofore mentioned.

I have referred to the safety-appliance acts. I have shown that the Government inspects couplers. The statistics of the Interstate Commerce Commission, in pursuance of the execu-

tion of this law, show that the accidents from that particular cause of casualties has decreased. Yet, in spite of this decrease from this particular source, the slaughter goes on and has increased in other forms of railway activity, showing that the palliative influence of the safety-appliance law, or of all similar laws, is not sufficient to compensate our fellow-citizens who are engaged in handling this great commerce of the country from the risks which they are bound to bear. To state it in another form, where a regularly recurring per cent of our fellow-citizens is maimed and killed, it is the duty of the nation to force the enterprise itself to bear the expenses involved therein. I may say at the outset that I do not care whether the railways recoup themselves for the additional expense involved in paying compensation to their employees by raising the rates or by charging extra passenger fares, or by decreasing the amount of free baggage that they haul.

Directly, this would affect a very small portion of the community. The freight charges might affect a still larger portion of the community, but, at all events, it is proper that the community which indirectly causes the railways to be so inhuman to the fellow-citizens of us all should permit a recoupment, because in the last instance the people at large pay for the maimed and injured. They do this by taking care of those survivors of those thousands of railroad men whose families have fallen in the scale of life, who therefore will breed inferior children who in some form or other contribute to the asylums and the jails, because there is no hope for the unfit and the injured. The vast army of hoboes and tramps, in many instances, is recruited from persons who have been blacklisted because they testified against the railway company on the trial for a fellow-servant or have dared to raise their voices for the betterment of their and their fellow-workers' conditions. (*Adair v. United States*, 208 U. S., 161.)

Coxey's army, ridiculous in its way, was a silent and peaceful protest which some day may become of entirely a different character unless the persons who compose the hobo army are decreased. These hoboes, in part, were persons who were blacklisted by the corporations because of various things which they had done which affected the carriers; and nothing offends the carriers so much as to have a man go on the stand and bear witness against what they consider their rights in favor of an injured fellow-employee.

INTERSTATE COMMERCE—ITS REGULATION.

It is characteristic of the workings of a democracy that no coherent plan of regulation is carried out in the beautiful unitary way characteristic of bureaucracies. To some extent this is to be regretted, but it is more important that people should be free and make their mistakes than that they should be well governed and simply the slaves of their own servants.

Heretofore our attempts at the regulation of interstate commerce have been principally in the direction of reducing the inequalities of service; attempting to enforce just rates and giving localities an opportunity to protest against discrimination and manifest favoritism. The attempts of the Government to pass an employers' liability bill have been stricken down by the Supreme Court of the United States, and it does not become me, who has once administered justice, to criticize the action of our Supreme Court.

The object of my bill (H. R. 16739), printed hereinafter, is to do away with the necessity or the possibility of any such construction as has been put upon the acts of Congress in the case of *Howard v. The Illinois Central and Brooks v. The Southern Pacific*, commonly called the "employers' liability act decision." It is a curious fact that the property rights of the carriers are protected; that in the *Debs* case the Supreme Court found warrant to preserve the movement of postal cars, freight trains, and passenger coaches; that in *Lennon's* case a man was put in jail for refusing to haul an empty car lying on a side track, although it was claimed to be a part of the interstate commerce of the country, while in the *Johnson* case below (117 F. R., 462) Judge Sanborn—of the same circuit court of appeals which decided the *Cordage* case against *Miller*—held that a dining car lying at a way station in Utah not equipped in accordance with the safety-appliance act was not subject to the safety-appliance act. The Supreme Court remedied the construction of the law in that particular case, but could afford no proper justice, for *Johnson* has not received any damages as a consequence of eight years of litigation, and finally was paid a small sum by way of settlement. Whenever a strike is threatened the carrier invokes the Federal character of the commerce and the persons involved go to jail (re *Debs*); when a receivership is asked for and a strike is threatened, the Federal character of the court having jurisdiction protects the commerce, and the person inciting to a strike is fined for contempt (re *Phelan*).

RECURRENCE OF INJURY.

This is in exceptional cases. Strikes do not take place every day. Riots, such as were claimed by the railways to have been caused by the American Railway Union in Chicago, are not of daily occurrence, but the movement of freight trains and of passenger equipment is of hourly and daily occurrence to an extent undreamed of by a person who has not watched it, and when in this regularly recurring series of movements of trains one man is killed or injured every seven minutes of every hour of every day and night, his children are left to starve; his widow may be forced to sell all she possesses; the standard of life of four to six people is lowered and an American family is put on the "bum" while the courts for eight or ten years are blocked with wrangle of counsel and the pounding out of new distinctions of a law which is antiquated, which was unfair when created, and which has become disastrously reactionary when enforced at the present time under modern industrial conditions. The systematized injustice, the denial of justice caused by the enforcement of old-fashioned laws—laws which the English, who originated them, have long since discarded as inept, as dangerous to their commercial progress—are retained by us as bulwarks of corporate resistance to social betterment.

We talk of the enlightenment of the American. We find it necessary to support missionary societies to carry the Gospel to heathen countries. We send thousands of school-teachers to the Philippine Islands; we send battle ships to Asia Minor to protect American colleges against the outrages of the Turk, when it is a fact that America and Turkey stand preeminent in this, that no Federal or national compensation acts prevail in either Turkey or the United States, and that on the rest of the Continent the theory which formerly prevailed in England and which now prevails in these United States has been utterly discarded, abolished, and cast aside as antiquated and unfair, as antisocial, as un-Christian, and as dangerous to the modern industrial state.

The tendency of modern civilization in standardizing all things that are in daily use, in fixing the thread on the screw so that the screw that is turned out in Manchester or in Pittsburgh will fit; that the bolts which are put in the bridge at the bridge works in Pittsburgh will fit when laid down on the great bridges across the Nile at Atbara, require such close calculation that commercial progress and national efficiency in the last instance depend upon the perfection of the ways of communication. The country whose railroads, canals, and waterways are most efficient will ultimately win. The size of the country and its resources are nothing as compared with its efficiency. Its efficiency depends directly upon the ease with which the forces necessary to handling the commerce are recruited. Consequently, in a country so vast as ours, where in many instances the only highway known to two generations has been the railway, success depends directly upon the efficiency of this method of communication.

When, therefore, whole classes of citizens have been crushed out, thrown aside as scrap, the feeling of resentment against the carrier harms its efficiency and thereby hurts the national thrust forward in international commerce. For every pensioner that the United States Government maintains in every hamlet and wayside station, we may be assured that the broken families and wrecked men and the memories of some uncompensated loss feed an undying dislike, hatred, or malignant hostility to the great and necessary railways of the country, and indirectly against the country that has permitted 773,049 men killed or injured to be cast aside as scrap without prompt, permanent, and just compensation. The excuse has been the country was growing and we had no time to regard these problems.

A democracy can only take up one or two things in a generation and settle them, but the time has come, Mr. Speaker, when it becomes necessary for us to seriously weigh the danger of permitting corporate cupidity to continue a system of licensed butchery and murder, of permissive breaking up of families, of degrading the standard of American citizenship, infinitely worse than the slavery which was broken up forty years ago, because that was confined to a small group, which inevitably was bound to come to encounter the economic progress of the rest of the world, restricted in area, whereas our present system, if continued, will inevitably lead to a growth of a feeling that a class, comprising a million and a half of men, consequently seven and a half million of American citizens, is being discriminated against, while the freight that they move and the passengers that they haul are to obtain the most favorable consideration at the hands of this body.

Should my bill (H. R. 16739) be passed, the persons who are injured have their choice of remedies. They can either sue in the courts as heretofore, bearing the burden of the proof, or else

they can take the compensation which this act will provide for their relief.

The countries that have progressed most materially within the last generation have been those countries which have cast aside the reactionary and antiquated forms of compelling the workingman to sue, or compelling their citizens or subjects to go to law for damages, when compensation should have been paid to them by the enterprise which caused the injury, as a necessary professional risk.

Germany, and in Germany preeminently Prussia, blazed the way. Germany was followed by England, New Zealand, and Bohemia. The social legislation of these countries stands forth as a great step forward against the antisocial theories with which we are still burdened. Their progress has in no small degree been caused by the efficiency of their workmen, and this, again, is the consequence of the compensation acts, in all their various forms and developments, which these countries have forced upon the Continent. They have forced this upon the Continent, not by the force of arms. The "blood and iron" policy of Bismarck ended when he had thrown France prostrate, and he turned his huge energy to the building up and repairing the ravages of war and making a fact that which the constitution of 1871 had held out to the various German tribes—a unified Germany. Politically this was accomplished very soon; economically the Germans, after the French war, were little better than their ancestors in the thirties or forties in this country; and the modern development of Germany has been caused in no indirect measure by the hearty cooperation of master and servants in every industry. This cooperation is due directly to the necessity of master and servants working together, and this working together was brought about by the necessary machinery called forth in the various compensation acts.

Based on the statistical material obtained from very large and thousands of small cities, Dr. Richard Freund, president of the Invalid and Old Age Insurance Company, of Berlin, in 1895 published a summary on an investigation of the question as to what manner the modern social legislation has affected the problems of poor legislation and the care of the poor. This was published in the Twenty-first Book of the German Society for Poor Relief and Beneficence. It is based on exhaustive statistical material and specially prepared interrogatories. Any Member who cares to read it can obtain it from the Library of Congress, and can find on page 83 the following summary of this statistical publication. He says:

Even if the time within which the effectiveness of the labor insurance laws has been under observation has been much too short to permit a statement that the influence thereof upon public care of the poor should have completely shown its effect (especially since very unfortunate economic conditions in the last year have disturbed the statistical problem), still we may say that now there is a mighty effect to be recognized, and this although in many cases the organizations charged with administering the laws have not given the attention which is required to work out the statistical effects.

The administration of care of the poor has been relieved in an important measure from the necessity of taking care of all by labor insurance. The labor insurance laws have in a great measure relieved the laboring population from the necessity of applying for poor relief.

Labor insurance has done more than this. It has raised the standard of life of the lower classes of population in this short time, and has exercised such a mighty influence that the poor relief, bound to take cognizance of these facts, could use the resulting savings through strengthening and expansion of its services, nay, was forced to expend moneys beyond that.

In a summary of Fifteen Years of Social Legislation the president of the federal insurance office of the German Empire (twenty-eighth volume, Year Book for Legislation, 1904, published by Schmoller), beginning on page 529, in an article on the progress of the German labor insurance in the last fifteen years, states, on page 553, that 10.3 million persons were protected by sick insurance; 19.1 million persons were protected by accident insurance; 13.04 million persons were protected by invalidity insurance, for which purpose annually over 550,000,000 marks (over \$131,000,000) were collected, and for whom up to the close of 1903 over 4,000,000,000 marks (nearly \$1,000,000,000) were expended; a capital of 1,500,000,000 marks (nearly \$400,000,000) were gathered and nearly 400,000,000 marks (nearly \$100,000,000) were loaned out by the invalidity insurance associations of their employees, for building and loan associations, farmers' banks, erection of hospitals, sanatoria, tuberculosis homes, and other public and quasi-public institutions, for the purpose of raising and improving the conditions of the German working classes.

In this connection I shall incorporate only a few figures from the Atlas and Statistics of the German Labor Insurance, by Dr. G. A. Klein. It was published as part of that wonderful showing made by the German Government for the World's Fair in St. Louis (1904), and of course does not claim to be up to date. The hurry in which these data were collected must also be taken into account. These figures are from page 19. Volume III, "Income, expenses, and capital."

In 1906, 31,088 persons received \$1,492,736 compensation within a few weeks of their injuries, payable from the earnings of the Prussian-Hessian State railways on a mileage of 20,848 miles.

Is there a doubt in the mind of anyone of those to whom my words are addressed that the English were forced to give up the barbarous and archaic jurisprudence based upon the common-law system of master and servant by the stress of German competition? Their trades unions, their system of allowing men's savings to be robbed by speculators, their intense effort to better this by the Friendly Societies Acts and Registration Acts and the Companies Acts, all show the futility of applying the theory of laissez-faire in the modern industrial state, in which the employee with his muscles and intel-

ligence stood opposed to the great masses of capital organized in heartless and necessarily efficient corporations.

The Continent followed the Prussian and German system of social legislation, because it found that the betterment, while not directly quantitative, proved to be an absolute qualitative betterment and showed itself in the efficiency of those persons for whom social care was provided by the State.

In the convention of New York, in 1821, William L. Marcy, afterwards Secretary of State, said, in speaking of the growth of the idea of popular franchise, which was growing toward

universal manhood franchise, that "Once having been granted, it could never be taken away, save by the force of bayonets."

And so the conditions of the modern workingman, who reads his paper, who sees that in times of prosperity inordinate profits are reaped from the movement of commerce of the country by those who control a very small majority of a still smaller holding company of a great system of railways; that his condition is no better than that of a wage slave, because the wages are paid to him in not sufficient quantity nor with sufficient regularity to allow him to take a share and lay it aside for labor insurance, or care of himself or his family in his old age; this man, I say, Mr. Speaker, is bound to ask us, his representatives, why it is that the Germans, English, French, Austrians, Spaniards, Italians, in their native land, are taken care of by governments which we are taught to look down upon as monarchical, as bureaucratic, as inefficient, while in this country—the country of the free, the only true freedom—an injured workman has to "sue his company and be damned."

Sooner or later, Mr. Speaker, the railway employees will demand not that something be done for them by the Nation, but that their employers be directly forced to give them the compensation sought to be enacted in this bill. I am not afraid of the charge that this is an entering wedge into the entire system of labor conditions. I want it to be an entering wedge.

The Congress of the United States can not legislate for coal mines in Utah, Pennsylvania, or West Virginia, for silver mines in Arizona, for the salt works in New York, or for the numerous trust-owned steel mills of Pittsburg and Chicago; these are within the police powers of the respective States; but the commerce of this country—which is protected by the decision of the Supreme Court in the Debs case and all similar cases wherever the workmen struck to better their conditions and where hoboes and rowdies burned cars and impeded the progress of the mails—has been taken charge of as being within the regulative power of Congress, and it is our duty not only to protect the commerce, but the human beings, our fellows, who make it move; it is our duty to pass all legislation which makes for its efficiency and which will keep us abreast of the times. The times are changing. The conditions which possibly were fair when seventeen railways handled the freight from New York City to Buffalo have become unfair when the traffic from New York to Chicago, a distance of 996 miles, is handled under unit control. The master can have no idea of the details, is not responsible, as a matter of fact, for the employment, and can not exercise any supervision or selection of the employees in handling this traffic; and yet an employee running a locomotive for forty years, careful and experienced, diligent and honest, faithful and loyal to his company, if wrecked through the stupidity of a telegraph operator or the untoward accident over which he had no possible control, is put to the proof of showing that he was free from negligence. If he is killed, his widow has the burden of the proof to show that the engineer who ran into an open switch or whose locomotive was wrecked in a smash-up with a freight train, over which the engineer had no control, and was without any blame, yet under prevailing conditions she should have no effective compensation except after eight to ten years' wrangle, trickery, and litigation, while the railway mail clerks in the postal cars, the persons in the sleepers, or passengers who are behind the locomotive obtain fair compensation for their injuries.

On a troop train rushed forward under the requirement of the act to regulate commerce, which provides (sec. 6, lines 8-13, p. 12)—

That in time of war or threatened war preference and precedence shall, upon the demand of the President of the United States, be given, over all other traffic, to the transportation of troops and material of war, and carriers shall adopt every means within their control to facilitate and expedite the military traffic—

the only persons not compensated in a fatal wreck would be the trainmen, engineers, and firemen, who are doing the work, while the taxpayers would pay pensions or compensation to every officer, soldier, and other military person enlisted to destroy and wreck property.

For a period of years the Government, to its credit, be it said, has authorized the payment of a small sum (\$1,000) for every railway mail service employee killed or dying of injuries contracted in the service within one year.

In other words, we have recognized the inevitable and constantly recurring danger, and have taken the initial step in the right direction of compensation. The Government has to that extent, in carrying out the recommendations of the President in respect to this bill (H. R. 21696, a bill granting to certain employees of the United States the right to receive from it compensation for injuries sustained in the course of their employment), only extended the operation of former acts.

A combination of conditions such as I have sketched out, and which are within the knowledge of every Member in this House, can not but lead to a decrease of national efficiency. And this national efficiency, as I have tried to show, affects the international standing of the community. The maimed and killed, their widows, their declassified children, must be taken care of by societies or almshouses or by the community at large in an inefficient manner, when the direct burden which they had assumed is our burden and we should bear it as a necessity. Ultimately we must bear it in some form. Is it not better and more honest to bear it directly and to make that enterprise as an entity which causes these injuries—crippled and maimed and killed, American citizens all—pay proper and timely compensation for the damage fully and as fairly as they pay for repairs to locomotives, headlights to their engines, new equipment, and general replacement?

The Republican party has been in control of the Government for forty years. A very small period of this time excepted, it has controlled the Presidency, the Senate, and this House. In all that period of time the argument has been used that the burdens of the protective tariff were proper and necessary for the purpose of affording to the American workman a higher standard of living and more just compensation. I do not take any credit for not using the present condition of economic slowing down as a weapon for pointing out to the majority of this House the unfairness in not having given compensation to the employees. The solution of the problem is new. We have had other problems to deal with heretofore, and, as I have said, it is characteristic to solve one problem at a time.

I shall on another occasion insert as part of my remarks certain portions of W. J. Ashley's book on the progress of the German working classes in the last quarter of a century (1904), which show that Bismarck's commercial and social policy raised the standard of living and increased the efficiency of the German working classes to an immense degree and made possible the tremendous economic progress of Germany throughout this period as a consideration for the burdens and injustice of a moderate protective tariff.

THE LEGALITY OF THE PROPOSED LEGISLATION.

At the outset of this argument I stated that the system under which employees are bound to sue for damages virtually amounts to a denial of justice.

The greatest draftsman that England ever produced—the cardinal legate, Stephen Langton—forced the King to promise that he and his successors would no longer sell or deny justice to any man, and that the law of the land should be applied to each man's grievances.

Our Constitution forbids the Congress to do certain things in the first eight amendments. The fourteenth amendment forbids the States abridging the rights of citizens or denying them the benefit of due process of law. The leading case, in which all the previous decisions were reviewed, *Holden v. Hardy* (169 U. S., 380), summarizes the decisions so clearly that all I shall do is to briefly refer to it.

In the courts of England, Mr. Justice Brown said:

While the cardinal principles of justice are immutable, the methods by which justice is administered are subject to constant fluctuation, and that the Constitution of the United States, which is necessarily and to a large extent inflexible and exceedingly difficult of amendment, should not be so construed as to deprive the States of the power to so amend their laws as to make them to conform to the wishes of the citizens as they may deem best for the public welfare, without bringing them into conflict with the supreme law of the land.

Of course, it is impossible to forecast the character or extent of these changes, but in view of the fact that from the day the "Magna Charta" was signed to the present moment, amendments to the structure of the law have been made with increasing frequency, it is impossible to suppose that they will not continue, and the law be forced to adapt itself to new conditions of society, and, particularly to new relations between employers and employees as they arise.

Although this case affected the mining laws of the State of Utah, yet its reasoning is, I believe, apt to this discussion, when we remember that under power to regulate commerce, Congress is absolutely supreme, in so far as the power is sought to affect the relation of the carrier and its employees who are engaged solely in interstate commerce establishing and maintaining post routes.

Very little attention has been given to the power of the Government to refuse to contract for the carriage of the mail with any carrier who might refuse to abide by the provisions of an act like my bill (H. R. 16739). But if the people demand some form of a railroad men's compensation act, its terms could be embodied in every contract for handling and hauling the United States mail, and the protection afforded by the Revised Statutes withdrawn from any carrier who refused to accept and abide by its provisions.

On page 390 the court states:

"Recognizing the difficulty in defining with exactness the phrase 'due process of law,' it is certain that these words imply a conformity with natural and inherent principles of justice and forbid that one man's property or right to property shall be taken with any other, or for the benefit of the State, without compensation, and that no one shall be condemned in his person or property without an opportunity of being heard in his own defense."

On page 392 the court quotes, with approval, the following extract from the opinion of Chief Justice Shaw, in *Commonwealth v. Alger*, 7 Cushing, page 53, at page 84:

Rights of property, like all other social and conventional rights, are subject to such reasonable limitations in their enjoyment as shall prevent them from being injurious and to such reasonable restraints and regulations established by law as the legislature under the governing and controlling power vested in them by the Constitution may think necessary and expedient.

The court states that the power to regulate dangerous industries is necessarily inherent in every form of government, although prior to the adoption of the Constitution but sparingly used in this country:

As we were even then almost purely an agricultural country, the occasion for any special protection to a particular class did not exist. Certain profitable employments, such as lotteries and the sale of intoxicating liquors, which were then considered to be legitimate, have since fallen under the ban of public opinion and are now almost altogether prohibited or made subject to stringent police regulations.

But in the vast proportion in which these industries (the business of mining coal and manufacturing iron) have since assumed, it has been found that they can no longer be carried on with due regard to the safety and health of those engaged in them without special protection against the dangers necessarily incident in these employments. In consequence of this, laws have been enacted in most of the States designed to meet these exigencies and secure safety to persons peculiarly exposed to these dangers.

The court then instances ordinances and regulations of various kinds guarding hatches, stairways, elevator shafts, and employment of sanitary appliances, protecting persons against fire in theaters, hotels, factories, and other large buildings, and in the case of the mining industry stating the special provisions made for the shoring up of dangerous wheels, ventilation shafts, signaling to the surface, supplying fresh air, and the elimination as far as possible of dangerous gases, limiting the number of persons permitted to enter the cage, the covering of the cages, and the provision for fences and gates around the top of the shaft, besides other similar precautions.

These statutes, one and all, have been held constitutional within the various States, although imposing on the various industries necessary burdens, on the theory that the State at large was the guardian of those who industrially were unable to contract for their own safety, and that it was necessary to provide against their own greed, as well as the exploitation of their masters or employers.

In this great case the Supreme Court well said, in speaking of the argument that the freedom of the laborer to contract had been infringed upon (p. 397):

The argument would certainly come with better grace and greater cogency from the latter class, but the fact that both parties are of full age and competent to contract does not necessarily deprive the State of the power to interfere where the parties do not stand upon an equality, or where the public health demands that one party to the contract shall be protected against himself. [My italics.]

The State still retains an interest in his welfare, however reckless he may be. The whole is no greater than the sum of all the parts, and when the individual health, safety, and welfare are sacrificed or neglected, the State must suffer.

It might be assumed that this argument should apply with stronger cogency to the enactment of an employers' liability bill than it would to the remarks which I am addressing to this House in the matter of the compensation act.

The sad experience of every person who has studied the enforcement of employers' liability acts, factory acts, or safety-appliance acts, of every form of palliative legislation except a compensation bill, forces one by a system of exclusion to rely upon the enactment of the compensation act as the only method whereby adequate relief can be given to those who have heretofore been judicially disinherited and have been made to feel the strong arm of the law in a peculiarly atrocious method of whittling away the rights sought to be conferred upon them by State or national legislation. I take the credit for my bill (H. R. 16739) as the first Federal general-compensation bill. It is set out herein so that all may understand the scope and my proposed method of correcting some of the antisocial evils of our present-day methods.

[TEXT OF THE COMPENSATION BILL.]

A bill (H. R. 16739) to provide compensation for injuries to employees solely engaged in interstate and foreign commerce, to which the regulative power of Congress extends under the Constitution of the United States, and to create a Commission of Injury Awards, and granting powers to said Commission. (Introduced February 10, 1908, by A. J. Sabath, of Illinois.)

Be it enacted, etc., That the provisions of this act shall apply to each and every common carrier subject to the provisions of an act entitled "An act to regulate commerce," approved February 4, 1887, as amended by an act approved March 2, 1889, and by an act approved

February 10, 1891, and by an act approved February 8, 1895, and by an act approved June 29, 1906, and all other acts supplementary, to or amendatory thereof, as well as any acts which are or may be passed at the present session of Congress, to which the regulative power of Congress extends under the Constitution of the United States, said common carrier shall be liable in respect to the employment subject as aforesaid to such of its employees as are engaged solely in the movement of handling, storing, dispatching, moving of interstate traffic or commerce to which said regulative power of Congress may or does extend.

SEC. 2. That any such employee while so engaged solely in carrying on interstate commerce, who in the course of his work, employment, and occupation is injured and suffers injuries which result in disability, either temporary or permanent, shall be paid by said employing carrier as indemnity and compensation for such injury, or if the said injuries result in the death of such employee, then to the executor or administrator of the estate of such deceased employee, for the exclusive benefit of the surviving widow and next of kin of such deceased employee, a sum or sums of money, in accordance with the following condition and scale of compensation: *Provided, That—*

(a) The employer shall not be liable under this act for injuries sustained by the employee which do not disable and incapacitate the employee for at least one week.

(b) The employer shall not be liable to pay an indemnity and compensation to an employee where the injury is caused by the wanton and willful misconduct of the employee so injured.

(c) Where the injury to the employee is caused by the negligence or willful act on the part of the employer, or on the part of some person for whose act the employer is responsible and accountable, nothing in this act shall affect any civil liability whatsoever of the employer. But in case the employee, or if the injury results in the death of such injured employee, the executor or administrator of the estate of such deceased employee may, at his option and election, either claim indemnity and compensation under this act or maintain an action at law to recover damages in respect thereof independently of this act, but in no case can the employee so injured, or in case of death of such injured employee, the executor or administrator of the estate of such deceased employee, claim indemnity and compensation under this act and maintain an action at law to recover damages for injuries to the employee, causing his death.

SEC. 3. That if an action is brought to recover damages, not based on any provision or provisions of this act, for injury caused by any accident, and it is determined in such action that the injury is one for which the employer is not liable in such action, but that he would have been liable to pay indemnity and compensation under the provisions of this act, the action shall be dismissed; but the court in which the action is tried shall, if the plaintiff so elect, proceed to award such sum or sums of money to which the plaintiff is entitled under and in accordance with the scale of indemnity and compensation hereinafter provided under this act, but may deduct from such sum or sums any and all costs incurred by the plaintiff in bringing the action instead of proceeding under this act. In any proceeding under this act, where the court awards such sum or sums of money under and in accordance with the scale of indemnity and compensation hereinafter provided under this act, after deducting any and all costs of the proceeding, shall cause the clerk of said court to issue and enter upon record a certified order of the sum or sums of money so awarded to the plaintiff, as indemnity and compensation, and such certified order shall have the force and effect of an award under this act.

SEC. 4. That proceedings for the recovery under this act of compensation for an injury shall not be maintainable, unless notice of the accident has been given as soon as practicable after the happening thereof and before the employee has voluntarily left the employment in which he was injured, and unless the claim for indemnity and compensation with respect to such accident has been made within six months from the occurrence of the accident causing the injury, or in case of death within one year from the time of death: *Provided always, That—*

(a) The want of or any defect or inaccuracy in such notice shall not be a bar to the maintenance of such proceedings. If it is found in the proceedings hereinafter authorized for settling the claim that the employer is not, or would not, if a notice or amended notice were then given and the hearing postponed, be prejudiced in his defense by the want, defect, or inaccuracy, or that such want, defect, or inaccuracy was occasioned by mistake, absence from the United States, or other reasonable cause; and,

(b) The failure to make a claim within the period above specified shall not be a bar to the maintenance of such proceeding if it is found that the failure was occasioned by mistake, absence from the United States, or other reasonable cause.

(c) Notice in respect of an injury under this act shall give the name and address of the person injured, shall state in ordinary language the cause of the injury and the date thereof.

(d) The notice may be served by delivering the same at or sending it by post in a registered letter addressed to the office or place of business of the employer on whom it is to be served, or, if there be more than one office, any one of the offices of such employer.

SEC. 5. That whenever any common carrier subject to this act, more particularly described in section 1 hereof (in this section referred to as the principal), while engaged in the pursuit and carrying on interstate commerce hereinbefore mentioned, contracts with any other person or persons, partnership firm, limited or otherwise, company, or corporation (in this section referred to as the contractor), for the execution by or under the contractor of the whole or any part of any work pertaining to and in the course of interstate commerce undertaken by the principal, the principal shall be liable to pay such employee solely engaged in interstate commerce as hereinbefore set forth any indemnity and compensation under this act, which he would have been liable to pay if that employee had been directly in its or his employ whenever the indemnity and compensation is claimed from, or proceedings are taken against the principal, then, in the application of this act, references to the principal shall be substituted for references to the employer, except that the amount of indemnity and compensation shall be calculated with reference to the wages and earnings of the employee under the employer by whom he is immediately employed: *Provided, That—*

(a) Where the principal is liable to pay indemnity and compensation under this section, he or it shall be entitled to be indemnified by any person who would have been liable to pay indemnity and compensation to the employee, independently of this section, and all questions as to the right to and amount of any such indemnity shall in default of agreement be settled by the Commission of Injury Awards hereinafter provided.

(b) Nothing in this section shall be construed as preventing an employee from electing to recover indemnity and compensation under this act from the contractor instead of from the principal.

(c) This section shall not apply in any case where the accident or injury occurred elsewhere than on, or in, or about premises on which the principal has undertaken to execute the work, or which are otherwise under his control or management.

SEC. 6. That where the injury for which the indemnity and compensation is payable under this act was caused under circumstances creating a legal liability in some person other than the employer to pay damages in respect thereof—

(a) The employee may take proceedings both against that person to recover damages and against any person liable to pay indemnity and compensation under this act for such indemnity and compensation, but shall not be entitled to recover both damages and indemnity and compensation; and,

(b) If the employee shall have recovered indemnity and compensation under this act, the person by whom the indemnity or compensation was paid, and any person who has been called on to pay an indemnity under the section of this act relating to subcontracting, shall be entitled to be reimbursed by the person so liable to pay damages as aforesaid, and all questions as to the right to and amount of any such indemnity shall, in default of agreement, be settled by the commission of injury awards as hereinafter provided.

SCALE AND CONDITIONS OF COMPENSATION.

SEC. 7. That whenever injury or death results from such injury incurred in the course of such employment said employee or his surviving next of kin dependent on his earnings shall be entitled to a sum equal to three hundred and twelve times his weekly earnings or the yearly average of the last three years during which he worked, whichever is the greater, at the time of the accident that caused his death, but not less than \$3,000 nor more than \$10,000 in each case. Such sums to be paid directly to such next of kin or to a duly appointed representative of the estate of the deceased employee or such annuity charge to be assumed by the said common carrier or employer as equals the above scale of payment or the provision hereinafter set forth. The exact amount of such payment or annuity charges to be determined by the injury award commission. In case there are no next of kin dependent on such deceased employee only the medical, surgical, and burial expenses in connection with the injuries are to be paid. For total disability of a period not exceeding six months one-half of the injured employee's wages, based on the maximum monthly earning for six months previous to said injury, and hospital and medical attendance shall be paid. For disability beyond six months the following proportion of his weekly earnings as next hereinafter set forth shall be paid. Whenever beyond said period of six months the earning capacity of said employee in such employment is totally destroyed he shall be paid two-thirds of his earnings, when said earning capacity is materially impaired one-half of his earnings, when said earning capacity is impaired one-third of his earnings, when said earning capacity is slightly impaired one-fourth of his earnings, based on his weekly or monthly earnings, as the case may be, during the period of the said impairment or injury: *Provided*, That the impairment or injury hereinafter mentioned shall not be of a character covered exclusively by the injury as set forth in the following scale of percentages of such employee's earnings. In all cases in which the scale hereinafter set forth applies, the employee shall receive not less than a sum based on the following scale of percentage of his earnings to be paid for the impairment or injury in respect to the loss or total impairment of the use of—

Loss of one eye, 40 per cent; loss of both eyes, 75 per cent; loss of sight of one eye, 30 per cent; loss of sight of both eyes, 75 per cent; loss of hand, 40 per cent; loss of right hand, 60 per cent; loss of both hands, 75 per cent; total disability in one hand, 30 per cent; total disability in right hand, 50 per cent; total disability in both hands, 65 per cent; loss of one foot, 40 per cent to 50 per cent; loss of both feet, 65 per cent; total disability in one foot, 25 per cent; total disability in both feet, 60 per cent; loss of one hand and one foot, 50 per cent to 70 per cent; total disability in one hand and one foot, 50 per cent; loss of an arm at or above the elbow or leg at or above the knee, 45 per cent to 60 per cent; total disability in one arm or leg, 35 per cent to 45 per cent; loss of either a leg at the hip joint, or an arm at the shoulder joint, or so near as to prevent the use of an artificial limb, 40 per cent to 60 per cent; ankylosis of shoulder, 30 per cent; ankylosis of elbow, 25 per cent; ankylosis of knee, 25 per cent; ankylosis of ankle, 20 per cent; ankylosis of wrist, 20 per cent; total deafness of one ear, 25 per cent; total deafness of both ears, 50 per cent; total deafness of one ear and severe of the other, 35 per cent; severe deafness of both ears, 30 per cent; loss of palm of hand and all the fingers, the thumb remaining 25 per cent; loss of palm of right hand and all the fingers, the thumb remaining, 40 per cent; loss of thumb, index, middle, and ring fingers, 25 per cent; loss of thumb, index, middle, and ring fingers of right hand, 40 per cent; loss of thumb, index, and middle fingers, 25 per cent; loss of thumb, index, and middle fingers of right hand, 37½ per cent; loss of thumb and index finger, 20 per cent; loss of thumb and index finger on right hand, 33 per cent; loss of thumb and little finger on right hand, 20 per cent; loss of thumb and little finger on right hand, 35 per cent; loss of thumb, index, and little fingers, 23 per cent; loss of thumb, index, and little fingers on right hand, 37½ per cent; loss of thumb, 20 per cent; loss of thumb on right hand, 25 per cent; loss of thumb and metacarpal bone, 25 per cent; loss of thumb and metacarpal bone of right hand, 30 per cent; loss of all the fingers, thumb and palm remaining, 35 per cent; loss of all the fingers of right hand, thumb and palm remaining, 45 per cent; loss of index, middle, and ring fingers, 20 per cent; loss of index, middle, and ring fingers of right hand, 30 per cent; loss of middle, ring, and little fingers, 18 per cent; loss of middle, ring, and little fingers of right hand, 25 per cent; loss of index and middle fingers, 15 per cent; loss of index and middle fingers of right hand, 25 per cent; loss of little and middle fingers of right hand, 25 per cent; loss of little and ring fingers, 10 per cent; loss of little and ring fingers of right hand, 18 per cent; loss of ring and middle fingers, 8 per cent; loss of ring and middle fingers of right hand, 15 per cent; loss of index and little fingers, 8 per cent; loss of index and little fingers of right hand, 15 per cent; loss of index finger, 6 per cent; loss of index finger of right hand, 10 per cent; loss of any finger without complications, 4 per cent; loss of any finger of right hand without complications, 8 per cent; loss of all the toes of one foot, 15 per cent; loss of great, second, and third toes, 12 per cent; loss of great toe and metatarsal, 12 per cent; loss of great and second toes, 10 per cent; loss of great toe, 8 per cent; loss of any other toe and metatarsal, 8 per cent; loss of any other toe, 5 per cent; hernia, 20 per cent to 50 per cent.

The above percentages shall be deemed and construed to have been reversed whenever the injured person is left-handed, so that the word

left as used in this scale is to be understood as being placed instead of the word right.

SEC. 8. That in all cases in which the carrier subject to the provisions of this act (as set forth in section 1 hereof) shall be the subject of a receiver or trusteeship before any payments are made on account of the debts due the holders of any bonds or other obligations except taxes, it shall be the duty of said receiver or trustee to provide funds for the payment of all claims due or owing in respect to any proceedings brought under this act. Such funds or claims shall be a lien or charge on the property subject only to taxes.

SEC. 9. That for the purpose of carrying into effect the provisions of this act a commission is hereby created and established, to be known as the "commission of injury awards," to be composed of five commissioners, who shall be appointed by the President, by and with the advice and consent of the Senate.

SEC. 10. That the commission first appointed under this act shall continue in office for the term of one, two, three, four, and five years, respectively, from the 1st day of July A. D. 1908, the term of each to be designated by the President; but the successor of each of them shall be appointed for a term of four years, except that a person chosen to fill a vacancy shall be appointed only to fill the unexpired term of the commissioner he shall succeed. Any commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. Not more than three of the commissioners shall be appointed from the same political party.

SEC. 11. That no person on the pay roll of, employed by, or holding any official relation to any common carrier subject to the provisions of this act, or owning stocks or bonds thereof, or in any manner pecuniarily interested therein, shall enter upon the duties of or hold such office nor be employed by said commission. Said commissioners shall not engage in any other vocation or employment. No vacancy in the commission shall impair the right of the remaining commissioners to exercise all the powers of the commission. The principal office of the commission shall be in the city of Washington, D. C., where its general sessions shall be held. Whenever the convenience of the parties may be promoted or delay or expense prevented thereby the commission may hold its sessions in any part of the United States.

SEC. 12. That the commission may by one or more of the commissioners prosecute any inquiry necessary to its duties in the United States into any matter or thing pertaining to or subject to this act. The commission may conduct its proceedings in such manner as will best conduce to a proper dispatch of business and to the end of justice. A majority of the commission shall constitute a quorum for the transaction of business, but no commissioner shall participate in any proceedings or hearing in which he has or has had any pecuniary interest. Said commission shall have power to make from time to time or amend general rules, regulations, or orders for the purpose of carrying into effect the provisions of any section of this act, including all details of procedure before it. Any party may appear before said commission and be heard in person or by attorney. Every vote and official act of the commission shall be entered of record, and all its proceedings shall be public. Said commission shall have an official seal which shall be judicially noticed. Any member of the commission may administer oaths and affirmations, sign orders and subpoenas. Each commissioner shall receive an annual salary of \$6,000, payable monthly.

SEC. 13. That the commission shall have the power to appoint a secretary, who shall receive an annual salary of \$3,600, payable monthly. The commission may appoint, for such terms as it shall determine, deputy commissioners, who shall receive an annual salary of \$2,400, payable monthly. Said deputy commissioners may administer oaths and affirmations and require the production of such books and papers in the custody of any person subject to this act as they may deem proper. The commission shall have authority to employ and fix the compensation of such other employees as it may find necessary for the proper performance of its duties and the enforcement of this act. Until otherwise provided by law said commission may hire suitable offices for its use and have authority to procure all necessary office supplies. The commission shall on or before the 1st day of January of each year make a report to Congress, and copies thereof shall be distributed as are all other reports transmitted to Congress.

SEC. 14. That said reports shall contain such information as may be considered of value in the determination of questions connected with the enforcement of this act, together with such recommendations as to additional legislation relating thereto as the commission may deem necessary, as well as the names and compensation of the persons employed by said commission.

SEC. 15. That the sum of \$350,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to carry into effect the provisions of this act.

SEC. 16. That said commission is hereby directed, authorized, and empowered to make all necessary rules, regulations, and orders necessary and proper to carry into effect the provisions of this act. Jurisdiction is hereby conferred on any district or circuit court of the United States in which the said common carrier operates its line to hear and determine any proceedings brought by said commission to enforce any rule or order so made. Any rule, regulation, or order made by said commission enforcing or carrying out any provisions of this act shall be published in such form as said commission shall deem proper.

SEC. 17. That whenever any common carrier subject to this act as employer refuses or neglects to pay any award, or neglects to obey any lawful order of said commission as created by this act, it shall be lawful for said commission, or, on the relation of any person interested in such order, to apply in a summary way by petition to any circuit court of the United States for the judicial district in which the employer carries on his business or in which the employee resides, alleging such failure or noncompliance, as the case may be. Said court shall have the power to hear and determine the matter on short notice, as the court may deem reasonable. Said court shall hear and determine the matter as a court of equity speedily and without the formal pleadings and proceedings applicable to ordinary suits in equity, and to this end said court shall have the power to direct an inquiry to carry this act into effect.

SEC. 18. That on such hearing the findings of fact in the report of said commission shall be prima facie evidence of the matters therein stated. If it be made to appear to such court on said report or hearing that the lawful order or requirement of said commission has been disobeyed, said court shall issue any proper process, mandatory or injunctive, to compel obedience to such order or requirement of said commission. Said court may in the proper case order any employer subject to this act and disobeying any order or process to pay such sum of money not exceeding \$1,000. Said sum shall be payable as the court may direct, either to the party complaining or into court to abide

the ultimate decision of the court. Payment thereof may be enforced by any process of the court.

SEC. 19. That when any such petition shall be filed by the commission, it shall be the duty of any district attorney of the United States under the direction of the Attorney-General to prosecute. If the judgment of the court shall be in favor of the employee, he shall be entitled to recover court costs and expenses connected with said proceedings, to be determined by the court, and collectible as part of the costs in the case. For the purpose of this act the circuit court of the United States shall be deemed to be always in session.

SEC. 20. That the said commission shall on the demand of any claimant dissatisfied with the award made by said commission bring or cause to be brought an action in the nature of a bill of review in any said circuit court of the United States. Any expenses connected with such proceedings, including a reasonable counsel fee to the prevailing party, shall be paid out of its appropriation.

SEC. 21. That the provisions of the act to regulate commerce, as amended as said amendments have been set forth in section 1 hereof, as well as an act in relation to testimony before the Interstate Commerce Commission, approved February 11, 1893 (27 Stat. L., p. 443), as well as an act defining the right of immunity of witnesses, approved February 11, 1893, as amended by an act approved June 30, 1906, Public Law No. 389, relating to witnesses, and all other matters of administrative detail, shall, as far as applicable to this act, be deemed to have been reenacted herein as fully as though set forth at length.

SEC. 22. That whenever this act requires any document to be served by post, unless the contrary intention appears, the service shall be deemed to be effected by properly addressing, prepaying, and posting a letter by registered mail containing the document or notice, and unless the contrary is proven to be effected at the time at which the letter would be delivered in the ordinary course of registered mail.

SEC. 23. That in this act, unless the contrary intention appears, words denoting or importing the masculine gender shall include females, and words in singular shall include the plural and words in the plural shall include singular.

SEC. 24. That, unless the context otherwise requires, the word "employer" shall be deemed to include any common carrier engaged in interstate commerce as set forth in the act to regulate commerce, or any act amendatory thereof (more particularly set forth in section 1 hereof), or any receiver, trustee, or holding company by whatever scheme or device said common carrier shall exercise its functions. The word "employer" shall also be deemed to include any common carrier engaged in foreign commerce in respect to any employee subject to the navigation or shipping laws of the United States. The personal representatives or next of kin shall be held to mean the persons who by the law of any State, Territory, the District of Columbia, or by the laws of any foreign country or state, shall be entitled to the proceeds of the estate of the deceased.

SEC. 25. That no contract, agreement, or device relating to the employment or reengagement consequent to the injury of any employee subject to this act, to waive any of the provisions of this act or to contract out from any of its provisions or from any rule, regulation, or order made by said Commission in relation thereto shall be valid or enforceable.

SEC. 26. That this act shall be in force from and after its passage.

"LIBERTY OF THE MAGNATES AND FREEDOM OF CONTRACT."

It is a subject of legitimate pride to us that Mr. W. J. Ghent can with truth, Mr. Speaker—and herein lies the sting—can with truth say of us:

The percentage of reversals on appeal in master and servant cases of this kind, when the verdict of the juries in the courts below had been in plaintiffs' favor, is perhaps larger than in any other branch of litigation.

Mr. George W. Alger, in an article on "The courts and factory legislation," in the American Journal of Sociology for November, 1900, gives the following careful and temperately worded summary of recent reversals in employers' liability cases in New York State:

The percentage of reversals on appeal in master and servant cases of this kind, when the verdict of the juries in the courts below had been in plaintiffs' favor, is perhaps larger than in any other branch of litigation. In New York, for example, an examination of thirty volumes of the court of appeals reports (126-156 N. Y.) shows written opinions in thirty-seven such cases. Of these (1) in three cases the juries in the lower court had found for defendant, and plaintiff was the appellant; (2) in four cases the court below had dismissed plaintiff's case as insufficient, without requiring defendant to introduce any testimony; (3) in thirty cases the juries below had found for plaintiff with substantial damages. The court of appeals in class 1 affirmed all of the cases where plaintiff was defeated below. In class 2 it reversed the four cases where plaintiff had been summarily nonsuited and sent the cases back to trial courts to hear defendant's testimony, a partial victory at most for plaintiff. In class 3, where plaintiff had actually received a verdict, of the thirty cases twenty-eight were reversed. These statistics are interesting as showing how complete is the lack of harmony between the courts, at least in New York, and the moral sense of the people by whom the courts were created in regard to these cases. Twice in thirty times do the opinions of the learned judges of New York's highest court coincide with the opinions of juries of citizens as to the requirements of justice.

The language of the leading work on one phase of this subject, Shearman and Redfield's "A treatise on the law of negligence," sums up the matter in a few words:

It has become quite common for judges to state as the ground of decisions the necessity of restricting litigation. Reduced to plain English, this means the necessity of compelling the great majority of men and women to submit to injustice in order to relieve judges from the labor of awarding justice. The stubborn resistance of business corporations, common carriers, and mill owners to the enforcement of the most moderate laws for the protection of human beings from injury, and their utter failure to provide such protection of their own accord, ought to satisfy any impartial judge that true justice demands a constant expansion of the law in the direction of increased responsibility for negligence. (Quoted from William J. Ghent's "Our benevolent feudalism.")

If we pass an employers' liability bill, the courts will be full of litigation. The Germans, whose progress I have shown in no

small degree is due to their more efficient workmen and their system of paying compensation to persons killed and injured in the course of railway operation, have long ago found the danger incident to an employers' liability bill, and for that reason, if no other, pushed it aside as an archaic and dangerous appliance in a modern, civilized, industrial state. As an example there is printed herewith a summary of Bavarian results in effecting a prompt settlement with widows of killed and to injured railway laborers. Employees of the State railways are compensated even faster than this, as no elaborate calculations of their average wages are required.

Table showing the time elapsing between injury or death and payment of first definite compensation to workmen on the Bavarian State Railways.

File No.—	Date of injury.	Date of definite compensation payable (liable to increase on subsequent rehearing).	Provided by sick insurance for thirteen weeks, beginning of fourteenth week.

* Died of injuries received.

* Payments relate back to date of death.

Prepared under the direction of Ministerialrat Karl Voelcker and of Regierungsrat Dr. Klaus Serrat, Bavarian Ministry of Communications, Munich, October 9, 1905.

Every one of our employers' liability acts, past and present, is based on the theory of contract, that sacred freedom of contract which permitted the exploitation of human beings, degraded them to an extent undreamed of by the ancient slavery, and which was mitigated to a very limited degree by factory legislation and by safety-appliance acts. Under them all the entire theory is that of contract and freedom of contract, which permits in some form or other the contracting out from the terms of the act in favor of the master and against the employee.

In every instance litigation of this character brings about a reaction which forces the courts, the interpreters of the law, trained as they are to conserve on behalf of their clients and on behalf of the public whom they claim to represent, by narrow construction, and to fritter away the benefits sought to be conferred by this legislation upon the class which is economically weak, and which, as I have said, has been judicially disinherited. That this term is not too strong is shown by the fact that men writing of the entire attitude of the courts to the workingman say:

A fact more curious yet to the unlegal mind is the judicial contention that statutory provisions for the safeguarding of machinery may be waived by the workman. Evidently his burden of risk, like the Hindoo's caste, is born with him, and can not be laid aside or escaped.

THE ULTIMATE VALIDITY OF THE PROPOSED ACT.

It would be futile for me, Mr. Speaker, to have entered on this discussion were I not convinced that ultimately some legislation such as my bill (H. R. 16739) proposes to enact will become the law of this land, and that those who now scoff at its provisions will be the most earnest upholders of the new industrial conditions, of the social betterment and improved civilization, of which it, in its incipency, is the forerunner. The act to regulate commerce was enacted in 1887, yet people are apt to forget that as far back as 1871 a bill of like character was introduced, and that the first step toward an attempt to force the carriers engaged in interstate commerce to submit to Federal legislation was introduced by Senator Sumner, of Massachusetts, in 1865. Progress in a country like ours is necessarily slow. Besides overcoming the natural timidity of capital, we must convince the Supreme Court of the United States that in the last instance it is a proper, lawful, and civilizing effort to raise the conditions of the persons who may be living in this great country under and pursuant to the Constitution.

The employers' liability act was declared unconstitutional by a majority of one. Five judges were in favor of declaring its provisions repugnant to the Constitution; four judges, on various grounds, dissented. When in the last analysis a statute is held unconstitutional on so narrow a margin, and when its advocacy and framing has had the benefit of the best legal talent in this House and in the other Chamber, it is proper to refer with respect to an opinion handed down by one judge below, whose opinion was not directly appealed from in the

cases before the Supreme Court and whose reasoning has never been assailed in any court whatsoever. In the circuit court of the United States for the eastern division of the southern district of Georgia, Hon. Emory Spear decided on the 25th of March, 1907, the case of Lucy Snead, administratrix, v. Central of Georgia Railway Company. In the course of his opinion that eminent judge said:

The steamboats plying the lower river were thus forbidden access to its wharves. The National Government since its organization had been silent. It finally thought proper to act. The railroads were then informed that unless suitable drawbridges were constructed so that steamers might pass through unimpeded their bridges would be removed. In other words, the dormant power of the Constitution was aroused, and the railroads, the creatures of the State, whose action had been theretofore lawful, turned the listening ear and caught the words of that mandate and swiftly obeyed. [My italics.]

The creation of the Interstate Commerce Commission, the enactment against arbitrary and discriminating rates, of the antitrust law forbidding combinations in restraint of trade, held directly applicable to railroads, even though chartered by the States, the law denouncing rebates and forbidding passes in interstate traffic, the law forbidding a railroad engaged in such commerce from dealing in commodities like coal, which it transports (Railroad v. I. C. C., 200 U. S., 361)—all such legislation culminating in the power exercised by the most recent enactment, intrusting the Commission, which is the agent of Congress, with the power to fix rates, and the bill to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon, enacted in the closing hours of the last session, are familiar illustrations of the exercise of the right and power of Congress to control such commerce. It is not difficult to foresee that this power may speedily be extended to reach and to paralyze the action of those daring financiers who water the stock of corporations engaged in interstate traffic, and who by this perilous expedient not only compel the public to pay interest upon evidences of fictitious values thus created, but endanger the stability of all business by the panics they engender and the calamities they threaten. In the meaning of the commerce clause, it is thus made clear that the words "to regulate" impart the right and power to enact laws, and not merely to make rules and regulations. The necessity for such right and such power, more than all things else, contributed to the very establishment of the Government of the United States itself.

Although argument in that case was specifically directed to the contention that the interference by courts was unlawful in so far as it tried to establish a liability in favor of employees against their employers, and that it might affect in a contingent or casual way the relation of intrastate carriage, yet in the wider scope which this bill proposes to enact it seems to me that it enforces the general arguments to a very great degree.

Judge Spear well says, speaking of the employers' liability act:

The law itself deserves the approbation of the entire country. Its incentive to carefulness on the part of those who control railways will be immeasurable. It will bring to many an honest, fearless heart the consciousness that he and his loved ones are insured against the folly and negligence of his fellows, whom he can not control. Had it been of force in the past, thousands of our countrymen who are sleeping in untimely and tragic graves, might now be leading useful lives, and many additional thousands who now spend the interval of life which remains to them in the mortification of mutilation and in its incurable suffering might now be happy and well. Surely at a period when every day brings its story of crashing and murderous collisions, of derailed and shattered trains, the long catalogue of the slain, the mangled, and dismembered, such efforts on the part of Government to extend its protecting care around its people, employed in its mightiest interest, should not be lightly discredited. The philanthropy and statesmanship which prompted it are not undeserving of such a eulogium as that pronounced by Macaulay on the philosophy of Bacon:

"It has lengthened life; it has mitigated pain; it has extinguished diseases; it has increased the fertility of the soil; it has given new securities to the mariner; it has furnished new arms to the warrior; it has spanned great rivers and estuaries with bridges of form unknown to our fathers; it has guided the thunderbolt innocuously from heaven to earth; it has lighted up the night with the splendor of the day; it has extended the range of the human vision; it has multiplied the power of the human muscles; it has accelerated motion; it has annihilated distance; it has facilitated intercourse, correspondence, all friendly offices, all dispatch of business; it has enabled man to descend to the depths of the sea, to soar into the air, to penetrate securely into the noxious recesses of the earth. * * * These are but a part of the fruits, and of its first fruits. For it is a philosophy which never rests, which has never attained, which is never perfect. Its law is progress. The point which yesterday was invisible is its goal to-day and will be its starting post to-morrow."

The Supreme Court of the United States on May 18, 1908, handed down its decision in *St. Louis, Iron Mountain and Southern Railway Company v. May Taylor*, as administratrix of George W. Taylor.

The case had been tried twice in the State courts, and eight years after Taylor's death the Supreme Court reversed the judgment obtained against the carrier; but the court laid down in its opinion a salutary rule, which is applicable to the principle of my compensation bill (H. R. 16739). Here is what the court said (my italics and small capitals) in that case which, with *Holden v. Hardy* (cit. ut supra), gives my bill (H. R. 16739) its constitutional justification:

In deciding the questions thus raised, upon which the courts have differed (158 Fed., 331), we need not enter into the wilderness of cases upon the common-law duty of the employer to use reasonable care to furnish his employee reasonably safe tools, machinery, and appliances, or consider when and how far that duty may be performed by delegating it to suitable persons for whose default the employer is not responsible. In the case before us the liability of the defendant does not grow out of the common-law duty of master to servant. The Congress, not satisfied with the common-law duty and its resulting liability, has

prescribed and defined the duty by statute. We have nothing to do but to ascertain and declare the meaning of a few simple words in which the duty is described. It is enacted that "no cars, either loaded or unloaded, shall be used in interstate traffic which do not comply with the standard." There is no escape from the meaning of these words. Explanation can not clarify them and ought not to be employed to confuse them or lessen their significance. The obvious purpose of the legislature was to supplant the qualified duty of the common law with an absolute duty deemed by it more just. If the railroad does, in point of fact, use cars which do not comply with the standard, it violates the plain prohibitions of the law, and there arises from that violation the liability to make compensation to one who is injured by it. It is urged that this is a harsh construction.

To this we reply that, if it be the true construction, its harshness is no concern of the courts. They have no responsibility for the justice or wisdom of legislation, and no duty except to enforce the law as it is written, unless it is clearly beyond the constitutional power of the lawmaking body. It is said that the liability under the statute, as thus construed, imposes so great a hardship upon the railroads that it ought not to be supposed that Congress intended it. Certainly the statute ought not to be given an absurd or utterly unreasonable interpretation leading to hardship and injustice, if any other interpretation is reasonably possible. But this argument is a dangerous one, and never should be heeded where the hardship would be occasional and exceptional. It would be better, it was once said by Lord Eldon, to look hardship in the face rather than break down the rules of law. But when applied to the case at bar the argument of hardship is plausible only when the attention is directed to the material interest of the employer to the exclusion of the interests of the employee and of the public. Where an injury happens through the absence of a safe draught there must be hardship. Such an injury must be an irreparable misfortune to some one. If it must be borne entirely by him who suffers it, that is a hardship to him. If its burden is transferred, as far as it is capable of transfer, to the employer, it is a hardship to him. IT IS QUITE CONCEIVABLE THAT CONGRESS, CONTEMPLATING THE INEVITABLE HARDSHIP OF SUCH INJURIES, AND HOPING TO DIMINISH THE ECONOMIC LOSS TO THE COMMUNITY RESULTING FROM THEM, SHOULD DEEM IT WISE TO IMPOSE THEIR BURDENS UPON THOSE WHO COULD MEASURABLY CONTROL THEIR CAUSES, INSTEAD OF UPON THOSE WHO ARE IN THE MAIN HELPLESS IN THAT REGARD. SUCH A POLICY WOULD BE INTELLIGIBLE, AND, TO SAY THE LEAST, NOT SO UNREASONABLE AS TO REQUIRE US TO DOUBT THAT IT WAS INTENDED, AND TO SEEK SOME UNNATURAL INTERPRETATION OF COMMON WORDS. We see no error in this part of the case. But for the reasons before given the judgment must be reversed.

Labor Will Exercise Its Political Influence as Long as There Is a Wrong to Be Righted or a Right to Be Defended.

SPEECH

OF

HON. WILLIAM B. WILSON,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. WILSON of Pennsylvania said:

Mr. SPEAKER: A false impression has gone abroad and has been persistently cultivated by those whose interest it is to do so, that the labor unions and farmers' organizations have been seeking from Congress class legislation and special privileges contrary to our Constitution and the spirit of our form of government. Organizations of farmers and wage-workers ask no special favors from Congress; they seek no immunity from the laws of the land; they desire nothing more than a fair field, devoid of favoritism, and insist that their rights and liberties, which means the rights and liberties of all the people, shall not be destroyed by legislation granting special privileges to other classes of our citizens or placing unjust burdens and restrictions upon themselves. There is not a right or privilege exercised by any corporation that is not a law-created and law-protected right.

There is not a corporation anywhere legally doing business either in interstate or intrastate commerce that does not derive all its rights, powers, privileges, and prerogatives from the municipal, State, and Federal governments; there is not a power properly exercised by any of our courts that has not its foundation in the constitutional, statutory, or common law. So when wage-workers and farmers come knocking at the doors of Congress for relief from the oppression of gigantic corporations that have grown so powerful that they can dictate the prices that are to be paid to productive labor on the farm, in the mines, and the mill, and in the same breath name the rates that must be paid by the consumer in general, or when they seek legislation that will prevent the courts from abusing the use of the beneficent writ of injunction and declaring that labor unions and farmers' organizations are, under the Sherman antitrust law, conspiracies in restraint of trade, they are not seeking special legislation, but asking that laws that bear unjustly upon them be amended or repealed. Laboring men in all parts of the country have been insistent that legislation of this character should be passed.

Petitions of citizens from every State in the Union have been

sent to Members of Congress urging the immediate necessity of amending the Sherman antitrust law, and modifying the power of the courts to issue injunctions in labor disputes; but no attention has been paid to the pleadings of the petitioners, further than to refer them to the Judiciary Committee, noted as the "cemetery" of such measures as the majority has decided to kill.

It can not be contended that lack of time is responsible for the failure to consider these measures. Many hours have been wasted in the closing days of this session by useless recesses, during which many measures of importance to the people could have been considered and passed upon.

There is no constitutional reason why we could not remain in session longer than has been decided upon. With the limited debate which the rules of the House allow, these measures could have been considered and passed within two days at the most. Matters of far less importance to the people in general have been taken up and disposed of, and there is no doubt that the measure asked for by the organized wage-workers and farmers could have been brought to a vote if the majority side of the House had desired their consideration, notwithstanding the fact that the committee having the bills in charge persistently sat upon the lid, as is clearly demonstrated by the definite statements of the majority leaders at various times. On May 9 the gentleman from New York [Mr. PAYNE], the majority leader on the floor of the House, said:

We are doing this business; we are legislating; we are responsible for what we do, and we are responsible for what we do not do, and we propose to assume the responsibility for it from beginning to end.

The gentleman from Pennsylvania [Mr. DALZELL] made the following statement to the House on April 3:

I think we will be able to demonstrate from this time out not only that the minority shall not enact any legislation, but that the legislation of the majority shall be such as the majority desires to pass in its own way, and at its own time, by exercise of the rules of the House.

On April 8 the gentleman from New York [Mr. SHERMAN], amid thunderous applause on the Republican side, proclaimed that—

The Republican party in this House, the Republican party in this nation, is prepared to-day to accept full responsibility not only for everything that is done, but for that which is not done in the way of legislation and administration.

The responsibility for the failure to legislate on these important questions is clear, and there is no way to avoid it. The recent decision of the United States Supreme Court in the case of *Loewe et al. v. Lawler et al.*, generally known as the "Danbury hat case," brings the labor unions and farmers' organizations clearly within the scope of the Sherman antitrust law. It was not intended by those who framed and passed the measure, nor was it believed by the American people, that the Sherman antitrust law should apply to organizations of workmen, including farmers, yet that construction has been placed upon it by the Supreme Court, and the construction must stand as the law of the land until remedial legislation has been secured. I quote the following from the decision of the court:

The averments here are that there was an existing interstate traffic between plaintiffs and citizens of other States, and that for the direct purpose of destroying such interstate traffic defendants combined, not merely to prevent plaintiffs from manufacturing articles then and there intended for transportation beyond the State, but also to prevent the vendees from reselling the hats which they had imported from Connecticut or from further negotiating with plaintiffs for the purchase and intertransportation of such hats from Connecticut to the various places of destination. So that, although some of the means whereby the interstate traffic was to be destroyed were acts within a State and some of them were in themselves as a part of their obvious purpose and effect beyond the scope of Federal authority, still, as we have seen, the acts must be considered as a whole, and the plan is open to condemnation, notwithstanding a negligible amount of intrastate business might be affected in carrying it out. If the purposes of the combination were, as alleged, to prevent any interstate transportation at all, the fact that the means operated at one end before physical transportation commenced and, at the other end, after the physical transportation ended was immaterial.

Nor can the act in question be held inapplicable because defendants were not themselves engaged in interstate commerce. The act made no distinction between classes. It provided that "every contract, combination, or conspiracy in restraint of trade was illegal. The records of Congress show that several efforts were made to exempt by legislation organizations of farmers and laborers from the operation of the act and that all these efforts failed, so that the act remained as we have it before us."

The original purpose of the so-called "Sherman antitrust law" was to prevent combinations in restraint of trade that resulted in taking exorbitant profits out of the people. Labor organizations are not organizations for profit; they have no capital stock; they declare no dividends. Not being organizations for profit, then they could not possibly be a conspiracy in restraint of trade for the purpose of extorting exorbitant profits out of the people. In addition to that, the working people of the country and the farmers of the country combined constitute the great bulk of the people. It would be practically

impossible for the wage-workers as a whole, and the farmers as a whole, to so combine that they would injuriously restrain trade to the injury of the community. They constitute the vast majority of the community and are entitled to the highest consideration which for many years they have not received. The farmers have considerable interest in this proposition, because of the fact that purchasing agents of great trusts and combinations have been going out into the farming regions and buying up their cattle, their cotton, and their corn, naming the price at which the farmers must sell, if he sells at all, and then taking that product and putting it on the market, practically naming the rates which the consumer must pay to secure the product. Farmers have organized, particularly in the West, for the purpose of protecting themselves against the purchasing agents of these great corporations, so that they may be able to secure a portion of the fair market price of the products of the farm. Under the decisions of the Supreme Court in several cases those organizations of farmers, organized for a good purpose, organized for the purpose of protecting themselves against the unfair encroachment of the power of the purchasing agents for the trusts or the combinations, are prohibited from organizing for that purpose, and they have a great interest in legislation of this kind, seeking to remove their organizations from the operation of the Sherman antitrust law.

I do not assert of my own knowledge that such a combination exists, and I believe it would be difficult for anyone to demonstrate that such combinations exist, and that is one of the difficulties in the situation at the present time. Half a dozen men may sit in the city of Chicago and determine the buying and selling price of beef, and yet it would be a difficult proposition to demonstrate that that is the case, because none of the six men could be placed upon the stand in connection with it to testify against themselves. Six or eight men can sit in the city of New York and determine the selling price of anthracite coal, and yet it would be a difficult proposition to be able to demonstrate to a court of law that those six or eight men did sit there and determine what the selling price of anthracite coal would be. But when it comes to a question of millions of farmers and millions of workmen undertaking to determine what they will do, it is an easy proposition to get evidence. The one is protected by the smallness of their numbers, and the others do their work openly and aboveboard, and it makes a very different proposition.

And because of the fact that it is necessary that there should be these combinations of farmers and wage-workers to protect themselves not merely against illegal combinations, but to protect themselves from combinations that are recognized by law, we believe that this remedial legislation should be given. The law itself recognizes the right of capital to combine. There are many corporations organized under our Federal laws, and multitudes of them that are organized under our various State laws, and every one of these corporations is simply an organization of capital and, being recognized by law, can act without coming under any regulations relative to conspiracy.

The laws of the land have invariably distinguished between a man dealing in his own product and a man dealing in the products of others. That is true in almost every State in the Union, if not all, with regard to laws relative to peddling. A man who buys and sells is required to take out a license, but the man who sells the products of his own labor is not required to take out a license in order to peddle it from house to house or from place to place. So the laws, as they exist at the present time and have existed, make the distinction—a very distinct difference—between the man who is dealing in his own product and the man who is dealing in the products of others; between the trader and the man who is a workman.

What is true of the products of labor would be naturally true when it comes to the case of a man purchasing for his own consumption, for consumption in his own home. Men naturally have the right to determine what things they will purchase and what things they will not purchase for their own use, and, having that right, have the right to agree amongst themselves what things they will purchase and what things they will not purchase. Take, for instance, a case where an article is produced in accordance with the laws of the State where child labor of very tender years is employed, the laws of the State not prohibiting the employment of that child labor in that particular factory or anywhere within that State. I take it that any citizen of the United States, any citizen of that State or any other State, would have the right to refuse to purchase the product of that factory or that plant as long as child labor was employed in it; that any citizen would have the right to agree with his neighbors collectively that they would not purchase any of the product of that plant while child labor was employed. Labor might be employed within the laws of the State in which

an article is produced in sweat shops, under sweat-shop conditions, and any citizen of that State, or any other State, would have a perfect right to refuse to purchase the product of that sweat shop and to agree with his neighbors not to purchase the product of that sweat shop, although it was produced completely within the limits of the law of the State in which it was manufactured.

It may be taken for granted that everybody who believes in government believes in organization, and that laws that are passed to prevent certain organizations are passed for the reason that either the purpose or the methods of the organization are injurious to the community at large. The Sherman antitrust act was passed for the purpose of preventing certain organizations or combinations from so conducting their business as to extort unreasonable profits from the people. Labor organizations are not organizations for profit. They can not be classed with that kind of organizations. They have no capital stock of any kind whatsoever. They are not engaged in interstate commerce of any kind. Their members have nothing for sale that goes into interstate commerce. The only thing that they have for sale is their labor power. That they have for sale, and the labor power of members of labor organizations is not a commodity that can be used in interstate commerce. In addition to that there is a rule in equity that two parties to a contract must be of equal power or else the contract will not be equitable, except through the generosity of the stronger party. Labor organizations are the natural and direct result of our industrial development, a direct result of copartnerships and corporations that are recognized and formed under our laws. A corporation is but an organization of men to carry on a given business or to arrive at a given purpose. So that the law recognizes organization in the formation of corporations.

A corporation like the United States Steel Corporation, for instance, employing 200,000 men, under the direction of one man at the head, acts as a unit in dealing with all trade matters, with its employees, and acting as a unit has greater power in dealing with its employees, or with any one of its employees, than that employee could possibly have. One employee seeking to make a wage contract, a contract concerning the terms of employment, would have absolutely no power except to either accept the terms of the corporation or to refuse to accept them, and if there was a refusal, then the employee would be out of its employment for all time to come, because there would be 199,999 men still continuing on at work, producing the material that the steel corporation desired to have produced. In order to be anywhere near equal in power with that organization in making a contract for wages and terms of employment, the employees, too, must act as a unit as well as those who are members of the corporation who act as a unit through their management. And so, so far as the moral phase of it is concerned, it is absolutely necessary that there should be labor organizations.

The welfare of our country requires that the laboring man and the farmer shall have the right to organize and control their producing powers and consuming capacity. Any other course would leave them absolutely at the mercy of great combinations of capital. Their right to earn a living and therefore the right to live itself, without violating the laws against theft, would be completely under the control of the management of great corporations. No free people can silently submit to a condition of that kind. The position of the organized wage-workers and farmers concerning legislation is clearly set forth in a memorial to Congress dated March 18, 1908, which I here-with submit for your consideration.

LABOR'S PROTEST TO CONGRESS.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., March 19, 1908.

We, the official representatives of the national and international trade and labor unions and organization of farmers, in national conference assembled, in the District of Columbia, for the purpose of considering and taking action deemed necessary to meet the situation in which the working people of our country are placed by recent decisions of the courts, now appear before Congress to voice the earnest and emphatic protest of the workers of the country against the indifference, if not actual hostility, which Congress has shown toward the reasonable and righteous measures proposed by the workers for the safeguarding of their rights and interests.

In the name of labor we now urge upon Congress the necessity for immediate action for relief from the most grave and momentous situation which has ever confronted the working people of this country. This crisis has been brought about by the application by the Supreme Court of the United States of the Sherman antitrust law to the workers, both organized and in their individual capacity.

Labor and the people generally look askance at the invasion of the court upon the prerogatives of the lawmaking and executive departments of our Government.

The workers feel that Congress itself must share our chagrin and sense of injustice when the courts exhibit an utter disregard for the

real intent and purpose of laws enacted to safeguard and protect the workers in the exercise of their normal activities. There is something ominous in the ironic manner in which the courts guarantee to workers:

The "right" to be maimed and killed without liability to the employer;

The "right" to be discharged for belonging to a union;

The "right" to work as many hours as employers please and under any conditions which they may impose.

Labor is justly indignant at the bestowal or guaranteeing of these worthless and academic "rights" by the courts, which in the same breath deny and forbid to the workers the practical and necessary protection of laws which define and safeguard their rights and liberties and the exercise of them individually or in association.

The most recent perversion of the intent of a law by the judiciary has been the Supreme Court decision in the Hatters' case, by which the Sherman antitrust law has been made to apply to labor, although it was an accepted fact that Congress did not intend the law to so apply and might even have specifically exempted labor but for the fear that the Supreme Court might construe such an affirmative provision to be unconstitutional.

The workers earnestly urge Congress to cooperate with them in the upbuilding and educating of a public sentiment which will confine the judiciary to its proper function, which is certainly not that of placing a construction upon a law the very opposite of the plain intent of Congress, thus rendering worthless even the very moderate efforts which Congress has so far put forth to define the status of the most important, numerous, and patriotic of our people—the wage-workers, the producers of all wealth.

We contend that equity power and jurisdiction—discretionary government by the judiciary for well-defined purposes and within specific limitations—granted to the courts by the Constitution has been so extended that it is invading the field of government by law and endangering individual liberty.

As government by equity, personal government, advances, republican government, government by law, recedes.

We favor the enactment of laws which shall restrict the jurisdiction of courts of equity to property and property rights and shall so define property and property rights that neither directly nor indirectly shall there be held to be any property or property rights in the labor or labor power of any person or persons.

The feeling of restless apprehension with which the workers view the apathy of Congress is accentuated by the recent decision of the Supreme Court.

By the wrongful application of the injunction by the lower courts the workers have been forbidden the right of free press and free speech, and the Supreme Court in the Hatters' case, while not directly prohibiting the exercise of these rights, yet so applies the Sherman law to labor that acts involving the use of free press and free speech, and hitherto assumed to be lawful, now become evidence upon which triple damages may be collected and fine and imprisonment added as a part of the penalty.

Indeed, the decision goes so far as to hold the agreements of unions with employers, to maintain industrial peace, to be "conspiracies" and the evidence of unlawful combinations in restraint of trade and commerce, thus effectually throttling labor by penalizing as criminal the exercise of its normal, peaceful rights and activities. The fact that these acts are in reality making for the benefit and the betterment of civilization as a whole does not seem to be understood or appreciated by the courts. The workers hope for a broader and more intelligent appreciation from Congress.

It is not necessary here to enter into a detailed review of this decision.

The workers ask from Congress the relief which it alone can give from the injustice which will surely result from the literal enforcement of the Sherman antitrust law as interpreted by this decision. The speedy enactment of labor's proposed amendment to the Sherman antitrust law will do much to restore the rights from which the toilers have been shorn.

We submit for consideration, and trust the same will be enacted, two provisions amendatory of the Sherman antitrust law, which originally were a part of the bill during the stages of its consideration by the Senate and before its final passage, and which are substantially as follows:

That nothing in said act (Sherman antitrust law) or in this act is intended nor shall any provision thereof hereafter be enforced so as to apply to organizations or associations not for profit and without capital stock, nor to the members of such organizations or associations.

That nothing in said act (Sherman antitrust law) or in this act is intended nor shall any provision thereof hereafter be enforced so as to apply to any arrangements, agreements, or combinations among persons engaged in agriculture, or horticulture, made with a view of enhancing the price of their own agricultural or horticultural products.

It is clearly an unwarranted assumption on the part of the courts or others to place the voluntary associations of the workers in the same category as trusts and corporations owning stock and organized for profit.

On the one hand we have the trusts and corporations dealing with purely material things, and mostly with the inanimate products of labor. On the other hand there are the workers whose labor power is part of their very lives and beings, and which can not be differentiated from their ownership in and of themselves.

The effort to categorically place the workers in the same position as those who deal in the products of labor of others is the failure to discern between things and man.

It is often flippantly averred that labor is a commodity, but modern civilization has clearly and sharply drawn the line between a bushel of coal, a side of pork, and the soul of a human, breathing, living man.

The enactment of the legislation which we ask will tend to so define and safeguard the rights of the workers of to-day and those who will come after them that they may hope to continue to enjoy the blessings of a free country as intended by the founders of our Government.

In the relief asked for in the proposed amendment to the Sherman antitrust law which we present to Congress labor asks for no special privileges and no exemption from the treatment which any law-abiding citizen might hope to receive in a free country.

Indeed, the present Parliament of Great Britain at its session in December, 1906, enacted into law what is known as the "trades dispute act." It is brief, and we therefore quote its provisions in full.

"1. It shall be lawful for any person or persons acting either on their own behalf or on behalf of a trade union or other association of individuals, registered or unregistered, in contemplation of or during the continuance of any trade dispute, to attend for any of the fol-

lowing purposes at or near a house or place where a person resides or works, or carries on his business, or happens to be—

"(1) For the purpose of peacefully obtaining or communicating information;

"(2) For the purpose of peacefully persuading any person to work or abstain from working.

"3. An agreement or combination by two or more persons to do or procure to be done any act in contemplation or furtherance of a trade dispute shall not be ground for an action if such act when committed by one person would not be ground for an action.

"4. An action shall not be brought against a trade union or other association aforesaid for the recovery of damages sustained by any person or persons by reason of the action of a member or members of such trade union or other association aforesaid."

We submit that if such relief from the onerous conditions brought about by the Taff-Vale decision of the highest court of Great Britain can be enacted by a monarchical government, there ought to be no hesitancy in conceding it in our own Republic.

The unions of labor aim to improve the standard of life; to uproot ignorance and foster education; to instill character, manhood, and an independent spirit among our people; to bring about a recognition of the interdependence of man upon his fellow-man. We aim to establish a normal workday; to take the children from the factory and workshop and give them the opportunity of the schools, the home, and the playground. In a word, our unions strive to lighten toil, educate their members, make their homes more cheerful, and in every way contribute an earnest effort toward making life the better worth living. To achieve these praiseworthy ends, we believe that all honorable and lawful means are justifiable and commendable and should receive the sympathetic support of every right-thinking American.

Labor asks only for justice. It asks that it be not victimized and penalized under laws never intended to apply to it.

We hope for a prompt recognition on the part of Congress of the wage-workers' very reasonable and moderate insistence in this important matter.

In addition, the other most important measures which labor urges are:

The bill to regulate and limit the issuance of injunctions—"Pearre bill."

Employers' liability bill.

The bill extending the application of the eight-hour law to all Government employees and those employed upon work for the Government, whether by contractors or subcontractors.

There are other measures pending which we regard as important, but we feel especially justified in urging the passage of these mentioned, because they have been before Congress for several sessions, and upon which extended hearings have been had before committees, every interest concerned having had ample opportunity to present arguments, and there is no good reason why action should longer be deferred by Congress.

We come to Congress hoping for a prompt and adequate remedy for the grievances of which we justly complain. The psychological moment has arrived for a total change of governmental policy toward the workers; to permit it to pass may be to invite disaster even to our national life.

In this frank statement of its grievances the attitude of labor should not be misinterpreted, nor should it be held as wanting in respect for our highest lawmaking body.

That the workers, while smarting under a most keen sense of injustice and neglect, turn first to Congress for a remedy, shows how greatly they still trust in the power and willingness of this branch of the Government to restore, safeguard, and protect their rights.

Labor proposes to aid in this work by exercising its utmost political and industrial activity, its moral and social influence, in order that the interests of the masses may be represented in Congress by those who are pledged to do justice to labor and to all our people, not to promote the special interests of those who would injure the whole body politic by crippling and enslaving the toilers.

Labor is most hopeful that Congress will appreciate the gravity of the situation which we have endeavored to present. The workers trust that Congress will shake off the apathy which has heretofore characterized it on this subject and perform a beneficent social service for the whole people by enacting such legislation as will restore confidence among the workers that their needs as law-abiding citizens will be heeded.

Only by such action will a crisis be averted. There must be something more substantial than fair promises. The present feeling of widespread apprehension among the workers of our country becomes more acute every day. The desire for decisive action becomes more intense.

While it is true that there is no legal appeal from a Supreme Court decision, yet we believe Congress can and should enact such further legislation as will more clearly define the rights and liberties of the workers.

Should labor's petition for the righting of the wrongs which have been imposed upon it and the remedying of injustice done to it pass unheeded by Congress and those who administer the affairs of our Government—then upon those who have failed to do their duty, and not upon the workers, will rest the responsibility.

The labor union is a natural, rational, and inevitable outgrowth of our modern industrial conditions. To outlaw the union in the exercise of its normal activities for the protection and advancement of labor and the advancement of society in general is to do a tremendous injury to all people.

The repression of right and natural activities is bound to finally break forth in violent form of protest, especially among the more ignorant of the people, who will feel great bitterness if denied the consideration they have a right to expect at the hands of Congress.

As the authorized representatives of the organized wage-earners of our country, we present to you in the most conservative and earnest manner that protest against the wrongs which they have to endure and some of the rights and relief to which they are justly entitled. There is not a wrong for which we seek redress, or a right to which we aspire, which does not or will not be equally shared by all the workers—by all the people.

While no Member of Congress or party can evade or avoid his or their own individual or party share of responsibility, we aver that the party in power must and will by labor and its sympathizers be held primarily responsible for the failure to give the prompt, full, and effective Congressional relief we know to be within its power.

We come to you not as political partisans, whether Republican, Democratic, or other, but as representatives of the wage-workers of our country, whose rights, interests, and welfare have been jeopardized and flagrantly, woefully disregarded and neglected. We come to you because

you are responsible for legislation or the failure of legislation. If these, or new questions, are unsettled, and any other political party becomes responsible for legislation, we shall press home upon its representatives and hold them responsible, equally as we now must hold you.

The following statement, issued by the American Federation of Labor two years ago, is of more than passing interest at this time, when the question of the issuance of injunctions has been keenly accentuated by the Federal courts, through the recent promulgation of restraining orders by Judge Dayton and others striking at the fundamental principles of human liberty and the personal rights of our people:

HISTORY OF INJUNCTIONS.

It may be well to have a brief history as to injunctions and their origin.

In a recent book by Henry George, jr., entitled "The Menace of Privilege," the following appears:

"Our practice of applying injunctions to labor disputes originated in a case in England in 1868. The English case is known as the Springhead Spinning Company v. Riley. In that case members of a labor union were restrained from issuing placards which requested 'all well-wishers of the union not to apply for employment from that company until the dispute was settled.' A temporary injunction was granted on the ground of 'threats and intimidation' rendering it impossible for the plaintiff to obtain workmen, without whose assistance the property became utterly valueless for the purpose of their trade, but the vice-chancellor who issued this injunction, which was only temporary, stated that he had some doubts as to whether it would stand on subsequent hearing should argument be made for making the order permanent; for no precedent for such action existed. A year later another temporary injunction of the same kind was issued, but neither of these cases were appealed to a higher court.

"In 1875 a third case was under consideration, and on being taken to a higher court, that tribunal deliberately and unanimously repudiated the action of the lower court. In reviewing the action of the lower court, Lord Chancellor Cairns, Lord Justice James, and Lord Justice Mellish all agreed that the lower court exaggerated their 'functions and jurisdiction,' and that it was at variance with the settled practice and principle of the chancery court, and that the lower court had no authority and the action no foundation in principle. The first injunction of this character in the United States was the case of P. P. Sherry, a shoe manufacturer of Lynn, Mass., v. Lasters' Protective Union, of that city. It happened in 1888, or thirteen years after that injunction's repudiation by the English chancery court of appeals.

"Notwithstanding that the higher court in England had taken a decided position, the Massachusetts court, in the case of Sherry v. Lasters, took the action of the lower court in England as a precedent for the issuing of a similar restraining order. This was the beginning of the long line of injunctions in labor disputes in the United States. Thus, while attorneys now 'quote' a perfect cloud of American and English injunction authorities, the facts are that they all sprang up in America since 1888, and in England and America they came from a single temporary injunction issued by the English vice-chancellor in 1868, who had some doubt of his jurisdiction, which jurisdiction was subsequently declared by the highest equity court in England not to exist.

The question of injunctions is one that interests the organized workers more than any that has confronted them for years. We contend that there is no authority in law for the issuance of injunctions in labor disputes. Never do we hear of these injunctions being issued except where differences exist between the employees and their employers. We contend that if overt acts are committed during the period of an industrial conflict and these acts in themselves are of a criminal nature, there is sufficient law now in the criminal statutes to punish them, but it is evident that the sole purpose of many employers engaged in a dispute with their employees as to wages, hours of labor, or conditions in applying for a restraining order against those with whom they are having the difficulty is to break the strike and compel the men to return to work under conditions unfavorable to them. In many instances men entirely within their rights, and whose demands for a change of conditions were absolutely correct, have been defeated through the issuance of one of these restraining orders.

We further contend that the courts in equity have no authority under existing law to issue such injunctions; that they are in violation of the thirteenth amendment to the Constitution, which guarantees to every citizen the right of "life, liberty, and the pursuit of happiness." Numerous cases could be cited of men who have unwarrantedly been

deprived of their liberty for violation of these restraining orders when they were entirely within their statutory and constitutional rights.

The position of the American Federation of Labor is clearly set forth in the following extracts of arguments made before the House Committee on the Judiciary in the several Congresses by President Gompers, of the American Federation of Labor, and Andrew Furuseth, secretary of the Pacific Coast Seamen's Union:

"Mr. GOMPERS. There are times when we have tried to have injunctions modified; in some instances our requests were granted, but very few. As a rule the hearings were set for so long a time after the issuance of injunctions that we have always accepted it that that was the first time we had an opportunity of being heard in the matter at all. Then, as I have said in the opening of my remarks, the thing upon which these injunctions might be modified would be the exercise of those rights which we have the perfect lawful right to exercise, and the things which would not be modified are already covered by existing laws, for they are alleged crimes.

"I say as a layman, but with the consciousness of the responsibility which goes with it, that there is not a man who will assert that there is one law upon the statute books of the United States upon which these injunctions are based. You can not quote a law which gives the authority for the issuance of these injunctions in these disputes. One gentleman drew the fine line between what is unlawful and what is a crime. Truly, all that is a crime is unlawful; all that is unlawful is not criminal. But the alleged charges upon which these injunctions are based are crimes, alleged crimes, and the others are neither crimes nor are they unlawful.

"We have been told that the bill if enacted would be unconstitutional. Well, that has been the last cry of the opposition about every reform bill that has ever been passed by Congress. Now, if the gentlemen who oppose this bill believe that it would be unconstitutional, why exercise themselves so much about it?

"Our opponents, of course, agree that it is lawful to strike, to strike as an individual or collectively. It is perfectly lawful, perfectly lawful now. It was not always lawful, and the predecessors of the gentlemen who now oppose this bill occupied exactly the same position that they now do when we sought the modification of the laws of conspiracy, so far as they apply to strikes, the right to strike, to quit work, to seek a new employer, to seek better conditions. It is not so long ago when it was a conspiracy to strike; it was not so long ago when it was unlawful.

"I think it almost superfluous to say that the charge that the leaders of organized labor either teach or encourage the commission of violence or crime is a base fabrication and unworthy even of the gentlemen who oppose this bill. The men who form largely the employers of labor of the country know that that is not true, and the gentlemen who have given vent to that utterance know in their hearts of hearts that that is not true, and that the men who are so-called leaders of labor either in their respective trades or in the general labor movement have done and are doing their best to prevent any violence of any sort, either by an individual man or by any number of men, union or nonunion.

"The insinuation that the labor leaders do not represent the rank and file of the organized workmen is upon its surface simply a preposterous statement. One of the gentlemen said he represents the workmen of the country. Yes, I think he does; very much like the lion represented the lamb after he had eaten him.

"We are fully persuaded that this bill is for the right. It is for justice; it is in the interest of right and in the interest of justice. It is in the line of the evolutionary progress of the social development and the economic development of our country.

"The American organized workmen realize the conditions by which they are surrounded and confronted. They understand the great concentrations of industry and combinations of wealth. They have realized the fact that individually they have no opportunity either to defend their own rights, to redress a grievance, or to attain an improvement in their condition.

"They understand that if they expect amelioration to-day or tomorrow and for the time to come, to preserve their manhood and integrity and independence and sovereignty, they must organize and unite and federate. I know that there are some men who answer that the organized labor movement, with its 3,000,000 members (I am including those who are not directly affiliated with the American Federation of Labor), do not represent the majority of the laborers of the country. I agree that we do not represent a majority of the workmen of our country. But I venture to say that we represent the most intelligent and the most skillful and the most manly of the workmen of our country, and this, too, without any reflection upon any nonunion man.

"That there is a legal remedy for some of the things which an injunction can enjoin goes without saying; but it is the purpose of the opponents of our legislation on this subject to get rid of the trial by jury in the regular process of the law. Their purpose is to make the judge who issues the injunction, the judge, the jury, and the executioner, and indeed to take away from the workmen enjoined the constitutional rights of being tried before a jury of their peers for any crime or offense with which they may be charged.

"Gentlemen of the committee, labor asks for nothing but what she believes she is entitled to, and organized labor is simply expressing it, because we have intelligence enough to organize and discuss these things, and out of it all has come a unanimity of judgment that this bill is necessary to the interests of peace and good will and success and progress.

"I trust, in fact I have no hesitancy in believing, that the committee will report this bill favorably to the House, and that it may pass with an overwhelming vote before the adjournment of the Congress, and may become part of the laws of our land."

Before the Committee on Judiciary of the Fifty-ninth Congress he stated as follows:

"Mr. GOMPERS. I commend to the attention of the members of the committee the injunctions that are incorporated in the report already printed, and which I have referred, and I want to say that the subsequent injunctions that have been issued by both Federal and State courts have simply gone step by step, reaching to greater lengths, and dealing with things that are the most ordinary affairs of man. Trespass, unlawful acts, criminal acts; no one can defend them, and claim honest citizenship in our country.

"But the doing, as I say, of the most ordinary things that men do in their everyday lives are more and more coming to be touched upon by injunctions. One injunction was issued—or, rather, many injunctions were issued—prohibiting persuasion, and not even designating what kind of persuasion. We can understand that there is such a thing as persuasion glibly used by the tongue and a club held in the hand; and no one can at all justify such persuasion as that. But even so, in such a case the injunction should not lie, because such an attempt is a threatened assault upon the person, for which there is a

law to prevent, to apprehend, to try, and to convict and to punish. But there is a persuasion—that persuasion which is commonly understood in our language—which no man can deny the right to exercise by another.

"And then comes the inhibition of a man or a number of men from weaning away from an employer those who are in his employ. 'Weaning away!' Is there any unlawful conduct if you, in your own interest, can wean away from me a man employed by me? Weaning away from me a man who is valuable to me in my business. By what? By bribes? By payment of money? By promises of reward, by advancement, by advantage? Is not that your right? If it is your right, is it not mine?"

"Take a case in point. A strike occurs. Men leave the employment of a certain firm because they ask for a high wage, or protest against a cutting of their wage, and another man or men take the places made vacant by the strikers. The strikers, having had experience, have accumulated certain funds, and they approach the men who have taken their places and say to them, 'John, or 'Gentlemen, or 'Men, you are taking our places. You have taken our places, and you are doing yourselves as well as us an injury, for if we are defeated in our effort the wages will be reduced and stay reduced, or our efforts to increase wages will not succeed, and you will have been the instruments to our defeat and to your own defeat and disadvantage."

"Come with us. Make common cause with us. We have accumulated funds, and we will pay you from what we receive from our associated efforts and our accumulated funds, either as much as you can earn, as much as we get, or we will pay you more than what you are now earning; quit the employment of that firm, and by reason of our common concert of action make that impression upon the firm that it will be required to yield and to withdraw the offer of the reduction of wages, or to concede the increase."

"I hold that the workmen have the right to go to any workmen employed by anybody, whether in a strike-bound establishment or otherwise, and offer this man to quit his employment and go to work with them in some other establishment, or not to work at all, for the time being. They have the right to 'lure away' and 'wean away' from an employer a workman, and to offer him money inducements, so that he may quit that employment and work for another, or to go idle for a period, in order that a certain lawful, honorable purpose may be achieved. And yet the injunction is issued against workmen for doing that very thing, and for doing it after the injunction has been issued they have been sent to jail."

"MR. ANDREW FURSETH, FIFTY-EIGHTH CONGRESS."

"We thus come back to the one fundamental question, 'Is there going along with the ownership of the mine, factory, or means of transportation a vested right in so much labor as is needed to make it profitable?'"

"If such right exists, whence is it obtained? It surely is contrary to the thirteenth amendment of the Constitution. If any such right runs against us as a class, upon what members of the class can it be enforced?"

"The employers and business men who come here in good faith and make this claim of vested right in our labor and our patronage are perhaps not much to be blamed. They find this idea expressing itself in the capitalization of the earning power of great enterprises; they have possibly paid good money for stocks and bonds, which are nothing but a mortgage upon the labor of the future. We learn from our industrial superiors, they from their financial principals. But that some of their attorneys should take the same position is a matter of some surprise and apprehension, to me at least."

"Can it be possible that these attorneys hold such contention to be sound? Through all the testimony and arguments there seems to run this idea of vested right in so much labor power as will run the plant, except in the argument of Mr. Bond, who recognizes that such right does not exist, and who mourns that fact."

"They urge with apparent sincerity the bill be not passed, because it will put a blot upon the judiciary, while they in the same breath claim that the whole machinery for the administration of justice and keeping the peace has broken down."

"They say that the police will not arrest, and when they do the police judge will not convict, or if he will convict, the accused will ask for a jury, and on it will be one or two members of the unions; conviction failing, and you have your labor for your pains."

"According to this, the citizen is, by his occupation as a wage-earner, so warped in judgment and tainted morally, that he can not be trusted as a juror, if one of his own class is to be tried. As this unfitness is based on moral turpitude, it follows that his testimony as a witness is of no value, and must therefore be rejected. This is entirely consistent with the claim that he is property. The slave never could testify against his owner, nor against the owner's equals. His evidence could be and was taken by the master against a fellow serf or slave, and so it is now with the wage-earner. The employing corporation goes into court and, to quote from the petition of the coal company already mentioned, says 'that the remainder of the miners and employees engaged as such * * * are willing to work and continue their employment; * * * that they are idle now for the reason that they are intimidated and in fear; that all of the miners at its said mines are very desirous of being permitted to continue their said work at the present rate of wages, and will do, as your orator is advised, and so alleges, if not interfered with and disturbed as hereinafter alleged.'"

"The petitioner then alleges that a confederation, combination, and association of men have gone among the miners and other laborers for the purpose of inducing or persuading them to quit work, and by threats, menaces, inflammatory speeches and demonstrations, and that if this continues those now at work will quit, and thus cause the 'said coal plant to lie idle and deteriorate in value.'"

"It is submitted that if the men at work and the men idle were free men entitled to the protection of the bill of rights there was nothing in these facts or allegations which could in any way justify the use of the writ of injunction. It is alleged that they used threats. What kind of threats? That is a question of fact, and under the 'bill of rights' they were entitled to a jury if they were threats within the meaning of the criminal law."

"We are told that the jurisdiction conferred on our court of equity was such as existed in England at the time of the founding of our Republic, and that it went to the protection of vested rights. If this be true, then either there is a vested right in the laborer going with the ownership of the mine, or the use of the writ was a gross usurpation. If it is the first, we ask of you to abolish it as inconsistent with the thirteenth amendment; if the second, then we pray that you stop the usurpation by the passage of this bill. In either case it is a

symptom of that growing 'industrial absolutism' which is gradually depriving us of our freedom as men, and which is digging from under our form of government its very foundation."

"MR. ANDREW FURSETH, FIFTY-NINTH CONGRESS."

"Like other parts of our judicial system, we have our injunctions from England. The King, by virtue of his absolute power, legislative, judicial, and executive, would be appealed to when some one was about to do something not forbidden by the law, yet which if done would cause great injury. Something needed to be protected; the law was insufficient, and by virtue of his absolute power the King could and did supply the remedy. Addressed to one subject, it was a royal command; if to many, a royal proclamation. In the first instance it was intended to protect the individual, and in the second the community."

"As the law became more complete, the need for such proclamation became less imperative, their places being taken by statute law or usage accepted as law; but law and usage being general in their application, serious injury might happen to individuals, hence the royal power was more and more restricted to individual instances of injustice or injury."

"The King, being too busy to sit in court to exercise his power, delegated it to his chancellor, and it grew apace until it came into serious conflict with the common law and the jury system. Its purpose being to prevent great wrong by forbidding the action which would cause such wrongs, the penalty necessarily had to be swift and certain, and, violation being a disobedience of the King's command—contempt of the King—and the facts being easily ascertained, punishment was immediate in operation and severe in kind. The royal power being irresponsible and absolute, it was necessarily misused by the individuals intrusted with its execution and their friends and had to be curtailed, circumscribed, and carefully guarded."

"There was a time when the court of star chamber was used in England as our courts are now being used, to forbid the doing and then punish disobedience without trial by jury in any and every direction. Personal liberty was at the whim and caprice of this court, but the English people would not long tolerate any such use of the royal power. The people abolished the court of star chamber and compelled the King to sign the bill of rights."

"It became the fundamental principles of chancery or equity that:
"1. It was to be exercised for the protection of property rights only.
"2. 'He who would seek its aid must come with clean hands.'
"3. 'There must be no adequate remedy at law.'
"4. It must never be used to curtail personal rights.
"5. It must not be used to punish crime."

"It was substantially in this shape that it was accepted by this country, engrafted in our Constitution, and the power of its administration conferred upon our courts."

"Equity law and jurisdiction at that time had a specific meaning, and any extension in jurisdiction, any enlargement of scope, must come from the people through an amendment to the Constitution, or there is judicial usurpation."

"If injunctions, which nowadays are issued in disputes between employers and employees, can stand the test of these principles, our complaint should be against the law. If they can not, then we have a just complaint against the judges who, either from ignorance or mistaken zeal for public order and cheap labor, misuse their power—act as a sovereign issuing his proclamations."

"The fundamental principle of American law as we understand it is that there shall be no property rights in man. A man's labor power is part of him; it fluctuates with his health, decreases when he grows old, and ceases at his death. It can not be divorced from man, and therefore under our system can not be property. Property may be bought, sold, or destroyed without destroying the possessor thereof; it is the product of labor or of nature. Labor is an attribute of life, and through no system of legitimate reasoning can it be treated or denominated as property."

"Injunctions—proclamations—used contrary to and destructive of constitutional guaranties of individual freedom, are usurpation, whether they take place in a monarchy by the king or in a republic by a judge. The power is the same, its results are the same, and a people that will endure become serfs, will deteriorate and die."

"You have had this bill before you during several Congresses. You have had hearings on it, and so far as has appeared at those hearings this bill would, if enacted into law, put a stop to the use of injunctions in labor disputes. That the relations between laborers and their employers are personal relations as distinct from property relations; that the rights of either party are personal rights, as distinct from property rights, it will hardly be seriously disputed."

"If these are the true relations, then there is no occasion for the equity power to step in. We maintain that it is pure usurpation on the part of the judge to so extend the powers granted to him as to cover labor disputes. We believe that by passing this bill you stop the usurpation and bring the law and the judges back to where it and they belong. Labor will be content with nothing less. Anything short of this robs the laborer, because he is a laborer, of his rights as a citizen."

"That the contention of the American Federation of Labor is absolutely correct is shown by the citation of the following authorities. We submit extracts from an address made by the Hon. John W. Akin, in 1898, at the convention of the Georgia Bar Association, held in Atlanta, Ga., Mr. Akin being president of the association at that time. We commend it to all for careful perusal, for it is one of the strongest arguments against the abuses of the courts in granting injunctions in labor disputes that has come to our notice."

"It need hardly be said that a glance at the whole field, even in the perspective, in which the modern exercise of this power displays itself would require discussion far beyond the proprieties of this hour. It is my purpose to notice only the most striking illustrations of the present development of this power. These illustrations involve the latest application of the writ of injunction by Federal courts to criminal offenses, to interstate commerce, to municipal and State government, and to contempt proceedings affecting the personal liberty of the citizen. Only a few representative cases will be referred to, but from them the drift may be clearly seen."

"INJUNCTION AGAINST CRIMINAL OFFENSES."

"Nothing in the history of our country's jurisprudence is more remarkable than the growth of what may be termed in a sense 'judge-made law.' In no department of judge-made law has the growth been wider or more rapid than in the law of injunctions as promulgated by the Federal judiciary. For instance, it is an ancient principle of equity jurisprudence that an injunction will never issue to restrain the commission of a criminal offense. Yet this fundamental principle has been

qualified and modified, if not to some extent overruled; but not by statute. In this, as in other instances of the enlargement of judicial in the direction of governmental power, the enlargement comes principally from the Federal courts.

"A recent case contains an exhaustive opinion arguing the right and power of the court to enjoin the sale by 'scalpers' of round-trip railway tickets to the Tennessee Centennial Exposition. The last head-note states one of the latest expressions of judicial amendment to this ancient rule of decision thus: 'It is not an objection to the jurisdiction of a court of equity to grant an injunction to protect property rights if the act sought to be enjoined is also a violation of the criminal law; nor that it might properly be made the subject of criminal legislation which the legislature has not seen fit to provide.'

"There are few criminal offenses which do not affect property rights. The husband has a property right in the life of the wife outraged and murdered. The landowner has a property right in the buildings fired by the incendiary's torch. The banker has a property right in the money stolen by the safe blower. If an injunction can be granted against the commission of any criminal offense on the ground that thereby property rights are violated, why may it not for the same reason be granted against the commission of every other criminal offense? And if this be the law, is not the ancient rule that no man shall be held judicially guilty of a crime until his twelve peers have so declared him virtually annulled in favor of a tribunal which, in effect, pronounces upon the guilt of the accused by the judgment of one man upon ex parte proof without the privilege of cross-examining witnesses or being confronted by them? Will not a little greater stretching, a little further enlargement, of this doctrine annul one of those constitutional privileges guaranteed by Magna Charta and embodied in the constitution of each one of these sovereign States?

"FEDERAL INJUNCTION INFRINGING PERSONAL LIBERTY AND FREEDOM OF SPEECH.

"The Federal cases which have caused most popular discussion and aroused most popular feeling have been those in which what is now commonly known as government by injunction was applied to personal liberty and freedom of speech. They vary in extent and application, but are the same in principle. What are known as the 'Chicago omnibus bills' during the great strikes are most conspicuous.

"In one a Federal court enjoined 'the officers, agents, and employees' of the receivers of the Northern Pacific Railway Company, 'and the engineers, firemen, trainmen, train dispatchers, telegraphers, conductors, switchmen, and all other employees' of said receivers, 'and each and every one of you, and all persons, associations, and combinations, voluntary or otherwise, whether employees of said receivers or not, and all persons generally, and each and every one of you, * * * from interfering in any manner, by force, threats, or otherwise [italics mine], with men who desire to continue in the service of said receivers, and from interfering in any manner, by force, threats, or otherwise, with men employed by said receivers to take the place of those who quit the service of said receivers, * * * and from combining and conspiring to quit, with or without notice, the service of said receivers, with the object and intent of crippling the property in their custody, or embarrassing the operations of said railroad, and from so quitting the service of said railroad, with or without notice, as to cripple the property, or prevent or hinder the operation of said railroad.' Later, they were enjoined 'from combining or conspiring together, or with others, either jointly or severally, or as committees, or as officers of any so-called 'labor organization,' with the design or purpose of causing a strike upon the lines of railroad operated by said receivers, and from ordering, recommending, approving, or advising others to quit the service of the receivers of the Northern Pacific Railway Company on January 1, 1894, or at any other time; and from ordering, recommending, advising, or approving, by communication or instruction, or otherwise, the employees of said receivers, or any of them, or of said Northern Pacific Railway Company, to join in a strike on January 1, 1894, or at any other time, and from ordering, recommending, or advising any committee, or committees, or class or classes of employees of said receivers to strike or join in a strike on January 1, 1894, or at any other time.'

"Only a portion is expressed in this quotation. In fact language is apparently exhausted in the effort to transform railroad employees, their friends, sympathizers, and advisers into mere dumb work creatures. They were allowed to breathe, but they could not safely talk. And this was done without a hearing.

"In the mass of verbiage two things are clear, and they are the salient points in this far-reaching decision: The employees could not quit work by any concert, no matter how badly treated or how poorly paid; and they could not strike. In the first respect, this decision made these employees slaves in so far as they could not voluntarily cease to labor. Is it not pathetic that the first court in the world to compel even involuntary servitude by a free man is a court of that Republic whose founders fondly believed they were establishing an asylum for the oppressed throughout all generations? In the second respect, the famous 'strike' is judicially condemned, and prevented under penalty of imprisonment, at the pleasure of one man, who holds this vast power, not by the choice of the people over whose destinies he presides with such stupendous authority. In how many cases have Federal courts or any other courts enjoined the employer from discharging, at his pleasure, employees who undertake service for no fixed period?

"A reason assigned for such rulings, in this and in similar decisions, is the public character of the service rendered by a railroad corporation, and, through it, by its employees. I will not undertake to forecast the ultimate conclusion of such a ruling, and I need not remind this thoughtful assemblage of the almost boundless sea of legal absolutism on which such judicial reasoning may launch us.

"SAFEGUARDS OF JUSTICE SWEEPED AWAY.

"The coal-miners' strike of last year was the occasion of the further exercise of sweeping and arbitrary powers by injunction, following precedents set by Federal courts and elsewhere alluded to herein. For instance, the United Mine Workers, a number of individuals and strikers, 'and others associated or operating with them, * * * and each of them' were enjoined, without a hearing, 'from inducing any of the employees or miners to quit their work. The Springfield Republican, a journal published in a Massachusetts wealth center, and whose editorials are unusually fair and able, commenting upon the grant of injunctions against the future commission of unlawful acts inciting or aiding a strike, says:

"The result of this is that if the acts are committed the prisoner is taken away from the ordinary ministers and processes of the law and, as in contempt of court, is tried by the judge alone and sentenced to prison for any length of time he may see fit to choose. Thus the

judge of his own motion becomes prosecutor, jury, and judge, and all the usual machinery and safeguards of justice are swept away. What would be said of an equity judge who should enjoin all people from committing any unlawful acts? Then unlawful acts would first become contempt of court and the victims would be subject to prosecution, trial, and punishment by the judge alone. The enormity of such a proceeding is palpable, but it is precisely the nature of Judge Jackson's proceeding.

"MODERN STRANGLING OF AN ANCIENT RIGHT.

"But the Federal courts have not stopped at enjoining the parties to a case. In one case the injunction was directed not only against the defendants and all persons combining and conspiring with them, but against 'all other persons whomsoever'; and everybody who might counsel or advise the strike—whether friend, attorney, or editor of a newspaper—was liable to be committed to jail at discretion and without jury trial, though they were not named in the bill and never heard of the case, provided these 'unknown defendants' and 'all other persons whomsoever' had been, in legal contemplation and as provided in the order, served 'by publication thereof by posting or printing.' It is unnecessary to comment upon this modern strangling of the right of freedom of speech.

"DRAGON'S TEETH AND REVOLUTION.

"The Chicago Times-Herald of September 19, 1897, published a four-page symposium on the subject of injunction in labor disputes. This symposium consisted of the opinions of fifteen judges on the bench and fourteen opinions of other jurists and prominent laymen. The Springfield Republican, published at a point far removed from the local coloring inseparable to such controversies, analyzing these answers, declares that only six unqualifiedly indorse the recent extension of the injunction power to labor troubles; seven were, in the main, noncommittal, while fifteen were outspoken in their hostile criticism. Fifteen judges returned replies, and we find that of these only two were unqualifiedly for what is popularly known as 'government by injunction,' six were noncommittal, while seven were more or less emphatic in denouncing or criticising the recent extension of the injunction power. Judge Gibbons, of the circuit court of Illinois, declares that 'in their efforts to regulate or restrain strikes by injunction, they are sowing dragon's teeth and blazing the path of revolution.' The chief justice of the Illinois court of appeals predicts that 'unless this usurpation of power by the courts is promptly checked, we shall within a few years see elections—and a Presidential one, perhaps—carried by a court's writ of injunction, backed by armed deputies or Federal soldiers.' Is the prediction of the chief justice too extravagant?

"A HUMILIATING PRECEDENT.

"The Ann Arbor and North Michigan Railroad broke its contract with its employees respecting wages and work hours. They struck. To aid them, the workmen on connecting lines, refusing to handle the cars of the Ann Arbor, quit work. United States Judge Ricks thereupon, on the application of these connecting railroads, enjoined the railroad employees from quitting service. Some who resigned were attached for contempt. Chief Arthur, of the Brotherhood of Locomotive Engineers, was also arrested for consenting to such action. He escaped punishment because the evidence did not show that he had sanctioned such action. All the engineers but one proved that they resigned before the injunction was granted. This one, however, quit work after being notified of the injunction. The Federal judge fined him \$50 and costs, and announced that the fine was only nominal, but that thereafter both fine and imprisonment would be the punishment for a similar offense.

"Here the laborers did the only thing they could do to make the railroad keep its contract. It will be noted that this Federal court, within whose jurisdiction lived both the workmen and these corporations, made not the slightest effort to prevent the corporation from breaking its contract and working the men longer hours and for less pay than they had contracted for. But the same court, which thus shut its eyes and folded its arms at the lawlessness of the corporation, took the helpless workman by the throat, and, under penalty of jailing him indefinitely without a jury trial, compelled him to do a thing which he had not contracted to do, and deprived him of freedom of speech in the discussion of what he conceived to be the relative rights of capital and labor.

"It will be observed in nearly all cases where Federal courts have attached for contempt workmen and their sympathizers that the injunctions were granted on ex parte applications. So that American citizens, not even charged with crime, have been jailed along with common felons by the arbitrary will of one man, who gave them no opportunity to question the propriety or legality of the omnibus injunction which deprived them of action and freedom of speech.

"THE GERM OF DISSOLUTION.

"I have noticed only a few of the comparatively recent Federal court decisions involving the conflict of interests between the public and the great corporations. These cases are but a few of the many forms in which this conflict expresses itself. No doubt this conflict is sometimes aggravated by demagogues. But it is equally true that many thoughtful and farseeing patriots have spoken to this question in terms of self-deserving wisdom, and who, because they foresaw danger in the trend of Federal court decisions, have been unjustly called demagogues. When Jefferson, with the clear vision of a philosopher, recognized and declared the conflict between federalism and republicanism, oligarchy of wealth and a democracy of all the people, between absolutism and individualism, he was called both demagogue and anarchist. But he was a seer as well as a leader, and to-day his political philosophy is accepted without question in this great Republic's heart of hearts. Standing, as this generation does to-day, in the shadow of a line of Federal decisions which are certainly innovations, and which many good and wise men believe to be usurpations of a dangerous power, we are reminded of Jefferson's prophecy. Said he:

"It has long been my opinion that the germ of dissolution of our Federal Government is in the constitution of the Federal judiciary, an irresponsible body, working, like gravity, by day and by night, gaining a little to-day and a little to-morrow, and advancing its noiseless step like a thief over the field of jurisdiction until all shall be usurped."

"Nothing said by others compares in comprehensive severity with this terrible indictment. And yet, if what Jefferson said was true then, its truth is multiplied tenfold now. Looking around us and about us; surveying the field of Federal jurisdiction as it exists in practice to-day; seeing States and municipalities stripped of their powers; beholding the new and direful engine of oppression and repression into which the ancient writ of injunction has been converted; observing how the toiler and the laborer have felt the maled hand of the Federal judge so often and so hardly, while the great trusts and monopolies of the

country have oppressed the poor, cheated justice, and defied the law with hardly so much as a rebuke from that same Federal judge, how can we be silent?"

We also submit extracts from addresses made by eminent jurists and statesmen on this subject.

Chief Justice McCabe, of the supreme court of Indiana, in writing on the subject of injunctions, in the Chicago Times-Herald, September 19, 1897, said:

"* * * Yes; I am inclined to believe that the use of the power interferes with the constitutional right of trial by jury, and in so far as it does this it endangers the highest and most sacred safeguard of the people."

Judge John Gibbons, of the circuit court of Illinois, in the same paper, said:

"* * * I desire to say that, in my opinion, there is a danger today threatening the very existence of the Republic as gigantic as that which precipitated the rebellion and well-nigh wrought the ruin of our Union. Now it comes, as ever, in the seductive guise of the law and under the solemn authority of the court. In their efforts to regulate or restrain strikes by injunction they are sowing dragons' teeth and blazing the path of revolution."

Judge M. F. Tuley, of the appellate court of Illinois, gave expression in the same paper to these words:

"* * * Such use of the right of injunction by the courts is judicial tyranny, which endangers not only the right of trial by jury, but all the rights and liberties of the citizens. If Congress has the power it should promptly put an end to 'government by injunction' by defining and limiting the power of the Federal courts in the use of the writ."

During the coal miners' strike in 1897 on the question of injunctions Governor Sadler, of Nevada, expressed himself as follows:

"* * * The tendency at present is to have committees make the laws, and to have the courts enforce them by injunction, both of which methods, in my opinion, are subversive of good government and the liberties of the people."

On the same question Governor Jones, of Arkansas, said:

"* * * Freedom of speech and of the press is inviolable in this Government, and we should not tolerate for a moment any encroachment upon this sacred right. Judge Jackson's order is revolutionary, and if upheld by the Federal Supreme Court and submitted to by the people will overturn our system of government and destroy our liberties. It is not only illegal and unadvisable, but is such an act as calls for his impeachment and removal from his office."

Governor Pingree, of Michigan, expressed himself in these words:

"* * * I consider government by injunction, unless stopped, the beginning of the end of liberty. Tyranny on the bench is as objectionable as tyranny on the throne. It is even more dangerous, because judges claim immunity from criticism, and foolish people acquiesce in their claims. To enjoin people from assembling peaceably to discuss their wrongs is a violation of first principles."

During October, 1897, Hon. W. H. Moody, now Attorney-General of the United States, in speaking to a large meeting said in part as follows:

"I believe in recent years the courts of the United States, as well as the courts of our own Commonwealth, have gone to the very verge of danger in applying the process of the writ of injunction in disputes between labor and capital."

In his annual address as president of the American Bar Association, in August, 1894, Thomas M. Cooley said:

"Courts with their injunctions, if they heed the fundamental law of the land, can no more hold men to involuntary servitude for even a single hour than can overseers with the whip."

In an address before the Grafton and Coos Bar Association, January 28, 1898, on the question of governing by injunction, J. H. Benton, Jr., a prominent attorney of Boston, said:

"The courts have gone too far. It is impossible for them to go on in the course they have taken and retain the confidence of the people or preserve their own powers."

"It is idle to say that the popular complaint on this subject means nothing, or that, as one judge has said, 'Nobody objects to government by injunction except those who object to any government at all.'"

"It does mean much. It means that the courts have, in the judgment of many of the most intelligent and thoughtful citizens, and of Congress, exceeded their just powers; that they have by the so-called exercise of the equity power, practically assumed to create and to punish offenses upon trial by themselves without a jury, and with penalties imposed at their discretion. And this means that if the courts continue in this course their power to enforce their orders by proceedings for contempt will be limited by legislation. The people will not, and they ought not to, submit to decisions like those in the Northern Pacific and Ann Arbor cases."

A careful perusal of these expressions from such eminent authorities clearly bears out the position taken by the organized workers of our country. That the courts have exceeded their authority in the granting of injunctions in labor disputes is beyond question. In asking Congress for the passage of the Pearre anti-injunction law, we are asking for relief from an obnoxious condition of affairs that has been read into our jurisprudence, in many instances, by judges who are outspoken in their unfriendliness to organized labor. We ask for the passage of this law in the interest of human as well as personal liberty, being fully convinced that in so doing we are within our rights, and that our convictions have been amply borne out by many other legal authorities, which space prohibits us from quoting at this time.

Attempts have been made to have passed into law the bill which would relieve us from these unfair and unjust injunctions that are granted in labor disputes. The matter was called to the attention of the delegates of the thirteenth annual convention of the American Federation of Labor, held in Chicago, Ill., December, 1893, resulting from injunctions that had been issued against the striking printers at Pittsburgh and the United Garment Workers of New York City. That convention instructed the executive council to have a bill drafted and presented to Congress dealing with this evil. Several bills were drafted and introduced in Congress, and extended hearings were given thereon, but with no result.

In 1901, however, the bill that was framed by the attorneys for the American Federation of Labor and referred to the House Judiciary Committee was considered for a considerable period of time by the House Judiciary Committee and was reported from that committee with amendments that practically made it a pro-injunction bill rather than an anti-injunction bill. Notwithstanding that the bill as amended with the pernicious provisions referred to had the prestige of the favorable report of the committee and the advocacy of the most conspicuous leaders of the majority of the House, we opposed its passage. Our position was communicated to the leading representatives of the mi-

nority, and after being stated on the floor of the House the bill as amended was defeated by a vote of yeas 54, nays 145.

In 1902 this bill was again submitted to Congress and was passed by the House of Representatives in its original form. The Senate Judiciary Committee first reported the bill in the manner in which it was passed by the House, but it was subsequently referred back to that committee and amendments made to it which again made it a pro-injunction bill. We opposed the passage of the bill with the amendments and asked that the bill be passed as it originally passed the House, but the late Senator Platt, of Connecticut, was obdurate, and the bill died on the Senate Calendar.

In 1904 the bill was again introduced and extended hearings were given thereon. The same interests that had been opposing the eight-hour bill also appeared in opposition to this bill and scoured the country high and low to bring witnesses in opposition to it. In this Congress the committee failed to take action on the bill and no report was made on it.

In the Fifty-ninth Congress numerous bills on the subject of injunctions were introduced, and the American Federation of Labor endorsed the bill introduced by Representative PEARRE, of Maryland. Another bill was introduced by Representative Little, which, instead of prohibiting the use of injunctions in labor disputes, attempted to regulate the matter by legalizing these injunctions. Both these bills are now pending before the House Committee on the Judiciary, no action having been taken during the last session of Congress.

It is now some thirteen years since this matter has been drawn to the attention of Congress and relief asked for, but up to the present time nothing has been done.

The American Federation of Labor favors the bill as drafted by our attorneys and introduced into Congress by Representative PEARRE, of Maryland, and is decidedly opposed to the bill now pending before the committee known as the "Little" or "Administration bill." The difference between the two bills is tersely stated in the editorial comments of President Gompers as published in the September issue of the American Federationist, and are as follows:

"If the courts are the most important factors in our Government for the preservation, rights, and liberties of the people, is not that rather a reflection upon Congress? Labor asks and insists upon a constitutional guaranty of the laborer's equity before the law, with other citizens, because it has found by experience that it is often discriminated against. Injunctions against which labor protests are those issued against them as a class, and our bill (PEARRE) to limit the power of the courts in issuing the injunctions will obviate the abuses to which Mr. CRUMPACKER refers and restore the principle of equality before the law."

"In labor disputes the issuance of injunctions is an invasion of personal liberty and freedom. There is not now in any of the statutes of the United States any provision authorizing the issuance of injunctions in such cases, and the bill introduced in the last Congress, known as the 'Little' or 'Administration bill,' if enacted into law, would be the first statutory provision authorizing the issuance of injunctions in labor disputes."

The following correspondence between Mr. Samuel Gompers, president of the American Federation of Labor, and Hon. CHARLES N. BRUMM, a Representative from Pennsylvania, demonstrates that the workingmen are wide awake and will hold that party responsible for the failure to pass remedial legislation which, having a majority and therefore the power to pass any measure it desired, failed to give workingmen and farmers the legislation they asked for and were entitled to.

I quote the correspondence:

WASHINGTON, D. C., April 30, 1908.

MR. SAMUEL GOMPERS,
Briggs House, Chicago, Ill.

DEAR SIR: Referring to the suggestion by you as to the status of legislation, I wish to say that I solemnly protest against the proposed early adjournment of Congress, as it will be impossible to act upon and pass such legislation as is demanded by the people and asked for by the President.

I will be willing to join with others to insist upon the several bills being brought out of the committees and acted upon promptly.

There is no disguising the fact that Speaker CANNON intended to prevent legislation on these lines by referring the President's message and other bills to the Congressional crematory, known as the "Judiciary Committee."

Very truly, yours,

C. N. BRUMM, M. C.,
Twelfth District, Pennsylvania.

CHICAGO, ILL., May 2, 1908.

HON. CHAS. N. BRUMM,
Member of Congress, Twelfth District of Pennsylvania,
House of Representatives, Washington, D. C.

DEAR SIR: Having business of importance in this city and vicinity for a few days, your favor of April 30 was forwarded to me here, the receipt of which I gladly acknowledge, and perused it with the greatest interest.

It is because I know you are concerned in the necessary legislation in the interest not only of labor, but of all our people, that I asked you as to the status of legislation in Congress. Your answer justifies the position which, together with others, I took before the election of Mr. CANNON to the Speakership of the present Congress and since. Mr. CANNON is the embodiment, and in himself represents all that is antagonistic to the protection and reformatory legislation demanded by the people of our country.

You will remember that an effort was made to arouse the Republican Members of this Congress to elect another than Mr. CANNON as Speaker; you have not forgotten the gusto with which they "unanimously" nominated and then elected him to show "that man Gompers" that "Uncle JOE" CANNON has the entire confidence of "all" the Republican Members of Congress. These Republican Congressmen and the newspapers which belabored and derided me because I knew the "genial Uncle JOE" and "the interests" for which he stood can now realize the position in which labor and the people generally are placed by Speaker CANNON and his small coterie of beneficiaries; how he packs the committees and blocks the passage of legislation which even Republicans, the newspapers, and labor—aye, the people generally—require even for their ordinary, as well as imperative, needs.

It is gratifying to know that you are willing to join with others to insist upon the several important measures being brought out of the committees and promptly acted upon by the House. There is no

doubt in my mind that it is the duty of those Members who believe with you to at least make the effort to crystallize that thought into action.

From my knowledge of the Members of the House I am fully persuaded that there are enough Members of the majority who would act with the minority Members on the necessary bills to secure their passage and have them go over for the Senate's action before the adjournment of this session of Congress.

Aye, with you I join in protest against adjournment of Congress before these measures are enacted. There is no reason for adjournment before legislation for the protection and restoration of natural human rights of the toilers and of the people, of which they have been shorn by the interpretation by the courts of the Sherman antitrust law; by the abuse of the beneficent writ of injunction denying to the workers the constitutional right of equity before the law—unless the Members of the House, responsible for legislation or failure of legislation, are more concerned with "the interests," with politics, than with broad and enlightened statesmanship to conserve human liberty and freedom to maintain for all time the underlying principles which form the theory and basis of our Republic.

Surely no one will be fooled should Congress adjourn early to avoid the passage of the important measures which are awaiting consideration and action. Those Members who are responsible for legislation or its failure, who vote for adjournment before the enactment of these measures, may imagine themselves in a fool's paradise, but I am quite confident that the people will hold them responsible for the vote to adjourn equally as though they had voted against the measures to which I refer. In the name of labor, in the interest of all our people, we urge and must insist upon the enactment of—

The Wilson bill (H. R. 20584) amending the Sherman antitrust law; The Pearre bill (H. R. 94) regulating the issuing of the injunctive writ to its original and beneficent purpose;

The extension of the eight-hour law to all Government employees and to employees of contractors or subcontractors performing work for the Government; and

A general employers' liability law applicable to all workers, so far as the Federal jurisdiction extends.

The above measures are specifically mentioned because they are some of the most important to the needs of the workers of our country, the workers who by their very numbers and the service they render to society are the most important, necessary, and patriotic citizens of our Republic and upon whom in the last analysis must devolve the mission to secure, maintain, and perpetuate true freedom for all our people, now and for all time to come.

You know I speak neither as a Republican, a Democrat, nor as a member of any other political party, but rather as the representative of the organized wage-workers of America. And it may, perhaps, not be amiss to add that to a very large extent the organized labor movement represents the hopes and aspirations of even the unorganized men and women of labor. Nor is it out of place to state that there is a constantly growing conviction among a large part of the thinking men of our country that the demands which labor makes upon Congress, and upon society as a whole, forms the cogent, reasonable, evolutionary movement for justice, right, and progress.

The wage-workers and the farmers' organizations, as well as masses of other right-thinking Americans, now have their eyes and thoughts directed to Congress as perhaps never before. They are not likely to take fair Congressional promises for the future in the place of refusal to perform peremptory and plain duty now.

The toiling masses of our country and their friends are thinking and propose to act more independently, industrially, and politically than at any time in the past. They propose to stand by their friends and advocates and elect them; to oppose those who are indifferent or hostile to their interests, rights, and welfare, and defeat them. And this independent thinking and acting applies not only to candidates for Congress, but to all who aspire to public preferment, from candidates for the great office of President, down.

Very truly, yours,

SAMUEL GOMPERS,
President American Federation of Labor.

The following documents and circulars issued by the American Federation of Labor show clearly that labor is aroused and active, and will insist upon its political rights with all the energy it possesses:

AMERICAN FEDERATION OF LABOR,
Washington, D. C., March 18, 1908.

ADDRESS TO WORKERS.

TO ORGANIZED LABOR AND FARMERS' ASSOCIATIONS, GREETING:

The "protest conference" of the representatives of the workers of our country assembled in Washington, D. C., on March 18, 1908, will probably go down in history as the greatest gathering ever held to solemnly voice the protest of the people against the denial of the rights of the workers by the judiciary. This conference will be memorable also for the declaration and action looking toward the upholding and defending of the rights of all our people.

There were gathered in this conference the responsible executive officers of 118 national and international trade unions; assembled with them in hearty agreement were representatives of the Farmers' American Society of Equity and also officers of railway brotherhoods. No more representative and responsible gathering of the men of labor, we believe, was ever brought together in the effort to voice the just protest and laudable aspirations of the workers of our country.

The deliberations of our conference, which occupied two full days, were preceded by a two days' session of the executive council of the American Federation of Labor. The proceedings were marked by the utmost harmony. There was indeed the intensity of feeling which so grave a situation must evoke; there was also an unbounded enthusiasm, a grim earnestness of purpose, and a firm determination that the work initiated by this conference should not cease until the wrongs from which the workers suffer shall be righted and their liberties which have been imperiled shall be restored and forever safeguarded.

Our consideration of the circumstances which made this conference imperative was characterized by the utmost freedom of expression. It was felt that in the consensus of opinion and feeling brought forth by the representatives of so many trades and callings from all sections of the country there could not fail to be much that would be helpful in guiding our deliberations and of service to our fellow-workers. It is our hope that every worker and every friend of the workers will realize and feel as we do the seriousness of the crisis which we now

face and that all will be animated by the earnestness, the loyalty, and enthusiasm which was so marked among the representatives assembled.

While the Supreme Court or other institutions may be able to temporarily retard and seriously embarrass the growth and action of our movement, we boldly assert that no power on earth can destroy, successfully outlaw, or disrupt the trade-union movement.

Meetings have been held in various parts of the country and resolutions adopted and forwarded to American Federation of Labor headquarters urging prompt and vigorous action. The suggestions submitted were various in detail, but all characterized by the earnest desire that labor should take steps at once to exercise its fullest activities in every possible direction in order that relief may be obtained from the present intolerable situation.

In this conference we, your representatives, realized the serious responsibility resting upon us, not only to voice adequately the feeling of outraged indignation on the part of the workers at the deprivation of their rights and liberties involved in the law as interpreted by recent court decision, but the even more important task of initiating and aiding in carrying toward a successful fulfillment the constructive and active work which shall deliver the workers from the present and impending danger and insure them the restoration of their rights and liberties and secure enjoyment in the future of the inalienable rights guaranteed by our Constitution.

A large part of our deliberations were naturally devoted to a discussion of the Supreme Court's action in applying the Sherman antitrust law to labor.

All agreed upon the necessity of immediate Congressional action if the serious consequences and threatened dangers to labor and the wealth producers of our country are to be averted.

The following amendment to the Sherman antitrust law had already been drawn up and agreed upon by the executive council, acting with the legal advisors of the American Federation of Labor. This is designed to relieve labor from the harmful operation of the Sherman antitrust law which never intended to apply to it.

"That nothing in said act (Sherman antitrust law), or in this act, is intended, nor shall any provision thereof hereafter be enforced so as to apply to organizations or associations not for profit and without capital stock, nor to the members of such organizations or associations."

"That nothing in said act (Sherman antitrust law), or in this act, is intended, nor shall any provision thereof hereafter be enforced so as to apply to any arrangements, agreements, or combinations among persons engaged in agriculture or horticulture made with a view of enhancing the price of their own agricultural or horticultural products."

This amendment was carefully considered in conference and met with enthusiastic, hearty, and unanimous approval.

It was the unanimous feeling that some special steps should be taken to impress upon Congress the necessity of prompt action upon the Sherman antitrust law amendment and upon other important labor legislation now pending, namely:

"The bill to regulate and limit the issuance of injunctions—" Pearre bill."

Employers' liability bill.

The bill extending the application of the eight-hour law to all Government employees, and those employed upon work for the Government, whether by contractors or subcontractors.

Your representatives prepared the protest which you will find accompanying this, and delivered the same to Speaker CANNON of the House, and Vice-President FAIRBANKS, President of the Senate.

As to the effect of our solemn protest representing the desires and needs of our fellow-workers and their friends, we can not at this time state, but we believe that Congress appreciates the gravity of the situation. In our protest we endeavored, while preserving a courteous and dignified form of address, to make it entirely clear to Congress that organized labor is in no mood to be trifled with. It means business. We truly believe that in this protest we stated very conservatively to Congress the intense feeling of anxiety and apprehension which agitates the workers of the country and their sympathizers.

Without doubt the presentation of labor's protest by our accredited representatives did much to convince the country at large that labor expects of Congress the relief which is within the power of the law-making department of Government, and expects it from this session of the present Congress.

The Supreme Court decision applying the Sherman law to labor makes the crisis an especially grave one, for under that decision every normal, peaceful, and helpful activity of the workers, whether exercised individually or in association, may be construed as a "conspiracy" or a combination in restraint of trade and commerce, and punished by fine and imprisonment, or both, and damages may be inflicted to the extent of each individual's possessions.

Every legitimate pressure must now be brought to bear upon Congress in the effort to secure the passage of our amendment to the Sherman law.

Hold mass meetings in every city and town in the United States on the evening of the third Sunday or Monday in April, 19 or 20, and at that meeting voice fully and unmistakably labor's protest against the Supreme Court decision which strips labor of the rights and liberties which we had supposed were guaranteed by the Constitution. Resolutions should be adopted urging upon the present Congress the passage of the amendment to the Sherman law and warning Congress that it will be held responsible for failure to enact such legislation.

Labor should spare no activity to impress upon Congress its insistent demand for the passage of this amendment.

In addition to the holding of the mass meeting of April 19 or 20, and on such other dates as may be fixed in future, and the forwarding of resolutions expressing labor's protest and determination, every member of organized labor should write a personal letter to the Congressman of his district and to the two United States Senators of his State, insisting that they use their efforts and cast their vote for the passage of our amendment to the Sherman law and other legislation mentioned in labor's protest, and warning them that labor and its friends will hold them responsible; that labor proposes to be represented in Congress by men who will do justice to the workers and all the people; that it proposes to exercise every political and industrial activity to this end; that upon the record of this Congress will be based the workers' decision as to a candidate's future desirability as a Member of Congress.

Get every friend of labor to write a personal letter of this character. Let it be brief, but to the point, and keep a record of the resolutions and letters forwarded.

We hope most earnestly for the passage of the measures we have urged; but should Congress fail to do its duty we will, by following this method, be able to place the responsibility upon those who have failed to do justice to labor when it lay within their power.

We deem it essential for the successful accomplishment of the plan set forth in the foregoing that local unions, city, central, and State federations, follow closely the line of action outlined by this conference and such further plans as may be promulgated by the executive council or by future conferences, so that our strength and influence may not be frittered away by different lines of action.

We have appealed to Congress for the necessary relief we deem essential to safeguard the interests and rights of the toilers.

We now call upon the workers of our common country to stand faithfully by our friends,

Oppose and defeat our enemies, whether they be Candidates for President,

For Congress, or other offices, whether Executive, legislative, or judicial.

Each candidate should be questioned and pledged as to his attitude upon all subjects of importance to the toilers, whether in factory, farm, field, shop, or mine.

We again renew and hereby declare our complete and abiding faith in the trade-union movement to successfully accomplish the amelioration of economic conditions befitting all of our people. The historical past of our movement, its splendid achievements in labor's behalf, and magnificent present standing warrants the assertion and justifies our prediction for its future success.

We, the representatives of the national and international trade unions and farmers' organizations, represented in this conference, call upon the executive council and upon all labor to use every possible legitimate effort to secure for the workers their inalienable liberties and their proper recognition as a vital portion of the fabric of our civilization. We pledge ourselves to use every lawful and honorable effort to carry out the policy agreed upon at this conference. We pledge our industrial, political, financial, and moral support to our own members and to our friends wherever found, not only for the present time, but for the continuous effort which may be necessary for success. We pledge ourselves to carry on this work until every industrial and political activity of the workers is guaranteed its permanent place and usefulness in the progress of our country.

Let labor not falter for one instant; the most grave and momentous crisis ever faced by the wage-workers of our country is now upon us.

Our industrial rights have been shorn from us and our liberties are threatened.

It rests with each of us to make the most earnest, impressive, and law-abiding effort that lies within our power to restore these liberties and safeguard our rights for the future if we are to save the workers and mayhap even the nation itself from threatened disaster.

This is not a time for idle fear.

Let every man be up and doing. Action consistent, action persistent, action insistent is the watchword.

REPRESENTATIVES OF NATIONAL AND INTERNATIONAL UNIONS AND FARMERS' ORGANIZATIONS WHO INDORSED AND SIGNED THE ABOVE PROTEST.

Samuel Gompers, president; James Duncan, first vice-president; John Mitchell, second vice-president; James O'Connell, third vice-president; Max Morris, fourth vice-president; D. A. Hayes, fifth vice-president; Daniel J. Keefe, sixth vice-president; William D. Huber, seventh vice-president; Joseph F. Valentine, eighth vice-president; Frank Morrison, secretary; John B. Lennon, treasurer—executive council American Federation of Labor.

George L. Berry, Norman C. Sprague, International Printing Pressmen's Union.

Joseph F. Valentine, John P. Frey, Iron Molders' Union of North America.

G. M. Huddleston, International Slate and Tile Roofers' Union.

Richard Braunschweig, Amalgamated Wood Workers' International Union.

Charles R. Atherton, A. B. Grout, Metal Polishers, Buffers, Platers, and Brass Workers' Union.

Jere L. Sullivan, J. F. McCarthy, T. J. Sullivan, Hotel and Restaurant Employees' International Alliance.

W. R. Fairley, Thomas Haggerty, United Mine Workers' of America.

A. McAndrews, E. Lewis Evans, Tobacco Workers' International Union.

W. F. Costello, H. T. Rogers, International Steam and Hot Water Fitters and Helpers' Union.

James O'Connell, Arthur E. Holder, A. McGilray, International Association of Machinists.

M. O'Sullivan, Thomas F. Ryan, Amalgamated Sheet Metal Workers' International Alliance.

J. E. Pritchard, International Pavers and Rammer Men.

Thomas T. Maher, Amalgamated Sheet Metal Workers' International Alliance.

J. L. Feeney, J. B. Espey, M. J. Kelly, International Brotherhood of Bookbinders.

C. M. Bennett, O. D. Pauley, American Society of Equity.

Timothy Healy, N. A. James, F. M. Nourse, International Brotherhood of Stationary Firemen.

Rezin Orr, W. D. Mahon, Amalgamated Street and Electric Railway Employees.

John A. Moffitt, Martin Lawlor, United Hatters of North America.

J. W. Kline, H. G. Poulesland, J. M. Cox, International Brotherhood of Blacksmiths and Helpers.

F. M. Ryan, Bridge and Structural Iron Workers' International Association.

William J. Barry, Pilots' Association.

W. W. Beattie, Wesley Russell, Percy Thomas, Commercial Telegraphers' International Union of America.

A. B. Lowe, J. E. Davenport, A. B. Wilson, International Brotherhood of Maintenance of Way Employees.

M. J. Shea, James J. Freel, International Stereotypers and Electrotypers' Union.

James L. Gernon, James Wilson, Pattern Makers' League of North America.

J. M. McElroy, Brush Makers' International Union.

T. A. Rickert, B. A. Larger, United Garment Workers of America.

M. Zuckerman, H. Hinder, United Cloth Hat and Cap Makers of North America.

H. B. Perham, A. T. McDaniel, W. J. Gregory, J. H. Williams, Order of Railroad Telegraphers.

Frank Gehring, Lithographers' International Protective and Beneficial Association.

J. F. Murphy, International Union of Elevator Constructors.

John H. Brinkman, Carriage and Wagon Workers' International Union.

P. F. Richardson, International Car Workers.

John Weber, Bakery and Confectionery Workers' International Union.

James H. Hatch, Upholsterers' International Union.

AMERICAN FEDERATION OF LABOR ENDEAVORS TO UNITE ALL CLASSES OF WAGE-WORKERS UNDER ONE HEAD THROUGH THEIR SEVERAL ORGANIZATIONS TO THE END—

1. That class, race, creed, political, and trade prejudices may be abolished.

2. That support, moral and financial, may be given to each other.

It is composed of international, national, State, central, and local unions, representing the great bulk of organized labor in the United States and Canada.

It gives to any organization joining its ranks recognition in the labor field in all its phases.

It secures in cases of boycotts, strikes, lockouts attentive hearing before all affiliated bodies, and it renders financial aid to the extent of its ability.

It is not a moneyed institution. It allows each organization to control its own funds; to establish and expend its own benefits without let or hindrance.

It aims to allow—in the light of experience—the utmost liberty to each organization in the conduct of its own affairs consistent with the generally understood principles of labor.

It establishes intercommunication, creates agitation, and is in direct and constant correspondence with a corps of representative organizers throughout the country.

It watches the interests of the workers in National Congress; it indorses and protests in the name of labor, and has secured vast relief from burdensome laws and Government officials.

It is in communication with reformers and sympathizers in almost all classes, giving information and enlisting their cooperation.

It assembles once a year all classes of wage-earners in convention to exchange ideas and methods, to cultivate mutual interest, to secure united action, to speak for labor, to announce to the world the burdens, aims, and hopes of the workers.

It asks—yea, demands—the cooperation of all wage-workers who believe in the principle of unity, and that there is something better in life than long hours, low wages, lack of employment, and all that these imply.

ITS EXISTENCE IS BASED UPON ECONOMIC LAW, TO WIT—

That no particular trade can long maintain wages above the common level.

That to maintain high wages all trades and callings must be organized.

That lack of organization among the unskilled vitally affects the organized skilled.

That general organization of skilled and unskilled can only be accomplished by united action. Therefore federation.

AGAIN—

That no one particular locality can long maintain high wages above that of others.

That to maintain high wages all localities must be organized.

That this can best be done by the maintenance of national and international unions.

That any local union which refuses to so affiliate is inconsistent, nonunion, and should be "let alone."

That each national or international union must be protected in its particular field against rivals and seceders. Therefore federation. That the history of the labor movement demonstrates the necessity of a union of individuals, and that logic implies a union of unions—federation.

It is now generally admitted by all really educated and honest men that a thorough organization of the entire working class, to render employment and the means of subsistence less precarious, by securing an equitable share of the fruits of their toil, is the most vital necessity of the present day.

To meet this urgent necessity, and to achieve this most desirable result, efforts have been made too numerous to specify and too divergent to admit of more than the most general classification. Suffice it to say that those attempts at organization which admitted to membership the largest proportion of others than wage-workers were those which went the most speedily to the limbo of movements that won't move; while, of the surviving experiments, those which started with the most elaborate and exhaustive platforms of abstract principles were those which got the soonest into fatal complications and soonest became exhausted.

In the face of so many disastrous failures to supply the undoubtedly existing popular demand for a practical means of solving the great problem, the question naturally suggests itself to many: "Which is the best form of organization for the people, the workers?"

We unhesitatingly answer: "The organization of the working people, by the working people, for the working people—that is, the trade unions."

The trade unions are the natural growth of natural laws, and from the very nature of their being have stood the test of time and experience. The development of the trade unions, regarded both from the standpoint of numerical expansion and that of practical working, has been marvelously rapid. The trade unions have demonstrated their ability to cope with every emergency—economical or political—as it arises.

It is true that single trade unions have been often beaten in pitched battles against superior forces of united capital, but such defeats are by no means disastrous. On the contrary, they are useful in calling the attention of the workers to the necessity of thorough organization, of the inevitable obligation of bringing the yet unorganized workers into the union, of uniting the hitherto disconnected local unions into national unions, and of effecting a yet higher unity by the affiliation of all national and international unions in one grand federation, in which each and all trade organizations would be as distinct as the billows, yet one as the sea.

In the work of the organization of labor, the most energetic, wisest, and devoted, when working individually, can not hope to be successful, but by combining efforts, all may. And the combined action of all the unions when exerted in favor of any one union will certainly be more efficacious than the action of any one union, no matter how powerful it may be, if exerted in favor of an unorganized or a partially organized mass.

We assert that it is the duty, as it is also the plain interest, of all working people to organize as such, meet in council, and take practical steps to effect the unity of the working class, as an indispensable preliminary to any successful attempt to eliminate the evils of which we, as a class, so bitterly and justly complain. That this much-desired unity has never been achieved is owing in a great measure to the non-recognition of the autonomy, or the right of self-government, of the several trades. The American Federation of Labor, however, avoids the fatal rock on which previous organizations, having similar aims, have split, by simply keeping in view this fundamental principle as a landmark, which none but the most infatuated would have ever lost sight of.

AMERICAN FEDERATION OF LABOR—A FEW OF ITS DECLARATIONS UPON WHICH IT APPEALS TO ALL WORKING PEOPLE TO ORGANIZE, UNITE, FEDERATE, AND CEMENT THE BONDS OF FRATERNITY.

The abolition of all forms of involuntary servitude, except as a punishment for crime.

Amending the Sherman antitrust law to rescure to the workers the lawful right to personal freedom and the right to unite to protect and promote their personal freedom.

Free schools, free text-books, and compulsory education.

Unrelenting protest against the issuance and abuse of injunction process in labor disputes.

A workday of not more than eight hours in the twenty-four hour day.

A strict recognition of not over eight hours per day on all Federal, State, or municipal work and at not less than the prevailing per diem wage rate of the class of employment in the vicinity where the work is performed.

Release from employment one day in seven.

The abolition of the contract system on public work.

The municipal ownership of public utilities.

The abolition of the sweat-shop system.

Sanitary inspection of factory, workshop, mine and home.

Liability of employers, for injury to body or loss of life.

The nationalization of telegraph and telephone.

The passage of anti-child labor laws in States where they do not exist and rigid defense of them where they have been enacted into law.

Woman suffrage coequal with man suffrage.

Suitable and plentiful playgrounds for children in all cities.

The initiative and referendum and the imperative mandate and right of recall.

Continued agitation for the public-bath system in all cities.

Qualifications in permits to build, of all cities and towns, that there shall be bathrooms and bathroom attachments in all houses or compartments used for habitation.

We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain.

We favor a system of United States Government postal savings banks. The above is a partial statement of the demands which organized labor, in the interest of the workers—aye, of all the people of our country—makes upon modern society.

Higher wages, shorter workday, better labor conditions, better homes, better and safer workshops, factories, mills, and mines. In a word, a better, higher, and noble life.

Conscious of the justice, wisdom, and nobility of our cause, the American Federation of Labor appeals to all men and women of labor to join with us in the great movement for its achievement.

More than two million wage-earners who have reaped the advantages of organization and federation appeal to their brothers and sisters of

toll to unite with them and participate in the glorious movement with its attendant benefits.

There are affiliated to the American Federation of Labor 118 international trade unions with their 27,000 local unions, 36 State federations, 537 city central bodies, and 650 local trade and Federal labor unions having no internationals.

We have nearly 1,000 volunteer and special organizers, as well as the officers of the unions and of the American Federation of Labor itself, always willing and anxious to aid their fellow-workmen to organize and in every other way better their conditions.

For information all are invited to write to the American Federation of Labor headquarters at Washington, D. C.

Wage-workers of America, unite!

TRADE UNIONS.

Foster education and uproot ignorance.

Shorten hours and lengthen life.

Raise wages and lower usury.

Increase independence and decrease dependence.

Develop manhood and balk tyranny.

Establish fraternity and discourage selfishness.

Reduce prejudice and induce liberality.

Enlarge society and eliminate classes.

Create rights and abolish wrongs.

Lighten toil and brighten man.

Cheer the home and fireside and

MAKE THE WORLD BETTER.

All wageworkers should be union men. Their progress is limited only by them who hold aloof. Get together, agitate, educate, and do.

Don't wait until to-morrow; to-morrow never comes.

Don't wait for some one else to start; start it yourself.

Don't hearken to the indifferent; wake them up.

Don't think it impossible; 2,000,000 organized workers prove different.

Don't weaken; persistence wins.

Workers, citizens generally, do your duty in this crisis, in this struggle for human liberty. Vote for those candidates who stand, and will stand firmly for H. R. 20584 (Wilson bill), H. R. 94 (Pearre anti-injunction bill), eight-hour law extension to workmen employed by contractors or subcontractors doing work for the Federal Government, and the general employers' liability bill. Vote against and defeat those candidates who, by their past course or present attitude, are opposed to these measures and their essential features.

Nothing is more important in this campaign for all our people than the above measures, to secure for all time the freedom of the laborer.

In the liberty of the workers is involved the freedom of the people.

Hail to labor! Organize and stand together! (Wendell Phillips.)

WISACRE FINDINGS—CANDID THOUGHTS OF EXPERIENCED MEN ON THE TRADE UNIONS.

Thank God we have a system of labor where there can be a strike. Whatever the pressure, there is a point where the workingman may stop. (President Lincoln in a speech at Hartford, 1860, referring to the New England shoeworkers' great strike.)

Toilers, organize. Let us carry on the good work, and in a few more revolutions of the earth upon its axis we shall have a better world—a better mankind. Waiting will not accomplish it; deferring till another time will not secure it. Now is the time for the workers of America to come to the standard of their unions and to organize as thoroughly, completely, and compactly as is possible. Let each worker bear in mind the words of Longfellow:

"In the world's broad field of battle,
In the bivouac of life,
Be not like dumb, driven cattle!
Be a hero in the strife!"

"I look to the trade unions as the principal means for benefiting the condition of the working classes." (Thorold Rogers, Professor of Political Economy, University of Oxford.)

Organized labor is wielding an influence upon every public question never attained before. The world's thinkers are now beginning to appreciate the fact that the demands of labor mean more than appears on the surface. They see that the demand for work is not alone one for the preservation of life in the individual, but is a human, innate right; that the movement to reduce the hours of labor is not sought to shirk the duty to toil, but the humane means by which the workless workers may find the road to employment; and that the millions of hours of increased leisure to the overtasked workers signify millions of golden opportunities for lightening the burdens of the masses, to make the homes more cheerful, the hearts of the people lighter, their hopes and aspirations nobler and broader.

"Capital is the fruit of labor, and could not exist if labor had not first existed. Labor, therefore, deserves much the higher consideration." (Abraham Lincoln.)

Let us concentrate our efforts to organize all the forces of wage labor and, within the ranks, contest fairly and openly for the different views which may be entertained upon the different steps to be taken to move the grand army of labor onward and forward. In no organization on earth is there such toleration, so great a scope, and so free a forum as inside the ranks of the American Federation of Labor, and nowhere is there such a fair opportunity afforded for the advocacy of a new or brighter thought.

"I rejoice at every effort workingmen make to organize. * * * I hail the labor movement. It is my only hope for democracy. * * * Organize and stand together. Let the nation hear a united demand from the laboring voice." (Wendell Phillips.)

The trade unions are the reflects in organized, crystallized form of the best thought, activity, and hopes of the wage-workers. They represent the aggregate expression of discontent of labor with existing economic, social, and political misrule. The trade unions are exactly what the wage-workers are, and can be made exactly what they please to make them. Active or sluggish; keen or dull; narrow or broad gauged—just as the members are intellectual or otherwise. But, represent as they may either of these alternatives, the trades union is the best form of organization for the toilers to protect their present interests, as well as to work out their salvation from all wrong.

In politics we shall be as we always have been, independent. Independent of all parties, regardless under which name they may be known. The only interest we shall have in either is their real, not merely their avowed, attitude toward labor. We shall endeavor to aid in exposing the folly of being a union man three hundred and

sixty-four days in the year and failing to remember the union man's duty on election day. But we shall unqualifiedly oppose the attempt to impress the thought upon the workmen that so long as they "vote right" on one day in the year they may be remiss in their membership and all their other duties every other day in the year.

It is clear that the working people of the State (New York) have reaped innumerable benefits through the influence of the associations devoted to their interests. Wages have been increased, working time has been reduced, the membership rolls have been largely augmented, distressed members have received pecuniary relief, general conditions have been improved, and labor has been elevated to a high position in the social scale. (Commissioner Dowling in report from Bureau of Labor Statistics.)

To-day, in the midst of an appalling amount of enforced idleness and misery among the organized forces of labor in the industrial centers of the world, the first rumblings can be heard of the rallying cry, "eight hours for work, eight hours for rest, eight hours for what we will."

To-day we repeat what we have claimed in good and bad times, that the simplest condition by which the social order can be maintained is by a systematic regulation of the workday to insure to each and all an opportunity to labor.

"For ten years," said Potter Palmer, of Chicago, "I made as desperate a fight against organized labor as was ever made by mortal man. It cost me considerably more than a million dollars to learn that there is no labor so skilled, so intelligent, so faithful as that which is governed by an organization whose officials are well-balanced, level-headed men. * * * I now employ none but organized labor, and never have the least trouble, each believing that the one has no right to oppress the other."

Labor is capital. Labor has the same right to protect itself by trade unions, etc., as any other form of capital might claim for itself. (Cardinal Manning.)

That the American Federation of Labor most firmly and unequivocally favors the independent use of the ballot by the trade-unionists and workmen, united regardless of party, that we may elect men from our own ranks to make new laws and administer them along the lines laid down in the legislative demand of the American Federation of Labor, and at the same time secure an impartial judiciary that will not govern us by arbitrary injunctions of the courts, nor act as the plant tools of corporate wealth.

That as our efforts are centered against all forms of industrial slavery and economic wrong, we must also direct our utmost energies to remove all forms of political servitude and party slavery, to the end that the working people may act as a unit at the polls of every election. (Political action—Declaration convention American Federation of Labor.)

We reaffirm as one of the cardinal principles of the trade-union movement that the working people must unite and organize, irrespective of creed, color, sex, nationality, or politics. (Thorough unity—Declaration convention American Federation of Labor.)

It is eminently dangerous and destructive to the best interests of the individual wageworker to proceed as if there were no other wage-workers; and infinitely to his advantage to seek for and adopt measures by which he may move so as not to jar and perhaps overturn himself as well as others. * * * We declare that not only are organizations of workmen right and proper, but that they have the elements, if wisely administered, of positive advantage and benefit to the employer. (National Association of Builders.)

To speak of a union as "the union," meaning something apart from ourselves, is a misnomer. "Our union" is more to the point. It is as we make it, and it can not rise higher than its units. But yet we have fashioned it fairly well. Our union, like any other human agency, occasionally makes mistakes, but in comparison it will show advantageously with any institution of the kind, either benevolent, religious, or social. Its road has been a rocky one, but it has grown all the stronger and healthier for the knocks it has received. In its early days, derided by press and pulpit, persecuted by monopoly, laughed at by politicians and buffeted now by panicky gales or bayoneted again by militia, our union has marched serenely on, bringing down its tormentors, making supplicants of its enemies. In the past decade, thanks to the veterans who have gone on before, unwritten and unsung, our union has seen a mighty change. The columns of the press thrown open, searching, competing for its doings; academicians, science, art, espousing its cause, the church rapping at the door for admission; popular magazines, dramatists, novelists adopting its rôle, courting its favor. Our union to-day is a determining factor in all social functions, a main artery of the pulse of trade, of commerce, of society. It raises wages, prevents reductions, and checks strikes and lockouts from the mere fact that it is. It promotes fraternity, sociability; it fosters temperance and liberality. Above all, it is an educational force. Our union is out on sectionalism; it is the embodiment of democracy; it knows no creed, rank, nor title. It scoffs at the cheap snobbery of wealth and rejects its charity; for the self-styled "sets" and "upper tens" it has a healthy contempt, and upon the tinsel and brass of their striped defenders it bestows its scorn. Our union is of the people. We glory in its achievements, and we love its principles.

Organization, coordination, cooperation, are the right of every body of men whose aims are worthy and equitable; and must needs be the resource of those who, individually, are unable to persuade their fellow-men to recognize the justice of their claims and principles. If employed within lawful and peaceful limits, it may rightly hope to be a means of educating society in a spirit of fairness and practical brotherhood. (Bishop Potter.)

The trades union! That takes the individual, oftentimes careless of his obligations to his fellow-man, ignorant of the very causes of the evils under which he labors, and works within him a revolution; fans to life the good that lies dormant in his nature, that moral sense which all possess; that makes of him an enthusiast—a man—with new views, greater aspirations, and nobler desires; a loftier purpose, a grander conception of society and life; that shows things in a different light, and awakens him to the fact that no matter what his occupation, how low his station, he is entitled to an opportunity to earn an honest livelihood, and no man can justly call himself master, notwithstanding wealth, gifts of birth—a generated spirit of independence and self-reliance that is the trade-union's pride and honor and which is the hope and safeguard of all civilization. True patriotism, not that hybrid brand too often sung to-day by the very class that persecuted the patriots of old, who would make slaves of free-men here. The trade union is right, and it is this sense of right that has defied the decrees of kings and priests in the past and which, while suffering, defies the rulings of courts, judges, and blacklisting corporations to-day. It lives both because of and in spite of them, and it will continue to live when its enemies sleep. Justice is its

goal, and it seeks not a definition of that holy word in musty statutes and befogged legal opinions. It opens its eyes and sees the word written on the very face of things, so that he who runs may read, and it decorates the thought in becoming, simple attire, truth in terms, fair play in action, "Do unto others as you would be done by."

Trade unions are the bulwarks of modern democracies. (W. E. Gladstone.)

If the labor unions did nothing else than call attention to the misery that abounds, their existence would be justifiable; but they have done more. They have not only called attention to the effects; they have shown the causes. They have done more still; they have produced remedies, upon the merits and demerits of which professors, editors, and ministers now discuss and advocate. Labor unions have produced thinkers and educators from out their own ranks, and have drawn students and teachers from the wealthy and professional. And more yet; while doing this, they have bettered the condition of thousands of families by securing higher wages, shorter hours, and greater independence, individually and collectively. The result is something to be proud of. The carpenter, the printer, cigarmaker, clerk, shoemaker, tailor, working long hours on short rations, have stepped boldly to the front and worked revolution in American thought. It is a fact beyond cavil.

No wage-earner is doing his full duty if he fails to identify his own interests with those of his fellow-workmen. The obvious way to make common cause with them is to join a trade union, and thus secure a position from which to strengthen organized labor and influence it for the better. (Ernest Howard Crosby, president Social Reform Club, New York.)

Attacked and denounced as scarcely any other institution ever has been, the unions have thriven and grown in the face of opposition. This healthy vitality has been due to the fact that they were a genuine product of social needs—indispensable as a protest and a struggle against the abuses of industrial government, and inevitable as a consequence of that consciousness of strength inspired by the concentration of numbers under the new conditions of industry. They have been, as is now admitted by almost all candid minds, instruments of progress. Not to speak of the material advantages they have gained for workingmen, they have developed powerful sympathies among them and taught them the lesson of self-sacrifice in the interest of their brethren, and, still more, of their successors. They have infused a new spirit of independence and self-respect. They have brought some of the best men to the front and given them the ascendancy due to their personal qualities and desirable in the interests of society. (John J. Ingram, LL. D.)

A principle in the economy of our lives must be established, and that is a living wage, below which the wage-workers should not permit themselves to be driven. The living wage must be the first consideration either in the cost or sale of an article, the product of labor.

There are many "isms" advanced for the solution of the labor problem, the appellations of which, if not the substance, are familiar to all localities, excepting, perhaps, along the outskirts of civilization and within the countingrooms of some large and very influential newspapers. While the advocates of each are inspired by the same noble purpose—the abolition of poverty, its criminal sequences, and the substitution of liberty, happiness, prosperity, and health—yet there is no practical unanimity, no "get-togetherism," discernible from out the economic chaos. In fact, if the truth must be admitted, paradoxical as it may appear, each school looks upon the other as an enemy. While the end sought is the same, the means used and the basic principles are widely divergent.

One advocates the Karl Marxian idea—direction, control, an elaborate extension of State functions; another the Jeffersonian—less government, but yet government; while another, the followers of Proudhon and Josiah Warren, believes purely and simply in the sovereignty of the individual, unfettered by statutes or judicial coercion. And each has its subordinate coterie of unconscious supporters—of ownership of telegraph and railroads, municipalization, minor legislative measures, freedom of land, etc. The discussion, so far as adherents count, proportionately, is yet in its infancy, and the outcome, which evidently will be decided by the relative number, the ascendancy of one of these particular schools, is not as yet even dimly foreseen in the distance.

Now, none of us know it all! We live in an age of doubt, uncertainty, and inquiry, and while our great minds wrestle with the economic elephant, while this lack of harmony exists and we await the questionable outcome, is there any one practical means of mutual self-protection upon which the workers can unite?

This question is answered in the union label. It is not a cure-all. It was not discovered by any profound thinker of ancient or modern times—in fact, its author is unknown. But we do know it originated in the fertile brain of some live trade unionist. Some unselfish and thoughtful individual, who, perhaps, while you and I were sporting, was harassing his overworked brain to benefit his fellowman.

Here are some of its advantages: It rests on no long-spun theory; it is simple; it is practical, and it has no enemies.

It can be adopted by all vocations, the skilled and unskilled alike. The printer can use it on his printing. The cigar maker can use it on his box. The hatter underneath his hat band. The tailor on his vest strap. The shoemaker on his shoe. The barber in his window. The blacksmith on his horseshoe. The molder on his stoves and hollow ware. The cooper on his barrels. The baker on his loaves. The wagon maker on his carriages. The fisherman on his can. Each can demand the union product of all.

The product of the union mulespinner from the mammoth dry goods houses, linen and underwear from the haberdasher—all to be passed over the counter by union clerks with the union button in their coat lapels.

Demand it.

[Editorial from the American Federationist, January, 1908. By Samuel Gompers.]

SPEAKER CANNON—LEST WE FORGET.

So Hon. JOSEPH G. CANNON has been elected Speaker of the House of Representatives of the Sixtieth Congress; elected by the "unanimous" vote of his party associates, in spite of "Dictator Gompers," as his coterie of beneficiaries have declared. And therefore and thereby

jubilation reigns in the House of CANNON. Labor has been given a "slap in the face," for when we say labor, particularly in this instance, we refer not only to the great rank and file of the American Federation of Labor, but also to the membership of the brotherhoods of railway employees. These organizations issued an identical circular on the same date as the one issued by the executive council of our federation reciting the record of Hon. JOSEPH G. CANNON on legislation for a "square deal" for labor, and therefore the slap in the face is just as ceremoniously and flagrantly administered to them.

Of course, pains were taken to make it appear that the "rebuke" was administered to us personally, but no one will be deceived. All realize that we have never asked a personal favor or personal consideration for ourselves, either from Mr. CANNON, other public official, or private employer. The consideration we have asked and insisted upon has been for the relief or for justice to the men and women of labor; for the protection of the young and innocent children from greedy and inhuman exploitation. There is not anything in the gift of official, politician, or any institution, other than the labor movement, which, if offered, would be accepted by us personally or officially. Those concerned know this, yet despite this knowledge they endeavor to hoodwink the uninformed of the public that it is the thirst for personal power and not the interest of labor and the general public which prompted and prompts us to expose the subtle and contemptible hostility of Mr. CANNON (and other Cannons by different names) to any of the reasonable demands which labor makes upon the lawmaking bodies and upon modern society.

It may not be amiss to say that if the true feeling of a large number of the Members of the House was expressed (as it has been expressed frequently to us), the election of Hon. JOSEPH G. CANNON to the Speakership would fall far short of a "unanimous" vote of his party associates. But be this as it may, we deem it our duty to place before our readers part of Mr. CANNON's labor record on measures upon which he has delivered himself, and upon which he has bestowed his distinguished consideration. Here it is:

"SPEAKER CANNON'S LABOR RECORD."

"During the Fifty-sixth Congress a pretense was made to secure amendments to the Sherman antitrust law. The representatives of labor were apprehensive that the purpose of the amendment to that law would be to afford no relief to labor, and therefore suggested an amendment which it had drafted. Labor's amendment came before the House for a vote, and was adopted by a vote of 259 to 9. The conspicuous member of the nine voting against it was Mr. CANNON. (Daily CONGRESSIONAL RECORD, June 2, 1900, p. 6994.)

"Labor secured the passage of a law to save the lives and limbs of employees on railroads, commonly known as the 'safety-appliance law.' This law provided for uniform, automatic car couplers and power brakes on railroad trains. In the Fifty-seventh Congress the enemies of that humane law made strenuous efforts to fritter away its safeguards by authorizing a reduction of the number of air brakes to be used on trains. The parliamentary situation was such that the only way to prevent the passage of such a provision was to secure from the House the passage of a motion instructing its conferees with the Senate committee to recede from it. Such a motion was made and passed, but the Hon. JOSEPH G. CANNON voted against the interests of labor and humanity. (Daily CONGRESSIONAL RECORD, February 23, 1903, p. 2704.)

"All interests of an important character, other than labor, are represented in the government of our country by separate Departments, each with its chief executive officer, a Secretary, who is a member of the President's Cabinet. Labor has, therefore, for years sought the creation of a Department of Labor, with a Secretary who, in the President's Cabinet, could represent and speak in the name of the vast interests of labor.

"During the Fifty-seventh Congress a bill was introduced to create a new Department of Commerce and Industries and to absorb the Department of Labor. If we could not secure a separate Department of Labor, organized labor was opposed to the Department of Labor being made a subordinate bureau in the then proposed new Department, and we asked that the Department of Labor be left free and independent until such time as Congress might see the wisdom and necessity of making that Department executive in character, and that its chief officer should be a member of the President's Cabinet. When the bill was under consideration in the House a Member, one of labor's friends, moved to recommit the bill with instructions to report a bill to retain the Department of Labor as a separate and independent department, with a Cabinet officer at its head, but the Hon. JOSEPH G. CANNON voted against this proposition. (Daily CONGRESSIONAL RECORD, January 17, 1903, p. 958.)

"In the Fifty-eighth Congress Mr. CANNON was elected Speaker, and made up his committees (before which labor legislation would come) in such a manner as to practically make it impossible for such legislation to be reported or enacted.

"Prior to the Fifty-ninth Congress Mr. CANNON was communicated with and respectfully petitioned that in his appointment of the committees before which labor legislation should come he might so constitute these committees as that they would give labor legislation a fairer hearing, consideration, and action. These petitions he utterly ignored, and accentuated his hostile attitude by the appointment of Members, if possible, still more antagonistic.

"During the Fifty-ninth Congress the committee having in charge the employers' liability bill amended it so as to require the parents of the unmarried employee who was killed to prove their dependency upon him before they could recover damages for his death. Labor's objection to this unfair amendment was made known to Speaker CANNON, and an opportunity was asked to correct it when the bill was up for consideration in the House. Speaker CANNON declined to grant this request; aye, before he would agree to recognize the Member of the House having the bill in charge for the purpose of moving its passage, he exacted a promise from him that he would not offer an amendment to correct the defect referred to, and by reason of the critical parliamentary situation thus created by the Speaker we were compelled to permit the bill to go through the House with the objectionable provision retained.

"Labor and other reform forces have for years endeavored to secure the passage by Congress of a law restricting immigration. Immense numbers—more than a million and a quarter—now come to our country within a year. One of the effectual means to secure this was an educational test, and this was incorporated in the bill before the Fifty-ninth Congress, the United States Senate having adopted it in a bill which passed that body. It was clear that a majority of the Mem-

bers of the House of Representatives were in favor of this bill, including the educational test, but Speaker CANNON not only used the vast power and influence of his office to defeat it, but he left the exalted position of the Speaker, went upon the floor of the House, and by force pulled Members out of their seats, and by threats and intimidation made enough of them go between the official tellers of the House and vote against the proposition. As a result of his high-handed actions the educational test was defeated and stricken from the bill.

"In the Fifty-eighth Congress the majority of Speaker CANNON's Committee on Labor adopted a series of resolutions containing inquiries which were incapable of intelligent answers. This course was adopted to avoid a record vote against labor's eight-hour bill.

"In the Fifty-ninth Congress Speaker CANNON's Committee on Labor was practically forbidden to report labor's eight-hour bill. The committee sought to prolong the hearings to prevent a report on the bill. At one session a peculiar situation was created. There were seven members present, three of the majority party and four of the minority party, and by a vote of four to three the chairman of the committee was instructed to report the eight-hour bill to the House with a favorable recommendation that it pass. After the report was made to the House Speaker CANNON positively refused to recognize any Member of the House for the purpose of calling up the bill for consideration by the House; and thus, through Speaker CANNON's opposition and manipulation, the bill failed of passage.

"In the Fifty-seventh Congress the House of Representatives passed labor's bill to limit the issuance of injunctions and the prevention of their abuses. In the Fifty-eighth Congress Speaker CANNON's Judiciary Committee prolonged the hearings in order to prevent reporting the bill. In the Fifty-ninth Congress Speaker CANNON's Judiciary Committee had hearings upon the subject of the injunction abuse and appointed a subcommittee to investigate a phase of the proposition. The subcommittee in its report cited the very abuses of which labor complains in opposition to labor's contention. The committee printed the subcommittee's report as a House document and refused to print labor's reply exposing the fallacy of the subcommittee's report.

"During the Fifty-ninth Congress, Speaker CANNON used his influence to force through the House, without giving labor an opportunity to be heard, an act repealing the operation of the eight-hour law, so far as it applies to alien labor in the construction of the Panama Canal. It was stated in justification that this action applies only to alien laborers, but though this is true in so far as the act itself is concerned, yet the result has been that the men working on the Panama Canal construction, whether Americans or aliens, are working more than eight hours.

"Even so far back as in the Forty-sixth Congress, on April 21, 1879, a Member of the House offered a resolution to enforce the eight-hour law. On May 7, 1879, it was favorably reported to the House. Mr. CANNON opposed the resolution, and in reply to a question whether the proclamation of President Grant did not declare that there should be 'no reduction in the wages of workmen on account of a reduction in the hours of labor,' Mr. CANNON said: 'I do not now recollect, but it is not material. The fact is, the law as now executed is this: If they work ten hours they get ten hours' pay, and if they only work eight hours, they get only eight hours' pay. That is the manner in which the law is now being executed, and so far as I am concerned, it will go on in that way, proclamation or no proclamation.' And on Mr. CANNON's motion, the resolution to enforce the eight-hour law was laid on the table."

But Hon. JOSEPH G. CANNON was not to rest satisfied with his unenviable "unanimous" election; he must needs take advantage of the awful straits in which a number of men and women find themselves to deliver himself of his accumulated spleen, to take another drive at labor over the head of "Dictator Gompers."

A committee of plate printers of Washington called upon Speaker CANNON on December 7, 1907, and asked his support of a bill for a new building in which the 1,500 employees, men and women (white and colored), in the Bureau of Printing and Engraving might have the opportunity of performing their work with less likelihood of ill health and death resulting therefrom, as is the case in the building now occupied by them.

It must be remembered that when Hon. Leslie M. Shaw was Secretary of the Treasury he officially reported to Hon. JOSEPH G. CANNON, Speaker of the House of Representatives, that the Bureau of Printing and Engraving was the worst sweat shop existing in private or public employment in the country. The present Secretary of the Treasury, Hon. George B. Cortelyou, fully and officially repeated the indictment of this governmental sweat shop.

It was the occasion of the plate printers' appeal for a place to work where they would be relieved from the present health and life destroying atmosphere, that Hon. JOSEPH G. CANNON must needs deliver a lecture to them not to be dictated to by "that man Gompers," etc. Would it be interesting to Hon. JOSEPH G. CANNON to know that, recognizing the awful fetid atmosphere in which the men and women in the Bureau were working for the Government, that "that man Gompers;" that "Dictator Gompers" advised the committee to call on him (CANNON) and try an appeal to his better nature, that perhaps he might be moved to take some action by which so large a number of hard-working, deserving Government employees might be saved from having their health impaired and their lives destroyed.

Taking advantage of the straits in which the plate printers' representatives found themselves in their mission of mercy, Hon. JOSEPH G. CANNON must needs attempt to overawe and humiliate them by attacking one in whom they have confidence and for whom they entertain the highest respect. He could not, however, stifle their protest and their declaration of loyalty to the great cause and movement of organized labor. It might be additionally interesting to Hon. JOSEPH G. CANNON to know to what a degree his fulmination has "endeared" him to all the men of labor throughout the country, aye, even to the committee of plate printers whom he so outrageously treated.

It is the policy of the trickster politician to pretend that the chosen spokesman of labor has his own personal interests to advance, his own views to exploit, his own power to extend or intrench. It is impossible for the politician of the CANNON stripe to conceive that there are some, yes, a large and constantly growing number of men, who, true to a principle, true to a cause, true to their fellows, would scorn to stoop to a dishonest or dishonorable act, or any act but which would redound to the interest and progress of the workers. But how can one expect such a conception of a man's conduct from Hon. JOSEPH G. CANNON, whose arrogance and whose antagonism to labor and the best interests of the people is universal knowledge?

These facts are recorded, "Uncle Joe," lest we forget.

[Editorial from the American Federationist, February, 1908, by Samuel Gompers.]

SPEAKER CANNON—"LEST WE FORGET."

So "Uncle Joe" CANNON had his man Friday take up the cudgels in attempting a reply to our editorial criticism of his conduct contained in the January issue of the American Federationist. Perhaps Hon. JOSEPH G. CANNON imagines that we are unaware of the "frame-up" by his satellites by which the plate printers' committee's credulity was imposed upon and the "resolutions of thanks" tendered him.

Under the rules of the House, engineered by Speaker CANNON and his few Congressional beneficiaries, no measure can be brought before the consideration of the House that he does not, in advance, sanction and approve. And thus any measures of real relief for the wage-workers of our country or for that of the common people have been stifled in committees.

The Committees on Labor in the Fifty-eighth, Fifty-ninth, and now in the Sixtieth Congress have been appointed with the one specific purpose of preventing any bona fide measure of genuine relief from being reported to the House for consideration. The Judiciary Committee of the last three Congresses have been appointed with the same intent and purpose.

What about Mr. Speaker CANNON's punishment of Congressman PEARRE by refusing to reappoint that gentleman upon the House Judiciary Committee, a committee in which he rendered conspicuous and able service in the last two Congresses? The punishment was meted out by "Uncle Joe" because Mr. PEARRE had convictions of his own as to what constituted his duty to his fellow-citizens, and particularly to his constituents. He had the temerity to introduce and stand for labor's bill limiting the abuse of the injunction process and thus defend and safeguard individual liberty and equality before the law.

For a "genial" old gentleman "Uncle Joe" CANNON is the most vindictive man of power who ever undertook to politically kill a Congressman who has convictions and conceptions of his own in regard to right and justice which a politician of the CANNON stripe can not be expected to understand or tolerate.

LABOR'S POLITICAL CAMPAIGN—WORKERS AND FRIENDS AROUSED TO THE NECESSITY OF UNITED AND DETERMINED ACTION—TABULATION OF CONGRESSIONAL VOTE OF 1906 SHOWS WHAT REMARKABLE RESULTS WERE ACCOMPLISHED IN THAT FIRST AND ALMOST UNPREPARED EFFORT—SPLENDID PROSPECT OF LABOR'S SUCCESS IN 1908.

[By Samuel Gompers.]

The question of the most effective use of the political and industrial power of the workers during the coming Congressional campaign was the most important subject considered by the protest conference of the workers and their sympathizers held in Washington on March 18-19 to consider the situation in which they found themselves as a result of recent Supreme Court decisions and the apathy of Congress toward their interests.

One of the most important contributions to the deliberations of the conference was the presentation of the tabulated statistics of the vote cast for Congressional candidates in 1904 and 1906. These figures acquired additional importance from the fact that in 1906 labor, for the first time, made a strong effort to elect its friends to Congress and defeat its enemies.

That the dominant majority in Congress was cut from 112 to 56 by labor's efforts in the campaign of 1906 is a fact which has been sedulously ignored by the partisan press of the country, yet this, a most remarkable and encouraging result, grew out of a campaign entered upon very late by the workers, without adequate means to carry on the work in Congressional districts scattered throughout the country. The statistics of the Congressional vote cast in 1904 and 1906, with the comparison of relative pluralities, were carefully compiled by Mr. Thomas F. Tracy and Mr. Arthur E. Holder, the legislative committee of the American Federation of Labor. They were presented to the protest conference and are herewith published for information of all.

The results of the Congressional elections as shown in the tables are worthy of the careful study of the members and friends of labor. The figures are absolutely authentic and were obtained from the secretaries of state in the various States. The increases or decreases in pluralities demonstrate beyond doubt the practicability and influence of the American Federation of Labor plan of campaign, and should be an incentive to all ardent, active unionists and their friends to give renewed activity to this movement this year when so much is at stake.

In a perusal of the tables it will be noticed that a number of States are omitted, the most noticeable being the Southern States. The explanation is that it is almost invariably the rule in that section of the country to make nominations in the primaries, rather than by nominating conventions. The result of the primary vote is equivalent to an election, and it is impossible to get any information from the results of these primaries, as they are not made a matter of State record; therefore the results of Congressional elections in those States can not be ascertained in a form suitable for tabulation.

In presenting these tables, showing the enormous reductions in pluralities of some of the candidates who were not friendly to labor's interests, and the defeat of others, either for renomination or election, there is no desire to antagonize, but it is only fair to record this history for the encouragement of our members and friends in the future.

The efforts of the workers in 1906 to elect their friends and defeat their enemies yielded results that are rich in suggestion as to what may be accomplished in the future by a still more united effort.

The comparison of the increase and decreased pluralities is a most interesting study. It will be especially valuable to the voters in the respective districts, because they are able to judge for themselves what were the influences which decided the vote in 1906, and they alone can carry into full effect the determination of the people of the country to protect and defend the natural and inherent rights of the workers.

Everyone must realize that in a campaign of this kind funds are necessary to pay the legitimate expenses, such as hall rent, printing, and postage. When it is considered that our total income for carrying on this work in 1906 was only \$8,225.94, all of which was donated by local unions and friends, and in view of the fact that recently the press of the country has been exposing the enormous amounts of money that were raised from corporations or their representatives for corruption purposes, the American Federation of Labor, its members and friends, may well be proud of its achievements in the past and may hope for a far greater measure of success in the future.

The campaign as conducted was on clean, honest, nonpartisan lines in every particular, and was a credit to those who had it in charge. An itemized statement of every penny of income and expenditure has

been printed and given full publicity, something that has never been done before in the history of a political party or movement.

The same course will be pursued in the impending campaign.

We have every reason to believe that in view of the serious crisis which confronts the workers, there will be far greater political activity this year than ever before. Our campaign work will still be dependent upon voluntary contributions from friends and sympathizers, but we have no fear whatever of the result, for our cause is just and righteous.

While no distinct effort was made to form labor parties per se in 1906, the policy was followed of electing men who had paid-up union cards in their pockets where the opportunity presented itself. In many States this proved successful to a degree. When it was not possible to do this, candidates for office were questioned and their records noted, and where they expressed themselves favorable to labor's measures, regardless of party, they received the support of labor. The action of every Member of the Sixtieth Congress in regard to labor's measures and interests has been carefully noted, and this information will be available in every district for campaign purposes.

In addition to the efforts made in the Congressional campaign in 1906, the results accomplished in the various States in the elections of our friends to the State legislatures, as well as to municipal offices, should not be lost sight of. We will publish later some statistics on that point.

The policy advocated by the American Federation of Labor was effectively carried out by the State and central labor bodies—in many instances successfully in 1906—and they will be prepared this year to profit by that experience and accomplish still greater results.

The practicability of our political movement has demonstrated itself in the action of the Sixtieth Congress. Members of that body who, prior to the last election, imagined that labor measures were something with which to play the game of "battledore and shuttlecock," and who were either hostile or indifferent, have now realized that even where they were not defeated, yet by the enormous reductions in the pluralities, a stinging rebuke had been administered them, and their record will be made the basis for future action at the hands of the workers. Already can be seen the handwriting on the wall and without fear of contradiction it can be said that labor will guard its interests and make its political power felt to a greater degree in the next Congress than in former ones, and better results will be obtained.

One of the greatest difficulties that has to be overcome in the utilization of our political power is the adherence to party organization by a large number of workers who can give no logical reason for their action. Indeed, it is a fact that in innumerable instances a large number of our citizens for years have gone on blindly voting for either one of the two great parties, and could give no other reason for doing so except that their father or grandfather had voted that way and they continued in their practices. Times have changed since then and new circumstances demand a new use of the voting power.

It is against this sort of action that the American Federation of Labor has been carrying on an agitation for years, advising its members to discontinue this procedure. It has endeavored to inspire them to think and act politically for themselves, rather than have the party boss dictate for them. Our men of labor should realize that principle is far more important than party domination. The results, so far, of our independent action have surprised and in many instances created consternation among party machines and party dictators. At no time in the history of our movement was there so much independent voting as there was in the last campaign. The spirit is growing rapidly; there will be far better results this year.

Party machines and bosses can readily cope with organized rivals, always knowing their strength and their weakness, and can easily cause dissension among the latter to the confusion and ultimate disruption of the rival movement. Party leaders appreciate the potency of the independent voting power. It causes them much loss of sleep and trouble. They fear the growth of this spirit of independent voting more than anything else, as they realize that it means their ultimate destruction as dictators.

The policy of independent voting will be continued with a renewed vigor. It is already deeply impressed upon the minds of the workers that for them to be absolutely free from party domination and political slavery they should always and ever bear in mind that "they who would be free must first strike the blow."

The American workman is fast shaking off the coils of the party boss and dictator, and in the future will continue to assert himself a free man politically.

Yes, after all is said and done, the last campaign, from the viewpoint of the American Federation of Labor, was a success, and there is every reason to hope that the impending campaign will be a greater one. Labor will continue to exercise its political activity to protect its rights and defend them, not only for the present, but for the future.

+ Increase. — Decrease.

* No opposition in 1904.

* Wadsworth (Rep.) elected in 1904; plurality, 13,036; defeated by Porter (Dem.) in 1906; plurality, 5,902.

* Allen (Republican) elected in 1904; plurality, 510; defeated by Hughes (Democrat), formerly a textile worker and pledged to labor's interest, by a plurality of 2,103.

* Wiley (Republican) elected in 1904; plurality, 12,507; defeated for renomination in Republican Congressional convention by Gottlob, a member of the International Typographical Union. Gottlob, Republican nominee in 1906, defeated by Pratt (Democrat) by a plurality of 5,874.

It is claimed that disgruntled friends of Wiley voted for the Democrat in opposition to Gottlob because of his well-known trade-union activity.

* Van Winkle (Republican) elected in 1904; plurality, 2,425; defeated by Leake (Democrat) in 1906; plurality, 5,739.

* Campbell (Republican) elected in 1904; plurality, 344; defeated by Ansberry (Democrat) in 1906; plurality, 1,015.

* Scroggy (Republican) elected in 1904; plurality, 2,377; not a candidate for reelection. Hildebrandt (Republican) defeated by Denver (Democrat) in 1906; plurality, 1,180.

(*) Otjen (Republican) elected in 1904; plurality, 5,179; defeated for renomination by Cary (Republican), a member of the Railway Telegraphers' Union. Cary was elected in 1906 with a plurality of 3,472.

While the above tables show that the majority of the dominant party was cut in two—that is, reduced from 112 to 56—it is also interesting to note that had the policy of the American Federation of Labor been fully carried out the results would have been more remarkable.

The following table shows instances where the majority of the dominant party would have been reduced 15 more had the American Federation of Labor's policy been fully carried out:

LABOR'S POLITICAL CAMPAIGN.

Name.	Party.	District.	State.	Vote, 1906.	Opposing vote.

Total.....					16,663

* Democrat. b Socialist. c Independent.

In the above instances it will be noted that the elected candidate really received less than a majority of the total vote cast. Had the opposition united its forces the choice of the voters would have found more adequate expression.

Removal of Restrictions from Part of the Lands of Allottees of the Five Civilized Tribes.

REMARKS

OF

HON. CHARLES D. CARTER,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. CARTER said:

Mr. SPEAKER: Under the general leave to print for five days I will insert the following history of the removal of restrictions, properly arranged, commencing January 29, 1908, and ending when the bill was signed by the President:

[H. R. 15641, Sixtieth Congress, first session.]

In the House of Representatives, January 29, 1908.

Mr. McGUIRE introduced the following bill; which was referred to the Committee on Indian Affairs and ordered to be printed.

A bill for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions, but all sales or incumbrance of their lands prior to March 1, 1909, shall be void unless the adequacy of the consideration and the fact of its actual payment or proper security therefor be approved by the Secretary of the Interior. All lands, including homesteads, of said allottees enrolled as of less than half Indian blood shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood and all allotted lands of enrolled living full-bloods shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance until April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act.

SEC. 2. That all land allotted to allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees, or in the case of minors as provided in section 6 hereof, for periods not exceeding five years without the privilege of renewal, except that oil, gas, or other mineral leases for any period of time, and other leases if made for more than five years, of any such restricted lands, whether of adults or minors, may be made with the approval of the Secretary of the Interior and not otherwise.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior and the enrollment records connected therewith shall be conclusive evidence as to the age and the quantum of Indian blood of any enrolled citizen or freedman of said tribes to determine questions arising under this act.

SEC. 4. That all land from which restrictions shall have been removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes. The land of allottees enrolled as freedmen shall be subject to taxation from and after sixty days from the passage of this act.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of incumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes, except as otherwise specifically provided by law, shall be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern district of Oklahoma as he may deem necessary to care for the allotted restricted land of allottees, whether adults or minors of the Five Civilized Tribes, including, when the supervision of the Secretary of the Interior is authorized by law, the sale or leasing of such lands and the disposal, for the benefit of the Indians, of the proceeds of such sales or leases. Said appointed representatives shall, without charge except necessary court fees, if any, care for the restricted allotted land of minor allottees of the Five Civilized Tribes, and shall annually account concerning such restricted land, both to the Secretary of the Interior and to the respective probate judges having jurisdiction of the persons and property of such minors. The probate judge may appoint the representative of the Secretary of the Interior having charge of the restricted land of any such minor to act as guardian for such minor without fee or charge, except necessary court charges and expenses incurred under order of the court. Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under direction of the Secretary of the Interior.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by substituting for the words "a United States commissioner," at the end of said section, the words "a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions from the alienation of said allottee's land: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of said estate.

[H. R. 16735, Sixtieth Congress, first session.]

In the House of Representatives. February 10, 1908.

Mr. SHERMAN introduced the following bill; which was referred to the Committee on Indian Affairs and ordered to be printed.

A bill in relation to the affairs and property of the Five Civilized Tribes, etc.

Be it enacted, etc., That the Attorney-General is hereby authorized to bring suit, when requested by the Secretary of the Interior, in the name of the United States, or of any other appropriate complainants or plaintiffs, for the use and benefit and on behalf of the Choctaw, Chickasaw, Cherokee, Creek, or Seminole tribes, or any enrolled member of either thereof, before or after the dissolution of the tribal government upon any matter or cause of action arising before or after such dissolution, for the following purposes: To recover any moneys, lands, town lots, funds, or any other property claimed by, or belonging to, any of said tribes, or any enrolled member thereof, received in the distribution of the land or moneys of said tribes, or rents and profits arising therefrom, to which, in the judgment of the Secretary of the Interior, such tribes or members may be entitled; to cancel and annul any conveyance, deed, or patent to any lands or town lots and to recover such property or its value wherever such conveyance, deed, or patent was made or procured in any manner contrary to the provisions of existing law authorizing the conveying, patenting, or alienation of same; to cancel or reform any lease, power of attorney, or other instrument in writing, affecting the lands or moneys of any of said tribes or any enrolled member thereof under which any adverse or hostile claim or right is or may be asserted against such tribe or member, made or procured without authority of law or in violation of the provisions of any law or regulation of the Department of the Interior applicable in such cases; to remove a cloud or encumbrance from the title of any lands allotted to any enrolled member of any of said tribes which may now or hereafter exist by reason of any conveyance or attempted conveyance, encumbrance or attempted encumbrance thereof, or any instrument of writing affecting the same, executed by or procured from any such member in person or through power of attorney prior to the removal of restrictions upon the alienation of such lands; for any other cause or causes, not herein enumerated, by appropriate action, through which, in the judgment of the Secretary of the Interior, any substantial right or interest of any such tribe or member may be protected, restored, or recovered.

SEC. 2. That any suit or suits provided for in this act may be instituted in any court of the State of Oklahoma where jurisdiction over

the subject-matter and person may be had according to the laws of said State, or in the circuit court of the United States for the eastern district of Oklahoma; and the said circuit court of the United States is hereby given jurisdiction, concurrent with the courts of said State, in any and all of the suits and proceedings authorized by this act, without regard to the amount in controversy.

SEC. 3. That the Secretary of the Interior is hereby authorized to pay from the funds of the tribe interested any costs, counsel fees, and necessary expenses incurred in maintaining and prosecuting any suit under this act affecting such tribe or any enrolled member thereof, including the fees of any special counsel employed by the Attorney-General to assist in the prosecution of such suits, which special counsel the Attorney-General is hereby authorized to employ in his discretion, and likewise to fix the compensation of such counsel: *Provided*, That the expenses incurred in maintaining and prosecuting any suit on behalf of any enrolled member of said tribe or tribes, or to determine any question common to the interests of any number of such members, shall be first paid from the funds of the tribe or tribes of which he or they are members and charged against the property of such member or members: *And provided*, That for any moneys so expended such tribe or tribes shall be reimbursed, under regulations to be prescribed by the Secretary of the Interior, from funds due or to become due, or any property of said member or members, such expense to be pro rata among the persons interested in the proceedings in such proportion as the Secretary may deem equitable.

SEC. 4. That nothing in this act contained shall authorize the commencement or prosecution of any suit in the interests of any member of any of said tribes upon any cause of action which accrued, or may accrue, subsequent to the removal of restrictions upon the alienation of the lands of such member, connected with or relating to such lands, unless upon the joint recommendation of the Attorney-General and the Secretary of the Interior and the approval of such recommendation by the President.

SEC. 5. That in any suit now pending or which may hereafter be brought in any court in the State of Oklahoma involving or concerning any of the matters, causes of action, property, or interests mentioned in this act, the United States, acting through the Attorney-General, upon the request of the Secretary of the Interior, may intervene on behalf of any such tribe or member and become a party to such suit; and any suit now pending or hereafter brought in any of the courts of the State of Oklahoma involving or concerning any of the matters, causes of action, property, or interests mentioned in this act, in which the United States, suing for the use and on behalf of either of the tribes mentioned in this act or any enrolled member thereof, is a party thereto in such capacity, including all suits instituted prior to November 16, 1907, by the Secretary of the Interior, under authority of the act of Congress approved April 26, 1906 (United States Statutes at Large, vol. 34, p. 137), or in which the United States acting in such capacity may become a party as herein provided, shall, on application now pending or made by either or any party thereto at any time before the trial of said cause, be transferred from such State court to the circuit court of the United States for the eastern district of Oklahoma; and the papers and files in said cause, or copies thereof if required, together with a transcript of all journal, docket, and record entries made therein, shall be furnished for such purpose on the payment or tender of legal fees therefor, and the records in all suits or causes so transferred shall be filed and docketed in the said circuit court of the United States at or before the next term thereof commencing after such application and such cause shall be there proceeded with as if originally commenced therein; and whenever the application herein provided for shall be filed and presented in open court, the jurisdiction of said State court over said cause and the parties thereto shall cease and the jurisdiction of all matters and parties therein shall immediately vest in the said circuit court of the United States: *Provided*, That any application for removal as herein provided which states facts showing that the cause is one coming within the provisions and contemplation of this act shall be sufficient, and no bond shall be required from the applicant.

SEC. 6. That if the clerk of the State court in which any such cause shall be pending shall refuse to any of the parties or persons applying to remove the same the papers, files, and transcript as provided for in this act or copy of same or any thereof when required, after tender of legal fees for same, said clerk so offending shall be deemed guilty of a misdemeanor and on conviction thereof in the circuit court of the United States to which said action or proceeding was removed as herein provided shall be punished by imprisonment not more than one year or by fine not exceeding \$1,000, or both, in the discretion of the court; and the circuit court to which said cause shall be removable under this act shall have power to issue a writ of certiorari to said State court commanding said State court to make return of the record in any such cause removed as aforesaid or in which any one or more of the plaintiffs or defendants have complied with the provisions of this act for the removal of same, and enforce said writ according to law; and the said circuit court may enforce any of the provisions of section 7, chapter 137, of the act of Congress of March 3, 1875, not in conflict herewith, which may be applicable and necessary to carry into effect the provisions and purposes of this act.

REMOVAL OF RESTRICTIONS ON INDIAN LANDS IN OKLAHOMA.

COMMITTEE ON INDIAN AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, February 25, 1908.

The subcommittee met at 2 o'clock p. m., Hon. PHILIP P. CAMPBELL in the chair. The committee was made up as follows: Hon. JAMES S. SHERMAN, Hon. PHILIP P. CAMPBELL, Hon. BIRD MCQUIRE, Hon. JOHN H. STEPHENS, Hon. CHARLES D. CARTER, Hon. EDWARD W. SAUNDERS.

The following gentlemen who were present announced their desire to be heard before the subcommittee: Mr. J. C. JOHNSON, representing the freedmen citizens of the Creek Nation; Mr. M. L. MOTT, representing the chief and council of the Creek Nation; Mr. W. W. HASTINGS, on behalf of the Cherokee Nation; Mr. P. J. HUDSON, special delegate for the Choctaws; Mr. Frank J. Boudinot, representing the full-blood Choctaws, and Mr. Webster Ballinger, representing certain members of the Choctaw and Chickasaw nations.

Mr. CAMPBELL. I think it is important that we should also have some understanding as to the time, so that there shall be no abuse of time, and that everyone can be heard as they may expect.

Mr. SAUNDERS. Suppose we get these gentlemen to indicate how much time they want, respectively, and then apportion it if it is too much.

Mr. CAMPBELL. Mr. JOHNSON, about how much time do you want to occupy?

Mr. JOHNSON. I think twenty minutes will give me sufficient time.

Mr. CAMPBELL. Mr. Mott, how much time will you want?

Mr. MOTT. I will want very little, not more than twenty minutes; not that much, I think.

Mr. CAMPBELL. Mr. Hastings, how much time do you want?

Mr. HASTINGS. I want half an hour if I can be allowed that much, or, if not, you can cut me down. I really prefer to speak a little later. I represent the Cherokee Nation, and I do not know whether all these gentlemen are going to speak directly about this bill, or whether they are going to offer some suggestions I want to combat; and if so, I would prefer to be permitted to come in later, so that I could answer those suggestions.

Mr. CAMPBELL. Do you think you could get along with twenty minutes?

Mr. HASTINGS. Yes, sir; I will be satisfied with that.

Mr. CAMPBELL. Mr. Hudson?

Mr. HUDSON. Twenty minutes.

Mr. CAMPBELL. Mr. Boudinot?

Mr. BOUDINOT. Not more than ten minutes.

Mr. CAMPBELL. Mr. Ballinger?

Mr. BALLINGER. Twenty minutes will be ample time.

Mr. CAMPBELL. I think we can give every man all the time he wants, as indicated. Now, there are before the committee H. R. 16735, in relation to the affairs and property of the Five Civilized Tribes, and H. R. 12900, H. R. 14402, H. R. 15641, H. R. 15331, H. R. 16495, H. R. 16962. These bills relate largely to the same subject-matter, and I assume that gentleman addressing the committee will come within the scope of the bills here referred to.

Mr. MOTT. Mr. Chairman, I will make this request of the committee. We have a large Creek delegation here, the chief and three delegates, together with myself, the attorney for the nation, and the gentlemen who represent the Creek Association, and I want to ask you, Mr. Chairman, as I wish to speak for the nation as a whole, for the chief, who is here present, to be permitted to address this committee at the close of the hearing.

Mr. CAMPBELL. Mr. JOHNSON, we will hear you now.

Statement of Mr. J. C. JOHNSON, representing the freedmen citizens of the Creek Nation.

Mr. JOHNSON. In order to consume no considerable portion of your time, gentlemen, I have prepared our objections on behalf of the freedmen of the Creek and the Seminole nations in the form of a short brief.

I beg leave to submit to you this brief on behalf of the freedmen citizens of the Five Civilized Tribes of Indians in the State of Oklahoma, and especially on behalf of the freedmen of the Creek and Seminole tribes of Indians, protesting against bills entitled H. R. 15641 and S. 5586.

These bills contemplate the removal of the restrictions from the lands allotted to citizens of the Five Civilized Tribes, not of Indian blood, and directly affects the so-called freedmen citizens of the said tribes:

"Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions, but all sales or incumbrance of their lands prior to March 1, 1909, shall be void unless the adequacy of the consideration and the fact of its actual payment or proper security therefor be approved by the Secretary of the Interior."

The freedmen were made citizens of the above-named tribes, the Creeks and Seminoles, by the terms of the treaty made and entered into between the United States and the said Creek and Seminole tribes of Indians, in the year 1866:

"ART. 2. The Creeks hereby covenant and agree that henceforth neither slavery nor involuntary servitude, otherwise than in the punishment of crimes, whereof the parties shall have been duly convicted in accordance with laws applicable to all members of said tribe, shall stipulated that hereafter these persons lawfully residing in said Creek many persons of African descent, who have no interest in the soil, it is stipulated that hereafter these persons lawfully residing in said Creek country under their laws and usages, or to have been thus residing in said country, and may return within one year from the ratification of this treaty, and their descendants and such others of the same race as may be permitted by the laws of the said nation to settle within the limits of the jurisdiction of the Creek Nation as citizens (thereof) shall have and enjoy all the rights and privileges of native citizens, including an equal interest in the soil and national funds, and the laws of said nation shall be equally binding upon and give equal protection to all such persons and all others of whatever race or color who may be adopted as citizens or members of said tribe."

Again from article 2 of the treaty made and concluded between the United States Government and the Seminole tribe of Indians at Washington, D. C., March 21, 1866, we beg leave to quote the following:

"ART. 2. The Seminole Nation covenant that henceforth in said nation slavery shall not exist, nor involuntary servitude, except for and in punishment of crime whereof the offending party shall first have been duly convicted in accordance with the law, applicable to all the members of said nation. And inasmuch as there are among the Seminoles many persons of African descent and blood, who have no interest or property in the soil, and no recognized civil rights, it is stipulated that hereafter these persons and their descendants, and such others of the same race as shall be permitted by said nation to settle there, shall have and enjoy all the rights of native citizens, and the laws of said nation shall be equally binding upon all persons of whatever race or color who may be adopted as citizens or members of said tribe."

These treaties giving and granting to these people citizenship were voluntary acts on the part of the Indians. They had been slaves formerly among them, and out of gratitude for services formerly rendered them this citizenship was granted. Since the granting of citizenship to these people they have demeaned themselves in a manner worthy of the esteem of their benefactors. As a further evidence of this good feeling that existed between the races, I beg leave to cite you from the agreement made and concluded between the Creeks and the United States Government, entitled "An act to ratify and confirm an agreement with the Muscogee or Creek tribe of Indians, and other purposes," approved March 1, 1901, and confirmed by the general council of the Creek Nation on the 25th day of May, 1901:

"ART. 3. All lands of said tribe, except as herein provided, shall be allotted among the citizens of the tribe by said commission so as to give an equal share of the whole in value, as nearly as may be, in manner following: There shall be allotted to each citizen 160 acres of land—boundaries to conform to the Government survey—which may be selected by him so as to include improvements which belong to him. One hundred and sixty acres of land, valued at \$6.50 per acre, shall constitute the standard value of an allotment, and shall be the measure for the equalization of values; and any allottee receiving land of less than such standard value may, at any time, select other lands which, at their appraised value, are sufficient to make his allotment equal in value to the standard so fixed."

This is the agreement under which Creek citizens took their allotments, and it is provided that each citizen of the Creek Nation shall receive 160 acres of land. In all of these agreements up to and including the last agreement made between these tribes and the United States the right of citizenship and the full and free participation of these people in the estate and funds of the tribe have been recognized. In not one single instance has there been any act on the part of the Indians to restrict the citizenship heretofore granted to these people in any manner whatsoever, and so far as I know the Indians have made no complaint that would justify the action contemplated in these bills of Congress. The freedmen of the Creek and Seminole tribes accepted the allotments along with the other citizens of the tribe and were willing to abide by any general laws made for the benefit of the whole tribe, and felt secure in the fact that they would be accorded the same protection as to other citizens. I beg leave to quote from section 7 of the act of 1901:

"Each citizen shall select from this allotment 40 acres of land as a homestead, which shall be nontaxable and inalienable and free from any incumbrance whatever for twenty-one years, for which he shall have a separate deed, conditioned as above."

In that connection I would like to say that I know of several instances there in the Seminole Nation where they parted with their lands for not over \$100. They knew nothing of the value of the lands.

Mr. CARTER. Mr. JOHNSON, do you not know also of instances where they have sold their land ten or twelve times?

Mr. JOHNSON. Certainly; yes, sir; and I will explain that by saying this, that these people were unaccustomed to all this; they knew nothing about the conditions of contract. That is one of the best arguments why I think the freedmen should be restrained; and what is true of them is also true of the full-blooded Indian down there. The simple fact is that they do not understand the nature of a contract, and they have always been given to understand that the United States Government would protect them from loss, and they regarded the man who came to them offering to buy their land from them as a mere speculator.

Mr. CARTER. He was skinning the white man, in other words?

Mr. JOHNSON. That is what I am trying to say; yes, sir.

Mr. MOTT. In numerous cases they never got over \$5 or \$10.

Mr. JOHNSON. I was going to say that the consideration for these lands never in any one case exceeds \$5. I know of one man who has given seven deeds against his land, and in no single instance has he gotten over \$5.

Mr. MOTT. If he keeps on he will get what it is worth.

Mr. SAUNDERS. What is land worth there?

Mr. JOHNSON. The land is worth about \$15 an acre.

Mr. McGUIRE. That man has managed to sell more than 1 acre, then?

Mr. JOHNSON. Yes; you will observe that the homestead of each citizen is made nontaxable and inalienable for a period of twenty-one years. At this point, gentlemen, permit me to state that in the year 1904 the Congress of the United States passed an act, known as the "Curtis bill," removing restrictions upon the alienation of lands allotted to citizens of either of the Five Civilized Tribes, who were not of Indian blood. This was the first blow aimed at the freedmen citizens of the Five Civilized Tribes. No collection of freedmen had ever petitioned Congress to have their restrictions thus removed, and the result of this wholesale removal of restrictions was that the freedmen, not being accustomed to handling real estate, and knowing nothing of the values of lands, were induced to part with their surplus for a very small consideration, and in many instances no consideration at all was given. In support of this, were I given the time, I would cite you innumerable instances where deeds have been procured by fraud and no adequate consideration given to allottees for the allotments.

In that connection, in the Creek Nation as well as in the Seminole Nation, we know of instances where such transactions have occurred. This wholesale transfer of land has been mainly by the younger members of the freedmen part of the tribe. The older citizens have some regard for their contracts, and understand the value of trying to keep their homes, and in those instances they have been very reluctant about selling their land, and I know of one man in the neighborhood of Muskogee who had refused to sell his land, and a lot of these land grafters found that he was away from home, and on that day there was a deed recorded against his entire 120 acres. That has gone into the courts, and they are trying to clear his title.

They produced witnesses to swear that this man was in their office on that day and signed the deed, and he has never received anything for his land. It has been contended by those who have been most benefited by the removal of these restrictions that the freedman was capable of caring for his allotment, and that he did not need the protection of the Government, as contemplated by these agreements. This, gentlemen, I deny as being absolutely false. The freedmen citizens of the Indian Territory have never been thrown into association with people who are familiar with land values, and they, of themselves, had no means of acquiring this knowledge, for the reason that they lived in a country where, up to the time of the allotment, there were no land values.

What is true of the full-blood Indian is also true of the average freedman—that is to say, he is incapable of managing his estate.

I want to call your attention further to the fact, gentlemen, that some time during the session of 1907 Congress saw fit to pass an enabling act, whereby the Indian and Oklahoma Territories would be admitted as the State of Oklahoma. The Indians were opposed to this union of the two Territories, and brought all the pressure possible to bear on Congress to defeat this bill. They even went so far as to prepare a constitution for the Five Civilized Tribes, to be known as the "State of Sequoyia" and asked its confirmation at your hands. This was denied them. The supporters of the joint statehood movement were loud in their praises of the resources of the State to be Oklahoma. They boasted of its untold wealth and the progress made by its citizens in the short space of seventeen years. They knew at the time of asking for its admission that the terms of these agreements were in operation in the Indian Territory, and that there was no considerable land available for taxation. I am reliably informed that their attention was called to this fact by the Members of Congress and persons living in the Indian Territory who opposed this joint statehood movement, yet

they declared that if they were granted statehood they were able to take care of themselves. It seems strange to me, gentlemen, that these people have discovered in less than ninety days from the admission of this State that they were short on taxable real estate, and they come to you now asking that you violate your solemn treaty obligations in order that they might be better able to maintain a State government that before its inauguration was boasted of as being the richest State in the Union.

The proposed bill or bills, if enacted into a law, not only removes the restrictions from the homesteads of adult freedmen, but includes the minors as well, and makes all of their property taxable.

In relation to the minors of the freedmen there, the freedmen as well as the Indians are very reluctant to go into the courts for any matter. In fact they sometimes lose their rights from the very fact that they are timid to start with, and, not being familiar with the form of courts that are in operation in that country now, they naturally do not go about the courts, and I know of many instances down there where white men have come in and made application and have been appointed as guardians of minor children. If these restrictions are removed from the homesteads of these freedmen down there, it will of course also include the minors, and while this may be a mere suggestion, and I do not say it will occur, there is a large chance that such thing should occur down there. Such things have happened. The guardian will go into court and ask to be permitted to sell the minor's allotment for the support of the ward. I know of two or three instances where Creek citizens have died leaving minor children, and white men have been appointed guardians of their estates and have squandered the estate and the minors are receiving no support. In one instance the guardian has asked that the estate be sold, and I believe premission has been granted, and the minor lives 50 or 60 miles away, and the guardian never goes there; and yet when it comes to the matter of making reports, he has an attorney who can go into court and make his report for him, and naturally that is as far as the investigation on the part of the court goes.

See section 4, page 3, H. R. 15461:

"SEC. 4. That all land from which restrictions shall have been removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes. The land of allottees enrolled as freedmen shall be subject to taxation from and after sixty days from the passage of this act."

I want to submit that if this is done, these minors on reaching their majority will find that their estates are already heavily encumbered by taxes; that is, if they have an estate left, and will be forced to start off in life with a debt against their property, and from which they have received no benefits.

Permit me to make a further suggestion, and I want to be understood as saying that this is a mere suggestion, that these minors shall have guardians appointed by the courts, and it is within the range of possibilities that the guardians might see fit to ask for an order of sale for their wards' real estate for the support of the wards. Such things have been done, gentlemen; whether or not the minor will be benefited by such a course, I leave you to determine.

The citizens of the Five Civilized Tribes, not only freedmen, but Indians as well, are opposed to the removal of restrictions from any class of homesteads. At the last session of the general council of the Creek Nation the delegations selected to represent the said nation at Washington were especially instructed to oppose all legislation looking to the removal of restrictions of homesteads of any of the citizens of the said tribe.

In conclusion I desire to state that this homestead is all that has been left to the poor freedman. If the restrictions are removed, it will be but a question of a few days until he will be homeless. The rights of no citizen of the State of Oklahoma are being encroached upon by reason of the fact that there is a restriction upon the alienation of homesteads by former Indian citizens, nor does it work a hardship upon the United States Government to let the provisions of these treaties remain intact. No good can possibly come to the people who are most to be affected by this, and I can not understand why Congress should lend itself to becoming a party to doing an injustice to these people. It has generally been supposed by the citizens, regardless of race or color, among the Creeks and Seminoles, that it was the wish of Congress that these citizens should become self-supporting, and eventually be worthy members of the great citizenship of the United States. I ask, what encouragement, what inducement, is offered these people, and especially the freedmen, notwithstanding the fact that their Indian friends tried to benefit them, and at no expense to the United States, to strive for a higher citizenship, when the very power to which they should naturally look for protection seeks to wrest their homes from them for the benefit of the few designing people who plead the inefficiency of taxable property to maintain a government that the freedmen never approved of?

Mr. CAMPBELL. You object to the removal of the restrictions from all Creek freedmen?

Mr. JOHNSON. Freedmen; yes, sir.

Mr. MOTT. That is homesteads, you mean?

Mr. CAMPBELL. Of course, that only applies to the homesteads?

Mr. JOHNSON. Yes, sir.

Mr. CAMPBELL. Now, would you object to having the homestead taxed in Oklahoma as belonging to the freedmen, as it is in Iowa or Kansas and Nebraska?

Mr. JOHNSON. I think so; yes, sir; for this reason, Mr. Chairman. The Government has agreed by our treaty stipulation that this land should remain nontaxable for a period of twenty-one years, and with all due deference I want to submit to the committee that the Government has violated those treaties often enough. They have broken them in several instances, and I think the time has come when it should stop. The taxing of the property places an incumbrance on that property, and if they are not prepared to pay the taxes, the taxes are charged up to the land, and it is in contradiction to the agreement.

Mr. STEPHENS. Mr. JOHNSON, would there be any objection to selling the surplus lands to the highest bidder and letting the profits go into a fund?

Mr. JOHNSON. That is all gone, so far as the freedmen are concerned.

Mr. STEPHENS. The freedmen have disposed of their surplus?

Mr. JOHNSON. That is already taxable, as I understand. You have reference to the unallotted lands?

Mr. STEPHENS. Yes.

Mr. JOHNSON. There would be no objection. For the purpose of equalizing allotments—the lands were classified and some received first-class allotments and others got allotments valued as low as 50 cents an acre—and in order to give each citizen an equal share in value, it was provided in the agreements that lands remaining after

the allotment was completed should be sold and used for the purpose of equalizing the allotments. There is no objection on the part of the citizens to the sale of this unallotted land.

Mr. CARTER. There is not much of it?

Mr. JOHNSON. About 87,000 acres.

Mr. STEPHENS. It would bring quite a sum, would it not, if sold in 80-acre blocks?

Mr. JOHNSON. It is usually sold in 160-acre blocks.

Mr. STEPHENS. What is that—good land or the best of land?

Mr. JOHNSON. I do not think it is the best of land. It is land that is left.

Mr. STEPHENS. Was it the best land in the country or the worst?

Mr. JOHNSON. No; I would think that it was land left after the selections were made, and naturally where one selected land for himself he would try to get the best.

Mr. MCGUIRE. Have you an allotment?

Mr. JOHNSON. I have; yes, sir.

Mr. MCGUIRE. Have you a homestead?

Mr. JOHNSON. Yes.

Mr. MCGUIRE. Have you any surplus allotted to you?

Mr. JOHNSON. Yes, sir; I have.

Mr. MCGUIRE. You still have your homestead and your surplus?

Mr. JOHNSON. And my surplus; yes, sir.

Mr. MCGUIRE. So far as you are individually concerned, would you object to having the privilege of alienation granted to you?

Mr. JOHNSON. None whatever, so far as myself is concerned.

Mr. MCGUIRE. How about your homestead?

Mr. JOHNSON. I do not know about that. I do not think I would want that.

Mr. MCGUIRE. Would you object to having your land taxed, both surplus and homestead?

Mr. JOHNSON. I would not object to the surplus being taxed, but I do object to having my homestead taxed.

Mr. MCGUIRE. How are you, relatively, compared with other parties down there; about a fair average, are you, of the citizens down there?

Mr. JOHNSON. No, sir; no, sir.

Mr. MCGUIRE. I suppose you have some advantages that the others have not had?

Mr. JOHNSON. Yes, sir.

Mr. CAMPBELL. Tell the committee, Johnson, very briefly how these freedmen handle their personal property.

Mr. JOHNSON. Well, up to the opening of the Oklahoma country we had some freedmen down there who were considered wealthy; they owned a large number of cattle and horses and their herds grazed all over the country and they were doing well; but since the opening up of the country there, and since whisky was brought in there, like the Indian, his neighbor, the freedman can not stand the temptation of whisky, and their property has drifted from them. Most of them are very, very poor.

Mr. CAMPBELL. They trifle their personal property away just as you say they would their land?

Mr. JOHNSON. Yes, sir.

Mr. MCGUIRE. You do not mean to say that they became less capable?

Mr. JOHNSON. No, sir.

Mr. MCGUIRE. You do not mean to say that there was no whisky there before Oklahoma became a State?

Mr. JOHNSON. No, sir; of course there was bootlegging, but of course the Government did not permit whisky there.

Mr. MCGUIRE. That is exactly what has been going on ever since?

Mr. JOHNSON. Yes, sir.

Mr. CARTER. Where were you educated?

Mr. JOHNSON. In Chester County, Pa.

Mr. CARTER. You are not a native-bord freedman?

Mr. JOHNSON. Yes, sir.

Mr. CARTER. You came back to Pennsylvania and were educated there?

Mr. JOHNSON. Yes, sir.

Mr. CARTER. Are the freedmen of the Creek Nation educated at all?

Mr. JOHNSON. Yes, sir; some of them.

Mr. CARTER. They have had the same privileges that the Creeks had?

Mr. JOHNSON. Yes, sir.

Mr. CARTER. And in those schools they charge for tuition, books, and medical attention?

Mr. JOHNSON. No; in the Creek schools—and in fact that is true of the Seminoles—there was a fund set apart by the terms of their several agreements that was used for the purpose of a school fund.

Mr. CARTER. They have the benefit of that for board and in some instances for their clothing?

Mr. JOHNSON. Yes, sir.

Mr. CARTER. Have they not had the benefit of that for about eighty years?

Mr. JOHNSON. Oh, no.

Mr. CARTER. Eighty years, ever since they moved to that country?

Mr. JOHNSON. Probably fifty years is as long as it has been going on.

Mr. CARTER. What do you think of the freedmen as educated in those schools? Do you think they are educated as well in the Creek Nation as they are in the surrounding States?

Mr. JOHNSON. No, sir; I do not.

Mr. CARTER. Notwithstanding that they have had all these advantages?

Mr. JOHNSON. Notwithstanding they have had some advantages, they are not as well educated. I do not think they are educated as well as they are in the surrounding States; no, sir.

Mr. SAUNDERS. I understand you claim the right not to have your homestead taxed, by virtue of treaty agreement?

Mr. JOHNSON. By virtue of treaty agreement; yes, sir.

Mr. SAUNDERS. That is, you claim that you have that right, and you do not care to give it up?

Mr. JOHNSON. We do not care to give it up.

Mr. SAUNDERS. Yes; because it is a treaty provision and stipulation?

Mr. JOHNSON. Yes. Now, gentlemen, I would like to say, before I close here, that it was contended in 1907, I believe, or possibly it was in 1906, by several corporations down there who were represented by their attorneys before the Senate committee, that the restriction should be removed from these homesteads in order to give the citizens of the new State more taxable land, and they cited that in a good many instances this land would be purchased by farmers—a farming class of people—and that the whole people would be benefited by it. They brought numerous instances to show where the Indians and freedmen were not doing anything with the lands and the lands were lying idle, and they said that if it was put on the market so that it could be sold, homesteaders would come in and buy that land. I hardly think that is true, and for this reason: When the restrictions were removed in 1904 I think it is safe to say that out of all the lands that were sold down

in that country not 10 per cent of them went into the hands of the farming class. Farmers did not get a chance to buy that land. It was bought up by speculators, and those are the men who are here to-day asking Congress to remove the restrictions from those lands.

Mr. CARTER. How were they sold?

Mr. JOHNSON. I will tell you; those real estate firms—

Mr. CARTER. I mean what procedure did the Department go through?

Mr. JOHNSON. When they were sold under the Department?

Mr. CARTER. Yes.

Mr. JOHNSON. The Department would advertise the land for sixty days under sealed bids. You had a right to submit your bid and deposit a certain per cent of your bid, and the lands were awarded to the highest bidder.

Mr. MOTT. That was not the case in the case of the freedmen. The restrictions on the freedmen's allotments were removed without any such restrictions. They sold them themselves.

Mr. JOHNSON. Yes; that is true.

Mr. SAUNDERS. How many of these homesteads are there; can you give me any idea about them?

Mr. JOHNSON. There were about 8,000.

Mr. SAUNDERS. How much acreage; 160 acres each?

Mr. JOHNSON. Forty acres each only. Gentlemen, I am much obliged to you for your attention.

Statement of Mr. Frank J. Boudinot.

Mr. BOUDINOT. Mr. Chairman and gentlemen, I have only two suggestions to offer; one is a suggestion of an amendment to section 1. I have here the Senate bill No. 4644.

Mr. CAMPBELL. That is the Platt bill?

Mr. MCGUIRE. It is the same as House bill 15641.

Mr. BOUDINOT. I know what the object of this proposed legislation is. It is for the protection of the people down there who ought to be protected. If there is any mistake made in protecting people who do not want to be protected, I know that that will not be the fault of this committee or of Congress. They are after protecting people who actually need protection, and the only danger is that you will protect some people down there against their will—overprotect them. However, I have not gotten to that yet. The amendment that I want to suggest to section 1 of his bill is in line 11 on the first page. After the word "there," in line 11, and before the word "prior," strike out the word "lands" and insert in lieu thereof the word "homesteads."

Mr. MCGUIRE. Then how would it read?

Mr. BOUDINOT. It would then read this way:

"All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions, but all sales or incumbrance of their lands prior to March 1, 1909, shall be void unless the adequacy of the consideration and the fact of its actual payment or proper security therefor be approved by the Secretary of the Interior."

Now, there is another correction that ought to be made to that clause. It should read "all lands, including homesteads, of said allottees enrolled as freedmen, except minors of allottees," and so forth. I would suggest that those two words "except minors" go in there.

Mr. CARTER. You would insert the words "except minors" after the word "freedmen"?

Mr. BOUDINOT. Yes, sir.

Mr. CARTER. What line is that in?

Mr. BOUDINOT. In line 9, on page 1.

Mr. CAMPBELL. I suggest that you reduce your proposed amendments to writing and leave them in the form of a memorandum for the stenographer.

Mr. BOUDINOT. I will do so. I had reduced all but that. I had this other in writing.

Gentlemen, the reason for this suggestion is that a great many lands, nearly all the allotted lands of freedmen, surplus allotted lands, have been sold since 1904, when the restriction was removed by act of Congress from the lands of freedmen. This bill, as it stands now, would permit these freedmen to come in and contest the validity of all prior sales. Some of that land was bought at a reasonable price, from \$300 to \$800 or \$900 for an allotment in the Cherokee Nation. They averaged 50 acres, and it may be said that the freedmen as a general thing, gentlemen, had the land. Somebody would come to the freedman and say: "I have a piece of land. I will let you allot it if you will sell it." And he would file on it, and they would buy it. Since then the land values have increased ten thousandfold in some instances, and under the bill as it is now there would be all sorts of suits instituted by the freedmen and people advising them that were not in good faith; suits instituted just to see if they could get a compromise.

The other amendment is an amendment of section 6. I agree with the idea of this section 6, to protect the people who ought to be protected. There are thousands of people down there in my nation, the Cherokee Nation, full bloods, first, who will not try to handle their own land, who do not want allotments, and who could not handle it if they tried, and who are uneducated and can not talk English. There are thousands of minor allottees of the Cherokee Nation for whom no guardians have been appointed, who have allotments; and they ought to be protected. I do not believe that it is fair to the other thousands more than these I have just mentioned, who are intelligent and able to take care of their allotments, to protect them against their will, and I do not think it is a good idea, either, to have two guardians. If there is a guardian under bond, acting under authority of the proper court down there, of a minor or other incompetent person, I do not believe that it is right to give the Secretary of the Interior authority to supervise all these contracts that have been approved by the courts.

Along this line the best argument I could make to you, the best illustration I could give you, would be my own case. I am guardian of my child. He has no allotment of land. I am under bond. I make a report to the court. I can only report the facts. In last December the Indian agent down there was paid \$112.50 for my child. I had an opportunity to invest the money for him. I went to the court and got an order, which I have in my pocket, directing anybody, an officer of the United States or anybody else who had money or anything of value coming to my boy, to pay it to me as his guardian. I went to the agent and presented the order, and he said that he had the check there but that he could not give it to me; that under the rules of the court he would have to put that money in some United States depository, and then he would notify me afterwards where it was. That was in December, and I have been waiting ever since, and I have not received any notice. I have had the same experience before, where he waited six months after the money was paid in before telling me where it was. Then when he put it in the bank, according to the rules of the court, he would notify the bank not to pay that out until a new order of court was granted. That takes time and it costs money. If there were large amounts of money it would not

count so much, but it costs just as much to get \$25 out of a bank coming to a minor under court proceedings as it does to get \$2,000.

I have an amendment to suggest to that section 6 which I believe would cover what I believe is a serious objection to that as covering the minors who have bonded guardians under the order of court.

Mr. STEPHENS. Where does that come in?

Mr. BOUDINOT. After the word "leases," on line 13 of page 4, and before the word "said," insert the words "in cases where there are no duly qualified and acting guardians under authority of a proper State or county court." That amendment would leave the representatives of the Interior Department there with all the authority they have now.

Mr. CARTER. Look over the bill and see if you do not think the elimination of these words would cure any objection: In the second line, beginning with the word "except," strike out down to and including the word "law" in the third line?

Mr. BOUDINOT. Yes, sir.

Mr. CARTER. Do you not think that would cure it?

Mr. BOUDINOT. Yes; I think that would be a good amendment.

Mr. CARTER. Strike out the words "except as otherwise specifically provided by law."

Mr. BOUDINOT. Yes, sir. I think, though, that the other suggestion would make it clearer.

Mr. CARTER. That would cut out all attempts at probate jurisdiction.

Mr. STEPHENS. What do you think of the policy of selling all this land at public outcry, going to the minors, in 40 or 80 acre blocks, so that the proceeds would go into a fund for their benefit, so that the lands might be distributed to settlers and the country might be opened up and settled at once? Would not that be better than this proceeding, which would finally eat up all the value of these lands, so as to let the money be held by the probate courts of the country instead of the land?

Mr. BOUDINOT. I have given some thought to the subject, and I would say that that would be a better plan. I think it would be the best plan.

Mr. STEPHENS. I think it is the solution of the question.

Mr. BOUDINOT. There are two sides to the question. On the first side, as suggested by the first speaker, are the people who want to stand pat. Changes have come down there, and we have a State government that gives us all the benefits that come under a good State government, and so far as I am concerned, I want to pay my taxes on my surplus and homestead. I want to take that burden as a citizen of the State of Oklahoma. At the same time, nobody can object to holding the Government to their contract, which said that they could not be taxed. But the idea of the gentleman as to the selling of the surplus lands and putting the land into the hands of farmers is the best suggestion. I believe it is the best way of educating the people down there. The suggestion you have made is a good one in regard to the land, that it shall be put into the hands of settlers. There is the objection in regard to that that all that land down there was bought up by speculators.

Mr. STEPHENS. It would go, under this, right from the hands of the Indians into the hands of a man who would take his plow and proceed to cultivate the land and make a home for himself.

Mr. CARTER. We might have a provision prohibiting a man from buying more than a certain number of acres.

Mr. CAMPBELL. Now, Mr. Hudson, we will hear you.

Statement of Mr. P. J. Hudson.

Mr. HUDSON. I will take but very little time to say what I want to say. I have been here two or three weeks and have been loaded down with treaties and papers and everything, and I just put them all away to-day. I did not know when you were going to meet; and now you catch me here without any papers.

Mr. CARTER. That is my fault, Peter. I ought to have notified you.

Mr. HUDSON. I can not tell you which bill it is, but I read one, and I found an objection to it, from our standpoint, in taxing minors' allotments. In that bill, in the first section, where you classify Indians by saying "Indians less than half Indian blood," you provide that their homestead and surplus shall be taxed, and you include minors. The next class is Indians of half or more Indian blood. Their surplus you provide shall be taxed; that is, when the restrictions are removed. You include in that classification also minors. Now, I object to taxing minors' allotments if there is any way to get around it. One great objection to that is that we have enrolled those known as "new born;" we have them enrolled twice, and these new born who are enrolled twice are allotted raw lands, not improved. Why? Because the best land, improved, has already been taken up by those allotted first, so that the hardship under that provision would be thrown on these little ones, 2 or 3 year old children, and the parents of those minors would have to stand a double hardship, probably a treble hardship, in paying not only the tax on their own lands, but their wives' lands and others, and it would be a hardship.

Mr. CAMPBELL. Could that land be leased so as to make it pay the expenses of taxes?

Mr. HUDSON. Well, yes; it can be leased when there is a demand for it. You know we have so much land that a great many of these lands there is no demand for, and you can not lease them. Many of the lands are located in parts of the country where you can not lease them at all.

Mr. STEPHENS. Would your people have any objection to the sale of these lands of the minors at public auction, so as to bring the highest price possible for them?

Mr. HUDSON. I think that would be a better plan, and I think the people would be very willing to do that. I have good reasons for that. I acted as guardian in quite a number of cases, and there came up a bit of timber land, and the timber was destroyed by a storm, and the court ordered us at once to dispose of the down timber, and in looking over the land I determined that I could not handle the down timber unless I disposed of the standing timber also, and I reported to the court, and they ordered me to sell all of the timber. There were 5,000,000 feet in all belonging to ten minors. While we were handling these lands, selling them to the highest bidders, the oldest child came of age, and a timber buyer went over there and bought that land by paying \$1 a thousand, and at the sale we offered this land, and this man objected and let it be known that he had bought it, and no one would buy it because it was at his own risk. We got \$2.06 a thousand for the pine.

Mr. STEPHENS. You think that the same thing would work with reference to the lands?

Mr. HUDSON. Yes, sir; with reference to the lands. Now, considerable of the pine allotment belongs to the minors down there now, and my opinion is that they will have more for their pine timber by selling it privately.

Mr. CAMPBELL. Is there much surplus land belonging to the minors in the Choctaw Nation?

Mr. HUDSON. I will explain that and answer for the others at the same time—the other Indians. The full-blooded Indians and a great many of these minors have allotted their surplus lands in the Chickasaw Nation. Their surplus lands in a majority of cases are away from where they live—100, or 150, or maybe 200 miles away from where they live. I am speaking of the majority of the full-blood allotments. The same is true of the minors. Does that answer your question?

Mr. CAMPBELL. Yes.

Mr. HUDSON. Now, I leave that point of the objection to taxing the minors' allotments.

Mr. CAMPBELL. Do you object to having your homestead taxed, or the homesteads of the Choctaws except minors?

Mr. HUDSON. That is what I am coming to now. I do not believe any of us are hunting around to pay taxes. [Laughter.] That is the next thing I want to speak of, and that is this: The first agreement we made was the main agreement, and the next agreement is the supplementary agreement. We would never have adopted those agreements unless the Indians had been promised that their land should not be taxed for twenty-one years. As long as the allotments remained in their possession the agreement was that they should not be taxed for twenty-one years. That is the only reason we adopted those agreements.

Mr. MOTT. That is the case with all of them.

Mr. HUDSON. Yes, sir. The next thing is that our full-blood Choctaws went into the Chickasaw Nation guided by the supplementary agreement. The supplementary agreement provides that they would have been out of it themselves in five years, the first, third, and fifth year. According to those provisions the full-blood Indians guided themselves that in order to avoid this taxation—they did not want to pay taxes—they should be able to allot their surplus lands anywhere and everywhere, in order to sell as soon as possible, and that is when they went to the Chickasaw Nation. The gratters paid their railroad fare and their board bills and prepared the plat, and the full-blood Indian walked into the land office and acquired the land. So I say that in order to avoid this taxation, that will come in five years according to the supplementary agreement, the full-blood Indians have allotted land everywhere and anywhere to men that wanted to buy.

Mr. CAMPBELL. What degree of blood would you be willing to have the restrictions removed from?

Mr. HUDSON. I think what you have agreed is good enough.

Mr. CARTER. Except that you object to the provision as to minors?

Mr. HUDSON. I object to that as to minors; yes, sir.

Mr. CARTER. Now, Peter, it is not the removal of restrictions or the right to alienate the land that you object to, but it is the taxation of the land that you object to, is it not?

Mr. HUDSON. Which class do you refer to now?

Mr. CARTER. I was speaking of all classes. Do you object to having the lands of the minors subject to alienation if they were not taxed?

Mr. HUDSON. If they were not to be taxed, that would be all right. That is what we all are afraid of.

Mr. CARTER. You do not object to having the restrictions removed on the surplus lands of all adults, do you?

Mr. HUDSON. Subject to taxation?

Mr. CARTER. And subject to taxation; the surplus lands of all adult Indians?

Mr. SAUNDERS. What is the homestead there?

Mr. HUDSON. One-half of 160 acres.

Mr. SAUNDERS. And 160 acres you call the surplus?

Mr. CARTER. Yes.

Mr. HUDSON. We would have no objection.

Mr. MOTT. Done under rules and regulations.

Mr. HUDSON. Yes.

Mr. CARTER. Wait a minute, Mr. Mott; let me ask the gentleman these questions. You do not care if the restrictions are absolutely removed and if the fellow is allowed to do as he pleases with his surplus land so long as he is protected in his homestead? I mean the adults, now; I am not speaking of minors.

Mr. HUDSON. When the restrictions are removed they would be taxed?

Mr. CARTER. Yes.

Mr. HUDSON. No, sir; I do not want that.

Mr. CARTER. You object to the taxation, but not the the alienation?

Mr. HUDSON. Yes.

Mr. CARTER. You would not object to the restrictions being removed so that he could sell the land if it was not taxed?

Mr. HUDSON. Yes; under the rules and regulations of the Secretary of the Interior.

Mr. CARTER. You want the Secretary to supervise that?

Mr. HUDSON. Yes.

Mr. CARTER. And sell the lands?

Mr. HUDSON. Yes.

Mr. CARTER. If it was for sale you would want the Secretary to come down and sell it?

Mr. HUDSON. Yes. Now, the pine land that the full blood is allotted, there is no restriction on that, and to-day the Indian has not got the timber, not only the pine timber but the hard-wood timber. The Indians did not know that they had sold the hard timber, but they proceeded after the sale of the timber, and that is all gone, and that is the way they have done down there now. That is the timber of the allotments that there is no restriction on. If the land is not restricted and they are not protected in the sale of their land, where will they be?

Mr. CAMPBELL. What does the more than half-blood Indian and the full-blood Indian do with his land now? What does he expect to do with it? He can not sell it.

Mr. HUDSON. Well, we lease them out. We have them improved as fast as we can.

Mr. CAMPBELL. For what purposes are they leased?

Mr. HUDSON. We lease them out for five years for improvement, for improving the place.

Mr. CAMPBELL. Do others take them and improve them on a five-year lease?

Mr. HUDSON. Yes, sir.

Mr. CARTER. A full blood can not lease his allotment now without permission from the Secretary of the Interior?

Mr. HUDSON. That is as to the mixed blood.

Mr. CARTER. Is not that true?

Mr. HUDSON. Yes; the full blood can not lease his land.

Mr. MOTT. For one year.

Mr. CAMPBELL. What do they get for 160 acres for a year?

Mr. HUDSON. We call them gratters, those people that carried these full-blood Indians out west to the Chickasaw country and located, paid all their expenses, and then got a lease on these lands that they selected or located the Indians on, for five years, by paying not over

\$25 to \$50 per allotment. That will be about 15 cents or 20 cents an acre.

Mr. CAMPBELL. Now, will that support an Indian?

Mr. HUDSON. No.

Mr. CAMPBELL. Is he getting the value of his land out of a lease of that kind?

Mr. HUDSON. No; but in a great many cases the lease of this nature is made on account of improvement, the land being improved. There may be houses on a certain piece of land, and that means they have selected this land for the Indians, promised to turn the property over to the Indians at the end of five years, and that is a reason for not paying the Indians so much. However, while we are on that point I want to tell this committee that hundreds of these leases will turn out to be sales when five years is up. The governor wrote me a letter a few days ago saying that an Indian named Kober leased his land to a person named Sawyer for five years, and Sawyer has sold the land to some other person and gone over into Texas. Now, Kober comes and demands possession of his land at the end of five years, and this man says it is a sale, and he has two witnesses. Kober denied signing his name to this bill of sale, but there were two witnesses on the bill of sale, and the Indian just simply gave it up.

Mr. MCGUIRE. Do you know of any more than that one case?

Mr. HUDSON. No; that is the only one that the governor wrote me about. There are cases like that, and later on there will be more cases like that begin to show up.

Mr. CAMPBELL. You are not objecting to the provisions of this bill except as you have stated here in your remarks?

Mr. HUDSON. About the minors' land?

Mr. CAMPBELL. Yes.

Mr. HUDSON. That is the only point I brought up. These old Indians, you have to be very careful in legislating for them. It seems to me if it can be done it will be better to sell those surplus allotments for those full bloods right out.

Mr. STEPHENS. There would be no objection to that?

Mr. HUDSON. I have no objection to that. I think it is the best plan, if it can be done.

Mr. CARTER. I would like to be clear on one thing. I understood you to say a while ago that you thought all Indians, including the mixed-blood Indians, ought not to be allowed to sell any of their surplus lands except under the direction of the Secretary of the Interior; is that correct? Do you not think that any Indian ought to be allowed to sell any of his land unless the Secretary of the Interior sells it for him?

Mr. HUDSON. I do not understand your question. In the bill I thought you had already classified the mixed bloods out.

Mr. CARTER. I am speaking irrespective of the bill now. Suppose any mixed-blood Indian, say yourself or myself, wanted to sell his land, do you think that we ought to go to the Secretary of the Interior and get permission before we are allowed to sell our surplus lands, and do you think after we get that permission we ought not to be allowed to sell it, but that the Secretary ought to sell it for us?

Mr. HUDSON. I do not believe I catch your question.

Mr. CARTER. I want to sell my land, and I am a mixed-blood Indian. Do you think I ought to be allowed to sell that land or do you think my restrictions ought to be removed so that I can sell that land without asking permission of anybody, or ought I to have to go to the Secretary and get him to sell it for me?

Mr. HUDSON. Well, I will say that a person who is able to handle his property ought to be allowed to handle his own property.

Mr. CARTER. That is what I wanted to understand exactly. Now, of course, you and I both understand thoroughly those leases, how they are made; but do you not know that it is a fact that a great amount of those lands were leased purely for grazing purposes of the full-blood Indians, and there is no improvement being put upon those lands at the present time?

Mr. HUDSON. Yes; in many cases.

Mr. CARTER. In the great majority of cases that is true now?

Mr. HUDSON. Yes.

Mr. MCGUIRE. Those are the 15 and 20 cent lands you spoke about?

Mr. HUDSON. That covers both the pasture leases and improvement leases. You know, the full bloods got the best land in the whole country. The full bloods got the best land.

Mr. MCGUIRE. Why is that?

Mr. HUDSON. These people that lived in the Chickasaw Nation knew about that.

Mr. MCGUIRE. They were allotted the best lands?

Mr. HUDSON. Yes, sir.

Mr. MCGUIRE. It was not the grafters who did that?

Mr. HUDSON. No.

Mr. MCGUIRE. That was a pretty good thing, was it not?

Mr. HUDSON. Yes, sir.

Mr. CAMPBELL. The grafters were really the friends of the Indians, were they not?

Mr. HUDSON. Yes, sir; they paid the railroad fare of the Indians and paid their board bills, and hired a hack and took them out and sold them a piece of land and brought them back to town and fixed the plat.

Mr. MCGUIRE. That was because they wanted the best land, as a matter of fact?

Mr. HUDSON. Yes; they figured to buy that piece of land from the full-blood Indian in five years after the supplementary agreement, which will be out after a few months.

Mr. MOTT. I would like to ask the gentleman a question for information.

Mr. CAMPBELL. Very well.

Mr. MOTT. Mr. Hudson, the question was asked you whether you were in favor of yourself and Mr. Carter selling your lands without going to the Secretary of the Interior. This bill provides that the surplus lands of all full-bloods shall be sold under rules and regulations prescribed by the Secretary of the Interior. Now, what is meant by that is that the Secretary can say to you under the rule that you can take your property and sell it if you are competent, or he can say to Mr. Carter: "If you are competent to make sale of your property, you do not have to sell it through the agency. I do not want to do anything with it. You are a competent citizen, and under the rule you can dispose of your own property in your own way," and if that were not the case, then those who were not competent would have no means in the world of protection, aside from the rules and regulations provided by the Secretary of the Interior, and therefore they all have to come under that class, and in order to protect the incompetent ones you are willing to have him say that you are competent, and then let you sell, yourself, are you, without selling it through the agent?

Mr. HUDSON. Yes, sir.

Mr. MOTT. But if the removal of that restriction gives you power to sell it without your competency being passed upon or the competency of any of those who are to sell, you want the Secretary of the Interior to pass upon the rules and regulations as to how and when you shall sell it?

Mr. HUDSON. Yes, sir. I had my restriction removed a few years ago, and I have not sold my land yet, except a small piece of it.

Mr. CARTER. What blood are you?

Mr. HUDSON. Three-quarters blood.

Statement of Mr. Webster Ballinger.

Mr. BALLINGER. May I inquire whether the hearing this morning relates to the restrictions or to the judiciary bill?

Mr. CAMPBELL. It has been confined very largely to the restrictions.

Mr. BALLINGER. I am opposed to this bill, and I enter a protest against this bill (H. R. 15641), which is the restriction bill, and I enter this protest for and on behalf of 8,000 persons admittedly of Choctaw and Chickasaw Indian blood who have been denied their rights in this tribal property by error of law, fraud, and gross mistake of fact committed by administrative officers. These persons are blood relatives of those who are on the tribal rolls; in some instances brothers and sisters, in other instances the children of those who are on the tribal rolls. In some instances they are the children of the signers of the treaty of 1830 under which this grant was made to the Choctaws. They have been denied their rights as members of the tribe. Those people are in actual possession of their lands down there. They have held possession notwithstanding the decisions of the Department and are in possession of their lands to-day in many cases. By the removal of restrictions the lands which they are actually in possession of and which they are entitled to under the treaties and the laws with these people and which have been allotted to other persons who thereby had the legal title and whose names appear on the tribal rolls, these persons holding the legal title can then sell these lands to innocent purchasers to the irreparable injury of claimants.

Mr. CAMPBELL. Are these people enrolled?

Mr. BALLINGER. No, sir; they are not enrolled.

Mr. CAMPBELL. In either the Choctaw or Chickasaw nation?

Mr. BALLINGER. Not on the finally approved rolls, approved by the Secretary.

Mr. CAMPBELL. Were they ever enrolled?

Mr. BALLINGER. They were members of the Choctaw and Chickasaw community. Mr. Carter, a member of this committee, has relatives down there who are recognized as members of these tribes who have been denied their right to enrollment on the finally approved tribal rolls.

Mr. SAUNDERS. Who has denied these people their rights?

Mr. BALLINGER. The Commission to the Five Civilized Tribes, the Commissioner of Indian Affairs, and the Secretary of the Interior. The Secretary of the Interior acted upon reports made by the Commission to the Five Civilized Tribes, which were false and misleading, and in many instances the actual facts were suppressed, which is shown by the evidence I have in my possession, denied them enrollment.

Mr. CAMPBELL. What were the reasons for denying the people these rights?

Mr. BALLINGER. There was no reason assigned; but the work done there was the most notoriously incomplete work ever done by any officer of the Government.

Mr. MCGUIRE. What material fact do you refer to?

Mr. BALLINGER. I will narrate briefly, although my time is so limited that I can hardly go into a thing of that kind.

Mr. MCGUIRE. Did anybody represent the nation there?

Mr. BALLINGER. When the Government commenced to administer upon the estate of the Choctaw and Chickasaw nations certain persons were employed to represent the nation and to defeat the rights of claimants. Those persons were paid upon the basis of the number of claims defeated and upon the proportion of the amount of property saved to the nation. Those attorneys defeated the rights of persons, because it was to their interest to defeat them, who were honestly entitled to this land; and, further than that, an officer of the Commission to the Five Civilized Tribes, holding an official position under the Commission, walked into the office of Mansfield, McMurray & Cornish, attorneys for the nations, and there briefed and prepared cases against the applicants, and then passed back to the Commission and in the name of the Commission and of the United States adjudicated and finally passed upon the rights of these parties. That is the way these rolls have been made of the Choctaw and Chickasaw people.

Mr. MCGUIRE. What is the name of the man who was guilty of that?

Mr. BALLINGER. William D. Beall. I personally filed charges against him and upon an official investigation made by William Dudley Foulke he was removed; and also Tams Bixby.

Mr. CARTER. Was he removed upon your charges?

Mr. BALLINGER. He was removed upon my charges.

Mr. CAMPBELL. Mr. Beall was?

Mr. BALLINGER. Yes; both Beall and Bixby were removed as a result of those charges.

Mr. STEPHENS. Was the work undone?

Mr. BALLINGER. There was never anything so notoriously incomplete as that work. Records of the United States showing the Indian blood of those people were suppressed and held in the office of the Commission and never transmitted to the Department; and, lastly, in the last week that the Secretary had jurisdiction to hear and determine the rights of these parties, in less than seven days the Secretary passed upon and decided the rights of 10,000 persons. That is the way this work has been done; and, gentlemen of this committee, it can not stand, because the courts will not permit it to stand, if Congress will not afford these people relief. These people are holding the actual possession of this property. The Government will never remove these people from that land unless it removes them in their coffins.

Mr. STEPHENS. About how many are in that situation?

Mr. BALLINGER. There are 12,000 people legally, equitably, and in good conscience entitled to share in the tribal property of the Choctaws and Chickasaws. There are probably 7,000 of them who are holding homes down there that will be dispossessed under this bill, because the legal title will be passed to the allottee who has never been in possession of it.

Mr. FERRIS. You come here with a startling statement that you are in possession of proof of the charges you have made against this Commission, and you offer as a reason for the faith that is in you that some 8,000 or 12,000 people have been left off of these rolls, grossly irregularly. Now, I do not desire to address my remarks or anything I might say to that phase of the situation at all, but why does it nec-

essarily defeat the purposes of this bill, and why does it conflict with that contention until some disposition is made of the surplus land?

Mr. BALLINGER. I will answer your question; because there is in law no restriction upon this property to-day, they exist only theoretically. The Government can not place restrictions upon it.

Mr. FERRIS. I agree with you, but Congress does not. Mr. CAMPBELL. I do not care about Congress. Congress should not complicate this estate to such an extent that we will have to bore through a hundred statutes on the books when we get into the courts. Let us fight this matter out in the courts. We are in the courts now.

Mr. CAMPBELL. Are you in the courts on this? Mr. BALLINGER. On the very nature of this title, and I will convince every member that you can not place a restriction on that land down there, in a few moments. The Choctaw and Chickasaw nations hold as perfect a title in fee simple as the sun ever shone on. The treaty of 1830, article 2, with the Choctaws provides:

"The United States, under a grant specially to be made by the President of the United States, shall cause to be conveyed to the Choctaw Nation a tract of country west of the Mississippi River, in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it."

That is as absolute and perfect a conveyance to the Choctaw Nation in trust for the exclusive use and benefit of the persons who comprised the nation in 1830 and their descendants, as it was possible to make.

Mr. STEPHENS. Was that followed by a deed? Mr. BALLINGER. The patent issued to these people in 1842, in conformity with article 2 of the treaty of 1830, provided:

"Now know ye that the United States, in consideration of the premises and in execution of the agreement and stipulation in the aforesaid treaty, have given and granted, and by these presents do give and grant, unto the said Choctaw Nation the aforesaid tract of country west of the Mississippi, to have and to hold the same, with all the rights, privileges, immunities, and appurtenances of whatsoever nature thereunto belonging, as intended 'to be conveyed' by the aforesaid article, 'in fee simple to them and their descendants, to inure to them while they shall exist as a nation and live on it.'"

The nations holding a perfect legal title in fee simple, passed the legal title in fee to the beneficial, or equitable owner, the allottee when it issued a patent to the allottee for his or her allotment. These deeds are all the same, the granting clause reading as follows:

"Now, therefore, we, the undersigned, the principal chief of the Choctaw Nation and the governor of the Chickasaw Nation, by virtue of the power and authority vested in us by the twenty-ninth section of the act of Congress of the United States approved June 23, 1898 (30 Stats., 495), have granted and conveyed, and by these presents do grant and convey, unto ——— all the right, title, and interest of the Choctaw and Chickasaw nations, and of all other persons in said nations, in and to the following-described lands."

Now, what restriction can you put upon that, particularly where the allottee is a citizen of the United States and of the State of Oklahoma?

Mr. STEPHENS. Is that what you call an allotment?

Mr. BALLINGER. That is a patent issued by the Choctaw Nation.

Mr. CAMPBELL. To the individual?

Mr. BALLINGER. Yes; to the individual.

Mr. FERRIS. I asked you a question, and I agree with you heartily on that legal proposition. I made quite a thorough investigation of the situation you have in hand, and I made copies of these papers. I am interested in properties down there very materially. I represent some of those people, and I want to know why it is that you can not thrash out your contention with reference to the disputes and those that you claim are improperly excluded—why can you not thrash out that proposition before we begin to deal with the surplus and unallotted lands, and let this bill go ahead?

Mr. BALLINGER. Because it is impossible to take the restrictions off of part of it until all the legal beneficiaries are known and the land has been equitably and legally divided.

Mr. FERRIS. You say there is no restriction now.

Mr. CAMPBELL. You say there is now no restraint to owning the property title in fee simple.

Mr. BALLINGER. Yes, sir.

Mr. CAMPBELL. In what way would the removal of restrictions from land that is restrained affect it?

Mr. BALLINGER. Because, Mr. Chairman, you can not take trust property and give my property to my brother.

Mr. CAMPBELL. But we do not propose to do that.

Mr. BALLINGER. Just a moment; I am coming to the principal question you are aiming at. You can not take my property and give it to my brother. You can not take my father's property and give it to his brother, and then remove the restrictions on those who have received more than their share, or have received part of the property to which I was entitled, and permit them to sell the land.

Mr. FERRIS. You do not propose that any of these parties that you claim are improperly excluded shall come in and take any of the property of the present allottees?

Mr. BALLINGER. Why, this property is the property of these people—Mr. FERRIS. So that the record will be straight, let me ask you this: You do not propose to divest the titles of any of the present allottees and give that property to those who are excluded?

Mr. BALLINGER. If we have a prior right to that property, if it is the home of some of those who are excluded, certainly we have that right, and will enforce it in the courts.

Mr. FERRIS. Let me ask you again; then you are contending that these parties, 8,000 or 12,000 of them, have not only the right to take hold of surplus and unallotted land and reach the lands that have already been allotted. Is that right?

Mr. BALLINGER. Under the law the land was to be allotted to the people who were actually in possession of the land and had improved it. The lands that have been in the possession of these people and have been improved by them for seventy-five years have been taken and given to some outsider.

Mr. FERRIS. I would like to have a plain answer to my question.

Mr. BALLINGER. I will answer your question as specifically as it is possible for me to do so. If these claimants have a prior right to a particular piece of land, we expect to assert that right; and we do not want you to attempt by legislation to transfer the legal title to somebody else, which you will do if you pass this bill. These restrictions are worthless, but they serve as a scarecrow to keep out innocent purchasers. That is all the good they are doing now, and by the time that scare ceases to permeate that country we will be back there with judgments of the Supreme Court that will prevent any persons who propose to buy this land from doing so and setting up a claim that he is a purchaser without notice.

Mr. CAMPBELL. You only have about five minutes more, Mr. Ballinger, and I will protect you from further interruption if you do not desire to be interrupted.

Mr. BALLINGER. If it is not the desire of the committee that I be interrupted, I will proceed.

Mr. STEPHENS. I understand, as a matter of fact and not as a conclusion of law, that there are people, according to your statement, now in possession of allotted lands of allottees?

Mr. BALLINGER. Yes, sir.

Mr. STEPHENS. When, as a matter of fact, there are others, and those others represented by you, who ought to have been allotted either that particular allotment or some proportion of it?

Mr. BALLINGER. Yes, sir; and that is what the Secretary of the Interior in his last report says. He says:

"Without doubt there are persons on the rolls who are not entitled to be there."

Now, how are you going to correct those abuses, if those rolls can not be purged and this property erroneously allotted recovered back to the nation? The Secretary says:

"Without doubt there are persons on the rolls who are not entitled to be there, and there are persons not on the rolls who should be there."

There is what the Secretary of the Interior says in an official communication. Now, this bill contains this further provision:

"SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes, approved by the Secretary of the Interior, and the enrollment records connected therewith shall be conclusive evidence as to the age and the quantum of Indian blood of any enrolled citizen or freedman of said tribes to determine questions arising under this act."

You can not make evidence conclusive in a court, and here is an attempt by legislative enactment to make something conclusive that you can not make conclusive, and particularly records that are so notoriously inaccurate as those records. You declare by this provision that if a full-blooded Indian who is entitled to 320 acres of average land has been enrolled as a negro, and thereby given 40 acres of the average land, that that record shall be conclusive evidence that that Indian is a negro. You can not make an Indian a negro by legislation and prevent a court from inquiring into his Indian blood.

With reference to the judiciary bill, it is utterly impossible to go into it, but my objections to this bill are as follows: This bill was evidently drafted without any knowledge or conception of the nature of the title with which it proposes to deal. It should not be placed upon the statute books because the inevitable result will not be to correct abuses, to right wrongs inflicted, suffered, and endured, to do equity, or to secure justice; but it will, if held to be valid, consummate and render final the culpable and notorious destruction of vested rights, abuses, wrongs inflicted, and deprivation of property rights accomplished through bribery, maladministration, and notorious incompetency by and on the part of administrative officers charged by the law with the administration of these trust estates, which have resulted in thousands of honest Indians, clothed with all the rights, privileges, and immunities of American citizens, being robbed and despoiled of their home and property rights.

Its real effect is to ultimately create positions for a horde of Federal officers, whose duty it will be to interfere in private controversies between citizens of the United States, to be compensated therefor out of the trust funds of these people, and to make a veritable political football out of these estates, to be dalled with when political exigencies arise, thus precluding the possibility of an equitable adjudication of any right, claim, or cause arising thereunder.

It is the rankest kind of class legislation, proposing as it does to prohibit the regular, ordinary constitutional courts of the sovereign State of Oklahoma from affording relief and protection through its courts to a class of its own citizens, compelling this class of citizens to seek redress and relief not in the ordinary, regular constitutional courts of justice, but exclusively in the Federal courts. It proposes to use the name of the United States in practically every case that can be brought under this act, solely for the purpose of litigating private claims and controversies between citizens of the State of Oklahoma and who are also citizens of the United States, and thus under color of law claim an interest in the controversy in which the United States has no real interest, immediate or remote, directly or indirectly.

Its provisions are in violation of the fundamental and most sacred guarantees contained in the Federal Constitution for the protection of life, liberty, and property.

EFFECT OF BILL IS NOT TO CORRECT ABUSES.

Let us subject this proposed legislative enactment to the searchlight of impartial analysis and examination.

Section 1 in substance authorizes the Attorney-General, when requested by the Secretary of the Interior, to bring suit in the name of the United States or any other appropriate complainants or plaintiffs to recover for either of the Five Civilized Tribes, or any enrolled member thereof, any moneys, lands, town lots, or any other property claimed by, or belonging to, either of said tribes, or any enrolled member thereof, and to set aside, cancel, and annul any conveyance, deed, or patent, which, in the opinion of the Secretary of the Interior, was secured either by fraud or without adequate consideration, and to cancel or reform any lease, power of attorney, or other instrument in writing affecting the lands or moneys of either of said tribes or any enrolled member thereof.

Will this provision permit the institution of a suit by the administrative officers having charge of the administration of these trust estates to correct the real abuses, injustices, and wrongs that have been inflicted upon persons having unquestioned rights in these trust properties, but who have been denied their share of the property by administrative officers, admittedly through error of law, fraud, and gross mistake of fact occurring and committed in the adjudication of their cases? Will this section permit the Attorney-General of the United States, upon the request of the Secretary of the Interior, to institute a suit to determine the legal rights of any one of the 10,000 people who have been denied their vested rights in the common trust property of the Choctaws and Chickasaws? The author of this proposed legislation in his official report for the fiscal year ending June 30, 1907, says:

"Requests have been presented and doubtless efforts will be made to reopen some, if not all, of these rolls, but it is to be hoped that such action will not be taken. Without doubt there are persons on the rolls who are not entitled to be there, and there are persons not on the rolls whose names should be there, but after the years of painstaking inquiry and determination made by the citizenship court, by the Com-

missioner to the Five Civilized Tribes, and, finally, by the Secretary of the Interior, it is believed that the cases of injustice or mistake are too few to justify an action that would surely result in thousands of claims being presented for readjudication."

What is this the Secretary says: "Without doubt there are persons on the rolls who are not entitled to be there, and there are persons not on the rolls whose names should be there," and then adds: "But after the years of painstaking inquiry and determination made by the citizenship court," which court it is alleged and generally believed was composed of at least two of the most corrupt scoundrels that ever sat as members of any court or commission and whose infamy was known to the Secretary when this report was written; and then he adds: "By the Commission to the Five Civilized Tribes," the members of which ignored and disregarded both the mandate of the statute and the instructions of the Department in order to defeat the rights of honest claimants and permitted its officials to accept employment from the firm of attorneys employed to defeat the rights of honest claimants while actually in the employ of the Government, and who, while in the employ of that firm of attorneys, briefed cases against applicants and then returned to the Commission and passed upon, in an official capacity, the very cases he had prepared and briefed while in the employ of said attorneys, and who, in order to defeat the rights of honest claimants, suppressed the records in their cases, covered up the evidence of their rights and deceived applicants by false and misleading representations, all of which facts were matters of public record and well known to the Secretary when this report was written; and, lastly, the Secretary adds: "And finally by the Secretary of the Interior," evidently overlooking the official reports to the Senate wherein his predecessor advised the Senate that between February 25 and March 4, 1907—exactly one week—the Secretary examined and decided 2,023 cases, involving the rights of upward of 10,000 claimants, and then the Secretary adds: "It is believed that the cases of injustice or mistake are too few to justify an examination that would result in thousands of claims being presented for readjudication."

Is this not a remarkable statement? Is it not upon its face so inconsistent, contradictory, and illogical that the recommendation can not be accepted or followed?

This "painstaking inquiry and determination made by the citizenship court," by the Commissioner to the Five Civilized Tribes, and finally by the Secretary of the Interior, which the Secretary assigns as a valid reason why these claimants should not be heard (for they have never in reality ever had their cases heard and determined) undoubtedly relates to the pains taken by the Commission to the Five Civilized Tribes not to make a record of the actual testimony taken in any case while it was in the field examining claimants in 1898 and 1899; to the adjudication and determination of the rights of claimants under provisions of bills pending in Congress which were not then and never became laws; to the pains taken by the Commission to suppress the records in the cases of claimants in order to prevent the true facts from becoming known to the Secretary of the Interior; to the pains taken by the citizenship court to defeat the rights of honest claimants in order to enhance the individual fortunes of members of that court; to the pains taken by the Secretary of the Interior when passing upon these cases finally, when more than 2,000 cases were examined and decided by him in less than one week, involving the rights of more than 10,000 claimants.

In substance the Secretary says in this official document that to purge the rolls of fraudulent names, or to permit rightful claimants who have been denied their property rights to present their claims in open court and have them adjudicated by a judicial tribunal, will involve so much labor and be so much trouble that he prefers that their claims should not be heard, although it is well known that claimants have never in fact had any hearing and have been deprived of their property through deception and fraud.

Would not an administrator of an estate who would dare make such a report to a court be summarily removed? Would any court in this land tolerate such brazen, culpable neglect of duty? Will Congress permit these people to be denied their property because of the corruption and criminal negligence of its agents and officers? Could anything be more binding upon the United States Government than an impartial, fair, and equitable distribution of these trust properties among the legal and equitable beneficiaries? Is it not a sacred duty which the National Government owes to these people to see that each and every one of them is given his share of the property? Can any reason be assigned why those who have been erroneously denied their rights by administrative officers should not have an opportunity to have their claims heard and determined by a competent tribunal? Is the Secretary of the Interior—charged by law with the administration of these estates—relieved of responsibility because the outrages perpetrated upon these people by administrative officers occurred under the administration of his predecessor? Is not Secretary Garfield the residuary legatee of all the errors committed and the wrongs inflicted upon these people under the administration of his predecessor? By what known rule of law or principle of equity can he now, as administrator of these estates, oppose, resist, or refuse a reexamination into every case of every person who claims to have been deprived of his rights through errors of law, fraud, or gross mistake of fact committed by administrative officers in the past?

These estates are now practically intact. Every fraudulent allotment made can now be canceled and every rightful claimant given his share of the property. In the Choctaw and Chickasaw nations there still remain unallotted 4,525,739 acres of land, including the 1,386,720 acres withdrawn by order of the Secretary of the Interior, contrary to law, for the purpose of establishing a forest or game preserve.

But no provision is found in this bill to correct any of these shameful abuses which are a stench in the nostrils of decent men.

EFFECT OF BILL IS TO CREATE HORDES OF FEDERAL OFFICEHOLDERS.

The inevitable result of the proposed legislation will be to overrun the eastern district of Oklahoma with a horde of Federal officers, whose duty it will be under this proposed enactment to interfere in the name of the United States in private controversies between citizens of the eastern district of Oklahoma with a horde of Federal officers, and expenses in maintaining the large number of suits which it is proposed to be brought under this proposed law are to be paid out of the trust funds of these people, who are to have no voice in the bringing of the suits or in the conduct of said suits after they are instituted.

Section 3 provides:

"That the Secretary of the Interior is hereby authorized to pay from the funds of the tribe interested any counsel fees, costs, and necessary expenses incurred in maintaining and prosecuting any suit under this act affecting such tribe or any enrolled member thereof, including the fees of any special counsel employed by the Attorney-General to assist in the prosecution of such suits, which special counsel the Attorney-

General is hereby authorized to employ in his discretion and likewise to fix the compensation of such counsel: *Provided*, That the expenses incurred in maintaining and prosecuting any suit on behalf of any enrolled member of said tribe or tribes, or to determine any question common to the interests of any number of such members, shall be first paid from the funds of the tribe or tribes of which he or they are members and charged against the property of such member or members: *And provided*, That for any moneys so expended such tribe or tribes shall be reimbursed under regulations to be prescribed by the Secretary of the Interior from funds due or to become due, or any property of said member or members, such expense to be pro rata among the persons interested in the proceedings, in such proportion as the Secretary may deem equitable."

Under this provision attorneys, agents, or employees without limit can be employed by the Attorney-General, who alone can fix their salaries and allow them such amounts for expenses as he may elect, and the Secretary of the Interior is to pay all such salaries and expenses out of the trust funds of these people. Who can predict with any degree of certainty that unless the Attorney-General and the Secretary of the Interior give this matter their personal consideration and attention, which would be a physical impossibility, that fees similar to the fee of \$750,000 previously allowed attorneys for the beneficent work of—as is alleged and apparently well founded—bribing public officers and resorting to all kinds of sharp practice in order to defeat the rights of honest claimants, and to be paid out of the trust funds of these people, will not be allowed these proposed attorneys, agents, and employees? Are these trust funds to be squandered and looted at will? If so, in common fairness declare a confiscation of this property and put an end to this shameful transaction.

The only person authorized to bring an action under this proposed enactment is the Attorney-General of the United States, and he can only act, no matter how equitable or meritorious the claim presented to him may be, or urgent the need for such action, when the Secretary of the Interior, upon the information furnished him by his subordinates, recommends the institution of the proceedings.

Why deny the right of the claimant or injured party at interest to bring such action in his own name? Or if it is essential that the Attorney-General bring the action, why not make it compulsory upon that officer to bring any action for any person when facts are presented by a claimant sufficient to justify the institution of such proceedings either for the protection of rights or for the recovery of rights which have been denied any claimant? Why attempt to make by law the vested rights of individual citizens of the United States recoverable only upon the recommendation of some departmental officer? Does any sane person believe that the Secretary of the Interior will personally examine into a single case or submit an official recommendation to the Attorney-General in any case where he has personally examined all the papers and is personally conversant with all the facts? Such an idea is an absurdity. With the multiplicity of duties which the Secretary of the Interior has to perform under existing law, he will not and can not know anything about the merits or demerits of any particular claim, but he must rely exclusively upon the recommendation of his subordinates. The subordinates being anxious to perpetuate their jobs will, if we can judge the future by the past, find excuse and justification for the bringing of thousands of suits, not so much in the interest of either the tribe or the individual, but because such litigation will prolong their employment. Unless the appointment of persons to conduct this litigation shall prove different from the past, broken-down political hacks with nothing but their past political record to commend them will be selected. Litigation will run riot and will continue until either these estates are completely squandered or until the courts place the exterminating heel of justice upon such proceedings or Congress as a result of an outraged public sentiment terminates the existence of this proposed law.

The Secretary being unable to give his personal attention to these matters, some bureau, division, or commission officer must act in his stead. This means that the rights of all this class of persons are to be put back in the hands of the same men who have shown themselves to be notoriously incompetent without any capacity to deal with ordinary practical questions coming before them for solution. These men are not lawyers, and some of them in the past have openly and notoriously asserted, in the face of the legal opinions of the Attorney-General's office, that they would not recognize the legal rights of certain claimants unless compelled to do so by the mandate of a court.

CLASS LEGISLATION.

This bill was artistically drawn, and upon casual examination would appear to confer jurisdiction upon the regularly constituted courts of Oklahoma, both State and Federal, to hear and determine the causes of action which it is proposed to bring thereunder. Section 2 provides:

"That any suit or suits provided for in this act may be instituted in any court of the State of Oklahoma where jurisdiction over the subject-matter and person may be had according to the laws of said State, or in the circuit court of the United States for the eastern district of Oklahoma; and the said circuit court of the United States is hereby given jurisdiction, concurrent with the courts of said State, in any and all of the suits and proceedings authorized by this act without regard to the amount in controversy."

All the force and effect of section 2, as above set out, is destroyed by sections 5 and 6. These sections contain the real life and venomous effects of this bill. Section 5 provides that any of the suits instituted under the provisions of this bill, or any suits now pending in the State courts in the eastern district of Oklahoma, shall on application now pending, or made by any party thereto at any time before the trial of said cause, be transferred from said State court to the circuit court of the United States for the eastern district of Oklahoma, and that "any application for removal as herein provided which states facts showing that the cause is one coming within the provisions and contemplation of this act shall be sufficient, and no bond shall be required from the applicant."

Section 6 makes it a misdemeanor for any clerk of a State court to refuse to certify the papers, files, and transcript of the case to the United States circuit court upon such motion being filed.

The fifth amendment to the Constitution provides: "No person shall be deprived of life, liberty, or property without due process of law."

This amendment prohibits the Government of the United States from imposing such obnoxious provisions as are proposed by this bill while the fourteenth amendment to the Federal Constitution imposes a like prohibition upon the States.

What is property? In defining a property right Mr. Justice Bradley in the case of *Campbell v. Holt* (115 U. S., 620; 29 L. Ed., 487) said: "That clause of the amendment which declared that 'No State shall

deprive any person of life, liberty, or property without due process of law," was intended to protect every valuable right which a man has.

"The words 'life, liberty, and property' are constitutional terms, and are to be taken in their broadest sense. They indicate the three great subdivisions of all civil right. The term 'property' in this clause embraces all valuable interests which a man may possess outside of himself—that is to say, outside of his life and liberty. It is not confined to mere tangible property, but extends to every species of vested right. In my judgment, it would be a very narrow and technical construction to hold otherwise. In an advanced civilization like ours a very large proportion of the property of individuals is not visible and tangible, but consists in rights and claims against others or against the Government itself."

What is due process of law? In the case of *Hurtado v. People of California*, Mr. Justice Matthews, delivering the opinion of the court, defines "due process of law," and his reasoning therein has been adopted by the Supreme Court of the United States and embodied in its decisions in almost every case involving this question that has come before the court from that day to the present. He says (110 U. S., pp. 516, 558; 28 L. Ed., p. 238):

"Due process of law in the latter (fifth amendment) refers to that law of the land which derives its authority from the legislative powers conferred upon Congress by the Constitution of the United States, exercised within the limits therein prescribed and interpreted according to the principles of the common law. In the fourteenth amendment, by parity of reason, it refers to that law of the land in each State which derives its authority from the inherent and reserved powers of the State, exerted within the limits of those fundamental principles of liberty and justice which lie at the base of all our civil and political institutions, and the greatest security for which resides in the right of the people to make their own laws and alter them at their pleasure."

"But it is not to be supposed that these legislative powers are absolute and despotic, and that the amendment prescribing due process of law is too vague and indefinite to operate as a practical restraint. It is not every act legislative in form that is law. Law is something more than mere will exerted as an act of power. It must be not a special rule for a particular person or a particular case, but, in the language of Mr. Webster, in his familiar definition, 'The general law, a law which hears before it condemns, which proceeds upon inquiry, and renders judgment only after trial,' so 'that every citizen shall hold his life, liberty, property, and immunities under the protection of the general rules which govern society,' and thus excluding as not due process of law acts of attainder, bills of pains and penalties, acts of confiscation, acts reversing judgments, and acts directly transferring one man's estate to another, legislative judgments and decrees, and other similar special, partial, and arbitrary exertions of power under the forms of legislation. Arbitrary power, enforcing the edicts to the injury of the persons and property of its subjects, is not law, whether manifested as the decree of a personal monarch or of an impersonal multitude. And the limitations imposed by our constitutional law upon the action of the governments, both State and national, are essential to the preservation of public and private rights, notwithstanding the representative character of our political institutions. The enforcement of these limitations by judicial process is the device of self-governing communities to protect the rights of individuals and minorities, as well against the power of numbers as against the violence of public agents transcending the limits of lawful authority, even when acting in the name and wielding the force of the Government."

Is an enactment that denies to an American citizen the right to bring or have brought in his own name an action for the recovery of his property, as is proposed by this bill, due process of law?

Is an act which permits suit to be brought for the benefit of one person or many persons who are of a definite class and denies the right to other persons admittedly of the same class to have suits brought for the recovery of their property due process of law?

Is an enactment that provides that citizens of a State and of the United States shall not bring a suit for the recovery of their property, except upon the recommendation of an administrative officer and upon the institution of the action by another administrative officer, as is proposed in this bill, due process of law?

Is an enactment that denies to a citizen of a sovereign State and of the United States the right to have his claim to property located exclusively in the limits of the State determined not by the regularly constituted courts of justice of that State, but solely in particular Federal courts, as is proposed in this bill, due process of law?

Congress can give no validity to such an enactment because it violates the guaranties contained in the Federal Constitution, which instrument, thank God, is above the power of Congress to impair.

GOVERNMENT NOT THE REAL PARTY IN INTEREST.

The ruthless disregard of law, the fraud practiced by administrative officers, which resulted in the denial to thousands of Indians and American citizens of their property rights, is of so little consequence to the administrative officer charged by law with the proper administration of these trust estates that he prefers, as appears from his annual report, that these thousands of legal beneficiaries should not be given an opportunity to be heard in open court, and there, with notice to the world, submit their claims and proof and receive judgments entitling them to their property.

The discovery, however, that title to a few town lots has been fraudulently acquired by a few grafters and that a few profligate Indians have sold their lands to white men without securing therefor adequate consideration arouses this officer to indignant action. The clarion call to arms is found in this bill, and the Interior Department vibrates with the shock of these frightful crimes. And what is the remedy? The Government proposes by the first section of this bill to thrust its name and mighty influence in between private claimants over these town lots and in a controversy to which it is a complete and absolute stranger.

The members of the Five Civilized Tribes are all citizens of the United States and of the State of Oklahoma. They are in their personal and civil rights in no sense under the chaperonage, control, or supervision of the Secretary of the Interior or any other administrative officer of the Government of the United States. The Government is concerned with this trust property only in fiduciary capacity, and that duty ceases and terminates when the member of the tribe receives his individual share of the trust estate, the conveyance to the nation being in fee simple and the conveyance by the nation to the allottee of all its right, title, and interest in and to the property lodged an absolute fee in the allottee. The allottee being seized in fee of the land, he could, the same as any other citizen of the United States, sell, convey, or encumber his property as he might see fit. He alone can raise the question of the adequacy of the consideration, and he alone can maintain an action to set aside a conveyance procured by fraud or imposi-

tion. The Government of the United States would be a stranger to such a transaction and could have no standing in a court.

The Constitution of the United States (Art. III, sec. 2) provides:

"The judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made under their authority; to controversies to which the United States shall be a party."

The jurisdiction of the United States courts extends to all cases to which the United States is a party. In order that the United States may prosecute or defend in a court, it must establish a case and show an interest.

What is a "case?"

Chief Justice Marshall, in the case of *Cohen v. Virginia* (6 Wheat., 264-405, 5 L. Ed., 257-291), says a "case" is "the prosecution by a party of some claim, demand, or request in a court of justice for the purpose of being put in possession of a right claimed by him and of which he was deprived."

That definition has been adopted by the Supreme Court of the United States in practically every decision from that day to the present, and was particularly relied upon by the court in the case of *La Abra Silver Mining Company v. The United States* (175 U. S., 44 L. Ed., p. 235), wherein the court says:

"Of like import was the judgment in *Smith v. Adams* (130 U. S., 167, 173, 32 L. Ed., 895, 897, 9 Sup. Ct. Rep., 566), in which this court said that the terms "cases" and "controversies" in the Constitution embraced "the claims or contentions of litigants brought before the courts for adjudication by regular proceedings established for the protection or enforcement of rights or the prevention, redress, or punishment of wrongs."

In the case of the *United States v. Henderlong* (102 Fed., 4) the court says:

"In order that the United States shall become plaintiff in a case or controversy in a judicial tribunal they must have some interest in the matter at issue. * * * The term 'parties' includes all persons who are directly interested in the subject-matter at issue who have the right to make defense and control the proceedings, or appeal from the judgment. Strangers to the suit are persons who do not possess these rights." (Hunt v. Haven, 52 N. H., 162.)

The Government of the United States alone has the power to bring a suit to cancel, vacate, and annul a patent issue by the Government in a case where such an instrument, if permitted to stand, would work serious injury to the United States and prejudice its interests, and then only where it has been obtained by fraud, imposture, or mistake. In the case of the *United States v. San Jacinto Tin Company* (125 U. S., 273-309, 31 L. Ed., 751), the court says:

"But we are of opinion that since the right of the Government of the United States to institute such a suit depends upon the same general principles which would authorize a private citizen to apply to a court of justice for relief against an instrument obtained from him by fraud or deceit, or any of those other practices which are admitted to justify a court in granting relief, the Government must show that, like the private individual, it has such an interest in the relief sought as entitles it to move in the matter. * * * If it be a question of fraud, which would render the instrument void, the fraud must operate to the prejudice of the United States; and if it is apparent that the suit is brought for the benefit of some third party, and that the United States has no pecuniary interest in the remedy sought, and is under no obligation to the party who will be benefited to sustain an action for his use; in short, if there does not appear any obligation on the part of the United States to the public, or to any individual, or any interest of its own, it can no more sustain such an action than any private person could under similar circumstances. * * * The interest or duty of the United States must exist as the foundation of the right of action."

Within the last sixty days the district court, eighth judicial district of Oklahoma, has dismissed a large number of cases instituted in the name of the Government to cancel and set aside leases made by allottees of their allotments, on the ground that the United States had no pecuniary interest therein; that it was a stranger to the proceedings and could not maintain such an action.

The real party in interest—the allottee—must be heard in his own defense and direct the proceedings, otherwise it is no adjudication of his claim or right. In the case of *Sabariego v. Maverick* (124 U. S., 261-301, 31 L. Ed., 442) the court says:

"Whenever one is assailed in his person or his property," said this court in *Windsor v. McVeigh* (93 U. S., 274, 277, 23 L. Ed., 914, 915), "there he may defend, for the liability and the right are inseparable. This is a principle of natural justice, recognized as such by the common intelligence and conscience of all nations. A sentence of a court pronounced against a party, without hearing him or giving him an opportunity to be heard, is not a judicial determination of his rights, and is not entitled to respect in any other tribunal."

The Government of the United States can not institute and maintain in its own name an action in which it has no pecuniary interest exclusively for the benefit of some third party. In the case of *The United States v. Sheridan* (119 Fed., 236) the Federal Government instituted an action against an insurance company on its bond for damages sustained by an individual engaged in construction work for which the bond was given. The evident purpose of the use of the name of the Government of the United States was to circumvent the statutory provision providing that in all suits brought in the circuit courts the amount in controversy must be \$2,000 or more. In deciding the case the court said:

"While the petition shows that this action is literally brought in the name of the 'United States as plaintiff,' is this true in the sense of that phrase as used in the judicial acts? Does the United States in fact 'sue' at all in the proper and actual sense of that word? Is the United States an actor in the pending litigation? Could the United States in any wise control it? Does not the United States merely permit the use of its name for the benefit of another, and is not the only connection of the Government with the case merely passive and formal? The answer to all these questions should probably depend upon the test of whether the United States is actually a party in interest in the litigation, or is merely a formal party under the permission of an act of Congress, in order that there may not be a technical 'violation' growing out of the fact that the bond sued upon is made to the United States alone as the party of the first part, the Salem Bedford Stone Company not being named in it. While time out of mind the official bonds of public officers and executors, administrators, guardians, and the like have been executed to the State or the Commonwealth, still any individual aggrieved by any wrongful act of such officer or personal representative could, without the permission of the State, sue upon the bonds, though, for technical reasons now well-nigh

obsolete, such person must use the name of the State ex relatione. But neither the United States in the one case nor the State in the other could recover in its own name for any wrong due to a mere individual, because it would itself have no cause of action."

Accordingly, the demurrer was sustained and the case dismissed for the want of jurisdiction.

The power of the legislature by such enactment as is here proposed to abridge the rights of citizens of the States and of the United States has been previously determined by the courts to be unconstitutional, null, and void. In the case of *Wally's Heirs v. Kennedy* (24 American Decisions, 512), the court says:

"The act of 1827 is a partial law, applying only to suits then brought or which might thereafter be brought in the name of any Indian reserve, to recover lands under the provisions of the treaties of 1817 and 1819 between the United States and the Cherokee Nation of Indians.

"The treaties secured to the reserves the right of citizenship. Of course, in 1827 they held the same relation to the body politic and were entitled to the same measure of constitutional protection as the citizens of Tennessee."

Mr. McGUIRE. Did I understand you to say a while ago that there was a firm of attorneys employed on a contract giving them a certain per cent of something? Now, what was that per cent?

Mr. BALLINGER. There was a firm of attorneys employed by the nations, their compensation to be fixed, and it was fixed, and the payment was made upon a basis of the value of the property that they took away from these people who had previously been enrolled, by judgment of the United States district courts, which judgments had been affirmed by the Supreme Court of the United States, and the source, the medium, through which this was consummated was a legislative commission that is believed to have been the most notoriously corrupt institution that was ever organized.

Mr. McGUIRE. If you have been correctly informed as to the facts, it would be the same thing as a firm of attorneys being employed to keep them off at so much a head.

Mr. BALLINGER. Yes.

Mr. McGUIRE. How much was it a head?

Mr. BALLINGER. They paid them a fee of \$750,000; but that firm of attorneys received as compensation for their services in keeping people off upward of \$1,300,000 in ten years, while the poor devil who had his farm taken away from him was compelled to mortgage his home, his farming utensils, and everything in this world he could borrow a penny on and was thereby reduced to absolute poverty.

Mr. STEPHENS. You do not know anything about an indictment being dismissed?

Mr. BALLINGER. Gentlemen of this committee, an indictment was returned against those men for criminal conspiracy for robbing the Chickasaw Nation. That indictment was never prosecuted. On the contrary, the United States attorney who attempted to prosecute these people was summarily removed from office, and by order of the Attorney-General of the United States—which telegram I saw myself—on the 14th day of November, 1907, the United States attorney at Ardmore was directed to dismiss those indictments, and the telegram read to "be sure and see that the indictments against Mansfield, McMurray, and Cornish were dismissed before the territorial courts passed out of existence and the new State came into being." And they were dismissed, and no attempt has ever been made to punish those men.

Mr. STEPHENS. Would this money have belonged to the Indians?

Mr. BALLINGER. This money would have belonged to this trust estate, and if there was ever a duty imposed on the Federal Government, there was a duty in this case to deal honestly with these people and give them their rights. It is because of this that I enter a protest here to-day. I do not want to protest against proper regulations, but I do want to protest against this sort of conduct on the part of administrative officers. It is not my say so, it is the sworn testimony of these men themselves which proves what I say. We yanked them before a select committee of the Senate and made them admit their infamy.

Mr. STEPHENS. I have a certified copy of the indictment.

Mr. BALLINGER. I am very much obliged to you, gentlemen, for this hearing.

Mr. SAUNDERS. As I understand you, the Choctaw and Chickasaw people engaged in litigation with these excluded people? There must have been some form of contention with the excluded people.

Mr. BALLINGER. There was contention with reference to everybody down there. Everybody's rights were disputed.

Mr. SAUNDERS. But they got on the rolls, you say, through judgments of the courts.

Mr. BALLINGER. Those on the rolls are not in the class of beneficiaries, many of them. There are two or three white people who have not one drop of Indian blood in their veins on those rolls. If you take off these restrictions those persons can transfer their property and you never can recover it in the world.

Statement of Mr. W. W. Hastings.

Mr. HASTINGS. Mr. Chairman and gentlemen of the committee, if there is any place where I feel at home, and if there is any subject with which I claim familiarity, it is in a discussion of the question of citizenship, particularly citizenship in the Cherokee Nation, because I have represented that nation in part on all questions relating to citizenship for the last ten years. I am not called upon to defend the members of the Commission to the Five Civilized Tribes, or the Commissioner to the Five Civilized Tribes, but I believe that I would be doing injustice to myself if I were to sit here silent and listen to the attacks which have to-day been made upon their personal integrity and not say before this committee what deep down in my heart I know, believe, and feel, and that is that more honest men have never administered the laws over an Indian people nor made or attempted to make a roll of citizens of any Indian tribe than the members of the Commission or Commissioner to the Five Civilized Tribes.

Mr. STEPHENS. Will you permit me to ask you one question?

Mr. HASTINGS. Yes, sir.

Mr. STEPHENS. Is it not a fact in all these nations that there are instances where there is one member of a family on the roll and another off, a father on and a mother off, and families are divided up in that way?

Mr. HASTINGS. Yes, sir; but I will come to that in a moment, and I will attempt to show this committee why that is right.

Mr. CAMPBELL. That is what we want to know.

Mr. HASTINGS. Let me show you why that happens. Under the treaties under which these Indians removed from the Eastern States to the Indian Territory, each to his respective nation, some of the individual members of a family removed West and some of them remained at home in the Eastern States. And now, if a brother, for example, went to and remained in one of the nations—I will use the

Cherokee Nation as an illustration—if he remained in the Cherokee Nation, I know of no instance where both brothers went under the same law and both remained in that nation all the time where both are not on the roll; that is, where they have remained there continuously.

Mr. STEPHENS. I can give you one instance right in the Cherokee Nation; that is the instance of W. R. Wayburn, who lives at Pryor Creek.

Mr. HASTINGS. No, sir; I say that I know personally that that man forfeited his right to citizenship by leaving the Cherokee country, and he was gone from it for a number of years.

Mr. STEPHENS. He was gone for twelve months, according to his affidavit.

Mr. HASTINGS. I am not talking about affidavits. You can prove anything you want to by affidavits. I have not the slightest respect for an affidavit in an Indian citizenship case.

Mr. STEPHENS. He had his father with him and went to Texas, and his father died there.

Mr. HASTINGS. That is not the fact. The fact was that he was away from there for years. He abjured his citizenship under the constitution of the Cherokee Nation and the laws of the United States.

Mr. STEPHENS. Is it not true that he had property there, and he lost that property?

Mr. HASTINGS. It may be that since he abjured his citizenship after his return he went out on the public domain and made an improvement in violation of law, and we may not have been able to have gotten him removed; but he has had ample opportunity to adjudicate honestly and fairly and fully and completely his rights to citizenship in the Cherokee Nation.

Mr. STEPHENS. His father became ill and died in Texas.

Mr. HASTINGS. Oh, this man Wayburn was out of the Cherokee Nation for a number of years, and he forfeited his right of citizenship. It does not make any difference what these applicants say; I am here to say that their statements are untrue.

Mr. STEPHENS. I know that he had a number of brothers and sisters there on the roll.

Mr. HASTINGS. They may be on the roll, but under the constitution of the Cherokee Nation, section 2, article 1, where you remove out of the nation you lose your citizenship in it, and therefore a member may be constitutionally and legally on the roll and his father or brother or sister may not be legally entitled to be on the roll. Now, that is a question to be determined under the testimony in each particular case.

Mr. STEPHENS. But under the ruling of the Interior Department that man has been thrown off of the roll, and he is losing his property there, which is worth thousands, almost.

Mr. HASTINGS. What I have been trying to explain to you and to this committee is that it is not a question of blood alone that entitles one to be enrolled under the law as a citizen of the Cherokee Nation. It depends not only upon blood, but upon residence there in the Cherokee Nation. That has been decided by every court in the country, and by the Supreme Court of the United States, in any number of cases, and among them, the Cherokee Trust Fund case (117 United States, 288) and the Stephens case (174 United States, 445), and in a number of other cases wherein the provision of the Cherokee constitution and the various acts of Congress requiring residence in the Cherokee Nation in order to retain a member's citizenship therein was upheld. The United States court for the northern district of the Indian Territory in the citizenship cases, heard upon appeal under the act of June 10, 1896 (29 Stat., 339), upon this point held:

"That blood alone is not the test of citizenship in the Cherokee Nation; that those Cherokees and their descendants who have separated themselves from the nation and have removed their effects from it and taken up their residence in any of the States in the Union have ceased to be citizens of the Cherokee Nation, and further, that bona fide residence in the nation is essential to citizenship."

This decision was affirmed by the Supreme Court of the United States in the Stephens case above referred to. Section 21 of the act of Congress approved June 28, 1898, commonly known as the "Curtis Act," in part provides:

"No person shall be enrolled who has not heretofore removed to and in good faith settled in the nation in which he claims citizenship."

The Cherokee agreement ratified by the Cherokee people on August 7, 1902, contained a provision in section 27 that, in so far as the question of residence was concerned, the Cherokee roll should be made in strict compliance with section 21 of the act of Congress approved June 28, 1898, a part of which I have just quoted.

The entire constitutionality of the act of June 28, 1898, was sustained by a decision of the Supreme Court in the Stephens case.

Suppose we had all done like Wayburn. Under the conditions of the patent our land would have reverted back to the United States, and there would not have been a foot of land left to those Cherokees residing down there now, because there is a condition in the Cherokee patent that the land shall revert to the United States if the Cherokee tribe becomes extinct or abandons the same. Hence the necessity for our incorporating into the Cherokee constitution, as early as 1839, the provision found in section 2, article 1, providing for forfeiture of citizenship upon removal from the Cherokee country.

Mr. STEPHENS. Let me ask you this: Were you not acting as an attorney down there and paid at so much a head to keep those people off?

Mr. HASTINGS. No, sir; I was not. I was paid a salary averaging less than \$2,000 per annum.

Mr. STEPHENS. Do you think a contract of that kind would be a corrupt bargain if it was made?

Mr. HASTINGS. That kind of a contract was not made with the Cherokee Nation, and I do not know the details of the work done by the firm of attorneys to which you evidently refer, but I understood that that firm had a contract with the nations they represented and that that contract was presented to a court and that this court created by an act of Congress all citizens of the United States, passed upon the amount of compensation to be paid; but, as above observed, I do not claim to be familiar with the services performed. However, in the Cherokee Nation I may say that that kind of a contract was not made, and the attorneys representing the Cherokee Nation were paid the very ungenerous salary of something less upon an average than \$2,000 per annum. Now, I quit the question of citizenship with this general statement. Under the act of Congress approved June 10, 1896, applicants had a right to apply to the Commission to the Five Civilized Tribes for admission to citizenship in any of the five nations; they had the right of appeal to the United States court given them, and afterwards the right of appeal to the Supreme Court of the United States was given them; under the act of June 28, 1898, the Dawes Commission was instructed and directed to make a complete and final

roll of all persons recognized as being entitled to citizenship in the respective nations, and from June 28, 1896, practically up to March 4, 1907, for nine long years, that Commission heard testimony pro and con, passed upon these cases, prepared written opinions, the applicants were permitted to be represented both in person and by attorneys where their interests could be well protected; they had a right and an opportunity was given to introduce all of the testimony they desired to in their own behalf, and the decisions in all rejected cases were first forwarded to the Commissioner of Indian Affairs for approval, and from the Commissioner of Indian Affairs to the Secretary of the Interior, and these applicants had all of these opportunities to thoroughly present their cases, and I for one believe that the question of citizenship down there ought to be forever closed.

It is true that we have 41,798 Cherokees, and you may here and there in the decision of over 41,000 cases find some little injustice done; perhaps you will find a few names on the roll that ought not to be there and you may find a few that ought to be there who are not upon the roll. But was there ever a human court established that tried as many as 41,000 cases in the course of ten or twelve years, many of them poorly represented, but what some injustice was done, and will not more injustice be done, and does not the Secretary of the Interior in that very report from which extracts have been read in your hearing, if you read the next three or four lines in it, say that more injustice would be done to our people if we opened up this question of enrollment, and does he not therefore advise that it be closed and no more legislation enacted looking to the opening up of the rolls? He says:

"Requests have been presented and doubtless efforts will be made to reopen some if not all of these rolls, but it is to be hoped that such action will not be taken. Without doubt there are persons on the rolls who are not entitled to be there, and there are persons not on the rolls whose names should be there, but after the years of painstaking inquiry and determinations made by the citizenship court, by the Commissioner to the Five Civilized Tribes, and finally, by the Secretary of the Interior, it is believed that the cases of injustice or mistake are too few to justify an action that would surely result in thousands of claims being presented for readjudication."

Now, as to the question of the removal of restrictions, my time is limited by the committee. I want to say, gentlemen of the committee, that no one is stronger in favor of protecting the real Indian than myself. I appear here in his behalf. But when I appear for the real Indian, I mean by that the ward of the nation, the full-blood Indian, and I am willing to say that I go as far as any member of this committee, I go as far as Congress will go, as far as the Department will go, in the protection of the full-blood Indian, and I believe that this bill that is prepared and introduced here is designed to and does protect the full-blood Indian.

Mr. McGUIRE. Is that bill No. 15641?

Mr. HASTINGS. Yes, sir.

Mr. McGUIRE. Is that bill reasonably satisfactory to you?

Mr. HASTINGS. It is reasonably satisfactory to me. There are some little changes in phraseology, perhaps some little differences in wording along in it that I would have changed, but taking it as a whole, yes.

Mr. McGUIRE. You heard the amendments suggested to the bill by Mr. Boudinot and others?

Mr. HASTINGS. Yes, sir; with those I agree in part. This bill removes restrictions from all citizens, all members of the tribes, or all allottees of less than half Indian blood, and from the surplus lands of all allottees of Indian blood less than the full blood, and from all of the lands of the intermarried white citizens and of freedmen, and gives the Secretary of the Interior jurisdiction to remove the restrictions from all restricted land, including all of the lands of full-blood Indians. I desire to say that for seventy-five years the Cherokees have had a constitutional government, and that they have had one of the best school systems that any State in the Union has had. We have had colleges in which our people have been educated conducted under the supervision and operated at the expense of the tribe, and besides a great number of mission schools and colleges independent of tribal control have been doing a great work educating the Indian people, so that now I want to say that we have some 250 or 300 union neighborhood schools, attended by whites and Cherokees, scattered throughout the Cherokee Nation, and two-thirds of the teachers in those schools are of Cherokee blood. In the late constitutional convention, which framed the organic law of the new State of Oklahoma, a number of the delegates were Cherokees by blood, and you have one here on this committee [referring to Mr. CARTER], one Member of Congress of Cherokee-Chickasaw blood, and in the United States Senate we have another distinguished member of Cherokee blood [referring to Mr. OWEN].

Mr. McGUIRE. Are you of Cherokee blood?

Mr. HASTINGS. Yes, sir; I am about one-thirty-second Cherokee blood. I want to add that a great many members of the present legislature of the State of Oklahoma are Indians by blood, and over in those counties where there is a reasonable percentage of Indians (and in no county are there more Indians than whites, but in those where there is anything like a large percentage of Indians) a great majority of the officers are Cherokees by blood. I only mention this to show you the degree of intelligence our people have attained down there and why I believe they are sufficiently protected by this bill. The full blood is protected against the sale of his land; he is protected against the leasing of it for oil or mineral purposes; sufficient safeguards are thrown around his devising his land; full-blood heirs can only sell inherited land with the approval of the probate court having jurisdiction over the estate, and by the terms of this bill he is allowed to lease his land for agricultural purposes for a period not longer than five years.

Before passing to section 6, I want to suggest an amendment to section 3. I have before me Senate bill No. 5586, but these bills are identically the same. In line 5, on page 3, I think the words, "and the enrollment records connected therewith" ought to be eliminated, for the reason that the rolls are printed, and these rolls now show the ages, brought up to certain dates, and they also show the degree of blood, and therefore I think the words, "and the enrollment records connected therewith," should be eliminated, so that these printed rolls or published rolls, those that are circulating around and are placed in the recording offices everywhere, should be the absolute and conclusive guide, and in lieu of those words I would insert the words "and printed under his direction," referring, of course, to the direction of the Secretary of the Interior.

Mr. STEPHENS. Do you think that the word "conclusive" ought to come out of the sixth line?

Mr. HASTINGS. No, sir; I think it ought to remain in there. If you do not leave it there, one day an allottee would sell his land, if you pass this bill, and let us suppose that he is less than half Indian blood, and the next day he might sell it to another man, and to another, and another, claiming in each case a different age or degree of Indian

blood, and I think it is too great a temptation to the Indian to commit fraud, and for that reason I think it is better to have these rolls to be made conclusive, and then the Indian knows what is the guide, and the purchaser knows what is the guide. The Indian should be taught to be honest rather than induced by legislation to be dishonest. I would have the Indian taught business integrity and personal honor. Let my race continue to be one of high ideals.

Mr. STEPHENS. As a matter of law, do you think Congress has any right to deprive a man of property rights by any such language as this in the bill?

Mr. HASTINGS. I do not believe that it deprives him of property rights. You are giving the right to alienate to some and to some you are not by affording better protection. That is the proposition.

Mr. BALLINGER. May I ask you one question?

Mr. HASTINGS. I have no objection.

Mr. BALLINGER. Does that prescribe the rule of evidence? Does that prescribe what shall be evidence?

Mr. HASTINGS. It does prescribe the rule of evidence.

Mr. STEPHENS. In an act of April 26 you said that these rolls should be conclusive as to the quantum of Indian blood. What would you do with Wayburn? He was on two or three rolls and was thrown off of those, and one of those was approved by the Dawes Commission and that was recalled in some way and he was thrown off of the rolls. What would he do? He would be suspended between heaven and earth.

Mr. HASTINGS. I beg your pardon, but the trouble with you is that you have got one isolated case out of 41,798 people. Will you pick out that one isolated case and stop the whole administration of affairs just because you claim that some injustice has been done some single individual and the only evidence you have of that is his ex parte affidavit contradicted by the record?

Mr. STEPHENS. If the Government can rob one man it can rob hundreds.

Mr. HASTINGS. But if we are going to hold up a final settlement of our affairs every time a man presents an affidavit that he is entitled to redress, nothing would ever be done, no settlement would be reached.

Mr. STEPHENS. But if that affidavit is right—

Mr. HASTINGS. An applicant may not be entitled under the law because of the provision of forfeiture contained in the Cherokee constitution, because of the act of Congress requiring residence in the nation in which he claims citizenship. He may not be legally entitled to be enrolled.

Mr. STEPHENS. How is a man to forfeit his heirship?

Mr. HASTINGS. That has been determined by the Supreme Court of the United States, that that is constitutional, in a number of cases, as I have already heretofore stated.

Now, I want to briefly discuss the question of taxation. I want to say, gentlemen of the committee, that I am going to disagree with my brother Indians, and I do not speak for them on this subject; I only speak for the Cherokees. And I regret that I have to come to the parting of the ways with the other representatives of the other tribes on this proposition. So far as I am concerned, my judgment is that you ought to protect the real Indian, "the domestic, dependent alien," the man who is really the ward of the Government, the man that you are charged with the duty to protect, the man that deserves protection, and the man whom the Government is in honor bound to protect.

Mr. STEPHENS. Would you say the full blood?

Mr. HASTINGS. I am talking about the full blood; and I also include the homestead of the mixed bloods, those of half or more than half Indian blood as provided here in this bill. I believe that the rest of that land ought to be taxed. I am not sure that any should be exempt from taxation but the land of the full blood.

Mr. CAMPBELL. Except the homestead of the full blood?

Mr. HASTINGS. Except the land of the full bloods. All the land except the land of the full blood is reserved here, and the homestead of the half and more than half Indian blood is protected from taxation. Now, I believe that all the rest of these lands ought to be taxed. If my lands are enhanced in value by reason of the State government being thrown around them, by reason of the fact that my neighbor is permitted to sell his land, by reason of the fact that better farmers get into possession of it, and by reason of the fact that they develop that land adjoining mine, which makes it more valuable and enhances it in value, then I believe that as a matter of right, as a matter of principle, I ought to help to pay for that government that enhances the value of that land.

Now, a serious question arises as to whether the lands of minors should be taxed. Let us consider that, gentlemen of the committee. You have got to raise so much taxes in a State and county, have you not? Now, suppose there is a family of two adults, the father and mother, and they have two minor children. You will either have to place double taxation on the land of the father and mother or equalize it upon all, will you not?

If that land belongs to the children, and that land is enhanced in value, what reason is there that it should not help pay for that?

Another reason might be urged. The children go to school. A large percentage of this tax is for educational purposes. The more good schools you have in every neighborhood, the more churches you build, the better class of tenants you will have, and it will add value to the land, and therefore the land of the children is enhanced in value, is it not? Now, if the land of the minors is enhanced in value, why should not that land pay its pro rata share of the burden?

Again, another reason why I think it ought to be taxed is this: The line otherwise of demarcation between the Indian and the white man is obliterated. If you go down in the Indian Territory, now Oklahoma, there is no such line. They never ask whether a man is a white man or whether he is an Indian, and I want to say that as long as you keep up these laws making a line of distinction, throwing the Indian over on one side of the line and exempting him from taxation, you place a ban on the Indian and he never can rise up under it. You create a prejudice against him that he never can overcome, and that will destroy him. I want to tell you right now that the Indian is walking right along side by side with the white man. You take all those offices down there, and you will find that the Indian is represented in all the different offices through that country, and if you enact this class legislation, if you go to exempting him from taxes and throwing him into a separate court, you will create a prejudice against the Indian, and the Indian being in the minority—there being about 100,000 over on the Indian Territory side as compared with 600,000 whites, and the whites increasing in greater proportion than the Indians—the ultimate result will be that the prejudice against the Indian will absolutely destroy him. What I would like to see is this prejudice wiped out and prevented. Have your union schools continued like you have them now.

Mr. MOTT. Is there any prejudice between the whites and Indians on the score of race?

Mr. HASTINGS. There is absolutely, to-day in the Cherokee Nation, not the slightest evidence of prejudice existing between them; but one race is being assimilated right along by the other.

Mr. CARTER. There has not been any demand for the payment of taxes?

Mr. HASTINGS. There has been no demand for the payment of taxes; no.

Mr. CARTER. From the whites or Indians of the Indian Territory?

Mr. HASTINGS. No, sir; not outside of the cities and towns.

Mr. CARTER. That prejudice probably would not spring up, then, until that demand was made?

Mr. HASTINGS. No; but I was going to add, suppose you exempt about three-fourths of this land from taxation; how are you ever going to alienate any part of it? Will it have any value? Are you ever going to get a farmer on the outside to come in and purchase any of that land? He will say, "I will be taxed to death." The Oklahoma constitution provides a maximum rate of taxation, but it doesn't say what maximum value shall be placed on the land, and therefore they will have to value the land high enough so as to make it yield a certain amount of taxes. So far as I am concerned, I believe you ought to protect the full-blood Indian until he is declared by law or the Department or some competent tribunal to be competent to commercially compete with his white neighbors. Many of them are now, and doubtless the Secretary of the Interior would so hold upon presentation of their individual applications.

So far as section 6 is concerned, I do not believe that that section applies to anything but restricted land. I think Mr. Boudinot and some of the other gentlemen here are honestly mistaken about it. That is my judgment, that it only refers to restricted land. I have no objection, if the Secretary of the Interior and the Government of the United States want to generously appropriate \$90,000 and send us, free, attorneys down there to assist our people in caring for their allotments; I have no objection to that. I do not believe in interfering with the probate courts. I believe, if a man is the guardian of his minor children, that this representative of the Department should come down there and give him advice free; but I do not believe in interfering with the guardian; but in the event he is appointed guardian, he must make annual reports to the Secretary of the Interior and also report to the probate court.

Mr. STEPHENS. Would there be any objection to selling the surplus land belonging to the minors to the highest bidder?

Mr. HASTINGS. I have a decided objection to that.

Mr. STEPHENS. Would you have any objection to this proposition? Of course you would for the sale of your own children's land.

Mr. HASTINGS. I would not begin to hear to it.

Mr. STEPHENS. But suppose the land of the minors was sold and the money put in the Treasury, so that the land could be taken up by white farmers.

Mr. HASTINGS. Do you refer to full bloods or half-breeds?

Mr. STEPHENS. Any of them.

Mr. HASTINGS. My answer might be different.

Mr. STEPHENS. Both ways.

Mr. HASTINGS. I want to say here that I am opposed to the sale of minors' lands except where there is a legally appointed guardian and where he applies to the probate court, and they are sold after appraisal and advertisement in accordance with law.

Mr. STEPHENS. But where it is sold to the highest bidder—

Mr. HASTINGS. Under the law out there it has to be appraised and sold to the highest bidder, but not sold except in each individual case, and that sale must be approved by the court.

Mr. STEPHENS. Should not that apply to all the surplus lands of the full-blood Indians?

Mr. HASTINGS. There is a provision in the bill under which the restrictions might be removed from the land of full bloods. I expect I am responsible in part for the insertion of that clause. That refers to homesteads as well as surplus land. I will tell you why that was incorporated—because some people are quite old and infirm, and they ought to have the right under the direction of the Secretary of the Interior to sell their lands; others are invalids; and, then, sometimes the homestead is not as valuable as the surplus, and under this provision the Secretary of the Interior would perhaps give them a right to sell the homestead instead of the surplus. Again, the homestead might be more valuable than the surplus, but the homestead may be a distance away from the rest of the land of the family, and it might be more desirable on account of its location to sell the homestead than the surplus. I think in some cases of minors, where there is a legally appointed guardian and it has been investigated by the Secretary and the guardian reports that it is for the best interest of the ward, for instance, for educational purposes, say in some individual cases, the full-blood minors' surplus should be permitted to be sold; but as a general proposition I would be opposed to it.

The next question is as to this jurisdictional bill. You find it incorporated in Senate bill No. 5586. I want to say, gentlemen of the committee, I think that bill is entirely too broad. I believe that section 6 of this bill gives the Secretary of the Interior jurisdiction and ample authority and gives him plenty of money, and section 5, which immediately precedes it, in specific language declares all sales, deeds, contracts, powers of attorney, or other incumbrances made or attempted to be made in violation of law absolutely null and void. I think, therefore, that section 6 gives him plenty of authority to protect those people down there, but I am very much afraid that there are many provisions in this jurisdictional bill that I would not agree to.

Mr. CAMPBELL. What is the number of that bill?

Mr. HASTINGS. It is Senate bill No. 5586. They have the two bills combined in that one. It permits any kind of a suit to be brought, either in the name of the United States or the individual, either with or without his consent, and in some cases it is to be brought either before restrictions are removed or after. Now, you know that this last financial panic was largely caused by the people being scared more than anything else. If this bill is passed, let me indicate to you the result of it. How are you ever going to sell any lands down in that country? Suppose you go to the recording office and get an abstract, and you see that the title is clear, how are you going to get an honest farmer from Illinois or Kansas to come out there with this bill, this threat, hanging over the land; how are you going to get him to come down there and invest in a foot of that land? He doesn't know but what the next day there is going to be a suit brought to cancel that original patent, and the result will be that instead of the honest farmer coming down there to buy that land it will be bought up by the speculator, who will take a chance at it.

Another objection that I have is that it takes money out of the tribal

funds, and after a certain time the funds, when the allotments are equalized, are to be individualized and the expenses of the suit or suits are charged up to the individuals. Now, we are trying to wind up our affairs down there, and that means a postponement of a final settlement, does it not? I believe that the Government of the United States is charged with the duty and responsibility, as you provided in section 6, of caring for those who should be cared for—that is, the real Indian down there in that country, and at the expense of the Government of the United States.

I am not opposed, gentlemen of the committee, to the Secretary of the Interior bringing these suits in the name and on behalf of the real Indian before the removal of restrictions, and at his request. Let him have the title unclouded before his restrictions are removed, and then the Indian can go into the open market and get the most for his land. But I am opposed to holding this bill over unrestricted land as a threat against it, so as to reduce the price of the land and keep out the honest investor in that country.

Mr. MOTT. Does not this bill provide that the Secretary of the Interior can not file any suit on this land where the rights of suit accrued after the removal of the restriction?

Mr. HASTINGS. No, sir; it does not.

Mr. CARTER. No; it does not.

Mr. BOUDINOT. Would you not favor this, or do you not believe that the guardians of minor allottees down there, acting under authority of the courts, should be free from the supervision of the Secretary?

Mr. HASTINGS. I do not believe that the guardians should be interfered with, nor do I believe that he should be superseded by the representative of the Secretary. I agree with you as to that, and I believe that section 6 contemplates the appointment of a representative of the Secretary who will act in an advisory capacity to this legal guardian, and would not supersede him at all.

Mr. CARTER. That was the intention.

Mr. HASTINGS. That was the intention. I am frank to say that I think section 6 is a little too loosely drawn, and I think it ought to be tightened up a little bit.

Now, a word more as to the jurisdictional features of the bill. Concurrent jurisdiction, as provided for in Senate bill 5586, means that the representatives of a government provided for in section 6 will urge the institution of all suits in the Federal courts and the transfer of all cases from the State to the Federal courts. To that I can not assent, because—

First, I think it unnecessary. Some test suits to determine all legal questions will have to be brought and those suits will be appealed either through the State courts, and, there being a Federal question involved, to the Supreme Court of the United States, or through the Federal courts to the Supreme Court of the United States.

Second, The State courts should not be divested of their jurisdiction. While some of the decisions reported to have been made by the judges of the State courts may be erroneous and indefensible, and probably are, it must be remembered that the judges are new and many complicated questions are being presented, sometimes indifferently, not to say poorly, but conditions will soon settle down, and I prefer to trust the property interest of our people to the judges of the courts which they themselves helped to elect. In the end the ballot is their only sure and safe weapon of defense.

Third, If you provide free attorneys for the less intelligent of our people their rights can and I am sure will be protected. If not, in the lower courts, upon appeal.

Fourth, Most allottees have other property interests to protect, and if they invoke the jurisdiction of Federal courts upon questions involving their restricted land, then the State courts and the juries will unquestionably be prejudiced against them in the trial of suits involving unrestricted land or other property interests or their liberty.

Fifth, This and all previous legislation, agreements, and treaties contemplated that all these Indians would at some time be emancipated from Federal control, and my honest judgment is that it is best for them to begin now. Let the incompetent Indians have the advice and assistance of the representative of the Government so long as Congress shall think it necessary.

Sixth, There is a serious question as to the right of Congress to enact the jurisdictional features of this bill. We have had too much doubtful legislation. The courts have had to construe every law enacted for that country, and every treaty or agreement made with the Indian people has been the subject of a lawsuit. I trust that the intention of Congress will be clearly and explicitly expressed in this bill, and that it will be free from doubt as to its constitutionality. All doubtful legislation in any way affecting the title to lands in our country will have the effect of clouding the title more or less, and will result to the detriment of the grantor, the Indian.

Seventh, Our present governor—and his term of office will not expire for three years, and by that time conditions will settle down in our new State—is a strong friend of the Indians, and I am sure if the representatives of the Government find any judge of a State court corrupt or unwilling to do his duty that he would not hesitate to remove him if the proper charges were filed.

Eighth, I think our people should be encouraged to have respect for and confidence in our local courts and in our State government and institutions rather than have instilled into them the spirit of suspicion and distrust. Teach the Indian self-reliance; develop him as rapidly as possible. Aid and protect him with the ultimate purpose of the Government always in view, and that is to make him a citizen of the United States in fact as well as in law.

If I know myself, I love and cherish every Indian sentiment. I owe the Cherokee people much—probably more than I can ever repay, although I have given them my best services for fifteen years in attempting to assist them as best I could; but I warn this committee now that, my judgment is, the surest means of destroying the Indians is to enact legislation that will result in arousing racial prejudice against them, now buried, as I trust, forever.

I have already trespassed upon the time allowed me. I am certainly very much obliged to the committee.

Statement of Mr. M. L. Mott.

Mr. MOTT. I did not know at the time you asked me how much time I would want that the committee was going to take under advisement this judiciary bill.

Mr. CAMPBELL. We are considering them all together.

Mr. MOTT. I do not believe there has been a great deal said about the judiciary bill, or that the objections offered necessitate my going into it very extensively, and to prevent consuming the time of the committee, as this would take more than I am willing to ask for, even if I knew that the committee was willing to concede it, I want to present to the committee here a brief. I have a brief here that I had

directed to the chairman of this committee which deals exclusively with the jurisdictional bill, the right of Congress to pass this legislation, and I will hand that to you. I had addressed it to Mr. Sherman, the chairman of the committee.

Mr. CAMPBELL. This will be for the use of the committee in the redrafting of the bill.

Mr. MOTT. Yes; and it might be embodied in the record. There has been a great deal of time given to the preparation of that paper, and it might be that in the discussion of this question, before it is finally concluded, the discussion might grow quite serious upon the question of the jurisdictional bill, because I know there is strenuous opposition to it upon the idea that it is interfering with the State courts, and that the Congress will be attempting to take away prerogatives belonging to that independent sovereign, which is something that it has not been in the habit of doing. A careful reading of that brief, which embodies all the authorities, will show that Congress is assuming no more than it has done in other cases, and in several of the States, and so long as the Indian lands are under restrictions the United States has reserved to itself the right of administering that trust through its own courts, and it is not a restriction upon the State of Oklahoma, nor is it a discrimination, and it has been so held in every decision from the time John Marshall handed down that famous one on the Cherokees in Georgia, and the provisions have been in entire harmony, and there is no doubt but what the opinions run along on all fours on this question.

Mr. CAMPBELL. Do you know of any other tribes except the Five Tribes in the Indian Territory who were granted a fee simple title in their land?

Mr. MOTT. I heard Mr. Ballinger read the provisions of those treaties. Mr. CAMPBELL. Do you know of any other case of that kind?

Mr. MOTT. No, sir; I do not.

Mr. CAMPBELL. Then it could not be res adjudicata.

Mr. MOTT. Well, I am not familiar with the matters there. My recollection is that the Choctaw and Chickasaw nations entered into an agreement afterwards with the United States Government by which certain limitations were imposed upon their rights. I do not think there is any question but what you have the power and the right to do that.

Now, Mr. Chairman, I want to say this: These matters have been discussed before the Interior Department at great length, not only at this session, but last session, and during all the time that the Government has been allotting these lands down there. The Interior Department understands this question, the agents and representatives of the Government understand this question, as it would be impossible for you gentlemen or any committee appointed to gather the conditions as they exist and have existed, if you sat here for twelve months. My confidence in the integrity of the Government is supreme, and the officers who administer the law in the affairs of these tribes. So far as the Interior Department and the Commissioner of Indian Affairs are concerned, I think they have done it solely and singly with the idea of the good of the Indians, and for their protection and preservation. That Department has recommended both of these bills—this restriction bill and this judiciary bill. They have done it actuated by what they believed was right, with a complete, full knowledge of the situation, and it is their business to know the situation.

Mr. CARTER. Are you in favor of the removal of the restrictions?

Mr. MOTT. No, sir. I am, under rules and regulations.

Mr. STEPHENS. Would not that prevent restrictions from being removed almost entirely?

Mr. MOTT. Oh, no. Why, they are so slow to act here. Have you ever had any business with this Department?

Mr. CARTER. Then your confidence in the Secretary is not so great if he has recommended this legislation?

Mr. MOTT. Which?

Mr. CARTER. For the removal of the restrictions.

Mr. MOTT. I advised him very forcibly on that, as I thought, and I impressed him sufficiently about it to excite some action, I think, although I differed with him in only one or two minor particulars. I am opposed to restrictions upon the homesteads of any of the citizens of the Five Civilized Tribes. I am not opposed to it because I am an Indian. I am not an Indian. I am a North Carolinian. I went out there and was appointed by the chief of the Cherokee Nation, with the approval of the President, and I have been there four years. I am opposed to the removal of the restrictions upon these homesteads, because there was a solemn agreement between these people and the United States that their land should be nonalienable and nontaxable for a period of twenty-one years. That is a solemn agreement in writing, signed by the President of the United States on the part of the Government of the United States, and by the representatives of the Indian tribes who ratified it.

Mr. CARTER. But you do not object to the removal of the restrictions on the surplus lands?

Mr. MOTT. That is not in conflict with any agreement with the Indians.

Mr. CARTER. You do not object to that?

Mr. MOTT. No; not under regulations.

Mr. CARTER. Do you not believe that they ought to have the right to sell their own lands?

Mr. MOTT. Yes; those that are capable of it, and I am in favor of the Secretary saying that the restriction should be removed. But because you are capable of selling your own land, I am not in favor of having the restrictions removed from the land of all those Indians so that a crowd of grafters can buy those lands for whatever the Indians will sell them for.

Mr. CARTER. I have a cousin who is a college graduate, and as bright a young man as there is in the Chickasaw Nation, and it took eighteen months, with three lawyers, for him to get his restrictions removed. That is an absolute fact, and I had finally to write Mr. Kelsey myself, and I told him that I had written him three or four letters before, and I wanted him to give this his personal attention; and when he did that, at the end of eighteen months, this young man got his restrictions removed.

Mr. MOTT. Mr. Carter, that is no argument against the principle. You are simply arguing against the method of procedure.

Mr. CARTER. The method of procedure would be the same. We have no guaranty that it will be different.

Mr. MOTT. The Secretary proposes to make regulations so that you can have the restrictions removed without coming to Washington. I will ask you a question, as a member of this committee.

Mr. CARTER. I will be very glad to answer it.

Mr. MOTT. Do you think that all the citizens in the Creek Nation are capable of having their restrictions removed and disposing of their

property, and do you think that they should be given the right to alienate and sell their property?

Mr. CARTER. I think that every Indian in the Indian Territory of mixed blood is as competent as, on an average, are the white men who surround him, and I think that he ought to be more competent, because he has had better educational facilities and he is better educated.

Mr. MOTT. Now, I want to answer every question that is put to me, but I do want to get before this committee certain things before I conclude. I want to make this statement before I proceed any further. I do not want to assault the Indian Territory nor Oklahoma, and I do not do it; but I do say that if the same conditions existed, if the same number of men—incompetent, incapable of attending to their affairs—lived in the District of Columbia, and owned all the property in the District of Columbia, that the same conditions would exist in the District of Columbia that exist in the Indian Territory. I say that matters here under those circumstances would be just as disreputable as they are down there, and I do say that the conditions down there are such as to justify this Congress in taking care of the Indians; because if this Congress does not do it, then the Indian will be swept literally off the face of the earth.

I say that as a man, and I say it as an individual, and I say it as an attorney for these people whom I represent. And I say that any man who understands the conditions and has lived there knows that the only absolute safety to the property rights of those people is through the legislation of this Congress, and the man who says that they do not need this protection is either woefully ignorant, or he is not the best friend of the Indian. There is no politics in the Indian Territory when it comes to getting hold of an Indian's land. I am a Republican, but when it comes to getting possession of the Indian's land and getting hold of it, there is absolutely no politics in it. The Democratic party and the Republican party stand shoulder to shoulder on that question. I make that assertion here without fear of successful contradiction. I do not mean as a party, I mean as individuals; I do not mean all the Democrats nor all the Republicans; I do not mean that, but I mean this: There are honest Republicans there and honest Democrats there, as there are in every part of the country, but I do not want to make the impression here that there is any party matter in this, or that there is any politics in it, but I do want to make the impression on this committee that the only safety for the Indians of the Five Civilized Tribes is through the strong arm of this Congress.

The restrictions were removed as to these freedmen citizens in 1904. The removal of those restrictions was a calamity, a misfortune, as I know, because I got there in fifteen days after that law went into effect; and of all the disreputable methods, unjustifiable, unwarranted, that could be imagined, they were in use. Every species of trickery, every species of device and fraud was resorted to to get the land from these people, and in seven out of ten cases the land went without any valuable consideration, Mr. Chairman.

Mr. STEPHENS. There were some development companies out there about this time that bought a good deal of this land?

Mr. MOTT. I do not care who bought the lands—what I say is true.

Mr. STEPHENS. Were not one or two development companies incorporated there about that time, five or six years ago, that made it a business to buy up that land?

Mr. MOTT. Yes, sir.

Mr. STEPHENS. And were not some of this Dawes Commission found red-handed in those companies?

Mr. MOTT. You refer to Mr. Bixby?

Mr. STEPHENS. He was one.

Mr. MOTT. Yes; and I came here and fought him to the last ditch for that reason, whether I succeeded or not.

Mr. STEPHENS. I am glad you did.

Mr. MOTT. And I am on record in the Department of the Interior as making that fight. He was removed, or rather he resigned. I do not know why he resigned. Mr. Ballinger says that he had him removed. There is just this about it: If you take off the restrictions from the lands of these people they will lose them. I am opposed to the removal of the restrictions. Here sits the chief of the Creek Nation. Here sits a delegate, and there is another, and there is another; there sit some citizens over there; and they are all opposed unqualifiedly to the removal of the restrictions from the homesteads of any mixed-blood citizens below the half blood, or from the land of any freedmen citizens.

Mr. CAMPBELL. About how many of the Cherokees are there?

Mr. MOTT. Seven thousand full blood, 8,000 freedmen, and 8,000 mixed blood.

Mr. CAMPBELL. Is there any Indian blood in the freedmen?

Mr. MOTT. Yes; but they were all on the rolls.

Mr. CAMPBELL. How are they on the rolls?

Mr. MOTT. They are all on the rolls as freedmen.

Mr. CAMPBELL. Do you know why that distinction was made; do you know why they are put on as freedmen instead of as Indians, when they have Indian blood in them?

Mr. MOTT. That was done by the Dawes Commission. Unless there was a very apparent, strong evidence of the blood, as they were named, and unless they said they were half blood, they were put down as full blood; and if they had one-half Indian blood and one-half negro blood, if they said they were full blood, they were put down as full blood; and if they said they were white and Indian, when they were negro and Indian, or if they said they were negro and white, they were put down that way. That was almost always determined by the answer of the applicant for citizenship.

As to that last question, when you had this question up, upon the removal of restrictions from the homesteads of freedmen, they believed then that it was going to be done without any doubt, and there were hundreds and hundreds of deeds signed to freedmen's homesteads before Congress reached the question, and if you remove any restriction down there the same thing will occur again. Those people do not know, most of them. Those men are prepared for this work, these disreputable men, and, as I say, the same conditions would exist right here; the same class of men would do the same thing. It is no disgrace to them, but they have got it organized right now, and if it was known that the bill was signed by the President removing the restrictions from the sale of that property apart from rules and regulations, hundreds of those homesteads and any amount of that property would be signed up before sunup next morning, even if they lived 20, 30, or 40 miles from any town.

Mr. CAMPBELL. Is there any hope that any time will ever come when these restrictions could be removed from the land?

Mr. MOTT. Remove them under the twenty-one years' clause, under the agreement.

Mr. CAMPBELL. Would it not be just as bad then?

Mr. MOTT. No, sir; I do not think so.

Mr. CAMPBELL. Or would it?

Mr. MOTT. I do not think so, Mr. Chairman. Consider the contact and association out there. The Indian does not live in the town. The development that has gone on there for the last twelve years has resulted in little change to the Indian and the freedman. They live out on the hills, to themselves, and they do not come in contact with the whites, and as the country is settled up these farms are bought up by people who actually improve them.

Mr. CAMPBELL. Can you get men to go down there and take up those farms and improve them without giving them the right to acquire them?

Mr. MOTT. No, sir; but do it under rules and regulations.

Mr. CAMPBELL. They have an opportunity to do so now, do they not?

Mr. MCGUIRE. Not in the Five Civilized Tribes.

Mr. CARTER. The mixed breed has a right to alienate his surplus?

Mr. CAMPBELL. That is my idea.

Mr. MOTT. This bill removes the restrictions on the surplus lands of 7,000 full-blood Indians, the adults, under rules and regulations; and if the Secretary, as he proposed doing, adopts new rules and puts a man there to represent him, then the actual farmer and settler will buy the land and settle it and cultivate it. If it is not done that way the grafters will have it to-morrow without giving any value for it, and they will be the only purchasers and the only bidders. The land sold under the freedman's regulations has not been developed. They have had a chance to develop that since 1904.

Mr. CAMPBELL. What has been done with that?

Mr. MOTT. Some of it has been sold by the grafters. All of it has gone out of the hands of the freedmen.

Mr. CAMPBELL. Very little of it is improved?

Mr. MOTT. Very little of it is improved.

Mr. MCGUIRE. Have you been there long enough to make up your mind as to whether, comparatively speaking, the freedmen or the colored people there are on an average in intelligence with colored people elsewhere?

Mr. MOTT. No, sir; they are not, those that belong to the Indians. Here was the custom among the Indians and the freedmen. The freedmen had the same ideas about things that the Indians had. Of course those that live about the towns are more intelligent. They are as capable and as intelligent as any class of negro citizens anywhere. But in the main the freedmen citizens of the Creek Nation are not as intelligent as negroes elsewhere. They do not know anything of the value of their property, and they are not capable of handling it.

Mr. CAMPBELL. Do they handle their personal property?

Mr. MOTT. They never have any, that I know of, since I have been there, to amount to anything; any more than the ordinary Indian and freedman Creek citizen does have.

Mr. CAMPBELL. Does an Indian know how to trade his pony and take care of himself in a pony trade—a Creek?

Mr. MOTT. I do not know whether they know anything about that. They might know something about the exchange of ponies or cattle.

Mr. CAMPBELL. Can they be swindled out of their ponies the same as they could be out of their lands?

Mr. MOTT. No, sir; I think a full-blood Indian, unintelligent in other matters, does know more about those things than he does about other matters.

Mr. STEPHENS. I understand your contention is that if the restriction was removed the land would fall into the hands of men who would keep the country undeveloped, as it is now, as was the case with the land of the freedmen. Now, suppose the land was segregated and sold to the highest bidder by the Government itself, and the money was kept in lieu of the lands, would not the Indians then be safe, with the money in the hands of the Secretary of the Interior?

Mr. MOTT. Oh, yes.

Mr. STEPHENS. And then would not the country be developed by selling this land to the highest bidder, and would not the land go into the hands of the farmers who would go there and get a good title from the United States Government, and in that way would you not have the solution of this whole matter?

Mr. MOTT. That would be under rules and regulations, the Secretary of the Interior handling the money and conducting the sales to the highest bidder. That is exactly what I stand for, whether the sale is by sealed bids or to the highest bidder.

Mr. STEPHENS. Then the farmers would get the lands and the grafter would be cut out and a man could buy a little tract of land and cultivate it himself.

Mr. MOTT. Yes.

Mr. MCGUIRE. Do you not think in that country, from what you have seen of it, that it would be a very, very slow process to leave this entirely in the hands of the Secretary of the Interior?

Mr. MOTT. I think it would be a great mistake to take the sale of this property out from the control of the Secretary, but I think it would be very much simplified by the Secretary putting representatives there where there would be no delay about the confirmation of sales.

Mr. MCGUIRE. I agree with you that some of them will squander their substance.

Mr. MOTT. Yes.

Mr. MCGUIRE. But you take a family of a half dozen boys who have had a guardian, and they come into possession of an estate. It has always been your experience that a per cent of those boys will squander what they have immediately?

Mr. MOTT. Of course.

Mr. MCGUIRE. Now, it would be foolish to say that that situation does not prevail and that it would not prevail in Oklahoma in case this bill goes through. But you think, do you not, that we should legislate for the greatest good to the greatest number; that that should be our purpose?

Mr. MOTT. Unquestionably.

Mr. MCGUIRE. There would be some isolated cases, and perhaps not entirely isolated here; but would you object to legislation of this kind simply because some man or some number of men who have never received that education which comes with responsibility would at the first time that property comes into their possession destroy it; would you kill this legislation for that reason, because a goodly number of those people would squander their money and their substance?

Mr. MOTT. I think that the trouble can be obviated just with a little amendment there.

Mr. CAMPBELL. Will you suggest the amendment?

Mr. MOTT. If you are going to take the restriction off of the homesteads of the Indians of less than the half-blood, and off of the freedmen, it should be done under rules and regulations. That is the amendment I would suggest.

Mr. CARTER. But you do not object to allowing a man to sell his surplus?

Mr. CARTER. No; not under rules and regulations.

Mr. CARTER. Then why interpose this matter about the homesteads?

Mr. MOTT. If you are going to sell it, I am opposed to the restriction on any class of homesteads, that is all. But if the Secretary's recommendation is followed by this committee and by Congress, that the restrictions be removed upon the homesteads of the Indians of less than half blood and on the freedmen's homesteads, instead of it being done as the Secretary recommends and as this bill provides for, I want it amended so that it will be done by the Secretary under rules and regulations, so that the land will be sold by the Secretary under rules and regulations. You will see there that the section applying to the freedmen's homesteads does put it under rules and regulations as to the adequacy of price.

Mr. MCGUIRE. It puts all the full bloods under rules and regulations?

Mr. MOTT. Yes; but then the mixed bloods and less than half bloods, it does not give them the advantage even of removing them after a year under rules and regulations, but it does it summarily.

Mr. FERRIS. Do you not think, they being more than half of white blood, that quantum of blood of itself renders them more nearly able to take care of their property than the other Indians?

Mr. MOTT. In the main it does; but as to the Creek Nation, here sits the chief and here are the delegates, and they will tell you that there is a large per cent of the mixed bloods that are as unqualified to protect themselves as the full bloods.

Mr. FERRIS. Are they more than half white?

Mr. MOTT. I do not know. Those that are on the rolls.

Mr. MCGUIRE. Merely for the purpose of making an observation, I would say that I have been with the Indians for twenty-seven years in my country. The most industrious, the richest, and most healthful tribe of Indians we have to-day in Oklahoma are the Ponca Indians. Fifteen years ago they were not working; they were not tilling their farms. You never saw them with a team. You saw their women doing the work. Their annuities became exhausted. It became with those Indians, full bloods and all, a question of "root, hog, or die." To-day every Ponca Indian, I think, has a team, and is working his allotment, is working his farm, is raising wheat and corn, a condition that would not have existed had he been put upon a pension for fifty years more, as had been pensioned for the previous twenty-five years.

Mr. MOTT. You have been living there twenty-five years?

Mr. MCGUIRE. Yes.

Mr. MOTT. He has had your association that long. [Laughter.]

Mr. MCGUIRE. Oh, no—

Mr. MOTT. And otherwise, the Creeks have not had any yet?

Mr. MCGUIRE. They have had your association, there. [Laughter.]

But, to be serious now, without any joking, the Poncas within the last few years—I do not know how long it has been since they were left in that situation, but not a great number of years, and it is true that they are surrounded by white people, but no more than the people in the Cherokee Nation or the Creek Nation or any other nation in Oklahoma—have worked out their own salvation. There is only one thing to attribute their success to, and that is that their annuities were exhausted and they were put upon their own resources and responsibilities. Many times they were hungry. Many times the young fellows would spend their last 50 cents for a pint of whisky, and when they were drunk they were put in the calaboose; but when they were let out, these young fellows, like white men, went to work and worked out their own salvation. And I say to you that the white man or the negro or any other nationality or race do better when they are put upon their own resources entirely, and when they are not continually pensioned.

Mr. MOTT. That is not an analogous situation. The Creek Nation are not begging for anything; they are not suppliants for charity. They are simply asking Congress to protect them and allow them to hold what they have, and then if they starve, let them starve.

Mr. CARTER. That agreement only relates to the homestead.

Mr. MOTT. Only to the homestead, and for twenty-one years; and it reaches your tribe, too.

Before I conclude I want to present this view of it, because I think it is having a great weight here. Of course I am very glad to have any member of the committee interrupt me and ask me questions, and I am glad to give any information that I can, but I do not want to be prevented from presenting this view of the matter, which is the strongest one here, and has more weight than any other, and that is this, the question of taxation. You have given them a State down there, and they come up to Congress and say: "You have given us a State down there, and now you want to deprive us of the means whereby we can properly conduct our State government by denying us the right to tax certain property." Now, that is not fair. They came up here and asked you for statehood, and I know how much you were interested in giving it to them, Mr. CAMPBELL. I know what a champion you were for it, and I know how they gave you credit for it at that time. They never once said a word to you, but I call upon you to deny it, if any man from the Indian Territory ever said to you: "Mr. CAMPBELL, you must take the restrictions off of this property and give us the right to tax, and then we are ready for statehood." No, sir; they never said that to you or to this Congress; they never said it anywhere. They did not then say it at home. But the very moment they stood here and told you they were ready for it, what was the result? All this property was untaxed. They came here and said they were ready for statehood, that you had kept them out of it for ten years, and that they were the richest and most powerful Territory in the United States, and that no objection could be presented by anybody that would carry any weight wherein they were not entitled to statehood. It was questioned by a great many people here. You accepted their statements and gave them statehood.

They never offered you one excuse that they were not ready. In less than ninety days they came back here and threw it in the teeth of this committee and of this Congress; they said: "You have gone to work and given us statehood down there, and given us all this responsibility upon us. Who has done it? Congress has done it. The President of the United States and the United States Senate and the House of Representatives have given us statehood, and now you want to deny us the exercise of the rights whereby we can tax property to properly conduct our State government." They ought to have said that then. There is not a man in Oklahoma that would have said it then, because they were not ready for it, if what they say now is so. Yet they told you they were ready for it. Now, they have brought about that condition, and they came back here, and it is the only strength and the single argument they have made, and it is all taxation, and not a man has been called upon yet to pay a dollar of taxes. I admit that the representative gentlemen, men of ability, like Mr. CARTER and other Members of Congress who are here, realize the importance of it, that actuates them, no doubt, in regard to the question of the removal of re-

strictions down there, and that clamor that is made about it is not upon the question of taxation, it is on the question of getting these irresponsible people, who do not know the value of land or of a dollar, out of the power of these men who are disreputable, and giving them no opportunity to get to them and make them sign away their property for comparatively nothing, and make paupers of them.

Now, let me tell you something else. You are Members of this Congress. There you are, Mr. McGuire. You take the restrictions off of those lands, except under rules and regulations, and impoverish these people of the State of Oklahoma, and in less than five years the same delegations that were in Congress then, that are in it now, will be back here saying to you: "You took the restrictions off of these Indians' lands, and you put them where they lost their property, when they were incapable of taking care of themselves. Now they are paupers. The moral duty does not rest on the State to take care of them; the moral responsibility rests upon the United States Government;" and you will be asked to appropriate \$1,000,000 to colonize them somewhere and clothe them and take care of them; it is as inevitable as that the sun will set to-night and rise to-morrow—the conditions exist—just as they come here and ask that things be done, and you, gentlemen, not seeing the situation, go ahead and do them, and they continue to bring to you one condition after another; and they are going to bring about the worst situation that has ever been brought about before they get done. Then Congress's work of humanity has just begun. They will say to you: "These are the wards of the nation; you are the trustee and the guardian. You had the right to protect them in your wisdom and discretion, and you failed to do it, and now there are 50,000 paupers, hungry and cold."

Mr. HASTINGS. Do you mean to say that those of less than half Indian blood in some years to come will come here asking to be colonized or are you referring to the full-bloods?

Mr. MOTT. I am referring to the class of citizens that the Government agreed to protect under the restrictions, and said that the restrictions should not be removed; the class that can not take care of themselves. I know that it is funny; I know that it is amusing; but it has been done. Every time you come back here, at every Congress. I tell you, if you take off these restrictions from these lands, if you take off this protection, they will be back here as sure as fate.

Mr. CARTER. You state there will be 50,000 paupers, I believe?

Mr. MOTT. If there are that many.

Mr. CARTER. There are 75,000 Indians in that part of Oklahoma, I believe. There are 75,000 Indians, as I understand, on the Indian rolls of the Five Civilized Tribes. Now, you say there will be 50,000 of these people who will be paupers. Do you contend that 50,000 of the mixed-breed Indians, or less than half of the Indian people, are not capable of managing their own affairs?

Mr. MOTT. Three thousand out of the 18,000—

Mr. CARTER. This does not remove all the restrictions on 50,000 people.

Mr. MOTT. It is removing the restrictions on an incompetent class.

Mr. CARTER. I can understand Mr. Mott's argument. He said something about what actuated this delegation. He is morally conscious that the majority of these people are as able to take care of themselves as Mr. McGuire, myself, or Mr. Hastings.

Mr. MOTT. Here are three full-blooded Indians sitting here, and if they do not agree to my statement and disagree with yours—

Mr. CAMPBELL. You do not understand that the proposition is to remove the restrictions from the full-bloods?

Mr. MOTT. Oh, no. I am not objecting to that feature in the bill as applied to the full-bloods. The only thing I do object to is this: I am opposed to the removal of the restrictions from the homesteads of any class of citizens. That bill provides for a removal of the restrictions from the homesteads of those of less than half blood, and of the freedom, apart from rules and regulations, except that freedmen are under rules and regulations for twelve months. Now, we are not opposed to it at all; but if it is done at all we do at least ask this Congress to see that they get fair and adequate prices, and that is all.

Mr. STEPHENS. Would it not be satisfactory if the land was sold at auction?

Mr. MOTT. Certainly; if you are going to remove the restrictions anyhow, your proposition is as good as any.

Mr. STEPHENS. I do not see any objection to that. They would have the money instead of the land. If the land could not be divided, the property would be sold and the money would be divided. That is what ought to be done here.

Mr. MOTT. There is a great deal that could be said about the matter, and, as I say, I am very glad you gentlemen have asked me so many questions, but it has probably precluded me from saying a great deal that I would have said.

Statement of Chief Moty Tiger of the Creek Nation.

(Chief Moty Tiger was examined through an interpreter.)

Mr. Chairman and gentlemen of the committee, if I understood what was being said here, I have got plenty that I might say along with those who have talked, but as I understood nothing that was said I can not refer to what any of the gentlemen said, because I know nothing that has been said. I can, however, give you a few ideas of my own. I realize the fact that I am here before you, and you represent a nation such as no other nation, and your strength is almost limitless. You have a great nation; you are rich and strong. No other nation, probably, is so strong, and what you do in many instances seems good work. The Great Spirit above alone has power greater than yours, and if He would withhold His help both you and myself, and all of us, would disappear, would be destroyed. Therefore, you having that great power, I look upon you very much as the Great Spirit, with His great power. If He were to withhold His power and mercy you would be destroyed. So also you have been watching over us and taking care of us for years and years with your strong arm, and to-day, if you withhold that care, we would be destroyed.

If you gentlemen were to go down in the Creek Nation, the Muskogee Nation, and see our citizens there, the citizens whom we are here to-day speaking for, you would think it was exceedingly strange. You are thinking and studying here how you might protect us down there, and one method of extending that protection, you seem to think—and we do also—is the retaining of the restriction on our lands down there; but if you should wish to remove that, there are persons here in this city who will touch the wires all over this town, and the information will be down there in our country in a moment's time, and the people who are down there ready to rob our people, as it may be said, of their lands, would have the lands already signed away to them in a few hours' time. We have both full-blood and mixed-blooded people down in our country; but unfortunately for us, a mere infusion of white or

some other blood with the Creek does not always make capable business men of them. For that reason we have very many that are mixed-blooded Creek citizens who would in a very short time be dispossessed of their homesteads if the restrictions were removed from them. If you remove the restrictions from the Indian's lands, that will be the end of the Indian. You have museums here where you take care of wild birds and wild animals, zoos and the like, and you have large reserves out in the far West where you take care of the wild beasts of the forest and the plains. That is very good; but can you not do as much for the Indian?

Mr. CAMPBELL. I should like to ask the chief a question, and then the committee will have to arise. Are you in favor of removing restrictions from less than half-blood Indians on their lands?

Chief TIGER. No.

Mr. MCGUIRE. Are you in favor of removing restrictions on more than half blood—white?

Chief TIGER. I have just said that an infusion of white blood into the Creek does not always make him a good business man, and for that reason I would not wish that the restrictions should be removed from their homesteads. We have a great many people who are mixed bloods, but they are not educated.

Mr. MCGUIRE. What is your blood?

Chief TIGER. About one-quarter.

Mr. MCGUIRE. One-quarter white?

Chief TIGER. One-quarter white. But these people who have no education are not able to take care of their property or their homesteads any better than I am or the people of the full blood.

Mr. CARTER. Do you represent the views of the majority of the people of Creek blood?

Chief TIGER. I do.

Mr. CARTER. I want to say for your information that I have a petition, which came to me voluntarily—several petitions, in fact, two or three—stating that the chief and the delegation did not represent the views of the mixed-breed Creek Indians. Some of them have been second chiefs, and more of them belonged to the council in the past, and I know some of them. I have a petition from some of those fellows. Those petitions state that you do not represent the will of the majority of the Creek citizens. They state that they are the friends of the chief, and have nothing against him personally, but that he is taking the course which is not for the best interest of the tribe; that the chief is not at this time a representative of the sentiment as it exists to-day, because he is perpetuated in power by the Secretary of the Interior—I mean by laws passed sometime ago—and he was not elected recently, but succeeded Chief Porter recently by order of succession, and they can not have an election down there. They say that he does represent the Indian of twenty years ago, but not the Indian of to-day. I tell you this for your information, because I want you to know what the people are saying, and not because I want to embarrass you in any way.

Chief TIGER. We who are public men, especially the gentleman who has just asked me the question, know that there is no man that gets into office but who is attacked by somebody, from some quarter. [Laughter.]

Mr. CARTER. The petitions do not attack you at all; they say they are friendly to the chief, but the chief does not represent their views. That is the point they make.

Chief TIGER. The Secretary of the Interior never appointed me as chief, and I have not come into the principal chieftaincy by election, but this man you call Roosevelt, living up here, is the man that put me in, and I regard myself as being chief of the Creek Nation. [Laughter.]

Mr. CARTER. They do not discredit you as chief.

Mr. CAMPBELL. I think that is all. The committee is certainly obliged to you gentlemen for the hearing and for the information you have given us.

Chief TIGER. I am anxious to say to the committee that I am here in exact accordance with the ordinance of the Creek national council, of which many of these people who have written here and made petitions are members, and those people are not representing things just as they ought to be.

Mr. CARTER. Maybe they have changed their minds.

At 5.10 o'clock p. m. the committee adjourned.

COMMITTEE ON INDIAN AFFAIRS,
HOUSE OF REPRESENTATIVES,
Friday, March 20, 1908.

The subcommittee met at 1.30 o'clock p. m., Hon. James S. Sherman (chairman) in the chair.

Statement of Mr. George W. Woodruff, Assistant Attorney-General for the Interior Department.

Mr. WOODRUFF. The Department is in favor of the bill (15641) as it stands. There has been introduced, also, a jurisdictional measure, and the Department believes that some provision for jurisdiction should be passed with the other bill for these reasons, briefly, that if it is not necessary it can do no damage; there may be many who say it is not necessary. I will not take more than a minute on that point. The reason for the importance of the bill is shown by the actual happenings since the admission of the State, the concrete happenings. The courts of the State have attempted to take such action as this, to authorize the sale of full-blood minor lands where it is claimed by the Department that the law of the United States forbids the sale of those, whether acted upon by a probate court or not; that as far as the status of those lands of minors is concerned, we do not wish to say that the probate court has not jurisdiction, but as far as their being full bloods is concerned, we believe that whether the Department would feel otherwise or not, that the law as it stands to-day absolutely precludes any action by the probate court of the State to alienate the minor lands.

There has been action taken by the courts of the State to quiet title in cases where deeds or other conveyances were taken from Indians for restricted lands prior to the removal of the restrictions. These things have resulted frequently in the service of notice upon the Indian, the restrictions having been removed, that the case will be heard by the State court, and the Indian, being childlike and simple, thinks it is a wise thing for him not to come within the reach of the courts, and he stays away. The result is that unless the United States could step in and protect him to the extent of the attempt to cloud the title or defraud him of the restricted land, such action having been taken before the removal of the restrictions, there is great danger that there will be a decree quieting the title to the person who, contrary to law,

secured the deed or other incumbrance prior to the removal of the restrictions.

There is another particular case, which is typical of the class, in which the State court issued an injunction to restrain a Federal officer from ejecting a person who was not upon the rolls and who had arbitrarily taken an allotment upon the traveled land and had cut and sold timber from that land as though it were actually her allotment. The court, taking cognizance of that, issued the injunction against ejecting her from the land which she claimed to hold against the tribe, also against the seizing and sale of the timber.

Mr. CAMPBELL. Was that a temporary order or a permanent order?

Mr. WOODRUFF. It was a temporary order and has not as yet been heard. The claim of the Department is that in a case of that kind it ought to be possible, if it is deemed wise, to remove the case to the United States court.

Mr. CARTER. What case is that, and where was it, do you remember?

Mr. WOODRUFF. It was the case of a woman. This particular case was brought with the direct intention of bringing before the courts the question as to whether a certain class of people ought to have been on the rolls or not, but nevertheless the tribal property was cut, the timber was sold as ties to a street railway company. The Federal agent seized this timber under direct instructions from the Commissioner to the Five Civilized Tribes, and the court has issued an order against his disposing of that timber for the benefit of the tribe. That as yet has not been tried, but still stands in the courts.

There is just one other class that I spoke of, which is acute just at present. There is a certain class of tribal land in the Choctaw Nation known as the "segregated coal area," which I suppose you know about, and it has been by act of Congress set apart not only from the rest of the United States, which was not necessary, but also from the Indians themselves. There is a certain number of intruders, purely trespassers, who have gone upon this land and are attempting to get such a foothold there as to apparently attempt to establish equities which may be recognized by Congress. They have been warned by the Department, and properly, I believe, that they can get no real equities by mere trespass and intrusion upon that land. Federal officials, under direction, have been sent there to tell them they must either leave the land or pay rent. In many cases they have acceded to this and paid the rent; I think in no cases have they left.

Recently one of them refused to pay the rent. The Federal officials attempted to eject him and the Federal officials have been arrested under an order of a justice of the peace, and there is an action pending in the State court to restrain the Federal officials from either ejecting these intruders upon the tribal property or collecting rent from them as a recognition of their temporary right to remain there, which has not been argued as yet. That is one of the concrete cases which I bring up to show you that if we have not the power to take those cases into the Federal courts, then we ought to have the power. If we have the power, which is denied by many people in the State, including the State judges, then no damage could be done by making it clear that the Federal Government has the power to enforce its own laws to protect the tribal property of these Indians and to protect the allotments so far as any action is taken before the restrictions are removed from the allotments, and beyond that the Department does not for a moment ask that action should be taken.

Just one word more. The Department feels that if the restrictions bill should be passed separately, that there would be no possible chance, perhaps, of getting this other bill, because the term is approaching its end and it is very difficult to get legislation when there is any direct active opposition to it. That being the history of such efforts, it is the feeling of the Department that the two should be passed together.

The jurisdictional feature, by the way, could in all probability be boiled down to what would be less than that page, perhaps, and still be entirely satisfactory.

The CHAIRMAN. Have you boiled it down?

Mr. WOODRUFF. I had intended to bring it, but Mr. Ward has a copy, I believe, and if that could be accepted it would be satisfactory.

Mr. CAMPBELL. Conceding everything that is charged up to the State courts here, do you think it necessary that there should be additional legislation to give the Federal courts jurisdiction over property that is under the control and jurisdiction of the Federal Government?

Mr. WOODRUFF. It is claimed, and has been claimed definitely to me by several gentlemen here present, that the Federal courts have no jurisdiction in those matters.

Mr. CAMPBELL. In the case of a full-blood Indian, would the Federal court be denied the right to exercise jurisdiction?

Mr. WOODRUFF. It is so claimed. I will state frankly that I do not believe it is so, but I want to make once more that point, that if it is not necessary no harm is done.

Mr. CAMPBELL. You are speaking as a law officer of the Department of Interior?

Mr. WOODRUFF. Yes, sir.

Mr. CAMPBELL. What is your opinion upon the proposition?

Mr. WOODRUFF. My opinion is that we could take all the cases I have mentioned here, and any other cases that we would want to take, into the Federal courts, unless, perhaps, it were for one question, and that is the amount involved.

Mr. CAMPBELL. Without additional legislation?

Mr. WOODRUFF. Without additional legislation, but I am anxious—and I am speaking for the Secretary when I say this—that these Indians, to the extent that Congress has seen fit to make any restrictions upon their property, and the tribes, to the extent that they remain as tribes, should be protected. I am anxious to make a certainty out of what seems to me a surety.

Mr. CAMPBELL. The only thing I had in mind was that it seemed useless to duplicate the authority of the Department to go into the court. If it already has the authority, as at first blush I would probably say it has, in the kind of cases you have mentioned here, it would seem wholly unnecessary to repeat that authority.

Mr. WOODRUFF. Except that it is claimed in open speeches by officials of the State that it is not so; and there is also another feature of the jurisdictional bill—that is, the giving out of concurrent jurisdiction—because I do not believe that the Department would want to bring many of these cases in the Federal courts. It would only be when it was found necessary. There is one other class I did not mention. There were some cases which were brought directly under the law of the United States giving the Secretary the power to bring cases to set aside leases which were obtained fraudulently, which are known as the Ex rel cases. They were transferred on November 16, by the enabling act, into the State courts. There was an application made for their retransfer, under the same enabling act, to the Federal courts, but the

State district judge refused to grant the petition for retransfer and took them up himself and dismissed them all out of hand.

Mr. CAMPBELL. Do you recall upon what ground he held jurisdiction? The amount involved?

Mr. WOODRUFF. I have never seen his decision. It was somewhat recent, and although I have written for it it has not reached me yet.

Mr. CAMPBELL. What judge was that?

Mr. WOODRUFF. I can not say. I know these minor cases are in the Seminole Nation, and it is the judge of Seminole County who is going to hear those cases on the 30th of this month.

Mr. DAVENPORT. Mr. West is the district judge who holds court in Seminole County.

Mr. WOODRUFF. The only point is that there may be some doubts. The Department is very anxious to use the State courts if it is possible, irrespective of the amount involved, and only in cases which involve tribal property acquired through fraudulent means, or restricted allotted lands, restricted or clouded contrary to law, to go into the Federal courts.

Mr. CAMPBELL. What is the practice in Montana, South Dakota, Nebraska, or Kansas wherever there are Indian lands and Indians yet under the control of the Department of the Interior?

Mr. WOODRUFF. Mr. Ward, I think, could tell you a little surer than I could on that.

Mr. WARD. We go into the United States court, and as a rule the State courts hold that they have no jurisdiction.

Mr. CAMPBELL. Do they refuse to take jurisdiction?

Mr. WARD. They do, as a general rule; and that is especially true in Wisconsin and Minnesota.

Mr. CAMPBELL. Is that true under the general law?

Mr. WARD. The law of the State.

Mr. CAMPBELL. I mean, do you go into the Federal courts now under the Federal statutes?

Mr. WARD. Oh, yes; we go in under the Federal statutes.

Mr. CAMPBELL. Would not the same statutes apply in Oklahoma?

Mr. WARD. No, sir; all the laws relating to Oklahoma are special laws; that is, to the old Indian Territory, and are not applicable anywhere else. As a rule the Five Civilized Tribes were excepted from the general laws relating to Indians.

Mr. CARTER. Mr. Woodruff, you say it is your opinion at present that the United States courts have jurisdiction?

Mr. WOODRUFF. Yes.

Mr. CARTER. You are not of opinion that the State courts have any jurisdiction at all; the jurisdiction is not concurrent at all at present, is it?

Mr. WOODRUFF. It is very probable that in some of the instances, such as when the amount is less than \$2,000, and cases like that, and in the case of minor Indians, if the action is taken in the State courts, concerning restricted minor lands, in the probate courts, the United States could go into the State courts to protect the minor Indians.

Mr. FULTON. May I ask a question, Mr. Chairman?

The CHAIRMAN. Certainly, Mr. Fulton.

Mr. FULTON. As I understand this jurisdictional bill, it is just made applicable to the Federal courts in the State of Oklahoma.

Mr. WOODRUFF. Yes; but we see no objection to making it generally applicable.

Mr. FULTON. But it is not made applicable, is it?

Mr. WOODRUFF. No; but it could be.

Mr. FULTON. Do you think it possible for Congress to enact a law that would simply be applicable to the Federal courts in one State?

Mr. WOODRUFF. Yes; I believe it could.

Mr. FULTON. You do? You think you could give a Federal court in one State a different jurisdiction than in another State?

Mr. WOODRUFF. I do not believe it would be giving them different jurisdictions.

Mr. FULTON. Then why do they need this?

Mr. WOODRUFF. To make it certain, and for the reason Mr. Ward has brought out, namely, one of the great uncertainties is because of the special nature of the laws.

Mr. FULTON. That might be true, might it not, as regards certain special provisions affecting the treaties between our Government and the Five Civilized Tribes, but when they became a State all the laws of the United States went into force over the State of Oklahoma exactly as over any other State?

Mr. WOODRUFF. Even in the enabling act there were special exceptions made concerning Oklahoma, and I would like to say that I do not think what we ask is any reduction upon the State of Oklahoma or the judges of the State of Oklahoma at all, any more than it is a reduction upon the State of New York that there are Federal courts in that State.

Mr. FULTON. The point I want to make is this, that as a legal proposition if this law were applicable simply to the State of Oklahoma, and gave the Federal courts there jurisdiction which the Federal courts in other States did not have, whether we have the power to do it or not; and, in the second place, no matter what the treaties may have been with the Five Civilized Tribes, all the laws of the United States and the jurisdiction given to all the Federal courts in the United States apply in Oklahoma the same as in any other State. So, why should we need any more legislation to cloud it? And, further, does not this appeal to you, that there is apt to be possibly a conflict between the jurisdictions down there, as you find in every jurisdiction?

Mr. WOODRUFF. No more or less than in the other States. At the present time it is rather acute, and I think this would cure the trouble, because the Federal courts would immediately take jurisdiction.

Mr. CAMPBELL. Suppose you take one of these cases that you mentioned here now and go into the Federal court on it, do you not think that would have the effect that passing a law here would have?

Mr. WOODRUFF. I believe thoroughly that it would, but I do not believe that it is safe to risk it.

Mr. CAMPBELL. Would it not be better, then, to enforce the laws as they now exist than to repeat, practically, the law giving the same power?

Mr. WOODRUFF. I think that that would be true if you let the restrictions stay as they are now while we are testing it. It is for the sake of the State of Oklahoma that this is suggested, in order that by making this thing certain there is nothing that shall stand in the way of affording that relief in the matter of taxable land, increase of population, etc., coming to the State. But I would like to answer Mr. Fulton's question by the Yankee method of a counter question, and that is to say, that if it is true that the Federal courts have the jurisdiction, what possible harm could it be to pass the law?

Mr. FULTON. It would have this harm—I am just speaking for my-

self—that it encumbers the book with laws along the same line, and yet might be conflicting, and in addition that it is a law which I am certain would not be taken very well by the people of the State and would cause a great deal of feeling in that regard. So it would cause harm and no good.

Mr. WOODRUFF. Is it not true that at the time your State accepted statehood under the enabling act they frankly and freely left to the United States the right to pass such laws as deemed wise to Congress concerning the Indians?

Mr. FULTON. There is no doubt about that.

Mr. CARTER. We are perfectly willing to leave that jurisdiction just as it is.

Mr. WOODRUFF. I would like to ask Mr. Carter a question. Do you believe, Mr. Carter, that all the classes of cases which I have brought up can be transferred to the Federal court?

Mr. CARTER. I do not know; I am not lawyer enough to discuss that.

Mr. WOODRUFF. Do you not think they should be transferred to the Federal courts by the United States, in its position of trustee or guardian to the Indians, to the extent that Congress has retained that?

Mr. CARTER. I do not know that I do, Mr. Woodruff; I think that the Interior Department and the Indian would have just as good a show in the State courts as they would in the Federal courts.

Mr. WOODRUFF. How about these concrete cases I have brought up?

Mr. CARTER. I will tell you why, Mr. Woodruff. In many instances you are taking the jurisdiction out of the hands of people who are actual Indians, because some of those judges are Indians.

Mr. WOODRUFF. That certainly would be very fair to the people who have acted contrary to the law in dealing with the property of Indians, and with the tribal property of the country; it would be very fair, would it not, to take it out of the hands of the Indian judges?

Mr. CARTER. I do not know that it would be any better for either class; I think both would get as fair a show with the Indian judges as with the white man.

Mr. FERRIS. You find in the enabling-act recitals that "We leave you and clothe you as a representative of the Government of the United States with all the authority that you originally had;" do you not find those recitals?

Mr. WOODRUFF. Yes.

Mr. FERRIS. And that has since been approved by a popular vote of the people in the form of being a part of our constitution of the State of Oklahoma; that is all true. Now, if you have the same authority that you always have had when we were in a Territorial form and as a Territory, we are a little sensitive about having you come in now and heap burdens on us which you did not impose on us when we were a Territory, and with the enabling act as your barrier and your supporter it leaves you in the same attitude that you were in before, and with all the vested rights that you had before, both as to jurisdiction and everything else. Then it seems to me that the time for the Government of the United States to complain would be when we, as an organized State, were trying to get out from under some of the Federal control, rather than to heap additional Federal control on us, which you have reserved to yourselves in the enabling act since we have become a State.

Mr. WOODRUFF. It seems no burden to me.

Mr. FERRIS. It seems so to us, for this reason, that we have become a State; we have organized local self-government; we have no objection—I have not as one of the Representatives of the State—to the United States reserving to themselves all that was necessary during our territoryhood, and you did that, whether I objected to it or not, in the enabling act, and we accepted that by a popular vote of the people, and a large majority ratified it; but I do, as a Representative of that State and having a little pride in our local self-government and in the jurisdiction of our local courts, object to having you, as a representative of the Government, come and ask for more than it was necessary to have while we were a Territory and more than it is necessary to encumber other States with. If this were made a general bill and brought out on the floor of the House, the objections that would come to that bill would be from Representatives of every State in this Union, irrespective of the aisle, as I believe, because I do not believe there is a Representative in Congress from any State in the Union who would want to come up voluntarily and surrender the jurisdiction of the State courts over to the Federal courts. First, if there were no jealousy existing between them, which of course there is, even then the Federal courts would be inadequate, and it would be a physical impossibility for them to come down and give those people the benefit of a trial, a speedy trial, as the law contemplates, and the result would be that the Federal courts would be courts of injustice rather than courts of justice, by reason of the fact that they would be swamped and business piled up until they could not take care of all the business in that territory at all. Those are my views.

Mr. WOODRUFF. I think it all comes back to just the one point, that the granting of the jurisdiction by a bill of this kind, the concurrent jurisdiction, to avoid that objection of heaping up the work as far as possible, is suggested by those who have the affairs of the Indians not only in their hands, but imposed on them by Congress; that it is asked in order to try to be sure to carry out the duty placed upon the Department by Congress, not with any idea of casting reflections upon the State or its courts; there is no more reflection against the State or its courts than there is because there are Federal courts in the State of New York upon the State of New York, and that the request is not to go one jot or tittle beyond the protection of that particular property over which the United States has seen fit, through its Congress, to maintain a trusteeship. What I claim is that the United States is in fact, if it should not be in name, the litigant in these cases, and that being the litigant it has given to it only what it has in every other State, to make sure that it can go into the Federal courts, if there seems to be any necessity. That is really all I could say about it.

Mr. FERRIS. Is this not true? Do not these recitals in the enabling act, which specifically retained to you the authority, power, and jurisdiction which you originally had, leave you just as favorably situated as you were while we were a Territory, and does that not leave you the general law in general application which applies to all the other States just as it stands? What occasion is there for a recital of that?

The CHAIRMAN. Let me ask you, Mr. Ferris, if you are right, what harm can come from a reenactment?

Mr. FERRIS. I do not know; I confess I do not know all the harm that might come.

The CHAIRMAN. I do not see any possibility of harm if you are right in your contention that this proposition is to give to the National Government, or its officials, only such right as they expressly reserved to themselves in the enabling act.

Mr. FERRIS. I do not say that is true, because I do not know that

that is true. This may do more. I think, perhaps, and my fears are that it puts Oklahoma on a different status from the other States, and I think I must be right in the opinion that as we now stand with those positive reservations in the enabling act, adopted by a popular vote of the people directly, we must be in the same attitude as other States.

Statement of Mr. George A. Ward.

Mr. WARD. While we are talking about the enabling act, there is considerable doubt as to whether the United States court now in the Indian Territory has jurisdiction in new cases, cases that have been brought since the 16th of November. The question is, Is the United States an interested party in these cases when we bring suits to set aside deeds? In answer to your question of a few minutes ago, Mr. Fulton, there is no question at all about the power of Congress to enact this law and about its constitutionality. Why? Because Congress reserved to itself in the enabling act the power to pass any law touching the property of an Indian or the Indian himself that it would have been competent for Congress to have passed had this act never passed. Those are the words of the act.

Take the Seminole Nation alone; there has not a title to a foot of land in the Seminole Nation passed, not a foot, because there has not been a deed recorded; there has not been a deed signed by the Secretary of the Interior in the Seminole Nation. Yet they have gone in there and bought 1,357 tracts from the Seminole Indians. We want to go to some court where we can have those deeds set aside. What did Mr. West do with those 49 cases Mr. Woodruff mentioned? We asked to have them taken to the United States court. Mr. West is the district judge for Seminole County, and he said: "The United States court has not any jurisdiction in these cases," and he refused to certify them, dismissed the cases, and now what have we to do? We have to go to the expense of having a transcript of all that record made and bring those cases in the Federal court. There were 349 in one bunch.

Mr. MCGUIRE. One case would settle all those.

Mr. WARD. What harm is this act going to do?

Mr. MCGUIRE. I do not see any harm.

Mr. WARD. It gives us the option; we can go where we want to; we can go into the district court of a State or we can go into the Federal court, and, so far as the Indian Territory is concerned, we are asking for just exactly what we did have.

Mr. CAMPBELL. Can you go into the State courts now?

Mr. WARD. Yes, sir; we can go into the State courts, but we want to go into the United States court; we want the cases transferred, and that is the proposition. That is my own opinion, that the United States court has jurisdiction of any case that was instituted prior to statehood, and that it is the duty of the judge on the application of the United States attorney to certify that case to the United States court, but I will say frankly that I am very much in doubt whether the United States court has jurisdiction of the cases that we now want to bring.

Mr. WOODRUFF. Just one word. The reason why I say it is my opinion that there are is because I am not willing to place myself on record anywhere otherwise, because we will strenuously attempt to maintain the position that we can go into the United States courts if we do not get the jurisdiction, and for that reason, as law officer, I would not be warranted in saying anything else.

Mr. WARD. Take the Creek Nation; we instructed the Commissioner to the Five Civilized Tribes to make an investigation of the records and find out how many full-blood tracts had been sold. We have just received his report—753 in that Creek Nation alone, in the face of the McCumber amendment. They have been sold and the deeds placed on record. We want to bring suits to quiet those titles; we want to purge the record of those deeds.

Mr. MCGUIRE. Suppose that a case now pending—I understand that there are some pending—that will be decided by a higher court probably in the very near future, settles definitely the question of the citizenship of those Indians down there; if the court decides that under the enabling act and under statehood they are citizens as you or I are citizens, it is all settled anyway; the full blood can dispose of his land regardless of what Congress may do here, as I see it.

Mr. WOODRUFF. That is true.

Mr. MCGUIRE. Now, then, if the Supreme Court holds that the Government still has jurisdiction, do you not think that any man would be very foolish to go and take a deed from a full-blood Indian and put it on record? That party would have to be a party to a suit, and whatever wrongful act he might do he would have to pay for out of his own pocket by way of costs of the case. Anybody can commence a case. I could commence a case against you to-day, no matter how ridiculous the allegation of the petition, but I would in the end be the sufferer. The man who takes the deed from a full-blood Indian, provided the United States Supreme Court decides he is not a citizen in the full sense of the word and can not alienate his land, has a deed which amounts to nothing, and it seems to me in passing upon the title that one of those deeds would not be considered of sufficient force even to cloud the title.

Mr. WARD. Oh, yes; it would be a cloud on the title.

Mr. MCGUIRE. It would not be if I wanted to buy.

Mr. WARD. There is not a loan company that would loan money until that deed was out of the way.

Mr. MCGUIRE. Loan companies do not regard as serious things of that kind.

The CHAIRMAN. I disagree with you. My experience is that loan companies regard those with great apprehension. Unless your situation is entirely different from what it is in the East, that would be a cloud on the title with us; it would prevent absolutely your obtaining a loan from the loan company.

Mr. MCGUIRE. Mr. Chairman, how could there be any cloud on the title unless there was some authority of law?

The CHAIRMAN. It does not make any difference; you can not go to a savings bank in the State of New York and find a quitclaim deed on a piece of property given by a person who had no right to give it, but what the savings bank would insist that that must be removed from the record before they would loan.

Mr. MCGUIRE. You do not pretend to say that there would be any authority of law for such a deed?

The CHAIRMAN. Certainly not; but I say it would be a cloud on the title, which any savings bank in the State of New York would insist must be removed before they would loan on it.

Mr. MCGUIRE. It might in this way; they might question the blood of the Indian, but it is simply a case of a person absolutely incompetent making a deed.

The CHAIRMAN. I understand all that.

Mr. WARD. Let me ask you a question that I think will illustrate it. Suppose I were to forge a mortgage to a piece of property owned

by you, place it of record, and you wanted to get a loan, do you think a loan company would lend you money?

Mr. MCGUIRE. That is different proposition; that is a question of fact, and I was speaking of a question of law; they are not parallel cases.

Mr. WARD. I think they are parallel cases.

Mr. ZEVELY. Does not the law prevent the full-blood allottee from encumbering as well as selling?

Mr. WARD. It does.

Mr. ZEVELY. Then, how could he mortgage?

Mr. WARD. He has; it is like the man in jail, he has done so.

Mr. ZEVELY. You do not understand me. You say he has sold it and got the money for it. If he would apply to some savings bank or some loan company for a loan on that land there would be a prior cloud there to the one in the deed which he could not remove at all, and there is an act of Congress which says that any effort to encumber, sell, or transfer shall be an absolutely void conveyance?

Mr. WARD. That is true.

Mr. ZEVELY. Then he can not borrow any money on it, can he?

Mr. WARD. But that is not the exact wording of the language; "shall not be void for," something about before removal of restrictions. If that is the case, they have bought the land, there is a cloud on it, and let us say that the Supreme Court of the United States says, just for the sake of argument, that the McCumber amendment is unconstitutional. Along comes Mr. Indian and he wants to sell his land to somebody else. I bob up and say, "No, you don't; I have a deed to this land;" and the Supreme Court says, "You had no right to sell it when you did." We want to get the land back for him so that he will own it. What is the consideration? The usual consideration recited in deeds—of course, the correct consideration can be proven—\$1.

Mr. MOTT. Have these lands down there not all been bought upon the recommendation of half the legal fraternity that the titles were good?

Mr. WARD. I do not know about that.

Mr. MOTT. By the advice of attorneys that the titles were good; is that not a fact? Have not the attorneys in the Indian Territory generally advised that these titles were good?

Mr. WARD. I understand that many of them have, but I can not say it is general.

Mr. MCGUIRE. If they did, it was upon the theory that the Indians have full citizenship; this would not cure that or affect it one way or the other. All you are seeking is the question of jurisdiction.

Mr. WARD. This would not cure it or affect it one way or the other, but we want to get the man's title back for him and we are asking, Mr. McGuire, just exactly what we had before statehood; no more, no less. We had our United States courts there then in the Indian Territory; there was not a court there that had jurisdiction, except the Indian courts, other than a United States court, and we are not going as far as we went; we are saying, "Give us the privilege of going in either court." If we find that a district judge is going to give us a fair shake, we will go into the State court every time; but if we get into a district where he is going to throw the harpoon into us every time, we will go into the United States court.

Mr. MCGUIRE. The mere fact that I was asking the question did not mean that I had any objection to this amendment. As far as I am concerned, I do not care. I think that ultimately it will work out anyway; I think whatever the law is, these questions will soon all be settled, regardless of whether we have this amendment or not. This will simply emphasize the law, possibly, and enlarge slightly the jurisdiction. The maximum now is \$2,000, and you give the concurrent jurisdiction. I never much liked the idea of too much concurrent jurisdiction, but I say I do not care, as far as I am concerned, one way or the other. The shortest way to daylight is what I am looking for.

Mr. WARD. The position of the Indian Office is favorable to the restriction clause. I understand that is the position of the Department, but we want the jurisdictional bill with it; we do not want the restriction bill unless we have the jurisdictional bill at this time.

Mr. CARTER. You mean you want this entire jurisdictional bill?

Mr. WARD. No; you can boll it down; just simply to give us a chance to go into a United States court if it is necessary. For instance, in King's court, what did they do? I was just told by Mr. Woodruff that they served notice on the Indian; he stays away from court—that is, the more ignorant—the suit was to quiet title. What else did they do?

Mr. CAMPBELL. They quieted the title in the purchaser.

Mr. WARD. And Mr. Indian has never had his day in court. Another thing we want in this restriction bill is the control of the leasing of the minor's land for mineral purposes. That is the part which is restricted, where you restrain restrictions on the land; we want to see that that Indian minor gets the proper protection.

Mr. CAMPBELL. That is in the restriction bill now?

Mr. WARD. I saw one where it had been stricken out, and that is why I mentioned it. It is in this bill I have here before me.

While I confined myself to the Creek or Seminole nations, I want to say that the same things apply to the other nations, but we have not received the papers and the investigation is being made in the other nations.

Mr. WOODRUFF. We know in one case where the report has not been received where it runs away up above a thousand in the Cherokee Nation.

Statement of Mr. Silas A. Cole, of the Choctaw Nation.

Mr. COLE. Mr. Chairman, I am here to represent the Choctaw and Chickasaw full bloods. The Choctaws and Chickasaws had a meeting in Hugo on December 3 and 4, 1907. About seventy-two delegates met there and a committee was appointed by that meeting. They had a meeting at Antlers on December 17 and 18, and prepared a memorial to the effect that the full-blood people are against the restrictions.

The CHAIRMAN. Against the removal of the restrictions?

Mr. COLE. Yes, sir. The full bloods are not asking for any statehood, are not asking the removal of any restrictions upon their land. I am a full blood, and I represent a full-blood people—that is, the Choctaw and the Chickasaw people. I have brought the memorial, and have presented one copy to President Roosevelt, one to the Secretary, one to Commissioner Leupp, and one to the Attorney-General, and I presented one to a member of the committee, Senator CURTIS. We want to get help from the Government, because we, the full bloods, are ignorant people; we do not know how to make a treaty with the white people, and we do not know anything about the white man's law and the court.

This is the reason we ask the Government not to remove our restrictions, because I understand that some were here asking for the removal of restrictions, but we, the full-blood people, are not asking for the removal of any restrictions at all, because our young people are selling their lands pretty fast; some of them get \$40 for one-fourth

of the allotment; some of them \$30. The claims are bought by chance; the young Indian is given small money to sign a deed, so that if the restrictions are removed our full-blood young people have nothing, no money and nothing. I am a full blood and I am a representative of a full-blood people. I think this is all I can say. I thank you for your attention.

Mr. CARTER. Mr. Cole, when did you come here?

Mr. COLE. I have been here about two weeks.

Mr. CARTER. You say they had a meeting; where was the first meeting held?

Mr. COLE. At Hugo.

Mr. CARTER. And then they had a meeting at Antlers?

Mr. COLE. At Antlers, the 17th or 18th of December.

Mr. CARTER. What is your business?

Mr. COLE. My business is preaching; I am a Presbyterian preacher.

Mr. CARTER. And you have not been buying any Choctaw land yourself?

Mr. COLE. No; I have never bought any.

Mr. CARTER. You have no lease business at all?

Mr. COLE. No.

Mr. CARTER. That is all.

Statement of Mr. J. W. Zevely, representing the Mid-Continent Oil and Gas Producers' Association, of Tulsa, Okla.

Mr. DAVENPORT. Mr. Zevely said he had some amendments he would like to suggest, which I might like to discuss in connection with the other matters, so I yield for him to make those amendments so that I may say something about them and not be repeating myself.

The CHAIRMAN. Do you want to make a speech in advocacy of the bill, Mr. Zevely?

Mr. ZEVELY. I want primarily to suggest some amendments to the bill.

The CHAIRMAN. Very well, we will hear you.

Mr. ZEVELY. Mr. Chairman, the first suggestion I desire to make is the insertion of the word "adult" between the words "to" and "allottees" where those words occur in the first line of section 2 on page 2 of the bill 15641.

The CHAIRMAN (reading). "That all land allotted to adult allottees;" is that your proposition?

Mr. ZEVELY. Yes, sir.

The CHAIRMAN. Why do you make that suggestion?

Mr. ZEVELY. The next one is covered by the same point, so I will get both down and then give my reasons. The next amendment I would suggest would be, in line 21, to strike out the words commencing with the word "or," after the word "allottees," in the third line in section 2, "or in the case of minors as provided in section 6 hereof." And further, in the same section, in line 25, at the bottom of page 2, strike out the word "whether," being the last word on that page, and the words "of adults or minors," where they occur in the first line on the third page. The point about that is this, that under the act of April 26, 1906, and commonly known as the "Curtis Act," the Congress conferred upon the proper courts of the then Indian Territory, now the State of Oklahoma, jurisdiction of the estates of minors without reference to their degree of blood. The circuit court of appeals for the eighth circuit in construing that section has held that jurisdiction resides in the probate courts in that State, and that jurisdiction is not in the Secretary of the Interior. The practical result of that, so far as the persons whom I represent here are concerned, is this, that in taking oil and gas mining leases, the only necessary steps are to get the authority of the probate court for the guardian to lease the property of his ward, and after that authority is obtained, to make such a lease as will meet with the approval of the courts, as provided by law, and when that is done the matter is settled.

If these words are reinserted here, our notion is that it was the intention of the Interior Department to take back the jurisdiction of certain of these minors and the control and management of their estates, in so far as leasing for mineral purposes is concerned. This we desire to avoid, if possible, for the reason that getting leases through the Interior Department is a tedious and frequently a long drawn-out process, and for the further and graver reason that the Department insists upon placing in the leases which they authorize persons to make, who are under their authority, terms of uncertainty as to the royalty the lessee must pay to the lessor, very harsh terms with reference to the rental he must pay for gas wells which may be found upon properties rented under the authority of the Department, and the further provision by the Secretary to the effect that while the lease may run for a certain period of years, yet he reserves the authority to revoke the lease at any time he may see fit upon ten days' notice, and makes the lessee obligate and bind himself not to resist the action of termination in the courts of the country.

That is a further burden, the great difficulty of making transfers when it is sought to do so, and for all these reasons the persons who are engaged in the oil and gas business down there are extremely anxious that the methods pursued in the other oil regions of the country should obtain there, and as little harm come to them as possible in the way of excessive cost in the matter of procuring leases and the uncertainty as to the royalties after they are procured. Of course we have this feeling, that the probate courts of the State of Oklahoma are quite as honest and quite as capable as the Interior Department would be or is in the matter of attending to the business of these minors; that the probate courts of that State would probably do that as well and as effectually as could the Department of the Interior through its various officers and subordinates. However, later along there is another amendment which we desire to suggest, which authorizes the Interior Department to have representatives down there in Oklahoma with a view to looking into the methods and the manner of procedure of guardians, to make reports to the probate courts in that State and to the Secretary of the Interior, and make those records public records.

The next amendment which I desire to suggest, Mr. Chairman, is in section 3, in line 5, on page 3. I desire to strike out after the word "Interior" the following words: "and the enrollment records connected therewith."

The purpose of that is this: Section 3 seeks to make conclusive as to the degree of blood and the age of enrolled citizens of the Five Tribes, and in the matter of establishing the degree of blood; instead of simply letting the roll itself be the conclusive evidence, they add to it the words which I have suggested to strike out, "and the enrollment records connected therewith." I understand the fact to be that you will not infrequently find that the age given on the enrollment and the age which appears by the testimony taken in connection with it are at variance, so that you would not be any nearer to conclusive evidence as to the age of the allottee than you now are if you take both of these grounds as necessary to constitute conclusive evidence

of the fact; since that is an arbitrary position on the part of Congress anyhow, and that either one or the other will answer it, it seems to me that the two are not necessary and that the more uncertain ought to be taken out and that the more certain and more conclusive means ought to be the one determined on.

The CHAIRMAN. Let me ask Mr. Woodruff right there, why is not Mr. Zevely's contention correct in respect to that?

Mr. WOODRUFF. In the second place?

The CHAIRMAN. Yes.

Mr. WOODRUFF. There is merit in his contention, not that it should be stricken out, but that it should be made clear that the enrollment records, in addition to the rolls themselves, should be effective with regard to age. The words "and the enrollment records connected therewith" have to do only with the matter of age, and that might very well be corrected to show that it has to do with age only.

The CHAIRMAN. Why is it not better just as it is, that the roll of citizenship—which, as I understand, is made up by the Secretary—now states the quantum of blood, the age, and so forth?

Mr. WOODRUFF. That is the trouble; it does not state the age.

Mr. ZEVELY. Oh, yes.

Mr. WARD. It shows this—the age, sex, and quantum of blood.

Mr. ZEVELY. The rolls themselves.

The CHAIRMAN. Then why is it necessary to have these words?

Mr. WOODRUFF. The age as it appears upon the roll is not clear as of what date. We find at the time this was inserted it was inserted for that reason, whereas the enrollment card sets out clearly the age as to the date. Therefore the card is very much more conclusive as to the age than the roll itself, whereas the roll itself should be absolutely conclusive as to the quantum of blood, and that should be changed, therefore, probably, in order to show that it applies to age only.

Mr. CARTER. If we allow the enrollment records to go in, Mr. Woodruff, almost every man will be trying to prove by those records, not that he is a full-blood Indian, but that he has enough white blood in him to sell those lands.

Mr. WARD. That is the reason the Department wants that in. For instance, an application was made in 1902 and the testimony taken at that time, and the case not decided, say, until 1905. The parent gave the age of the child at that time, 1902, and in some cases they put his age on the roll as of 1902 and in others they changed the age to make him three years older than he was in 1905 when enrolled.

Mr. WOODRUFF. Therefore the roll itself is not very good evidence as to the age, but the card is.

The CHAIRMAN. What makes the card better?

Mr. WOODRUFF. Because it shows the age of the very date of the application of his enrollment.

The CHAIRMAN. As I understand, then, the rolls, for instance, say that Mr. Ward is an Indian with seven-eighths Cherokee blood, 21 years of age. Now, the card says Mr. Ward was 21 years of age on the 17th of April, 1902?

Mr. WOODRUFF. Yes, sir.

The CHAIRMAN. I see your point.

Mr. ZEVELY. My point about it is this: Take one or the other, I do not care whether it is an enrollment or the record, but one or the other, because where they are in confusion it is very readily to be seen that you are establishing an arbitrary rule.

The CHAIRMAN. Then let me prosecute the inquiry a little bit further. Does the card show everything that the roll shows?

Mr. WOODRUFF. The card shows everything that the roll shows, but it shows the age a little more conclusively.

The CHAIRMAN. Then why is not Mr. Zevely correct in suggesting that we take the card instead of the roll?

Mr. WOODRUFF. Because the roll is so much more accessible for general use, in the case of the oil operator who wishes to take the lease and wishes to assure himself. He would much prefer to take the rolls which are now printed and which he can turn right to and discover the true state of affairs.

Mr. ZEVELY. If both of these things were essential to determine the age of the allottee, a prudent man would not content himself with examining one or the other; he would examine both. If they vary, he has to take whichever one he chooses, then.

The CHAIRMAN. I think Mr. Zevely is right about this, Judge Woodruff; I do not think you want to put in the law a proposition that leaves it uncertain.

Mr. WOODRUFF. And for that reason I suggested it should be changed to make the rolls conclusive as to the quantum of blood, and the enrollment cards conclusive as to the age. Thereby you assume just one record for each.

The CHAIRMAN. I see your idea.

Mr. WOODRUFF. That is my idea.

Mr. ZEVELY. Mr. Chairman, the next suggestion is, in line 7, on page 3, in section 3, strike out the word "Indian" where it occurs between the words "of" and "blood." The proposition here is there shall be conclusive evidence as to the age and the quantity of Indian blood. If you strike out the word it simply makes you establish the blood of any Indian.

Mr. DAVENPORT. There is no blood on the roll given but the Indian, the white intermarried, and the freedmen; there is no attempt to give the blood, the degree of blood.

The CHAIRMAN. The quantum of blood is 100 per cent of blood in each person.

Mr. ZEVELY. Except that this quantum means the quantum of Indian blood or the quantum of white blood or the quantum of negro blood. However, if Mr. DAVENPORT's suggestion is correct, that those rolls only show the Indian blood, there is no occasion for that amendment.

Mr. DAVENPORT. That is true.

Mr. ZEVELY. We suggest that there be added a new section, to be known as section 3a to follow section 3, which shall read as follows:

"SEC. 3a. That all oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior, shall not be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and

acknowledgment of deeds, and the same shall be recorded in the county where the land is situate."

The first provision in that suggested section, Mr. Chairman, goes to this effect, that there are many leases pending; at least, there have been up to this time, several hundred or several thousand leases in the Indian agent's office, in the inspector's office, and in the office of the Secretary of the Interior. Our contention is this, that if this proposed bill should pass and there should be a lot of these leases pending in these various stages of transit, when finally some of them got here, having been entered into, the condition being that the Secretary of the Interior should approve them, and the restrictions had been removed from the land, the Secretary would probably say: "I have no further authority about this; the land has the restrictions removed from it, and this man has the right to make this lease himself." The consequence would be that your contract would be a nullity; you would have to go back and get another lease. This simply authorizes the Secretary to carry those contracts into effect the same as if the act had not passed.

The other provision is to this effect, that after restrictions are removed, an allottee who has, prior even to now, entered into a lease of oil or gas lands, because the restrictions are subsequently removed, he and his lessee may get away from the provisions of this lease by entering into another lease themselves or abandoning this one and notifying the Secretary of the Interior of the fact so that his records may be closed as to that matter. That provision, as I remember it, was put in there on the suggestion of the Secretary himself when we were discussing it with him.

Mr. WOODRUFF. That is, I believe, practically true, that he has said that with great reluctance, because it is foreseen that in many instances this power will be taken advantage of by the lessors and lessees in order merely to hand over a lease for some very low amount, and it exemplifies the attitude of the Department toward the authority of the State courts, that when once the restrictions are removed the Department feels that it ought to be relieved from the necessity of further following up the nonrestricted Indians, and therefore that, although we concede that there will be a great money loss to the Indians under that, it is impossible, when we let them loose, to prevent them from giving away what they have for practically nothing.

Mr. ZEVELY. You have no control over them when the restrictions are removed.

Mr. WOODRUFF. That is what I say.

Mr. ZEVELY. I desire to suggest further, with reference to the desirability of having this last feature of the amendment I have suggested incorporated into the law, that, as it is now, the delay is very considerable on the part of the lessor before he can obtain his royalty or his rental which has to come through the Indian agent, and he has to pay 3 per cent.

Mr. WOODRUFF. He no longer is obliged to do that.

Mr. ZEVELY. When did you abandon that?

Mr. WARD. December 8 or January 8.

Mr. WOODRUFF. And at our request the committee has left it out of next year's Indian appropriation bill.

Mr. FULTON. Would not the same thing be true of all other contracts which the Indians may have entered into that required approval by the Secretary?

Mr. ZEVELY. After the restrictions were removed?

Mr. FULTON. Yes; could you not read that amendment so as to cover all those contracts, and not confine it to one class?

Mr. ZEVELY. Yes, sir; I think we could.

Mr. FULTON. Would it not be better?

Mr. ZEVELY. I think so, but there are very few of those; they are so few that we did not think it necessary.

Mr. FULTON. There are quite a number over on my side, the farm leases and things of that kind.

Mr. ZEVELY. The next suggestion, Mr. Chairman, is to strike out section 6 as it appears in the bill 15641, and I will have to read that section:

"SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes, except as otherwise specifically provided by law, shall be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives of the eastern district of Oklahoma as he may deem necessary to care for the allotted restricted land of allottees, whether adults or minors of the Five Civilized Tribes, including, when the supervision of the Secretary of the Interior is authorized by law, the sale or leasing of such lands and the disposal, for the benefit of the Indians, of the proceeds of such sale or leases. Said appointed representatives shall, without charge except necessary court fees if any, care for the restricted allotted land of minor allottees of the Five Civilized Tribes, and shall annually account concerning such restricted land, both to the Secretary of the Interior and to the respective probate judges having jurisdiction of the persons and property of such minors. The probate judge may appoint the representative of the Secretary of the Interior having charge of the restricted land of any such minor to act as guardian for such minor without fee or charge, except necessary court charges and expenses incurred under order of the court. Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under direction of the Secretary of the Interior."

My objection to that section is this, primarily, that it takes the jurisdiction of the minor allottees of the Five Tribes from under the proper courts of the Indian Territory, where the circuit court of appeals for that circuit has said in the decision to which I referred before that jurisdiction properly belongs and where it was conferred by this act of April 26, 1906.

Mr. WOODRUFF. Do you think it does?

Mr. ZEVELY. I think it does.

Mr. WOODRUFF. Did you ever read that first language?

Mr. ZEVELY. Here is the language: "The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern district of Oklahoma as he may deem necessary to care for the allotted restricted land of allottees, whether adults or minors."—He can not care for it unless he has control over it. You will find it goes on further to talk about that—"including, when the supervision of the Secretary of the Interior is authorized by law, the sale or leasing of such lands and the disposal, for the benefit of the Indians, of the proceeds of such sale or leases."

You have a clear conflict between the representatives of the Secre-

tary of the Interior—whom you sent there to care for these lands, who could dispose of these lands—and the guardians and the probate courts of the State of Oklahoma, both having the same authority.

Mr. WOODRUFF. There could be no conflict, because in giving the probate courts clearly that jurisdiction over the restricted Indians, concerning which there might now be some dispute, it says here, "except as otherwise specifically provided by law," and the "otherwise specifically provided by law" is this very provision.

Mr. ZEVELY. It gives the representatives of the Secretary the care of these minors. How can they have the care of the property if they do not have it?

Mr. WOODRUFF. It is very clear to me; I do not want to take the time to argue it.

The CHAIRMAN. It seems to me that you can have the care of property, Mr. Zevely, under a court; you do not necessarily take it out from the control of the court because you have the care of it.

Mr. ZEVELY. It seems to me to give that authority here—"restricted land of allottees, whether adults or minors, of the Five Civilized Tribes, including, when the supervision of the Secretary of the Interior is authorized by law, the sale or leasing of such lands and the disposal, for the benefit of the Indians, of the proceeds of such sales or leases." If that is not giving him control of that land, through his representatives, I do not know what the English language expresses.

Mr. WOODRUFF. It does, but it does not give control of the minor.

Mr. ZEVELY. I am talking about the property.

Mr. WARD. It gives them authority, because the probate courts say that it gives them jurisdiction.

Mr. ZEVELY. That is exactly what I say; you have a conflict of jurisdiction there.

Mr. WOODRUFF. Not at all.

Mr. ZEVELY. Suppose a probate court should appoint a guardian of a minor down there, and he seeks to take charge of his estate.

Mr. WOODRUFF. He can not do it.

Mr. ZEVELY. You take it here; the Secretary of the Interior takes it; that is what we want to avoid.

Mr. MOTT. Under what court does the Secretary take it?

Mr. ZEVELY. Under the probate court.

Mr. MOTT. Of the State?

Mr. ZEVELY. Yes.

Mr. MOTT. And the probate judge is confined only to the probate laws of the State, because there are no Federal laws under which he can act. Therefore there can be no conflict.

Mr. ZEVELY. We have suggested this in lieu of that section, if I may read it:

"SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern judicial district of the State of Oklahoma as he may deem necessary to inquire into and investigate the conduct of guardians and curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian and curator or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardian and curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian and curator for such minors, without fee or charge."

That leaves the jurisdiction of the property of the minors in the hands of the persons appointed by the probate court of the State of Oklahoma, where, according to our notion, it properly belongs, but by this provision which you make, by these representatives whom the Secretary may send there, the guardian is pledged to keep a constant watch upon what is becoming of the property of the minors in the States, but the power to control is in the proper court, namely, the probate court of the State of Oklahoma, and there is no danger of any conflict of authority about that if this suggestion is adopted.

Mr. Chairman, just one word on the question of the jurisdictional bill, as to the authority of the Secretary to proceed in the Federal courts on behalf of the allottees as to whose restricted land there may be some difficulty, some fraud, suggested. We have made this draft, which is a further part of this section 6, which I have just read:

"And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands."

"Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That the homesteads of minors shall not be sold or encumbered by order of the court or otherwise until such minor arrives at the age of 21 years, except as to leases authorized by law."

Those are the only suggestions I have to make, Mr. Chairman, and I believe that under that last provision the Department's desire for supervision of these affairs, in its zeal to see that the allottees may

not be despoiled of their heritage, may be fulfilled and they will find ample authority in this act to enforce the law and see that they are not robbed of their property.

Statement of Hon. James S. Davenport, a Representative in Congress from the State of Oklahoma.

Mr. DAVENPORT. Mr. Chairman and gentlemen of the committee, in the outset I want to say that I am in favor of the removal of the restrictions as provided by what is known as the "McGuire bill." However, I want to be understood as saying that I do not believe that that bill goes far enough or gives to the people down there what they really need, but it is a step in the right direction, and does not retard their present condition in the way of laws or does not enjoin upon them any additional burdens to prevent them from going forward. In order that I may be perfectly understood in that connection, I can say, from personal experience for seventeen years in that country, that 80 per cent of the Indians by blood in the Seminole, Creek, and Cherokee nations are as competent to manage their own affairs as 80 per cent of the people in my native State—which the chairman kindly referred to a while ago—Alabama, or of any class of people.

I care not where you go and find them, taking them in the aggregate, you are going to find a certain per cent of that class of people as incompetent to acquire, or to hold after they have acquired, property without any questions as regards to nationality or citizenship. In the Indian Territory, and especially in those three tribes that I have more knowledge about, there are some of their citizens who are not competent and would not to-day, if their property were loose, retain it as would some of their brothers who live across the line from them, because it is not in the nature of things that all people should retain their property. There is a class down there known as the "full-blood class," and a portion of that class would not retain their property because they have not had the experience that their brothers of less degree of blood have had. I believe that the present bill ought to become a law, but I believe that it ought to be amended where it says "half blood or more." After having considered that, I believe that the restriction should be held upon the homestead of the half blood or more than half blood.

I believe that the half blood ought to have the restriction removed from his land and let it read that where they were more than half blood the restrictions upon the homestead should be retained, because about 30 per cent or more are half-blood Indians of those tribes, and as a rule the half-blood Indian is as competent to take care of his property as the man who has not more than one-eighth or one-eleventh of Indian blood. I know there are varied opinions as to whether the restrictions should be removed upon any class down there, but I am going to say to you as one of the Representatives from there, as a citizen of the Cherokee Nation and a man who lived among those Indians from my infancy, so to speak, that if you take the Indian population in that country, 90 per cent of the Indians by blood in either one of those tribes would say to remove it from everything, and I speak upon my responsibility, and I am willing to go to any one of those tribes and submit it to any authority and pay half of the expenses of an election, and if any of them does not vote to remove the restrictions I will pay all the expenses. I am not in favor of removing the restrictions from the full blood's homestead, but I am in favor of him being placed in a position so that he can handle his lands the same as my children, who have only one-sixteenth of Indian blood in them.

In the Cherokee Nation, in round numbers, there are about 34,000 Indians by blood. In round numbers, there are six or seven thousand of those who are full-blood Indians. Those people are land rich, but paupers when it comes to doing anything with it. There are families who are full bloods, in my nation, who have acres and acres of land, and they have not one dollar to pay for the improvement of it. Under the present condition of the laws they can not lease if for more than a year at the time—that is my recollection—and no man who desires to go into farming or agricultural pursuits will go on a piece of land and take a lease for so short a time for the purpose of cultivating and putting it in an improved condition. The practices in different tribes are different, but I think the full blood's homestead should be reserved to him, as the present law is, but that he should have the right, under the direction of the Secretary of the Interior, to make application to the Secretary, and let the Secretary, through his representative, investigate as to the intelligence of that Indian and as to his needs, and if, after that investigation, it is found that he needs to have a part of that land turned loose so that he and his family may live or have something to eat while they are living, it ought to be granted to him. I know of a few cases in the Cherokee Nation, and I speak of them because I know more about them than of the other tribes, where there are to-day aged persons, full bloods, without any means of support, practically, and they have good land, but can not do anything with it to get any money. That kind of a condition, I believe, ought to be relieved.

Mr. CAMPBELL. What would be your suggestion to relieve that condition?

Mr. DAVENPORT. I would relieve that in this way, I would give the Secretary of the Interior power to examine cases of that kind where applications were made to him, and if he thought they needed some money to live upon, where they were aged or infirm, or that they should sell some land of their homestead to remove the restrictions upon that portion of the full blood's surplus land. I am carrying out the line of that provision.

The provision in this present bill, gentlemen, after due deliberation, was practically agreed to by all the representatives of Oklahoma, as well as the gentlemen of the Department of the Interior. It was not, I say frankly, what either party wanted, but, as I said in starting out, it was a step in the right direction. There has been opposition raised against the removal of restrictions in that country, and I want to be placed in this position so that all who are present may know, I have maintained from the time I had any knowledge of that country that by degrees the Indian ought to have some responsibility thrown upon him in order that he might make a useful man among his brothers in that country, and I have found from observation of the Confederate Tribes around my tribe that Indians who had been maintained upon a reservation by the Government, when they were relieved of that maintenance and placed upon their own resources, with practically nothing to go upon, turned loose the same as any other American citizen, they are to-day useful men and women and earning their living the same as any other class of citizens around that country. Several of the Confederate Tribes have been opened up since I went there. You take the Pawnees and a number of those tribes, the Sac and Fox, and the Pottawatomies, several of those tribes have been opened up, and you find those people to-day, a great per cent of them, progressive citizens, following the pursuits

of agriculture and teaching, the practice of medicine, the practice of law, and engaged in other pursuits the same as United States citizens in that country who have always been free to act as they please.

Mr. CAMPBELL. Do those conditions extend to the freedmen?

Mr. DAVENPORT. They extend to all of them. When they were first opened a certain amount of them were held for homestead purposes, but the point I was making is that they were turned loose without any annuity and without any restriction by the Government as to their action. They were no more wards of the Government, but must go out and act for themselves. I believe that it will not only have a tendency to place a responsibility upon the Indians in that country, but I believe that it will make them better men and women. Of course some may say that there are people in that country who will rob them of their property, and I will concede that; I will concede you that to-day, if the property was turned loose in the Indian Territory, the same as any other State in the Union, there are men who would trade and traffic with them and, if possible, get it away from them, but the average Indian in my section of the country is as competent to battle with the American trader as any man anywhere, and if you do not believe it, one of you gentlemen go down there and try to drive a bargain with him, and see the condition of things. The trouble has been that the conditions in that country have been such that the fellow who had a special interest to serve would object to this being done; a man who had a special interest in another line would object to that, and that is what brought a conflict of opinion upon that question.

Mr. FULTON. Is it not a fact that it is frequently the case down there, and is it not almost entirely true that the full bloods know that they can not sell their lands, and that when they do sell them they are simply working the white man for what they are getting out of it?

Mr. DAVENPORT. I do not think there is a full blood living to-day, whether he talks English or not, in what is known as the Five Civilized Tribes, who is not as conversant with every treaty down there as any man living in that country. I do not believe that there is a full blood who does not know that there is a prohibition made on his sale, and that when he makes a sale he knows the law imposes a restriction upon him.

Mr. FULTON. And is it not true that he sells the same tracts to four or five different people?

Mr. DAVENPORT. I have understood that was true.

Mr. WOODRUFF. And is it not equally true that those four or five different people buy it from him when they know it is restricted?

Mr. DAVENPORT. I do not want to misrepresent anybody down there. I and my family were American-born citizens, and we are all now legislated United States citizens. We occupy a twofold position, and we occupy the same position down there—that Mr. Indian will skin a white man if he can and a white man will skin an Indian if he can.

Mr. MCGUIRE. Or each other?

Mr. DAVENPORT. Each other; you know it, indeed. You can keep them in that position for twenty-five years longer, and the last day of the twenty-five years that same condition will exist, and my candid opinion is that the quicker they are thrown on their own responsibility—taught that they are United States citizens and have assumed all the responsibility of citizenship—the more quickly they will assume it, and the more quickly you will see that they bring up their part of that Government and show they are competent to manage their affairs.

Along the line that there are differences of opinion, I want to ask that there be incorporated in this record a petition that I received from the Creek Nation. The governor of the Creek Nation is here, its representative is here, and its delegates are here. I know not from whom this emanated, but it bears the signatures of a number of representative Creek people, to my knowledge. In this they protest against the action of their delegation and against their attorney in coming here and resisting legislation which they say they were not sent for. This is signed by a number of people, but I know nothing about it except that I received it through the mail. It reads as follows:

"PROTEST AND MEMORIAL TO CONGRESS BY THE CREEK CITIZENS OF THE STATE OF OKLAHOMA.

"We, the undersigned citizens of the Creek tribe of Indians of the State of Oklahoma in mass meeting assembled in the town of Enfield, Okla., on this 16th day of March, 1908, do hereby protest against and repudiate the action of the Creek delegation headed by Chief Moty Tiger and the Creek national attorney, now in Washington City, for the reason that their said action is against all treaty obligations made between the Creek Nation and the United States Government, and against their positive instructions given them at the time of their appointment by the Creeks as assembled at Okmulgee at October session of Creek council in 1907, and against the wishes of a large majority of the Creek people, the first breach of trust being their seeking to have such legislation enacted into law by the United States Congress that would place all litigation respecting our landed interests under the jurisdiction of the Federal courts instead of the State courts of the State of Oklahoma, where said matters rightfully belong.

"Second. We most earnestly protest against the continuation of Moty Tiger as principal chief, and against the appointment of a national attorney, and against the appointment of a national interpreter.

"We also most earnestly protest against any legislation that might be passed looking to the bringing of suits by the Creek Nation or tribe for the benefit of different individual Indians of said nation and protest against the employment of attorneys to fight such litigation and against the payment of such fees and expenses out of the Creek tribal funds or moneys.

"Third. We most earnestly ask that all of the moneys and funds now on hand to the credit of the Creek Nation be paid out at once in the equalization of the allotments of the Creek Indian as provided for in treaty obligations between the United States and the Creek people.

"To this end we demand as a matter of right under our treaties with the Government that no payments be made nor moneys be paid out by the Government until all allotments are equalized as called for in said treaty, and that after all allotments are equalized we then consent that any balance, if any, remaining to the credit of the Creek Nation be paid out per capita.

"We hereby ask that a copy of this memorial be sent to each Member of Congress and Senators from the State of Oklahoma and to the Secretary of the Interior and Commissioner of Indian Affairs.

"Respectfully submitted,

"Roley McIntosh, ex-second chief Creek Nation; Geo. W. Stidham, member national council; R. L. Simpson, merchant, Enfield, Okla.; E. H. Walker, ex-member national council; S. J. Logan, member national council; Bunnie McIntosh, member national council; Freeland McIntosh, ex-member national council; Choctaw Glivens, ex-member

national council; Simmer, ex-member national council; James Barnett, ex-member national council; James Hill, member of Creek national council; Joe Sauger; Jack Stidham; Thomas McIntosh; L. G. McIntosh, county superintendent of schools; A. E. Ralford; W. S. Coody, clerk; Charles Gibson, county commissioner McIntosh County; Bosie Scott, ex-Creek attorney; Thomas Doyle; W. P. McCombs, salesman; John McIntosh; J. M. Depriest, constable; Cleve Whitlow; Henry McIntosh; L. G. Stidham; C. S. Smith; Shiah Gray; Job McIntosh; Sam H. Doyle; Albert McKinney; Daniel N. Bard; Cub McIntosh, ex-judge; Henry McDermott; Art Asbell, postmaster Checotah, Okla.; John McKinney; F. C. Coon; Jim Bea Scott; W. B. Rogers, sr.; W. B. Rogers, jr.; R. Y. Audd; F. R. Audd; C. L. Audd; J. M. Jones; G. W. Odom; John Barnwell; I. S. Warrior, member Creek national council; R. L. Watson; Van Allen McIntosh; Cheesie McIntosh; Fred Farrell; H. C. Fisher, ex-auditor M. N.; Jack Thompson, merchant, Checotah, Okla.; Van Grayson; John Murray; George McGilbry; John C. Wise; Euel F. Walthall, druggist, Checotah, Okla.; Rob. Gentry; Geo. W. Scott, farmer."

The CHAIRMAN. Now, Mr. Davenport, what have you there; is that the paper you received?

Mr. DAVENPORT. Yes, sir.

The CHAIRMAN. That is merely a typewritten copy; it does not purport to be signed by anybody?

Mr. DAVENPORT. They sent it to all of the representatives, as they say.

The CHAIRMAN. You never have seen the original of that paper?

Mr. DAVENPORT. No, sir.

The CHAIRMAN. Do you vouch for it?

Mr. DAVENPORT. Only as I stated, that I received it through the mail. I do recall now that there was a letter signed by Mr. George W. Stidham and Mr. S. J. Logan.

Mr. MOTT. Do you know Mr. Stidham?

Mr. DAVENPORT. Yes, sir; I have known him seventeen years. If you want me to tell you, I can tell you, and I can connect some other people with him.

The CHAIRMAN. We will not confuse those things with this.

Mr. DAVENPORT. Now, then, Mr. Chairman, that is the condition as it exists down there. There are different parties holding different views upon that question, and for that reason I have filed those papers which are sent to me, and I want to say this, that since I came here from the 2d day of December up to this date, not a single record of a man or a woman of either of the tribes I have the honor to represent, to my knowledge, or that I have ever had any acquaintance with until I came here, has ever written me a line to work against the removal of restrictions, and I have had, I suppose, 200 letters from citizens of each of the tribes I have known for years, and in every instance they asked for the removal of restrictions from a part of the allotments. None of them have asked that the restrictions be removed entirely from the full-blood Indians, but the mixed breeds have asked that it be removed entirely, so that is the position I am in from my personal knowledge of conditions down there; it is the position I am in, everybody asking for action upon it as to a part of the allotments, but no one asking that it be not done upon a portion of it. I would not advocate for one moment the removal of restrictions upon the full-blood lands, because I do not think it should be done.

There are two other classes of citizens down there, one of which is the intermarried citizens. I want to preface that by saying that the intermarried citizen never was a ward of the Government, and that if he was once a citizen of the United States he was always a citizen of the United States. While he was taken along in the wake of the legislation, rightfully under the law he should not have been, because he was not entitled and did not need any protection against the United States. He assumed that responsibility when he came into the world, to be subject to its laws, and he did not need any of its protection. But in the legislation down there, and in drafting the legislation, they just carried the intermarried citizen and freedman along that line. The homestead of the intermarried citizen should be removed at one stroke, because he is not a ward of the Government and never was; he had no right to the protection; he got what he got by the grace of God and the freedom to go down there and marry one of the nation's citizens.

As to the freedmen in that country, there is some diversity of opinion upon that proposition, but I will say to you that the freedman never was a ward of the Government within the meaning of the Indian wards. He knew before he acquired any right that the first man who acquired any rights in the country was the United States citizen; when he acquired those rights, he acquired them as a United States citizen by treaty stipulation, and I do not believe that he ought to have any protection down there any more than the white man. I am just like old Stick Ross, a negro who was in the Cherokee council. They elected him from one of the districts just for fun, and his old boss, who used to be with him before the war, Mr. Rodgers, said to him, "Stick, what are you going to do about this intermarried white man business?" He said, "Mr. Rodgers, I am in favor of making the white man as good as the nigger." And I am in favor of making the negro as good as the white man in this proposition. We ought to have the restrictions removed, as they are American citizens and have been for years, and ought to be placed upon an equal footing with other citizens. I think if you will question the freedmen in that country that 90 per cent of them will say that they want it done, and 90 per cent of them down there are just as capable of taking care of themselves as 90 per cent of the negroes in Washington are capable of taking care of themselves. There are other nationalities—and the American is not excluded—who are not competent to take care of their property.

I want to speak of two other things in connection with the competency of the Creeks and Cherokees down there to take care of themselves. They have been a people who have always educated. From the superintendent of schools in that country you will find that they had about 180 day schools in the Creek Nation upon the 1st of January of this year, and those schools had been maintained for years back. They had their boarding schools and other schools which had been maintained, and they have been a people who attended to educating the children of their tribe, and the records of the educational department will show that the Cherokees have always been a people who educated. The Cherokees built and maintained, and have maintained ever since 1846, with the exception of about three years during the late lamentable war, a high school, or what would be termed a college, in the State. They had 350 day schools, or public schools, throughout

their nation on the 1st day of January of this year, and the exact number of children can be ascertained by the report of Mr. Benedict, of the Indian Office.

But they have been not only educating in the last few years, but those two tribes, to my knowledge, have been educating for almost half a century, since they have been located in the Western country, and to-day I make this statement, that you can go into the Seminole, into the Creek, and the Cherokee nations and take the young men and the young women of those three tribes between the ages of 18 and 30 years and, according to the per cent of that age, you can go into any State in the Union and compare the population according to the population there, and you will find as many girls and boys of those three tribes of high school education according to the number as you will find in any State in the Union. I do not think there are 10 per cent of the Cherokee boys and girls between those ages who have not a high school education, and there are 40 per cent of them who have a college education in the Cherokee Nation between those ages. They are as well equipped, to take them in their entirety, for statehood and for American citizenship, as any other State in the Union according to population, and I most earnestly urge that if the committee, after giving due consideration to all the questions that have been brought before it, can believe that those people down there are not American citizens with sufficient intelligence and competence to manage their affairs, that you do not pass any law giving them that right; but, on the other hand, after you have investigated these conditions, if you find that they are placed in a position where they are at least as competent to manage their affairs as the average American citizen in the State, that you accord them that right, and I say to you, with all due candor and due deference to the gentlemen who may disagree with me, that they are as competent to manage their affairs as the people of any State in the Union according to population.

Mr. MOTT. Is it not a fact that 25,000 members of the Cherokee Nation have about one thirty-second of Indian blood in them? I heard Mr. Hastings make that statement in the Department.

Mr. DAVENPORT. There are only about between 6,000 and 7,000 full bloods of an approximate number of 34,000 by blood.

Mr. MOTT. Twenty-five thousand one thirty-second of blood.

Mr. DAVENPORT. I can not say that. I will say to you that 25,000 are practically white men and women, and a nobler class never breathed the breath of life.

Mr. MURCHISON. Mr. Chairman—

The CHAIRMAN. One moment. Whom do you represent, Mr. Murchison?

Mr. MURCHISON. I represent the Keetoowah Society.

The CHAIRMAN. What is that?

Mr. MURCHISON. They are a society authorized by the Cherokee Nation.

The CHAIRMAN. If you wish to be heard, we will hear you in due time.

Mr. MURCHISON. Mr. Diefendorf telephoned me, and I did not know until twenty minutes ago that this hearing was on, when Mr. Diefendorf telephoned me that if I came here I would probably be heard.

The CHAIRMAN. Very well.

Mr. MCGUIRE. You made the statement, Mr. DAVENPORT, that you thought 90 per cent of all persons of Indian blood, and the people in general, were favorable to the provisions of this bill now, after consideration?

Mr. DAVENPORT. Yes, sir; and I think if they had an opportunity to express themselves they would so express themselves.

Mr. MCGUIRE. What I wanted to ascertain was your opportunity for information. Has this been a matter of general discussion through the press and on the stump and elsewhere?

Mr. DAVENPORT. It has been discussed, I will say, before our tribal relations were disposed of. The last struggle we had for the governor, the chief in the Cherokee Nation, both political parties—the Keetoowah, whom Mr. Murchison represents, and the Downing party, which I helped to support—carried it in their platforms, recommending the removal of those things, and placing them upon equal footing with other citizens.

Mr. MCGUIRE. And, in your judgment, are not the white people and all other classes of people there just as considerate of the welfare of the Indian, the full blood, as you or anyone?

Mr. DAVENPORT. I have always found the white men there to be in favor of making the Indian there as he is anywhere else.

Mr. CAMPBELL. What is the answer to that proposition, that the Indians are in favor of the removal of restrictions? Is that the proposition that the minors, who would gladly assume control of their property before they arrive at the age of maturity, and that they are incompetent to judge as to whether or not their restrictions ought to be removed, are wards?

Mr. DAVENPORT. You want to know what the answer is?

Mr. CAMPBELL. Yes; what is the answer to the suggestion that they are mere wards and must remain so? I think legal steps have been taken to remove that wardship.

Mr. DAVENPORT. I can not answer that except to give my own opinion. I can say to you from the observation of the people that since 1901 the wards of the Government were wards only to the extent of their property rights; that they were United States citizens to all intents and purposes other than that provision, that limited provision held upon their property right; they claimed and asked that, having been legislated United States citizens, they be placed in the same position as other United States citizens in that country who buy land, have the restrictions removed, and if a farm springs up by their side that they may be allowed to have their own spring up with it. In other words, that they may assume all the conditions and all the burdens of it, and that their children, as they go out, will have their property, and have it so they can handle it the same as any citizen can in your State or in any State where no restrictions were imposed. In other words, gentlemen, it seems to me that while some of those people ought to have the restrictions gradually removed, that it is a very peculiar condition of affairs surrounded by the States that are as prosperous as we are, that the lands of those citizens who are seeking their own advancement peacefully, should be withheld from them when, as has been suggested, 25,000 or 30,000 are white people.

Mr. MOTT. Permit me one more question, if you will.

The CHAIRMAN. Wait a minute. There has been too much of this miscellaneous jumping in and asking questions. We are a committee conducting this hearing, and I shall insist that this shall not proceed any further. Everybody who ought to be heard will be given an opportunity to be heard, but those outside of the committee must not interrupt a gentleman who has the floor and is speaking.

Mr. DAVENPORT. In connection with the full-blood proposition, the chairman will remember last year, or the latter part of the year before,

I believe it was, Senator LONG and Senator TELLER and a number of gentlemen who were known as a special committee—

Mr. CARTER. A select committee.

Mr. DAVENPORT (continuing). A select committee, were sent through there by the Senate to have special hearings and to ascertain what the sentiment of the people was upon that question. I undertook to-day to go through that and get some statements that were made by full-blood Indians. Their report was published in two volumes and is a matter of record in the files here, but in running through that I came across the statement of a full-blood Indian whom I know and have known for a number of years, Richard Glory, and I tore this out of the volume of the full hearing and want to incorporate his statement. He goes into the question thoroughly. He is a full blood. He is a gentleman who has had considerable experience in education, and he answers fully all the questions they put to him.

Mr. Walker appeared and gave a short statement, which I want to incorporate, showing the tendency of the different degrees of bloods. It shows the tendencies and the different feelings. Richard Glory testified as a full blood, and they came there voluntarily, too, because there was nobody to solicit them. The days and places were fixed.

(For statements of Walker and Glory see Appendix X.)

Mr. CAMPBELL. I would like to know, for my own satisfaction, about how many Indians this bill, which has been prepared and is now before the committee, would have the restrictions removed from.

Mr. DAVENPORT. I can not tell you the number of Indians, but it would remove in the Cherokee Nation nearly one-half of them, at least, or probably more, taking it from half blood up.

Mr. CARTER. I have report from the Interior Department, the Indian Office.

Mr. CAMPBELL. I would like that in the record.

Mr. DAVENPORT. It would remove at least half of the Indians of the Cherokee Nation. In the Seminole and Creek nations it would not remove quite as great a per cent of the population, because there are more full bloods according to the number of the population than we have in the Cherokee Nation.

STATEMENT OF LAND CONDITIONS IN THE STATE OF OKLAHOMA.

[Prepared and submitted by C. D. CARTER.]

Tribal enrollment showing degree of blood of Indians in Indian Territory.

ADULTS.	
Full bloods:

Respectfully submitted for the information of the House Committee on Indian Affairs.

C. D. CARTER.

(Thereupon, at 4 o'clock p. m., the subcommittee adjourned until tomorrow, Saturday, March 21, 1908, at 2 o'clock p. m.)

COMMITTEE ON INDIAN AFFAIRS,
HOUSE OF REPRESENTATIVES,
Saturday, March 21, 1908.

The committee met at 2 o'clock p. m., Hon. PHILIP P. CAMPBELL in the chair.

Mr. CAMPBELL. The committee will resume the hearings, pursuant to the adjournment until 2 o'clock this afternoon.

Statement of Hon. Scott Ferris, a Representative in Congress from the State of Oklahoma.

Mr. FERRIS. Mr. Chairman and gentlemen of the committee, I do not know that it would be necessary for me to appear before the committee at this time except for the fact that I will not have time when the matter is reported and comes onto the floor of the House, or even when it is before the full committee, to present some observations that I have made. Therefore I avail myself of this opportunity.

I want to take the matter up in fairly an elementary way, which, of course, will do some members of this committee no good, because they are acquainted with the situation; but other members of the committee may get some facts with which they are unacquainted, and for the benefit of those who may read or refer to these hearings I am satisfied that what I am going to say would be of importance.

I want to give this committee some idea of what chance I have had to make observations with reference to conditions in Oklahoma, and with reference to the conditions of the Five Civilized Tribes. I was born 15 miles from the northeast corner of the Indian Territory, in the edge of Missouri, and I lived there all my life until seven years ago, when I moved to the southwest corner of Oklahoma and engaged in the practice of law. During all that time and since that time I have had an intimate acquaintance with the Indian situation, with the Indian people, with the character of their lands and their methods of holding them and dealing with reference to them, and I want to say in the beginning, having the high regard that I should have for them as a Representative of those people, and based on my knowledge and acquaintance with them, that in my judgment the interest of the Indian and the interest of the white citizen in the development and growth of the State, having in mind both Indians and white citizens, would be subserved better, I think and I am sure, if the restrictions were all removed save and except that on the homestead of the full blood. I am not going to insist that my position be borne out, because at a time prior to this I have thought best, and have been forced, to recede from that position. The Oklahoma delegation, consisting of five Members of the House and two Senators, began at the beginning of this Congress to try and procure some legislation that would relieve the conditions in Oklahoma.

Having in mind the wide experience and knowledge that the Department had, we at once began a series of consultations with the Interior Department and the Indian Office; and I might say that those meetings were all well attended and careful attention was paid in every particular to what was said and done, and I might say that perhaps the Department yielded some. I am sure the delegation yielded a good deal. The result of day after day and meeting after meeting in those conferences, attended by members of the Indian Office, by the Secretary himself, by attorneys of the Indian Office and attorneys of the Interior Department, and by five Members of Congress from Oklahoma and two United States Senators from Oklahoma, comprising the whole delegation, was that we came to an agreement on H. R. 15641, introduced by Mr. McGUIRE on January 29, 1908. This bill has a good many things within its columns that I do not really like; it has a good many things in it that I would like to have changed, if my personal views were allowed to govern. But as the result of those conferences and as the result of a unanimous and positive agreement by the Indian Office, by the Interior Department, and by every Representative from the State of Oklahoma, including the United States Senators, we agreed upon this bill.

I want to say that from now on I desire to deal strictly with this bill, H. R. 15641. There is no use talking about what my inclinations might be, or what my ideas of what might be passed might be, for I may be frank enough to say that my inclination would be to go further than this bill in the removal of the restrictions. This bill starts out by a division of those Indian people into four distinct classes, namely, the freedmen, of whom there are 23,382, as shown by the Government rolls; the intermarried, of whom there are 2,506; the mixed bloods, of whom there are 50,670, and the full bloods, of whom there are 24,669. Those comprise the four classes of Indians that are embraced in the Five Civilized Tribes. I want to say at the beginning that those tribes stand, as an Indian situation, separate, apart, and alone from every other Indian situation in the United States. I have within my Congressional district five and a half counties made up from the Chickasaw Nation, which is one of the Five Civilized Tribes. The remaining portion of my district is in old Oklahoma, and is inhabited by the Kiowa, Apache, and Comanche Indians. Those Indians occupy a status very foreign to that of the Five Civilized Tribes. They are not entitled to the legislation that this bill affords them, and I would not advocate it for them, because they are Indians in the true sense of the word.

These Indians of the Five Civilized Tribes have owned their lands from time immemorial almost, by grants from the Government, and I might say that in my judgment they have owned the lands in fee, aside from a couple of limitations, namely, the condition that they should remain there, and one other condition that I will not refer to now. Going back to the division of those Five Civilized Tribes into four distinct classes above mentioned, this bill first, by its provisions, takes off all restrictions from the lands of that class enrolled, called and designated as intermarried citizens. That class of people, gentlemen, I think it will be apparent, need no protection from the Government; they need no assistance from the Government. They are not entitled to have their lands remain free from taxation and the other burdens. They do not expect them to be left free from taxation and the other burdens. They do not want the Government to longer curtail their estates. They are white citizens the same as you and I; they are citizens who have had the benefit of education the same as you and I; they merely occupy a place on that roll by reason of the marriage relation, and not by reason of any necessity for the present restriction. Therefore I take it that the position of this committee would certainly be to be for the McGuire bill, as far as that one class is concerned. Now let us pass to the next class. This reads:

"All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions, but all sales or incumbrance of their lands prior to March 1, 1909, shall be void unless the adequacy of the consideration and the fact of its actual payment or proper security therefor be approved by the Secretary of the Interior."

Freedmen are the class that were originally slaves of the Indian people of the Five Civilized Tribes before they were emancipated, which was more than fifty years ago, and since that time have resided with the Indians in the Indian Territory, now Oklahoma. My view is that those freedmen, who were emancipated more than fifty years ago, have been indeed very fortunate to occupy a place and retain an interest in that landed estate, that valuable estate, along beside the Indians in Oklahoma; and I do not believe that that particularly advantageous position that they occupy entitles them to any protection whatever, and except for the fact that I feel it my duty to keep faith with the Indian Office, to keep faith with the Secretary of the Interior, and keep faith with the other members of the delegation, I certainly should feel that that last clause in which their lands are subjected to departmental supervision for one year after the others are turned loose, was objectionable, and I would certainly feel it my duty to object to it. At the time that was considered the Secretary of the Interior himself evidently doubted the advisability of inserting that clause, and if I am not mistaken it was the second or third conference before he was willing himself to put that tail to the kite in favor of the freedmen. But it is there, and we have agreed to support it, and I am ready to support it; and surely there can be no disposition on the part of this committee to object, or say that Congress was going too far in the removal of restrictions as to those lands.

Now let us go a little further. Each of these clauses deals with a specific class. The third clause in the bill deals with the mixed bloods. It reads:

"All lands, including homesteads, of said allottees enrolled as of less than half Indian blood shall be free from all restrictions."

Gentlemen, think of this class that we are dealing with. There are only 50,670 mixed bloods. Some of them are half and more, some of them are less than half, of the white blood. This bill only seeks to remove the restrictions from those who are less than half Indian blood, and I submit to this committee, and I submit to every fair-minded man who is acquainted with the Indian situation at all, that they are not going too far, and I must refer to my own judgment and say they are not going far enough, when they remove the restrictions as to that particular class. It ought to be at least three-fourths, in my judgment. I feel that Congress would more nearly do its duty if it took the restrictions off of those of three-quarters blood than if it took them off of those of half blood or less. I would first take the restrictions off of the half blood and then off of the three-quarters blood, and leave the full bloods and perhaps those of three-quarters blood or more under the restriction, if they think wise, so far as the homesteads go.

But surely there can be no objection to taking it off where the Indian blood is not half but less than half. That class of citizens are at the head of banking institutions, are attorneys and Members of Congress, are in mercantile business, and are engaged in every other business in Oklahoma that any member of this committee might mention; honorable, upright, intelligent, educated men, made citizens by the enabling act in positive terms, capable of holding the highest office in the land, capable of enjoying the rights, benefits, and immunities of American citizens in every respect except in regard to the alienation of their lands. I submit that this Congress surely ought not to have any hesitation in taking the restrictions off of the lands of that class; you can not be doing wrong; you are bound to be doing right. It can result in but one thing, and that is to make better men of them, and enable that State to be settled by good citizens who will buy the land and build homes on that land that is not being used for other purposes.

We come next to the fourth clause, which reads as follows:

"All homesteads of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood and all allotted lands of enrolled living full bloods shall not be subject to alienation, contract to sell, power of attorney, or any other encumbrance until April 26, 1931."

Now, I do not desire to make any reference to that, because that was intended to be in keeping with the McCumber amendment; on that older class the Department—the Secretary—thought it ought to be withheld. I do not agree with that, but we have agreed on this bill, and I am going to support it.

In regard to the other phases of the bill, I am not going to try to go into that part of it, because I have not the time. There has been some talk of injecting into this bill a Federal court jurisdiction bill. I am free to say that I have not taken the pains and the trouble to go into that bill as fully as I think it ought to be gone into before it is given any serious consideration, and the reason I have not given it serious consideration is that at the conferences with the Secretary and with the Indian Office, when every member of the delegation was present, they agreed and we agreed to leave out of this bill things that were objectionable to us, and that we would leave in the bill things that were objectionable to us but approved by them, and to that extent this bill is a product of that agreement. So I had hoped that it would not be the disposition of the Department to ask that anything that was objectionable to the entire delegation be incorporated in this bill, and I have not thought it necessary to prepare myself to defend ourselves or fortify ourselves against that measure.

The enabling act, as was before said, makes every Indian of the Indian Territory, irrespective of quantum of blood, a full citizen of the United States. The welfare of the State should be considered. This committee has a dual duty resting on its shoulders, to preserve the right of the Indian citizen and to preserve the rights of the State. I want to say to you that in the Indian Territory, with a population composed of 101,000 Indians, according to the latest report, about 16,000,000 acres of land is tied up and not subject to taxation. About 3,000,000 acres have been removed by departmental rulings and by act of Congress from that condition; 3,000,000 out of 19,000,000 acres in all. This bill which the Department asks you to make law will remove 6,980,000 acres more of that land distributed around through the State. This bill will give us some relief; but it will still leave in round numbers 10,000,000 acres of the land of the Five Civilized Tribes, which comprises almost the entire eastern half of the State, yet tied up hand and foot.

One more observation. I will try not to go beyond my time. Citizens who think of the situation think, "Why, each man has perhaps only 160 acres or perhaps 320 acres; some of them have more and some of them less." But when you stop to think of the proposition, it is not only the heads of families who have that, but each wife, each child, has that amount of land, and it makes a family of ten people, at the rate of 160 acres of land apiece, own 1,600 acres of land. The experience of Congress and the experience of Representatives in this body has been that land should not be held tied up in large tracts. One family can not utilize 1,600 acres of valuable land in Oklahoma; they can not use it to advantage as far as they are concerned, and the result is that the country is held back and they are land poor. They have land, and they have not money with which to cultivate it; they

have land which they have no means to operate and control. The result is that great tracts of land are lying idle, keeping the price of land back and holding it down, and denying to those people schools and churches, roads on the section lines, and bridges, and all the other advantages that come with modern civilization. One point more.

I am going to say that it will do the Indian more good than anybody else to have the restrictions removed. Why? Because until you do remove the restrictions you will have a class of tenants in the Indian Territory and a class of people in the Indian Territory who can not own their own homes and who will not take a pride equal to that of the home owner in building up the Territory and making it what it should be; but if you will remove the restrictions, so that an individual family of ten, say, holding 1,600 acres of land, can sell their surplus down to a point where they can control and own and cultivate what they have left, you will put the Indian side by side in his conditions with other thrifty home owners, and that will make the Indian a better and more upright and worthy man. You have something to contribute to the welfare of the Indian as well as to the State.

I had a few more things that I wanted to say, but I can not ask leave to extend very well. I thank you, Mr. Chairman.

Statement of Mr. Kenneth S. Murchison.

Mr. MURCHISON. I do not advocate any particular bill, Mr. Chairman, or any particular method of removal of restrictions. What I am here for is to ask that Congress shall pass some legislation, whatever it may be, so that the Indians in Oklahoma will know what rights they have. We have down there to-day quite a conflict of opinion as to whether or not a title can be granted by the Indian or not. As a consequence, the Indians make contracts with speculators in lands, and because they say there is a doubt as to the title, they will not pay what the lands are worth. Therefore the Cherokees, whom I represent, are very anxious for some action to be taken by Congress which would fix beyond any question just exactly what rights they have as to alienation, if any, and so that there will be no question about that, and the Indians will not suffer by reason of these speculators acting as I have suggested. That is all that I have to say. The full-blood Cherokees, who have been my clients for some time, are rather indifferent about the question of removal of restrictions, but they want to know just what rights they have, so that they can get the price for their lands, the price that they are worth. That is all I wish to say.

Statement of Mr. E. P. Hill, representing the Choctaw Nation.

Mr. HILL. Mr. Chairman and gentlemen of the committee, I would not trespass upon the time of the committee to any extent but for the fact that I feel it is my duty, as attorney for the Choctaw Nation, employed by them, especially in view of what has been said, Mr. Chairman, with reference to the Indians in the Five Civilized Tribes, to present the views of my people with reference to these questions; and I want to say to the committee frankly, Mr. Chairman, that the Indians feel that there is a necessity to have somebody as their representative to appear before the committees in Congress, in order that their views upon these matters of legislation may be presented. I had not intended to refer to the restriction feature of the bill, but to make a few remarks as to why I considered the judicial part of it not only desirable, but absolutely necessary. I know, Mr. Chairman, we have heard a good deal about the business capacity and the business experience and intelligence of the Indian in that country. If you could select the competent man, the competent Indian, the man who is in fact capable of transacting his own business in dealing with his more intelligent neighbor, if you could select him and take the restrictions off of his property and leave it unhampered, it might be all right; but when you do that, if you pass a general bill with the idea, Mr. Chairman, that you are benefiting a few men of intelligence and a few men of capacity, where you will benefit one man in that situation you are legislating to the detriment of ten other men who are not so competent and who are not so capable.

Mr. Chairman, I have wished that Congress might investigate conditions in the Indian Territory as they are, and that then its legislation with reference to those people down there might be based upon what a committee of Congress could learn as to that condition; and I want to say to you that the man who appears before a committee of Congress and tells you that the Indians of the Five Civilized Tribes as a rule are competent to attend to their own business, and that Congress should remove the restrictions from their property and leave them in a position to deal with it as they please, makes a mistake. I have been in contact with those Indians. I have no interest in the world in this matter, except as their attorney, to present this matter to the committee, and, Mr. Chairman, there is one thing that is lost sight of in this discussion, and that is the obligation that the Government owes to those people down there under its treaties and under its agreements with them. The Federal Government not only, Mr. Chairman, has a legal right, as has been decided time and again by the Supreme Court of the United States, to legislate with reference to the property of the Indians down there, but the Federal Government is under strong, deep, moral obligation to protect them in their property rights. It is a sacred relation, between the Indian and the Government; that of guardian and ward—not guardian of his person, but guardian of his property.

I have been particularly struck with the statements that have been made with so much confidence, that the Indian is now a citizen, and that he has been vested with all the rights, privileges, and immunities of other citizens, and I confess, Mr. Chairman, that for a while I shared that opinion, because I believed that probably the amendment which Senator OWEN says he had the honor to write in 1901, an amendment to the act of 1887, conferred that right upon the Indian; but when I examined that amendment and when I examined that act and found that the act itself specially excepts the Choctaws and Chickasaws, Creeks, and Seminoles, I doubted very much if his amendment made them citizens of the United States.

Mr. CAMPBELL. May I ask you a question?

Mr. HILL. Certainly, Mr. Chairman.

Mr. CAMPBELL. To what extent did the Indians of the Five Civilized Tribes vote at the general election that has just been held in Oklahoma?

Mr. HILL. Mr. Chairman, I will give you my observation, and I think it is correct, because I have been brought in contact with the Indians in my section of the country all over the Choctaw Nation; I have traveled in every part of that nation as their attorney, and my observation is that the Indian as a rule is not fixed in his political convictions, and that a great many of them took no interest in the elections which we have held, for that reason, so far.

Mr. CAMPBELL. My question was not what interest he took, but did

the full bloods have the right and did they exercise the right to vote down there?

Mr. HILL. A great majority of them, as I am informed, did not vote. Of course they have the right to vote, you understand, and they understood that they had the privilege to vote.

Mr. CAMPBELL. They understood that they had that right?

Mr. HILL. Oh, yes; they understood that; but, Mr. Chairman, I want to say this to you, and I am expressing to you what I believe to be the sentiment of the Indian: The Indian looks to the Federal Government to protect him in the enjoyment of his property rights. Whether he is justified in that or not is not for me to say, but I know that he looks to the Federal Government in that particular. Now, so far as the government of the Choctaw Nation is concerned, just before I came up here I had a talk with Governor McCurtain of the Choctaw Nation, a man who has the confidence of his people and who has been their chief for a number of years. They are willing that the restrictions should be removed from the surplus lands, but they are not willing for the restrictions to be removed from the homestead lands of any Indian by blood.

Mr. CARTER. You understand that this bill does not remove the restrictions from the lands of full bloods?

Mr. HILL. Not on the surplus.

Mr. CARTER. No; not on the full bloods' lands at all and not on the surplus lands of any Indian of half or more than half Indian blood.

Mr. HILL. As I said, Mr. Chairman, I had not intended to antagonize this feature of the bill as to the removal of the restrictions, because the Department of the Interior after hearing all parties interested has agreed, as I understand, on the bill which has been submitted by Mr. McGUIRE; and having done that, it was not my purpose to object to that bill in any particular as to the removal of the restrictions spoken of, but it is my purpose to insist, as a matter of simple justice to those Indians down there, that the judicial feature of the bill shall be added. And, Mr. Chairman, for the life of me I am unable to see how any man can object to the Secretary of the Interior having authority to go down there into the courts of the country and recover for those people there the lands which have been taken from them by fraud and in violation of law. I say I am unable to see how, in common justice, any objections can be urged to that.

Mr. CAMPBELL. Let me ask you this: Do you think that the Indian would have the right to go into court now for that purpose?

Mr. HILL. Certainly he would, Mr. Chairman. It would not take an act of Congress to give the individual Indian that right.

Mr. CAMPBELL. That is what I was going to ask you.

Mr. HILL. No; it would not take an act of Congress. Of course this is given to the Department here because Congress has supervision over the property. It would not take an act of Congress to give the Indian the right to go into court to recover property taken from him by fraud or in violation of law. The law would give him that right. But remember this, many of these people have neither the intelligence nor the means to do that; and unless you provide a bill of this character that will give the Department the authority to go in there for them and recover their property, there are hundreds and hundreds of Indians in that country who never will see some of the allotments that have been given to them by the Government.

Mr. CAMPBELL. They have authority now to hire attorneys, have they not?

Mr. HILL. They could, of course, like any other man, hire an attorney.

Mr. CAMPBELL. You say you are the attorney for the Choctaws?

Mr. HILL. Yes.

Mr. CAMPBELL. You were employed while they were still sustaining their tribal relations?

Mr. HILL. Yes; their tribal relations still exist.

Mr. CAMPBELL. I am simply asking these questions for information.

Mr. HILL. Certainly; I am glad to answer any question.

Mr. CAMPBELL. Why can not your relation to the Choctaws go right on, and you represent them and bring actions in the courts under the law as it now exists?

Mr. HILL. Because we do not represent individual members, you understand, of the Choctaw Nation. There are some 25,000 or 30,000 Choctaws, I believe. We are attorneys for the Choctaw government, which still exists. They still have their governor and their executive officers and their council, which is their legislature, and we are attorneys for the government. It would be impossible, Mr. Chairman, anyhow, for any one firm of attorneys to handle the large number of cases that would necessarily arise. As it is now there are 3,000 cases on the probate court dockets down there of minors alone. These cases will probably average three minors to the case, and some 8,000 or 9,000 minors' allotments are now in the probate court of the courts embraced within the Choctaw Nation alone.

Mr. CAMPBELL. Some suggestion was made here yesterday as to the appointment of agents to represent the Department of the Interior. Would those appointments cover the question that you have in mind?

Mr. HILL. Mr. Chairman, I think this. I think that the amendment which I saw here yesterday and which Judge Woodruff, of the Interior Department, had is a good one. I do not know whether it is intended as an amendment or not.

Mr. CAMPBELL. You have it here.

Mr. HILL. I think if that were passed—and I do not see how the gentleman from Oklahoma can object to that—it would give relief, and that would authorize the Department to investigate and bring cases down there for the recovery of property that had been taken from the Indians in violation of law. I can not see how any man can object to that. I heard one gentleman suggest here yesterday that that would be an encroachment upon the rights of the State if the Department of the Interior was authorized to do that. Why, Mr. Chairman, if the Department of the Interior is authorized to do that, the Federal Government is simply exercising its proper functions under the law. The Federal court, as it is, has jurisdiction down there in cases involving an Indian allotment, and if the State courts are given concurrent jurisdiction, as I understand they are by this bill, the State has greater power than it has now, and instead of this being an invasion of the rights of the State, you are giving to the State a privilege which it does not now exercise under the law. It is true, if the amount involved is under \$2,000 you could not remove the case; if the case would have to originate in the State court, and you could not remove it to the Federal court on petition. Yet after it gets through the State courts, a Federal law being involved, and the construction of it being involved, the case would finally come to the Supreme Court of the United States.

And another thing: If the suits which have been authorized by Congress against those Indians down there time after time, or if the investigation which has been made down there fixing the value of these allotments, is any criterion to go by, there is hardly one allotment in that country that is not worth \$2,000 and more. In an investigation down there to determine the amount of the fee to be paid for some

litigation in behalf of the Choctaw Nation, the fact was disclosed at the hearing that the allotments averaged \$1,800 in value in that country; and if you will examine that hearing I do not believe that you will find that any man disputed that. If you will take the suits which have been brought down there against Indians to recover from them fees for services, you will find the value of their allotments is put generally at \$5,000. Those cases have gone through the Court of Claims, and nobody has denied that; and I doubt that there would be a suit brought down there for the recovery of one of those allotments under this bill that would not properly originate in the Federal court, or which, if filed in a State court, could not be removed on petition to the Federal court.

I believe that the members of this committee know something of the conditions of those people and their environment; but let me say to you in behalf of those helpless and unlettered people—and there are thousands of them who are so—that there are hundreds of Indians in that country who are not now in possession of their property which has been partitioned to them. There are hundreds and hundreds of Indians, especially minors, in that country who are not in possession of their allotments and who never will see them unless some provision is made by which somebody can take hold of this matter for them and restore to them their property; and I want to say to you that instead of the people of Oklahoma opposing a provision of this sort the whole moral force of our country will sustain it, because it is a matter of simple justice to a helpless people.

Mr. CAMPBELL. Is there no provision, either in law or method of executing the law, by which those people who have had land allotted to them can be put in possession of it?

Mr. HILL. The only thing in the world that could be done would be for the individual Indian to hire a lawyer and put up the money to pay the costs. As it is he can not make any contract to employ a lawyer that would be binding on his property. This bill provides that the Secretary of the Interior may go ahead and do this and furnish the money for the expenses and then deduct it from the Indian's share of those tribal funds that are coming to him.

Mr. CAMPBELL. Is there any considerable amount of land that has been allotted to individual Indians who are now denied the possession of that allotment?

Mr. HILL. There are many cases, Mr. Chairman, where the Indian does not know even where his property is.

Mr. DAVENPORT. There is a district court and a probate court clothed with full jurisdiction to bring about an investigation any day that he applies for it.

Mr. HILL. If you will furnish the means that can be done, and that is the object and purpose of this; and Mr. DAVENPORT, if I may be permitted to ask you, what objection would there be to this procedure on behalf of these people? It does not authorize him to recover property from anybody except where it has been taken in violation of law or through fraud, and what objection could there be to that?

Mr. DAVENPORT. I did not mention that yesterday. My answer to that, as the question was addressed to me, is this: That when the time is terminated no living man can say that there will be any funds of either of the tribes to apportion these expenses from. It would take a court of equity, after the Secretary of the Interior had gone down there and brought these suits, to find out where the fund would come from; and in the second place, as a citizen of the Cherokee Nation in Oklahoma, as a lawyer in Oklahoma, as a Representative from that part of Oklahoma, I say there is a court there clothed with full jurisdiction to attend to those things, and I will answer it further to the committee and say that I will put up the funds if Mr. Hill will call my attention to any such case in the third judicial district, and I will go into the court as a lawyer and furnish the costs to prosecute the case until the man who holds that land is dispossessed and the minor is in possession.

Mr. HILL. I might call Mr. DAVENPORT's attention to cases in his own country where the land of the full-blood Indian has been conveyed by him without a proper consideration. However, Mr. Chairman, I am speaking with reference to my own people, the people I represent. I wish I had my correspondence here in order that I might show you cases where Indians went and leased their lands, or supposed that they were leasing them, or supposed that they were making some contract with reference to them without a conveyance, and it afterwards developed that that contract was a deed to the property. Now, there are not only a few cases, but there are hundreds of cases of that sort in that country.

Mr. FERRIS. Some of those Indians have given anywhere from two to a dozen deeds to their property, have they not?

Mr. HILL. That may be true in a few cases.

Mr. FERRIS. Is not that true in your knowledge in that country?

Mr. HILL. No. There may be a few of those cases.

Mr. FERRIS. Do you not think that the Indians knew in each case that that was an absolute nullity, and that they were gaining the only advantage to be gained?

Mr. HILL. That has been urged here, and has been said before, and I want to say in defense of the Indian that in a great majority of the cases where he has parted with his property he has done so at a grossly inadequate consideration.

Mr. CARTER. He has not parted with it.

Mr. FERRIS. He has never parted with it.

The CHAIRMAN. Let us proceed in order.

Mr. CARTER. I want to ask Mr. Hill a question. You say that the trouble now is that the Indian has not the funds to conduct these cases?

Mr. HILL. Yes, sir.

Mr. CARTER. Have you noticed the amount appropriated in the McGuire bill for taking care of the Indian's property?

Mr. HILL. I do not understand that there is any provision made in the bill—

Mr. CARTER. Yes; the amount is \$90,000.

Mr. HILL (continuing). Except to appoint representatives there who have a sort of general supervision and control. But you can not file a petition in that country unless you deposit the costs with the clerk; you have got to deposit the money there. And if you leave it to the Indian, he does not know anything about our courts. These people who have lost their property have not become accustomed to the changed conditions down there, and you can not with one sweep of the pen make them as competent and as able as we are to attend to their own affairs.

Mr. CARTER. Is it your idea that the State courts would not give the Indians justice?

Mr. HILL. Not at all; and I say by this bill you are giving the State courts more power than they have. You are giving them concurrent jurisdiction with the Federal court. And right now, with the law as

it is, if an Indian comes into the State court down there, or, rather, if an Indian brings suit to recover his land, and it is over \$2,000, he can take it into the Federal court. It does not take any legislation to give him that right.

Mr. CARTER. That is what we think.

Mr. HILL. But this bill gives to the State court greater jurisdiction than it now has, because it can exercise a greater jurisdiction in all these cases.

Mr. CARTER. You are in favor of giving the State court more jurisdiction than it has now?

Mr. HILL. I am in favor of this bill; I am in favor of this jurisdiction. I am in favor of it because it will be a matter of justice to those people. Unless Congress provides some method by which this property can be recovered for them, I believe they will lose it, and that their patrimony which has been given to them by the Government will be lost. This is especially desirable for the children. There are many children of the full-blood Indians who have got to grow up and be educated with these new environments, and it may be, by the time they reach their majority, they will be competent and able to take care of their own affairs; but it seems to me, as a matter of simple justice, that the Federal Government ought to vest the Secretary with power, if he sees proper to do it, to go out there and recover the property that has been taken from them unlawfully.

Mr. CARTER. Do you not think he has that power now?

Mr. HILL. I do not know whether he has or not.

Mr. CARTER. Do you know anything about the Boyd case, which has been decided by the court of appeals?

Mr. HILL. The Boyd case? From one of the Carolinas?

Mr. CARTER. Yes. Was it not decided in that case that the Secretary had a right to bring suit for the recovery of an Indian's property?

Mr. HILL. I do not know. It might be that under the administrative control which, you understand, the Department has over the Indian's property generally, the Secretary might exercise some such authority; but the Department has not done it and the Department is here now asking that this authority be given to it; and what objection can there be, gentlemen, to recover property from a man for an Indian where it has been taken away from him by fraud?

Mr. CARTER. We are all in accord on this, that we want the title straightened out.

Mr. HILL. This bill does not cloud the title. It is not the authority given to the Secretary of the Interior that clouds the title, but it is because of the transfer that has been made of record down there. That clouds the title.

Mr. CARTER. You do not mean to say that the original jurisdiction bill would not cloud the title?

Mr. HILL. I mean to say that if you pass this bill it does not cloud the title.

Mr. CARTER. Do you mean the original jurisdiction bill introduced by Mr. SHERMAN?

Mr. HILL. I do not know just exactly what it is, but I mean the authority given to the Secretary of the Interior to bring suit to recover land which has been fraudulently taken will not cloud the title, because if it has been lawfully taken, there will be no occasion for a suit.

Mr. CARTER. What we want is to get concretely at your views on the matter. As I understand it, the principal thing that you complain of now is that the Indians have not the funds and have not the initiative character to bring these suits. You think that somebody ought to be allowed to bring those suits for them and that funds ought to be allowed for the bringing of those suits. Is that about your idea?

Mr. HILL. I mean this: That the Government is the guardian of the Indian and his funds, and this money of the Indian which the Government has is practically all held for him, and there should be given to the Secretary of the Interior authority to appropriate those funds for the purpose of bringing these suits where it is thought necessary in order to restore to the Indians that which belonged to them, and that which has been taken away from them in violation of the law. That is all this bill does.

Mr. CARTER. You want the funds to bring the suits with?

Mr. HILL. This bill does not fail to recognize the State courts, but provides that in the exercise of this purpose to restore this property to these people who have not the intelligence or the means to do it for themselves, the State courts shall have concurrent jurisdiction.

Mr. FERRIS. Will you yield for a question?

Mr. HILL. Yes, sir.

Mr. FERRIS. You say to recover the property of these Indians. Do you intend to convey to this committee the idea that you, as a lawyer, believe that those Indians conveyed any title whatever to the restricted property?

Mr. HILL. No, sir.

Mr. FERRIS. Is it your position that you are in favor of passing a bill that will let the Secretary of the Interior, with or without the consent of the Indians, bring a suit for any purpose for which he may see fit, and that the Indian fund will be subjected to the payment of that expense? Is that your position?

Mr. HILL. I am perfectly willing that the suit shall be brought at the discretion of the Secretary of the Interior. While it is true that the execution of this deed to a piece of restricted land by the Indian would not convey title, at the same time it would be a cloud upon the title, and nobody would buy it except some speculator like those who have already gotten these lands from the Indians; and if a bona fide purchaser should come along and should want to settle there and make a home upon it, he would not buy it. But if the title is cleared by the Interior Department, by reason of this suit, then a bona fide purchaser would buy it.

Mr. FERRIS. Another legal question I would like to ask you as attorney for the Choctaw Nation. Do you not think that to vest the Secretary of the Interior with power to bring suits with or without the consent of the individual Indian, using his funds for the expenses of carrying on that suit, would in itself throw a greater cloud over the title than these deeds, which are admitted by everybody to be absolute nullities so far as legality, justice, and everything else is concerned? The first bill introduced provides that that suit may be brought either before or after the removal of the restriction.

Mr. HILL. I think the Federal Government as the guardian of the Indian ought to take whatever steps it thinks necessary and proper to protect its ward. The relation existing between the Federal Government and the Indian is just as sacred as that between a guardian and ward in regard to a child's property, the property of some helpless minor, or at least there is a relation of dependency that is recognized and that is the only power that the Secretary of the Interior is asking for in this matter. Certainly a recognition of this well-established right would not cloud title.

Mr. CAMPBELL. I should like to ask you a question about something which I think no one has referred to. Do you think it proper for the tribal fund belonging to the Choctaws to be appropriated in the way indicated, to recover property or to quiet the title to the possession of the property of some particular Indian who has alienated whatever title he thought he had for a consideration?

Mr. HILL. The bill provides, Mr. Chairman, that the expense of any suit is to be charged against the Indian's pro rata share of the tribal funds.

Mr. CAMPBELL. I understand he is to stand a pro rata share, but do you understand that the ninety-nine Indians who have not endeavored to alienate their property, and have done nothing to cause any expense in relation to it, ought to have their funds used in order to protect the Indian who did use his ingenuity to get rid of his property, and now is endeavoring to use the tribal funds in order to get it back?

Mr. HILL. As for the other ninety-nine Indians, it does not cost them anything.

Mr. CAMPBELL. The tribal fund is not to be used, then?

Mr. HILL. Every Indian has an interest in that fund.

Mr. CAMPBELL. Yes.

Mr. HILL. Let us say A, B, and C, Indians, have an interest in the fund. A brings a suit and the expense of that suit is taken out of the fund belonging to A, B, and C, and it is charged up against A, and he pays from his part. B and C do not pay anything.

Mr. CAMPBELL. There is no part of the costs in the suit against A taken out of the fund belonging to B and C?

Mr. HILL. No, sir.

Mr. FERRIS. Is that your understanding of this?

Mr. WOODRUFF. It is true, providing there is a fund of which A has a share.

Mr. HILL. If there is no fund, he does not bring the suit.

Mr. CARTER. What are you going to do about the Creeks? The Creeks have no funds and the Federal Government has agreed to give them \$4,000,000 more than what is due them. When you bring suit on behalf of one of those individuals, where are you going to get the funds to bring his suit?

Mr. HILL. It strikes me you are not looking after the interests of the tribes in this thing.

Mr. CARTER. I think I am, and I submit that I am interested with them about as much as any man in the room.

Mr. HILL. I am willing to trust all that to the Secretary of the Interior. He is not going ahead to bring these suits unless there is something on hand to pay the expense of bringing them.

Mr. CARTER. There is nothing on hand in the Creek Nation, because they already have a claim for equalizing their allotments of \$7,000,000 when they have only \$3,000,000.

Mr. HILL. That is true.

Mr. WOODRUFF. It is true if that law should transpire in the shape in which it stands that the expense of the suits in the Creek Nation would come out of the tribal fund, inasmuch as A, in whose interest the suit is brought, has no interest in the fund, because the fund will all be exhausted in other ways than by distribution in which A would share. In the Choctaw Nation and the Chickasaw Nation, unless there was a great expense run up, that could not happen.

Mr. CAMPBELL. A would have enough pro rata to pay his expenses?

Mr. WOODRUFF. Yes.

Mr. CARTER. I want to give notice that I am going to insist, as a member of the Chickasaw tribe, that no funds be used for any individual in excess of his pro rata share.

Mr. SAUNDERS. These deeds were made by people who had no right to make them?

Mr. HILL. Yes, sir.

Mr. SAUNDERS. People who had no right to make them except by virtue of the general law?

Mr. HILL. Yes.

Mr. WOODRUFF. One more remark. If the provision suggested by Mr. CARTER—which prima facie is very just—is inserted, then I think there should be a further proviso that where the tribal fund is not available the Secretary of the Interior should be authorized to use the funds of his Department; that where the individual Indian has not a share in the tribal funds available for that purpose the United States will stand the expense. I am not the least bit afraid that these expenses will run so high that there will be any loss to the tribe, unless it were in the Creek Nation.

Mr. CAMPBELL. What is your estimate of what the expense would be to quiet the title, or put an Indian in possession of his allotment, in a given case?

Mr. WOODRUFF. If we had to bring the cases separately, the expense of each case would be multiplied by the number of cases brought. I am confident that it will not be necessary to bring a great number of suits of this kind, or that if it is, I am sure they will go pro forma after the test cases have been tried. As to the expense in an individual case, I have not attempted to figure it, but I had taken it for granted that the Attorney-General would be allowed to use his own force. If that would not follow as a matter of course, that provision should be put in there, that he should use his own employees as far as he could spare them; and by using his own employees there would be no attorneys' fees whatever. The court fees certainly would not run very high if each suit had to be brought by itself, and if, as I believe verily, each suit will not have to be brought by itself, the prorating of the expense will bring it down to a nominal sum, something below \$10.

Mr. CAMPBELL. Would there be a publication, or the service of summons?

Mr. WOODRUFF. There would be a service.

Mr. CAMPBELL. Probably both, in each case?

Mr. WOODRUFF. There would be no occasion for a publication if you could get service.

Mr. CAMPBELL. There might be if there were summons sent out.

Mr. WOODRUFF. Yes; we might have to make service.

Mr. CAMPBELL. The publication cost alone would not be less than \$10.

Mr. HILL. Yes; it would; it is \$2.50 in our county.

Mr. CAMPBELL. As low as that?

Mr. HILL. Yes. The publication would cost very little, and of course that would be only in the case of a nonresident.

Mr. FERRIS. Of course if a man was solvent, you could recover the costs out of him, if you could find him.

Mr. WOODRUFF. If he is solvent and you can find him. I think the cost per capita would be almost negligible.

Mr. CARTER. I want to ask you if it is not a fact that almost all those deeds are given by full-blood Indians?

Mr. HILL. I think most all of them are, and I want to tell you it was not the Indian that solicited the trade, but you will find there are many companies that are organized down there who have sent

their representatives out into the mountains, and where these Indians live, in order to secure their signatures on these documents.

Mr. CARTER. That was the very reason we made the lands of these full-blood Indians inalienable. Have you read this McGuire bill, and do you know what the character of it is?

Mr. HILL. Yes; I think I do.

Mr. CARTER. It does not remove the restrictions completely from the lands of any of these people except those who are less than half Indian blood. Now, do you not think that that class of Indians of less than half Indian blood are as competent as the other citizens around over the State?

Mr. HILL. Of less than half Indian blood?

Mr. CARTER. Yes; not even the half blood, but less than half Indian blood.

Mr. HILL. There are many competent Indians; but to say they are competent in the same proportion as the white man is going too far. I doubt it.

Mr. CARTER. Have you ever thought what it takes to constitute a less than half-blood Indian? It is absolutely necessary for that child to have two parents with white blood in them; and I think you will admit that it is a fact that no child with a parent of less than half blood, or with two parents of less than half blood, has been raised in any manner as an Indian.

Mr. HILL. Here is what brought about this necessity for this legislation: It is, as I told you, that speculators and companies—individuals and companies—

Mr. CAMPBELL. I think we have been over that.

Mr. HILL (continuing). Have gone and secured these contracts, and they have secured them by means of imposition upon the Indians.

Mr. CARTER. What contracts are those?

Mr. HILL. These deeds that have been put upon record.

Mr. CARTER. There is nobody who has any sympathy with those at all.

Mr. HILL. That is all this bill is seeking to do.

Statement of Chief Moty Tiger, of the Creek Nation.

(Chief Tiger testified through an interpreter.)

Chief TIGER. Mr. Chairman and gentlemen of the committee, you permitted me to speak to you some few days ago, and I am very glad you have given me another opportunity. I regard myself in this light: You take up a criminal and put him in jail, and finally you take him out and try his case and bring in a verdict of guilty, and he is to be hung, but before you hang him you bring him up and ask him why he should not be hung. I feel somewhat in that situation. [Laughter.] I have heard a good deal of talk here, but I do not understand English, and I do not know exactly what you have been talking about, but I have heard this English word "restrictions" and the phrase "removal of restrictions" all the while, and I have absolutely got so that I understand that much, and I am going to address myself to that particular subject.

Mr. CARTER. My understanding was that the chief wanted to address himself to the petition that was filed asking for his removal.

Mr. CAMPBELL. He can occupy his time as he sees fit.

Chief TIGER. In the first place I am opposed to the removal of restrictions, and I am going to address my talk to that subject. I have been born and reared in the Creek Nation, among the Indians, and I have an idea that I know pretty well the desires and wants of those people, of the full-blood Indians. Not very many months ago my predecessor, who was chief of our nation, called an extraordinary session of the Creek council, some time in the latter part of July or the first part of August, to consider whether or not they were in favor of what was known as the "McCumber bill," and it was pretty well understood by the Indians that that protected them from the sale and incumbrance of their lands. The matter was taken up—that is, the question as to whether or not the Creek council indorsed the McCumber Act that was supposed to protect the Indians from the sale of their lands for twenty-five years was taken up—and of course in such a large council as that you could hardly expect all to think one way.

So this matter was taken up and thoroughly discussed by the members of the Creek council. During the discussion of that question by the Creek council, people gathered to the council from all parts of the nation, especially from the little towns, the various towns in the nation, and they came there and argued on the outside with the members not to agree, or not to indorse this McCumber Act, and in doing so they even brought intoxicating drinks and endeavored to work upon the members of the council in that way in order to get them to decline or refuse to indorse the McCumber amendment. But these people who went there in order to get the council to say nothing, to have nothing to do with this McCumber amendment, failed completely, and a very large majority of the Creek council indorsed what we call the McCumber amendment, which, as we understand, protects the Indians from the sale and incumbrance of their land for twenty-five years, and after the action of the Creek council indorsing the McCumber amendment, those who were working on the outside—and then we had some members in the council who favored having nothing to do with this McCumber amendment—that small minority were very much displeased; and I would say here, too, that a large proportion of these people were white people from the various towns in the nation. They went away displeased and discontented, and I wish to say, too, in reference to the paper that was read here the other day as a protest by some Creek citizens against the work of the delegation here, a large proportion of those who signed that paper were among those people who went to that council for the express purpose of seeing that the council did not take the action that it did take. The people who opposed the McCumber amendment at that time were not people who were friendly to what we conceive to be the best interest of the Indians proper of the Creek Nation, and many of those whose names we saw signed to a paper here the other day are some of the same people who operated with those grafters at that time. I did not wish to say anything about these citizens of mine; I do not think it is a thing that I ought to talk about; but as I go on with my subject it naturally comes to these people, and I just make that passing remark about those citizens of the country.

I was asked here the other day by the committee, "Do you think you are speaking for the majority of your people?" and I said I did, and I still think I am now representing the interests and the desires of the majority of my people, and I will explain why I think so. The Creek people have had a constitution and laws for a great many years. Their constitution provides how an election of the head of the nation shall be held, and I ran some years ago as second to the chief now deceased, and I got more votes from my people than anybody else who ran during that general election. Our constitution provides that when the chief shall become unable to carry on the work of the chief of the nation his

second shall come into power; and you yourselves also made a law whereby your chief, the President, should appoint a chief down in that country in the event that the chief acting is not able to carry on the work of his office. Our chief died, and in consonance with our constitution and in consonance with the laws, the President of the United States appointed me, and I have been endeavoring to carry on the work of the United States, with such little power as we have got, as best I can, up to the present time, and this makes me know that, having gotten more votes than any of the other people who ran for office at that time, I am here representing the large majority of our people.

As to the matter of law, I am not a lawyer and not accustomed to appearing before juries and people and talking law, nor am I versed in statistics and things of that sort, but if you would care to interrogate me on any point that I am conversant with, I will be glad to give you whatever information I can.

Mr. McGUIRE. Have you had read to you H. R. 15641—that is the bill under discussion—or have you heard it? That bill provides only as to the mixed-blood Indians, and makes no provision for the alienation of the land of the full blood except in the discretion of the Secretary of the Interior. Is that provision, if it is there, satisfactory?

Chief TIGER. What blood do you speak of? We have got a lot of niggers down there, and we have got people mixed with the white blood.

Mr. McGUIRE. When I speak of those not interfered with, and left entirely to the discretion of the Secretary of the Interior as to whether any restriction shall be removed, I refer to what is known as the full-blood Indians.

Chief TIGER. That is just the thing we want. We want our full-blood Indians not interfered with at all—for the present, at any rate.

Mr. McGUIRE. That is just what this bill provides. Would that be satisfactory to you?

Chief TIGER. We have an agreement with you whereby you have promised us protection, and we claim that protection. We want that protection continued, and if now your bill does that for the full-blood Indians, we can not object to it.

Mr. MOTT. Might I ask this, Mr. McGUIRE? I want to know if the chief understood, that is all. I know the chief. I do not want the chief to be taken advantage of. It might be pleasant to some, but not to Mr. McGUIRE or myself. [Laughter.]

Mr. CAMPBELL. We will give you an opportunity after the interpreter and the chief are through.

Chief TIGER. I do not see anything to laugh about in this matter. I say that I want no restrictions removed from the full-blood Indians' lands, and if that is what my interpreter has told you, I see nothing very funny about it.

Mr. CARTER. We were laughing at Mr. Mott, and not at the chief.

Chief TIGER. Of course the Members from the State are here, and they have expressed their wishes and desires in this respect, and we understand that. When we build a home, a house, after having built it we find very many other things we need to furnish to make this house habitable. These Members of Congress from Oklahoma have built a home down there; they have built a State, and having gotten that State in readiness for occupancy, they find they are needing a great deal more, and in order to make it habitable they are trying to get something out of these Indians in order to make their home habitable and pleasant.

Mr. McGUIRE. We think you have been misinformed.

Chief TIGER. I do not think I am. I think I know what I am talking about. Now, having gotten the State down there, you want to remove the restrictions from the property of the full blood and other Indian citizens down there, in order that you may tax it, and there-with run your State government, and that is what we are not wanting.

Mr. CAMPBELL. Have you been informed that this bill, or that this committee, was proposing to remove restrictions from full-blood Indians?

Chief TIGER. I have so understood.

Mr. CAMPBELL. Did you learn that after you came here or before you came?

Chief TIGER. I have known that for quite a number of months, since quite a while ago.

Mr. McGUIRE. Do you know when the bill was introduced, and did you know that when the bill was introduced?

Chief TIGER. Why, I understood that that was the object, in this way. When the gentlemen were running for Congress in that country it was told me that they promised the voters that they would see to it that this Congress removed the restrictions from the Indians' lands, and that is how I came to believe that that was the object of some of the people there, before I came here.

Mr. CAMPBELL. Have you asked anyone who was in a position to find out, since you have been here, if this bill did not protect the full-blood Indian?

Chief TIGER. I am probably at some disadvantage in that particular case. I do not think I have had that particular bill read and interpreted to me.

Mr. CARTER. Of all those fellows who ran for Congress on a platform of removal of all restrictions, including the full-blood Indians' homestead allotment, was a single one elected? Do you know of anyone elected to Congress or the United States Senate, who advocated the removal of restrictions on the full-blood Indians' homestead?

Chief TIGER. I do not.

Mr. CARTER. As a matter of fact, I may state that there were several fellows who ran on that ticket, but none of them was elected.

Chief TIGER. A drowning man will even grasp at a straw, and I wrote to my brother, John Brown, the Seminole chief, and he answered me, and I would like to have his answer read at this time. The Creeks have made their statement as to their beliefs and their desires in this matter, and I would like to have this incorporated in the report of the committee, if it be proper.

The letter referred to, which was written in English, was read aloud by Mr. Grayson, as follows:

SASAKWA, IND. T., March 18, 1908.

HON. MOTY TIGER,
Chief Creek Nation, Washington, D. C.

DEAR FRIEND AND BROTHER: I beg to acknowledge receipt of yours of the 14th instant, just received. I greatly appreciate the gravity of the situation and the strenuous efforts being put forth by the Oklahoma delegation in Congress for the removal of restrictions on Indian lands, in which those of Indian blood are the most active, if that be possible, but I hope they will be compelled to accept much less than they would like. I have lately supplemented my efforts made in Washington before the Department with letters to Secretary Garfield and Senator CURTIS, and have satisfactory acknowledgments. I am assured that my representations will be made known to the committee in charge of the matter, before whom I felt sure my ideas and representa-

tions would be in consonance with those made by you and your delegation for the Creek people. I know that our appeals have gone unheeded for generations. It is a cry now from the graves of helpless thousands and ought to excite some pity; enough, I hope, to stay the executioner for a day at least.

Anything, Chief, that you can and will say to me at any time along this line will meet a sympathetic chord, ready response, and hearty cooperation in any way yet open to us. You are most welcome. The word "intrusion" finds no place in my heart.

Your friend and brother,

JOHN F. BROWN,
Chief of Seminole Nation.

Mr. McGUIRE. Is Chief Brown, who wrote this, a full-blood Indian?

Chief TIGER. I do not know.

Mr. McGUIRE. Do you not think a man who can write a letter like that is capable of transacting his own business?

(The question was not answered.)

Mr. MOTT. Now, before the chief takes his seat I would like to say a word. He can not understand me any better than he can any member of the committee. I know him well, and I just wanted him to get right on the record, and I am sure the chief, if it is explained to him after it is over, will be very much dissatisfied that it was left in the record that he was not entirely and clearly understood. Mr. McGUIRE asked him a question, whether this bill was satisfactory, and it does not matter whether it is satisfactory to me or not, the attorney of the nation, but he understood, when he was answering, that it was satisfactory as to the full bloods. He did not mean nor want to be understood that it was satisfactory as to the whole bill.

Mr. CAMPBELL. The committee heard just what he said, and heard both the question and the answer.

Mr. MOTT. Will you put a question to him at my request?

Mr. CAMPBELL. What is the question?

Mr. CARTER. I want to ask him a question before that.

Mr. MOTT. I want to ask if he wants the restrictions removed from the homesteads of any class of the citizens.

Mr. CAMPBELL. That question was asked two weeks ago. I remember very well he said that he did not.

Mr. CARTER. I want to ask the chief if has been told that this committee was at this time considering any bill for the removal of any restrictions upon full-blood Indians?

Chief TIGER. I have not been told that the committee at this time was endeavoring to remove any restrictions from the full-blooded Indians, and I did not have reference to anything of that sort.

Mr. CARTER. I would like very much to know how the chief got the idea that we were considering any such thing.

Mr. JOHNSON TIGER. Pardon me for interrupting, Mr. Chairman. I would just like to say a word in explanation of what the chief has said. I am the son of the chief. On the 13th of March Mr. CARTER introduced a bill proposing the removal of restrictions on all lands of the Five Civilized Tribes except the homesteads of full bloods, and the chief was under the impression that in the consideration of the committee of these bills this bill of Mr. CARTER was a part of what was under consideration.

Mr. CARTER. He did not say that, Johnson. I asked him, and he did not say that.

Mr. JOHNSON TIGER. He had read the bill removing all the restrictions on all lands except the lands of the full bloods, and I think he understood that it was under consideration before the committee here.

Mr. CARTER. That bill has never been considered here at all.

Chief TIGER. My time is up now, I presume. There are some things I could say, but if my time has expired I will cease.

Mr. CAMPBELL. Is there anyone else who has not been heard who has something that he wants to say particularly? If so, we can take a few moments more. Otherwise I assume that we shall regard these hearings as concluded at the adjournment of the committee this evening.

Mr. WOODRUFF. Mr. Chairman, I think this has been touched on enough, but two things were said. One was, why attempt by this legislation to remove the cloud as to the titles of the full bloods, inasmuch as their lands are not to be opened up for sale. The other was that there seemed to be some kind of an understanding in that jurisdictional bill as to continuing to follow them up after the restrictions were removed. I presume those things were clear to the committee.

Mr. CARTER. The original jurisdiction bill, if you will remember, allowed suits to be brought on the lands on deeds given after the restrictions were removed.

Mr. FERRIS. That was the first bill. I have not seen that since this bill was brought up.

Mr. WOODRUFF. In regard to the removal of the cloud from the full bloods' lands, there are two reasons that occur to the Department. One is this very fact that the State courts are entertaining, even in the case of full bloods, suits to quiet title brought by those that have the deeds or conveyances, and the full bloods, not being able to know what is going on, do not come to defend, or get anybody to defend them, and the first thing you know the cloud is made apparently heavier and thicker and harder to remove, because a State judge has passed a decree fixing the title in the man who obtained the deed before the removal of the restrictions. That was the first point. The second point is that the restriction bill—and I hope that Chief Tiger did not misunderstand entirely about that—does give a way of removing restrictions from full bloods which seems to the Department very proper and necessary. That is, there are old, aged, infirm Indians who must be taken care of.

The Oklahoma delegation all saw these things and urged them. Those old Indians are land poor. They have wild and uncultivated lands, and they wish to sell those lands. If at the time they sell these lands this cloud is there, it will make it extremely difficult to remove the cloud and give the relief necessary. Not only the aged and infirm, but those who are land poor, and who have a surplus of 160 acres and have a hovel there, and no cattle or horses or other proper means of supporting themselves, must have relief. The thought is not so much to remove the restrictions as to heap up the restrictions on the other land by selling a part of the land and adding the proceeds to the land left by the way of improvements, allowing the Indians to carry on the negotiations for the building of their houses, and all that kind of thing. I was anxious that we should have the power, therefore, to go after that.

The only other thing was on the point raised by Mr. FERRIS, and I think properly. The Attorney-General, when the restriction bill was sent up to him to look over, added a paragraph providing that when the Secretary of the Interior, the Attorney-General, and the President should concur in the opinion that there had been gross fraud committed

against an unrestricted member of the Five Civilized Tribes, even if it occurred after his restrictions were removed, on the concurrence of the three of them, the Attorney-General might represent that Indian in an effort to set him right. Without any doubt that the Attorney-General was doing it for the very best, it seemed to the Department as going further than was proper. When Congress sees fit to remove the restrictions, it should remove them so that from that time on that Indian, so far as his unrestricted land is concerned, should depend upon the action of the State courts and his own good sense as to whether he should or should not abide by the contract he has made; and this bill has left any such thought out of it.

Mr. FERRIS. This land bill has not been introduced yet.

Mr. WOODRUFF. No; just this little short clause I refer to.

Mr. FERRIS. I have not seen that. My remarks were addressed to the former bill.

Mr. WOODRUFF. One thing more. Mr. Zevely asked, as far as minors are concerned in leasing, which amounts to an alienation in regard to oil and minerals, that should be left to the probate courts of the State. Now, an explanation of why the Department believes it should not be left to the probate courts of the State is—with apologies to the State courts and not claiming that they will not do their fair share—that it is something that the United States has kept in its own hands; it is something for which the United States is responsible; it is something which will make it necessary for the United States to bring suits and act, because this often results, even at the best that can be done by anybody, in a way in leaving out of account the minor element of the restricted. Now, while the Federal court was a probate court it may have been proper for the Federal court to have entire jurisdiction of that, because it was then the United States acting; but now that the State court is to have the probate power, it would seem proper that the United States, through the Department, should have the right to see that this restricted land which has mineral in it should not be wasted, and that the proceeds may go and be done with as the State judge in the best exercise of his judicial conscience may see fit to allow it to be used.

Mr. WARD. Mr. Chairman, I want to approve of one part of the amendment; that is the part allowing the Secretary to approve these leases which are on file when the bill becomes law, whether they be in our offices or in the Indian Territory. We concur in that amendment.

The CHAIRMAN. You approve of that amendment here?

Mr. WARD. To that extent; just that very first part of it.

Mr. ZEVELY. Respecting what the Attorney-General has said about the jurisdiction of the probate courts, I want to call attention to the nature of the act of Congress. The act of Congress did not say, as they are ordinarily designated, "the courts in the Indian Territory" or "United States courts in the Indian Territory," but it said "the proper courts," apparently having in contemplation the very thing which happened—statehood and the creation of probate courts there to take care of the property of minors, as they will continue to do unless this Congress or some subsequent one sees fit to repeal the act of 1906.

The CHAIRMAN. If there is nothing else, the committee will stand adjourned.

At 4.30 o'clock p. m. the committee adjourned.

APPENDIX.

Statement of Richard Glory.

By the Chairman:

Q. What is your name?—A. Richard Glory.

Q. Where do you reside?—A. I live on Spring Creek, out here in the country.

Q. In what nation is that?—A. The Cherokee Nation.

Q. What is your blood?—A. Full blood.

Q. You are a full-blood Cherokee?—A. Yes, sir.

Q. Now, kindly go right on and make such a statement as you care to make to the committee in regard to the matters in which you are interested or desire to speak of to the committee—that is, such matters as in your opinion your people are interested in.—A. Gentlemen, I don't come before you as the Pharisees did, but I do come before you as the publican did, and I do not wish to talk with you or detain you any longer than is absolutely necessary; therefore I believe that with a very few words I will be through. I am here before you, gentlemen, representing the full-blood element of my people, and what I shall say upon this subject will be based upon experience and observation as to the feeling and condition of my people.

I wish to impress upon you gentlemen composing this special Senate committee that you are down here on a mission the chief purpose of which is to hear the different opinions of the people. You are here for the purpose of receiving these views, and I am here before you now for the purpose of presenting my views and the views of the people I represent. In the original agreement that was made there was a provision in that agreement that we could sell our land within five years from the adoption of that agreement. Only the surplus land could be sold, of course, and the homestead was reserved. Only last winter the Congress of the United States enacted laws to the effect that they prevented us from selling our surplus land on any terms for the term of twenty-five years—that is, the laws enacted last winter prevented us from selling or disposing of any of our land, surplus or homestead, for the term of twenty-five years.

Senator LONG. That is, a full-blood Cherokee could sell his land in five years from the date of the first patent, or from the date of the agreement?

Mr. GLORY. From the date of the adoption of the agreement.

Senator LONG. From the date of the issuance of the patent?

Mr. GLORY. Yes, sir.

Senator LONG. He could sell in five years from the date of the patent?

Mr. GLORY. Yes, sir; I think it was on the 7th day of August that the agreement was made.

Senator LONG. Yes, sir; but it was from the date of the patent that the restrictions extended, and they extended only five years from that date, and that did not apply to the homestead. After five years he could sell his surplus land.

Mr. GLORY. Yes, sir; and the homestead should be reserved, of course.

Senator LONG. And it was reserved under that treaty?

Mr. GLORY. Yes, sir. Now, I think, or have the opinion, and that opinion is based upon my experience and observation of my own people—I am of the opinion if the Indians are given a chance to dispose of some of their surplus land they would have money with which to improve their homestead, and that, I think, would be an advantage

to them, for it is plain that if they are not allowed to do this the majority of them will not do anything toward improving their homesteads. An Indian is not like a white man. I am one of them myself, and I know. They are not as industrious as a white man usually is, and they are handicapped by having a lot of land that they can't do anything with, for they haven't any start, and they won't get a start unless they can dispose of their surplus land, or enough of it to get some money to make improvements on their homesteads. If they could do this they would have a start and something to live on. Another thing: I think that the condition of some of the Indians should be taken into consideration. Some of my own people are getting very old and helpless; they are very mature in years, and they won't be here very much longer. They are getting helpless and they can't work any more, and for that reason I believe it is nothing but right that Congress should act upon that question of sale of surplus lands and let these old people sell it and get money to make them so they would enjoy the few days they have to remain here. I want to emphasize these facts, for the reason that the full-blood Indians—in fact, all of them, but particularly the full bloods—are in a more critical condition than ever before.

There is no doubt in my mind, or in the mind of the more intelligent of my people, that Congress, when they were enacting that law, thought that they were doing a great and good thing for the Indians. I admit it; but still there was a great majority of them that did not know the real condition of the people and their needs, and for that reason I believe that there should be a remedy provided by this coming session of Congress. I believe that if we were to dispose of our surplus lands that it would be a good thing and would do more to relieve the condition of my people than anything else. We are rich in land and poor in everything else. If we could eat the land it would be all right, but we can not. There is three-fifths of my people taking their allotments, and the land is lying idle, for they can not even rent it. If they want to rent some of that land, you have surrounded the attempt to do so with so many complications, for you say that it has to go before the Interior Department—

The CHAIRMAN. Is it your opinion that if Congress were to rescind the action of last winter and stand upon the agreement that was made between the tribes and the Government of the United States that the surplus land should be salable after five years, would that meet the difficulty that you speak of—would it meet that difficulty now—going back to the last agreement between the tribes and Congress that gave the right to sell the surplus land at any time after five years—that is, five years after the delivery of the patent? Would that meet the difficulty, or would you consider that more ample legislation was necessary to provide the relief necessary?

Mr. GLOXY. Well, I would prefer that Congress should make some legislation in regard to that.

The CHAIRMAN. Well, in regard to what? What I am speaking of is this: If the legislation by Congress at the last winter's session was wiped out, if you went back to the agreement that allowed the Indian to sell his surplus land five years—after five years from the date of his patent—would that be sufficient legislation to meet the difficulty you now speak of, or would it require still more liberal legislation?

Mr. GLOXY. Well, I believe that still more liberal legislation would be required. That would do if we could not get better; but if we could get something more liberal, it would be better.

Senator BRANDEGEE. How do you think it ought to be done?

Mr. GLOXY. Well, that is for you gentlemen to say.

Senator BRANDEGEE. Well, that may be so, but my question is what you think about it? I want to know how you think it ought to be fixed?

Mr. GLOXY. Well, I don't know that Congress would take my advice.

Senator BRANDEGEE. Well, we might take it. You don't know—anyway we would like to know what your opinion is about how it ought to be fixed?

Mr. GLOXY. Well, since you insist on it, I'll tell you that I think that you ought to make it so these restrictions would be removed—remove the restrictions at once on the surplus lands of the full bloods. I believe that the restrictions should be removed as a whole from the full bloods of all Indian Territory.

Senator BRANDEGEE. So you think the restrictions should be removed as soon as possible on the surplus lands of full bloods?

Mr. GLOXY. Yes, sir.

Senator BRANDEGEE. Well, how about the homesteads?

Mr. GLOXY. No; not the homesteads.

Senator BRANDEGEE. How?

Mr. GLOXY. Not the homesteads.

Senator BRANDEGEE. You mean that you don't think the restrictions should be removed on the full-blood homesteads?

Mr. GLOXY. That's it. The restrictions should be left on the homesteads.

Senator LONG. Then you believe that the restrictions should be removed from the surplus lands only?

Mr. GLOXY. Yes, sir. I don't believe it would be wise to remove them from the homesteads. If they were removed from the surplus lands so we could dispose of them it would enable many of us to get something to go on and improve our homesteads.

The CHAIRMAN. What is your occupation or employment or profession now? In other words, what do you do for a living now?

Mr. GLOXY. My occupation at the present time is clerk in a store.

The CHAIRMAN. Your occupation at the present time gives you an opportunity to observe very closely the condition of the full-blood Indians in your tribe?

Mr. GLOXY. Yes, sir.

The CHAIRMAN. So your occupation now and at other times has furnished you with ample opportunity to observe and become very thoroughly acquainted with the sentiment of the Cherokee people on this and all other subjects that interest them?

Mr. GLOXY. Yes, sir. I was born and raised with them, and I come in contact with them every day.

Senator LONG. You think, then, that the extension of time from five years to twenty-five years was a mistake in the Curtis Act of last winter?

Mr. GLOXY. Yes, sir.

Senator LONG. When we extended the time from five years to twenty-five years you complained of that?

Mr. GLOXY. Yes, sir; I think it is subject to criticism.

Senator LONG. And you think it ought not to have been done?

Mr. GLOXY. Yes, sir; I think that ought not to have been done, and the rest of my people think so, too. It is done, though, and they want it remedied in some other way so that they can dispose of their surplus land as soon as possible—not that all of them want to dispose of it, but we want it fixed so we can dispose of it if we want to and in that way get money with which to go ahead and improve our homesteads. An Indian is not a white man, you understand; on the average he is

not, but I have seen Indians that would average up fairly with white men when it comes to doing things; but, as I say, on the average they don't come up to white men. They are not as capable of starting without anything as a white man is, and making a farm out of the wilderness, but if they could get a start I believe that lots of them would average up well with the white man; but, as I said before, the only way they can get that start the way they are situated is to make the law so they can dispose of their surplus land or whatever part of it they want to dispose of, and use the money they get in that way for improving their homesteads. If they do that, I believe lots of them will get along just about as well as the average white. We would then have something to go on to make a living.

Some of our people are getting very old and feeble, as I stated, and their land is lying idle, and there they are old and feeble and very poor and wanting for the ordinary necessities of life, to say nothing of the comforts, and all the time they are rich in land that they can't sell; and I am sure that you will agree with me when I say that the restrictions ought to be removed from their land so that they could sell it and get something that would be of use to them in their lifetime.

The CHAIRMAN. Well, I am inclined to agree with you, for I think that would be a very good thing to do.

Mr. GLOXY. That is my opinion.

The CHAIRMAN. But as to the homestead, you would not be in favor of taking the restrictions from that? You think the homestead would furnish enough land to furnish a living even if the surplus land was sold?

Mr. GLOXY. Yes, sir; for the Indians, as a general thing, it does. I don't know of one that the homestead would not be all and more than he would want. Of course you understand that all of them who have taken their allotments have both homesteads and surplus lands—children and all.

The CHAIRMAN. Yes, sir; I understand. The full-blood Indians hardly ever make use of more than the homestead?

Mr. GLOXY. No, sir; I don't know of any of them using all of that. It is more than the great majority want or ever will need. An Indian don't hardly know what the value of land is, and in disposing of it they should be held under some kind of supervision to see that they get what it is worth; but that is a subject that you gentlemen can easily solve.

The CHAIRMAN. Well, we would like to have your solution of it.

Mr. GLOXY. Well, I don't know that I could fix it right, but I think that somebody ought to have charge of it; the agent or some court or committee should have the looking after it and see that it is sold for what it is worth. An Indian thinks a great deal of his homestead—his home—and they are much attached to it, but they don't care for anything more than is sufficient to supply their simple needs.

Senator TELLER. So they hardly ever make any use of anything more than the homestead?

Mr. GLOXY. No, sir; and no more of that than they can handle.

Now I am speaking of the full bloods, you understand, all the time. Of course, you take the mixed bloods, there is lots of them would want more than the homestead. I expect there is lots of the mixed bloods that would need more than the homesteads, but the full bloods, they don't need or want any more than the homesteads, and very often they can't use all of that. They don't inclose their land and don't think of doing so only with the little bit they have under cultivation. It has always been customary for them to have under inclosure say 5 or 10 or 15 or 20 acres, and perhaps some of them might have 30 acres, but it would be few of them that would have that much and the homestead is 80 acres, so you see that they don't need even all of the homestead—40 acres might be enough for a homestead—it is now, but they might get so in the future that they would cultivate more, so I think it advisable to keep the whole 80 acres as a homestead.

Q. In effect, their surplus land is so much dead capital, and can't be utilized for any useful or beneficial purpose?—A. Yes, sir.

Q. And so they don't get any revenue from it?—A. No, sir; not at the present time.

Senator LONG. Do you know of many full bloods who have refused to take their allotments, or have refused to select their allotments?

Mr. GLOXY. Well, there is a considerable number of them that have failed or refused to do so.

Q. The Commission in that case selected their allotments for them?—A. Yes, sir.

Q. And arbitrarily awarded them?—A. Yes, sir.

Q. And in doing this the Commission generally allowed them to remain where they were?—A. Yes, sir.

Q. Selected that as their homestead for them?—A. Yes, sir; they selected their homesteads there—the Daves Commission did—but of course they selected their surplus land at different places scattered around the country within the limits of the tribal lands. They are scattered around at one place and another.

By Senator BRANDEGEE:

Q. I understood you to say that the full-blood Indians, or some of them, refuse to take their allotments?—A. Yes, sir.

Q. Do you understand or know the cause or reason for these full-blood Indians refusing to take their allotments either of homesteads or surplus land?—A. Well, of course I have devoted a good deal of study and attention to that subject. I know them very well and go around among them, and I hear them talking about it; and I have come to the conclusion the reason they don't do it is because they expect that they are going to get their old laws and old treaties back again, and that all the land will come back again to be held by the tribe; and I mean by that that they expect that conditions will revert back to what they were in the old days when all the land was held in common.

Q. What do you mean by "getting the old laws back"?—A. The old conditions that were there. I have not studied this thing in the way of specially and particularly studying it, but I know enough about it to know that that is what they expect.

Q. Well, that is too indefinite. You say the old laws. Do you mean the old treaty of 1832, or the one establishing the homestead?—A. No, sir; I mean the old conditions that were here prior to the passage of the last law.

By Senator TELLER:

Q. Do you mean the act of 1866?—A. I mean the laws that were here before the abolishment of the tribal government that they used to have.

Q. Oh, I see. They want the tribal government back.—A. Yes, sir.

By the Chairman:

Q. They are hoping that the time will come again when all this land will be held in common?—A. Yes, sir.

Q. Just as it was before they voted on the agreement to abolish

tribal government and agreed to take their land in severalty?—A. Yes, sir.

Q. That is what they are hoping for?—A. Yes, sir.
Q. Well, it is a vain hope, a hope that will never be realized.—A. I know it, but you can't make them realize that.

By Senator LONG:

Q. That is the reason they won't take their allotments or accept anything, for they fear that if they do so it will prevent the return of this time which they are looking forward to, when all the land will be held in common as it was in the old days?—A. Yes, sir.

Q. Are there few or many of the full bloods that hold that view?—A. Well, there are a good many of them.

Q. How many?—A. I could not say; but there are quite a few of them.

Q. Don't think the majority of them hold that view of the matter?—A. No, sir; I think not.

Q. Then you think that the majority of the full bloods have taken their allotments?—A. Yes, sir.

Q. How about the mixed bloods?—A. They have taken them.

Q. So the majority of the full bloods and all of the mixed bloods have taken their allotments?—A. Yes, sir.

By Senator BRANDEGEE:

Q. You are appearing here for a part of the people of the Cherokee Nation?—A. Yes, sir; I am appearing here only for the Cherokee people, or that part of them who have requested me to do so.

Q. And there are how many full bloods in the Cherokee Nation?—A. There is about 7,000, I believe. I won't be positive, but I understand that is the number.

Q. Well, I believe that is the number that is reported officially—about 7,000 full bloods and about 26,000 mixed bloods. That is about correct, is it not?—A. I suppose that is about right. They have been enrolled, and I suppose the enrollment is about correct.

Q. And you say that all of the mixed bloods took their allotments?—A. Yes, sir; that is my understanding.

By Senator LONG:

Q. And you don't think the majority of the full bloods refused to take their allotments?—A. No, sir; I don't think they did.

Q. Well, do you mean that they did or did not?—A. I think the majority of the full bloods took their allotments.

Q. And as to those of the full bloods who refused to take or select their allotments, the Commission went ahead and selected them for them? Is that right?—A. Yes, sir.

Q. And left them in the places where they were and had been living?—A. Yes, sir.

Q. I mean that the Commission in selecting arbitrarily for them selected the place where they were residing and allotted it to them?—A. As a rule, they did.

Q. And where that was not done it was because of the fact that inasmuch as they had refused to claim it as an allotment, some one else had come in and filed on it?—A. Yes, sir.

By Senator TELLER:

Q. Are there many of your people, I mean your Indian people, who believe it is a crime to divide land and hold it in severalty?—A. No, sir; I believe not.

Q. Well, some tribes do hold such a belief.—A. I suppose, of course, there is some that do; but I don't know of any. If they held such a belief they haven't said anything to me about it.

Q. You do not hear that advanced as a cause or reason for their refusing to take their allotments?—A. No, sir; only, as I said before, that they think they will ultimately return to the old original conditions.

By Senator LONG:

Q. You are a full-blood Cherokee?—A. Yes, sir.

Q. How old are you?—A. 37.

Q. You speak good English?—A. Yes, sir; fair.

Q. Well, I think you speak excellent English. I suppose you were educated?—A. Yes, sir.

Q. Where were you educated?—A. I went to school in the States.

Q. What school did you go to?—A. In the State of Ohio.

Q. I don't like to interfere with the tenor of your statement here, but I would like to have you tell me something about the schools here in the Territory, so far as they apply to your people. I would like to have you tell us about that, if it doesn't interfere with your statement here. What we particularly want to get at is the extent that the children down here go to school, and the extent and character of the school facilities. That is something that I am sure every member of this committee is profoundly interested in.—A. Well, I was going to bring that out in my talk later on.

Q. Well, just go right ahead, then, and make your statement in your own way.—A. The circumstances and conditions in our country down here are such that if the matter is not settled definitely and on some fixed basis very soon there will be a season of great disaster. It is bad enough now, but this is nothing to what it will be later. No one knows what the result will be. The land question is a very perplexing one, and it will require all your patience and wisdom, gentlemen, to find out the truth about it and devise a remedy; but we believe you are equal to it, and the way to find out is the way you have taken—come down here and listen and see for yourselves. The great bulk of the land all through the Indian Territory is lying idle and unproductive, and especially is that true of the land held by my people; and of course nearly all of it is held that way. As I stated, the Indians are not capable of cultivating it, and they can not dispose of any part of it to people who know how to cultivate it; and the result of that is that nothing is done with it.

This is very bad. The biggest portion of it—of that part of it that is comprised in the holdings of the full-blood Indians—is absolutely unproductive, and, as I have stated, if the full blood was permitted to dispose of his surplus land or a part of it, as the case may be, as I said, he would be able to realize a little capital with which to improve his homestead, or a part of it, and that would be the first step in his advancement. Now, I want to say that Indians, especially the full bloods, are just about like children. They must be taught, and taught intelligently, and if you get them started right they will very often advance and become good, useful citizens. I am one of them, and I know just how they feel about it. It is hard to make them understand a thing, but when they understand it no one knows it better than they do. Of course, the homestead should always be theirs. They should not be allowed to get rid of that at all. They might squander their surplus—it is well worth while letting them make a try at it—but the homestead ought to be kept as their home always—forever, if possible.

By the Chairman:

Q. About how many acres are there in a homestead in your nation?—A. Well, it varies; some are larger than others. It is owing to the valuation of the land they select or the grade of the land. Now, I say if these privileges were granted to us—that is, to dispose of our surplus lands—it would enable a place for the good citizens of the United States to come among us and settle among us—people who know how to farm and how to live, and you can depend on it that their presence and example would have a very stimulating effect on the Indians. They would be our neighbors, and they would be all among us, and that is what the Cherokees want. The presence of these white citizens would be of the greatest benefit in every way, for it would have a tendency to persuade the Cherokees, and this I believe would apply to every Indian tribe in the Territory. It would have a tendency to persuade them to go to church and to school—to send their children to school. I know this from my own personal history, for had it not been for this influence I would probably be just as they are. They are honest and true and loyal. They want to be citizens, good citizens, but they don't know how to set about it. The presence of these white citizens would stimulate them in every way. They would have their example held up daily before them, and they would try to live as they live and emulate their example. This is the most important thing in my opinion in the whole situation—the matter I might almost say, of supreme importance. Now, I will say that all my people don't think on this as I do, but I know that the result would be as I have put it. I know it by my own case and numerous others I have seen. There could be no other result. My people would drop their old habits and customs insensibly and by degrees and constantly live more and more like their white neighbors. Our children would go to the same school and we would attend the same church, and the civilizing influence could not be resisted. I am looking to the future, and I believe that we should all look to the future and should not be bound by any desire to get a temporary advantage, for it is what the future holds for my people that counts. When children go to school and play together and go to church together and are together in all things there can be no result other than the advancement of the race inferior in the scale of civilization; therefore I believe that an all-wise God has intended we should finally be the beneficiaries of the civilization which is sweeping the world and that my people can no more escape it than they can escape anything else that is inevitable.

I don't think it would be wise to let them go off by themselves and live as they always have lived. If the white man in large numbers could come among us and get this land they would set out their trees, their orchards, and vineyards, and finally the Indian would be impelled to follow their example and do likewise. I have no other object than the upbuilding and benefit of my race. I am not ashamed of my blood or lineage—not by any means—I want my race and the future children of that race to go on and up in the path of civilization until at length they would stand side by side with their white brothers on equal terms in every respect. Now, these are the propositions that I have wished to present to you, gentlemen, and I have done so to the best of my ability. I hope you will take into account my limitations and understand just what I am attempting to point out, and take into your fullest consideration and act on them to the best of your knowledge; and I am in hopes that the session of Congress about to convene will look into these matters carefully and conscientiously and enact such laws as will do away to as great an extent as possible with the evils that at present oppress this country and its people, which are shown to exist by the testimonies which have been laid before you. That is all, gentlemen, unless you wish to question me.

Q. Well, what is the present conditions of the schools?—A. Oh, yes, I overlooked that. Of course we have a very good system of schools. This system of schools was devised, worked out, and carried into effect by the Indians all through the Territory many years ago under the tribal form of government, and now that the United States has taken charge of these schools, I can't say that they have been benefited any, nor would I say that they have been damaged, but the fact is that we Indians had devised and put in operation what we considered to be a good system, and this was the opinion of competent whites who examined them; but there are some of my own people who are holding back from them, but they are ones that don't believe in the advancement of civilization.

Q. Have you a claim in that country?—A. Yes, sir.

Q. Do the children of the full bloods attend these schools?—A. Well, quite a number of them attend these schools.

Q. But all of them don't attend them?—A. No, sir; but a great many of them do. It is a matter that I am satisfied will adjust itself in time, like all things adjust themselves. Now, gentlemen, I wish to point out that the great evil in connection with the educational system here is that it is not compulsory—there is no such a thing here as compulsory education.

By Senator TELLER:

Q. I guess that is what you need. It is a good thing anywhere, and it would no doubt be good here.—A. There can be no question about that. Some of our people live back in the woods and away from school facilities, but of course as schools are established in greater number, the school facilities will be available to more and more of our people, and they send their children to school or not, just as they please. There is nothing regular about the attendance. One day they will go to school, and the next day, if they see fit they will remain away, and this system is demoralizing on account of the lack of regularity. They should be compelled to send the children during stated terms to school every day. This is brought about of course by the fact that their parents don't take much interest in education. Now, this is not universal by any means, for there are some few parents—well, quite a number of them—more than you would probably imagine, who take a very great interest in schools, and are intensely anxious that their children should receive a good education, and use every effort in seeing that they do get it. There are a great many people who take a great deal of interest—full-blood Indians at that—in the building of schools and churches.

By Senator LONG:

Q. What about your restrictions—have you ever had them removed?—A. Yes, sir.

Q. By the Secretary?—A. Yes, sir.

Q. How did you get them removed?—A. Through the Indian agent. Q. You made your application to have your restrictions removed, and the Indian agent investigated your case and found or decided that you were capable of managing your own affairs, and he recommended

that your restrictions should be removed and the Secretary removed them?—A. Yes, sir.

Q. When was that done?—A. In 1905.

Q. In 1905, a year ago?—A. Yes, sir. Now, I wish to say that the majority of my people are capable at least of handling their own affairs if they are given a show or the privilege was extended to them. I believe that the majority are just as capable of doing so as I am.

Q. Well, do you think—really think—that you are capable of managing your own affairs?—A. Yes, sir. Now, of course, you will find people now and then that are reckless, but that is not a condition that is peculiar to the Indians, for you will find lots of white people who are not capable of managing their business. I have known white men that were not.

Q. So have I—lots of them.—A. You will find them among all classes of people, no matter what their color, that are not capable of managing their business. Some are more extravagant than others. Now, I don't know that I have anything more to say.

By the Chairman:

Q. I would like to ask you a hypothetical question. Do you believe that a full-blood Indian ever will acquire increased capacity to transact his own business unless he is given an opportunity to experiment? Do you not think it is impossible to say whether he is or will ever be able to do so unless the opportunity is given him to try it?—A. Do you mean by removing his restrictions, so he can transact business?

Q. No; I mean this: Do you think that it can be said of any full blood that he is or is not capable of transacting his own business in a safe and sane manner unless the chance is given him and it is actually demonstrated whether he can or can not? In other words, do you think that it can be definitely said whether or not he is capable of transacting his own business as long as he is held in wardship and is not given the opportunity of transacting any business?—A. I don't know; only this, that if he was given the full benefit of transacting his own business, it could then be seen whether he was or not. I believe that the majority of them, if they were given the opportunity, would show that they are capable of doing business for themselves. I think, as he gained experience, if he was allowed to start in a small way, that he would be fully as capable as the average white man.

Q. You believe if he was given the opportunity that he would grow with his responsibilities or opportunities? Is that what you desire to be understood as saying?—A. Yes, sir.

By Senator LONG:

Q. Are the full bloods of your age able to speak English?—A. Yes, sir; quite a number of them are.

Q. But not all of them?—A. No, sir.

Q. They have gone to school—the ones that speak English?—A. Yes, sir; they have been attending school.

Q. Do they teach English in school?—A. Yes, sir.

Q. So it follows that if they go to school they have to learn English?—A. Yes, sir.

Q. Do you mean that they have attended the schools in the States or in the Territory?—A. Yes, sir; in the Territory.

Q. And in these schools they speak English?—A. Yes, sir.

Q. And do you think that most of the full bloods of your age are capable of attending to their own business affairs?—A. Yes, sir; most of them are, to a certain extent.

Q. But all of them are not?—A. Well, there is one now and then that might not be.

Q. But the older full bloods, in your opinion, are not capable of attending to their business?—A. No, sir; some of them might not be. Well, I say most of them might not be.

Q. You would not consider it to be a safe experiment to allow them to do so?—A. No, sir.

Q. If the attempt were made the result in some cases might be disastrous?—A. Yes, sir; to a good many of them, I have no doubt about it.

Q. And the full bloods of your age have taken their allotments, haven't they, or the most of them have taken them?—A. Yes, sir.

Q. They are the younger Indians?—A. Yes, sir.

Q. That is all.

By Senator BRANDEGEE:

Q. Had you been attending school here before you went away to attend school?—A. Yes, sir.

Q. Where had you attended school here?—A. I attended the public schools.

Q. How old were you when you went away from here?—A. I was about 18.

Q. You went to school in Ohio?—A. Yes, sir.

Q. Was it your own idea to go into another State to school?—A. Well, I can't say that it was. I was raised by a poor mother; she was poor and ignorant, but she knew the value of education and she always tried to impress upon me the value of a good education; she never let an opportunity pass of impressing that on me, and I was impressionable and I never forgot it, so it has always been my effort and desire to learn in every way possible, and she helped me in all ways, and of course I had a hard time of it; I had to work part of the time to get provisions and clothing to live and to get a little money ahead, and when I would get a little money ahead of course I would go to school as long as it lasted, and then I'd go to work again and earn more and go back to school.

I want to acknowledge, here, what I owe to her for the way she impressed me, for she always told me to go to school and study hard and learn what I could and, gentlemen, I have never forgotten it. I don't want you to understand, gentlemen, that I am the only one amongst my people who is sensible of the advantages to be derived from education, for there are plenty in my nation who have striven in their own way to acquire it, and if they did not succeed it was not because of a failure of their will—it is because they did not go about it as I did. When I had advanced so far, of course, it was my will that I should go elsewhere and finish my education, and though it was hard I managed to do it, and that was the way I acquired what education I have. It is not very much, though; I regret that I haven't more.

Q. Well, I must say that you seem to have done very well; you are to be congratulated.—A. Thank you.

By Senator LONG:

Q. Have you ever taught school?—A. Yes, sir.

Q. Where?—A. In the Cherokee Nation.

Q. Right in the Cherokee Nation here among your own people?—A. Yes, sir.

Q. And now you are clerking in a store?—A. Yes, sir.

Q. And you have had your restrictions removed?—A. Yes, sir.

Q. Have you sold your land?—A. Yes, sir; part of it.

Q. What part of it have you sold?—A. I have sold my surplus land.

Q. Have you sold all your surplus land?—A. Yes, sir. I have sold all my land excepting my homestead.

Q. And how many acres are there in that?—A. In my homestead?

Q. Yes, sir.—A. Thirty acres of homestead.

By Senator TELLER:

Q. Do you live on it?—A. Yes, sir.

Q. You live there now?—A. Yes, sir.

Q. It is near the town here, is it?—A. Well, no; it is not very near. It is about 25 miles from town.

By Senator LONG:

Q. You live in town here, don't you?—A. Yes, sir; at the present time, I do.

Q. So you live here in Vinita at the present time?—A. Yes, sir—oh, here in Vinita? No, sir; not here in Vinita.

Q. Well, where do you live?—A. I live out here at Pryor Creek, about 25 miles from Vinita.

Q. And you live on your homestead there?—A. Yes, sir.

Q. Do you work it—cultivate it yourself?—A. No, sir; I live there, but I don't work on it. I have a man that cultivates the place; he attends to the place for me.

Q. This man whom you have employed looks after your homestead and you clerk in a store in town?—A. Yes, sir.

Q. When did you sell your surplus land?—A. Immediately after the restrictions were removed.

Q. Did you get a good price for your land?—A. Yes, sir; I got a very good price.

Q. Why did you sell your surplus land?—A. I had to do it in order to make a start. I could not make a start at improving my homestead unless I did it, for there were things that I had to have.

Q. What did you have to have?—A. I had to buy my farming implements and buy my team, and put buildings on my homestead. It was unimproved, and there was no other way of improving it but by selling my surplus land.

Q. In other words, you improved your homestead from what you got or realized from the sale of your surplus land?—A. Yes, sir.

By Senator TELLER:

Q. Could you raise enough to support a family on 30 acres of ground?—A. Yes, sir; I think so. Wherever there is good tillable land a man can raise enough on 30 acres of ground to support a family all right, provided he kept it in a good state of cultivation.

By Senator BRANDEGEE:

Q. Let me ask you this question: Do the majority of the full bloods in the Cherokee Nation speak and write English?—A. Well, you will find quite a good number of them that can speak and write the English language.

Q. Well, can the majority of them do so?—A. I don't know whether the most of them can or not; but there is quite a number who can.

Q. But whether or not the majority can do so, you can't say?—A. No, sir.

Q. I understood some witness to say here this afternoon that almost all of the full bloods of the Cherokee Nation both speak and write English. What do you say as to that?—A. Well, that probably is correct. It is true, I think of the younger generation; but now and then you will find one who can't.

Q. Well, now, let me ask you this: Is there any prejudice or jealousy among the people of your nation against those who can or do manage to get a good education and return to the tribe?—A. No, sir; there is not. I don't believe there is. They don't seem to be any discrimination against such.

Q. They are willing for anybody to acquire as good an education as they can acquire in any way they can acquire it?—A. Yes, sir.

The CHAIRMAN. That is all.

Mr. GLORY. Well, gentlemen, I am very thankful for the privilege of appearing here before you, and I hope that in the future these few words that I have spoken may so impress you, or have a tendency to impress you, and through you others, that they will eventually bear fruit.

Senator LONG. We appreciate what you have said, and I am sure we have all been much interested and instructed by it, and we trust it will.

Mr. GLORY. Thank you.

The CHAIRMAN. Are there any others present who desire to address the committee? If there are, we would be glad to hear from them now, one at a time, however. I am informed that Mr. A. Grant Evans, of Muskogee, is present, and if so, we would be very glad to hear from him.

Statement of Mr. W. H. Walker.

By the Chairman:

Q. Where do you live, or what is your post-office?—A. Tahlequah.

Q. What is your business?—A. I am assistant secretary to the chief of the Cherokee Nation.

Q. What is your citizenship?—A. Cherokee, by blood.

Q. Are you mixed blood?—A. Yes, sir; one-eighth Cherokee.

Q. And the balance white?—A. Yes, sir.

Q. What do you wish to say?—A. I want to speak to the committee on this question of the removal of restrictions for a moment.

Q. Very well; proceed.—A. I can probably illustrate it better by taking my own case. I am one-eighth Cherokee. I have three children that I have allotted for, and one that I have not filed for yet, and there is my wife and myself who have filed also, making in all about 550 acres that my wife, myself, and my family have. Now, there is about 150 acres of that land that is not good agricultural land. It is a cheap grade of land. Now I am illustrating the point I want to make by my own experience. I made application about five months ago to the Secretary of the Interior to have the restrictions removed from my surplus allotment, and although five months have passed I have never had a hearing on it yet, and there has been no action taken at all.

Q. Well, what do you expect this committee to do?—A. Well, I call your attention to these delays in these matters with the hope that Congress will do something to remove the trouble.

Q. Where did you make your application?—A. Through a representative of the Indian agent's office here who was there at Tahlequah, where they come from time to time to attend to any business there may be for them to do. I requested the Indian agent here, Mr. Kelsey, to make a special recommendation in the case if he would, as he has authority to do under the rules.

Q. Did he make it special?—A. I am not sure, but I—well, I don't know, and I have not asked him about it. His representative that was over there at Tahlequah, to whom I made the application, told me that he thought he would do it without question.

Q. And that was five months ago?—A. Yes, sir; it was in the last of May some time, and this is November—it is more than five months ago. Now, the point I want to get at is the slow action that is taken in these cases like mine. There can be no objection to the removal of my restrictions. I believe that everybody who knows me will certify that I am about as capable of running my own business safely and carefully as the average white man. I think that Mr. Kelsey himself will certify to that, and there can be no objection on that ground. Now, I don't blame Mr. Kelsey. I think he does the best he can and that the business in his office is attended to as well and expeditiously as is possible, but I think the trouble occurs down there in the Department of Indian Affairs at Washington. There is more or less delay in every case, but in some of them it is very great and very annoying, for it is hard to think that in a case like mine they could not get action on it in nearly six months. We are feeling that these delays are brought about under the present regulations, and that they are unreasonable and unwarranted, and we feel that Congress should take it up and make a general order.

Q. Removing restrictions?—A. Yes, sir.

Q. Do you think that should include full bloods?—A. Well, I don't know about that. I have been among them all my life—was practically born among them and have been brought up among them, and I think I know them just about as well as anybody, and when it comes to saying that I would make the order so sweeping as to include them, I have to stop and think. Now, I'll tell you the way it is. There should be distinctions—there should be some discretion shown. I don't believe it would do to take it off all of them. There are a great many among them—men like Mr. Gritts, who was here before you and made a statement—there are men among them like him who are competent to handle their own affairs.

Q. So you think there are some of the full bloods who are competent to manage their affairs in a safe manner?—A. Yes, sir; and on the other hand a great majority of them are not.

Q. To what extent would you remove the restrictions on the mixed bloods?—A. Now, it is the mixed bloods—well, I believe it should be a general order.

Q. Removing all restrictions?—A. Yes, sir.

Q. On the homestead and all?—A. No, sir; I don't think I would take it off the homesteads. No; I would leave it on the homesteads, for there are people that ought to be protected in their homesteads.

Q. Then, you would not approve taking it off the homesteads?—A. No, sir; I would not; for if you did that I know that we would soon have a great many people who would be homeless.

Q. What conditions would you recommend as to the removal of restrictions from the full bloods?—A. Well, I believe it should be done through the United States courts in each case and making a special and separate examination into the merits of each application and a special investigation as to the fitness of the full blood to have them removed, and it should be done by hearing evidence like in any ordinary suit in court.

Q. You think, then, that there should be no general law passed by Congress removing the restrictions on any of their lands?—A. No, sir; I don't believe it would be a good idea. I think it ought to be a court proceeding as I have described. I think each case should be handled separately in the case of the full bloods.

Now, I want to impress upon the committee the fact that there is a very great necessity for some relief on this restriction business as far as the half breeds are concerned, because we are soon going to have a new State down here, and there is a problem confronting us as to how we are going to carry on our local government without some taxable property. We can't carry on any kind of government without having something that is taxable.

Q. Then you do not object to be taxed?—A. No, sir.

Q. You are perfectly willing to be taxed?—A. Yes, sir. If I am to be a citizen in this new State I want to bear my share of the expense of running the State.

Q. You wish to be a good citizen?—A. I do.

Q. And you think it is the duty of every good citizen to pay his due share toward the expense of running the State and local county or city governments?—A. I do.

Q. Are there many more like you down here?—A. Yes, sir.

Q. You say that you are secretary to the chief?—A. I am one of them. He has three secretaries, and I am one of them. I have been one of his secretaries for three years now.

Q. The chief's name is Rogers, I believe?—A. Yes, sir; W. E. Rogers. In my position I have an opportunity to know what the sentiment of the people is on any question, and I think I know what it is on the question of removal of restrictions.

Q. Has Mr. Rogers ever passed any opinion or has he ever expressed any opinion, either public or private, on that question—that is, in regard to the removal of restrictions?—A. Well, I have heard him say so privately—yes, and publicly, too, but not in an official capacity. He would make suggestions along that line.

Q. His views are similar to yours?—A. Yes, sir; I think so.

Q. How about your people—the Cherokees?—A. I think it would be the sentiment of a great majority of them that the restrictions should be removed. Well, now these people who have come here and who have homes here—if the people who desire to come here and make their homes with us—if there was a general order made that they could come here and buy their homes and improve them and live on them—if they would come in or were allowed to come in and buy this land from the allottees it would be a great thing for the country and for the people who own the land, for, as a rule, they are poor and haven't anything, and if they could sell their surplus land or part of it, say, they could go at work improving their homestead and have a comfortable place to live; they would have the means of getting a start, and that is what most of them need; and another good thing would be that the land would sell for what it is worth in the market the same as it does in the State. If that was done it would just about shut out the speculator.

Q. Is that the class of gentlemen who have been referred to many times since we began this investigation as the "grafter"?—A. Yes, sir. I will call him the speculator, for that is what he is. If this was done I believe there would be a very great and sudden advance in the prices paid for land. This is a great country; it is all right, and some day everybody will admit it is all right. All it wants is half a chance, and it will show the country a thing or two. I am free to say that we would much rather see it settled up by a good class of farmers and put in crops—settled by people who know how to farm, for their way of doing things would be an object lesson to our people, and that is what they need more than anything else—that and money with which to get a start. Thank you, gentlemen.

Extract from report of select committee of the Senate.

MARCH 30, 1908.

DEAR SIR: I beg leave to submit herein below, for the consideration of your subcommittee, certain statements made by Indian citizens of the Five Civilized Tribes before the select Senate committee consisting of Senator CLARENCE D. CLARK, of Wyoming, chairman; Senator CHESTER I. LONG, of Kansas; Senator FRANK B. BRANDEGEE, of Connecticut; Senator HENRY M. TELLER, of Colorado, and Senator WILLIAM A. CLARK, of Montana. Also report and recommendation of such committee on removal of restrictions.

This committee was appointed under the provisions of Senate resolution of June 30, 1906, its purpose being to investigate all matters connected with the condition of affairs in Indian Territory, and specifically to report to Congress legislation necessary therefor. These statements were taken on the ground in Indian Territory, and may therefore be considered as representative of the sentiment of the Indian people in the Five Civilized Tribes.

Numerous other statements were made in the hearings conducted by this select Senate committee, covering over 2,000 pages of their report, and I earnestly invite the attention of the Members of the House Committee on Indian Affairs to the report of this committee and to their recommendation for removal of restrictions.

Respectfully,

HON. JAMES SHERMAN,
Chairman Subcommittee on Indian Affairs.

C. D. CARTER.

Recommendation of select Senate committee as to removal of restrictions.

By the act of March 3, 1901, all Indians in Indian Territory were made citizens of the United States. The Indian tribes had title to these lands by patents from the United States. These lands were occupied in common by the members of the respective tribes. By the supplemental agreements made in 1902 these Indians agreed to take their lands in severalty upon condition that they could alienate their allotments within a certain period, which differed in the several tribes. We believe that Congress might shorten this period and permit alienation at an earlier date.

Congress, by the act of April 21, 1904, removed the restrictions upon the alienation of all allottees of either of the Five Civilized Tribes who were not of Indian blood, except minors, and except as to homesteads, and provided that restrictions upon the alienation of all other allottees, except minors, and except as to homesteads, might with the approval of the Secretary of the Interior, be removed upon application to the Indian agent at the Union Agency.

Section 19 of the act of April 26, 1906, provides that no full-blood Indian of the Choctaw, Chickasaw, Cherokee, Creek, or Seminole tribes should have power to alienate, sell, dispose of, or encumber in any manner any of the lands allotted to him for a period of twenty-five years from and after the approval of that act unless such restrictions, prior to the expiration of said period, shall be removed by act of Congress.

We believe that this last legislation was unwise, injurious to the Indians, and of no validity. Congress, after providing in the supplemental agreements that all the lands allotted to the citizens of the different tribes should be alienable within certain periods, could not, without the consent of the Indians, extend the time in which the lands could not be alienated and add to the restrictions imposed by the original agreements. The effect of this legislation has already clouded, and, if unrepealed, will continue to cloud the title of much land in Indian Territory, and will result in endless litigation.

It will prevent the Indians from obtaining a fair price for their lands, and has been and will continue to be a fruitful source of dishonest transactions.

It will not prevent sales being made at the expiration of the periods designated in the supplemental agreements, and has already resulted in contracts being made for such sales. This provision is generally considered to be invalid and should be repealed.

We recommend that all restrictions be removed from the surplus lands of all citizens of the Five Civilized Tribes, except minors.

We recommend the removal of restrictions as to homesteads of the members of such tribes who are not of Indian blood, which includes intermarried white citizens and freedmen.

The removal of restrictions on the alienation should also include the removal of restrictions as to encumbering and leasing.

We believe that the restrictions should remain upon the homesteads of citizens of Indian blood, which would include both full bloods and mixed bloods. This will insure each member of every family a home that can be improved from the funds derived from the sale of his surplus lands. A homestead in Indian Territory is not like a homestead on the public domain, where the head of the family only has a homestead. A homestead in Indian Territory consists of from 40 to 160 acres of average land for each member of the tribe, and may or may not be his place of residence. A family of six may have homesteads aggregating from 240 to 960 acres, and in the Choctaw and Chickasaw nations such a family may have from 480 to 12,000 acres, which would still be inalienable under the supplemental agreements and the legislation which we here recommend.

In view of this fact the committee submits this partial report, and at an early date, if permitted by the Senate, will submit to the Senate its conclusions upon other matters herein referred to, which have been subjects of its inquiries.

Respectfully submitted,

C. D. CLARK,
CHESTER I. LONG,
FRANK B. BRANDEGEE,
H. M. TELLER,
W. A. CLARK.

Statement of C. H. Victor, three-fourths Choctaw Indian.

The CHAIRMAN. Where do you live, Mr. Victor?

Mr. VICTOR. I live 6 miles southeast of Ardmore.

The CHAIRMAN. What is your nationality or blood?

Mr. VICTOR. I am a Choctaw by blood.

The CHAIRMAN. Are you of the full blood?

Mr. VICTOR. No, sir; I am three-quarters.

The CHAIRMAN. You are three-fourths Indian?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. We shall be glad to hear any information you may be able to impart.

Mr. VICTOR. I have heard some very intelligent men get up here and explain their views, but I have not heard any Indians make any talk here, nor have I heard anyone make an explanation or statement that I thought suited the Indians or that fitted the country any better than Mr. Cobb did. I have heard all he said, and I tell you, gentlemen, that he made the best talk that has been made here and told you more of the truth than anyone else has. He may be a "grafter," but that is neither here or there, for, if he is one, he gave you some awful good advice, and he ought to know about as well as anybody in this country what he is talking about. Mr. Mills also has told you just what the truth is. Both these gentlemen have about told the truth about conditions here.

I have not much to say, but I do want to say something about the removal of restrictions. It is a hard subject and has a great many sides to it, but I think, on the whole, that the thing that ought to be done and will have to be done, if there is not to be a permanent bar interposed to the advancement of this country, is to remove the restrictions from the surplus lands of the mixed breeds and the full bloods, and I think it is best to do that for this reason: You can go out here in this country and pick up 100 mixed breeds just as you come to them, and also 100 full bloods, and you will find just as many out of the full bloods who are capable of attending to their business as you will find in the mixed bloods. I am an Indian, and I know what I am talking about from the standpoint of an Indian.

I believe I am acquainted with more Indians in the Choctaw and Chickasaw nations than any single man in either nation. I believe that there is not another man in these nations who knows as many of the Indians as I do; therefore I feel that I am warranted in assuming that I know something about them.

I observe here that it has been a common thing for everyone who has spoken and has referred to the matter at all, to assume that the Mississippi Choctaws are not as competent to look after their business as the native Choctaws, but I say that under the same and equal circumstances they are, and under some conditions more so.

They came here from Mississippi—were brought here by speculators, largely. Down there in Mississippi they had no land, no protection, and no special privileges, and they had to work in order to make any kind of a living, which was something that the Indians up here did not have to do. They had to work land there for a share in the crop, and the people who owned the land furnished them with teams and tools to work with, for half the crop raised. So they had to work, and it would have been a good thing for the Indians in this Territory if they had always had to work, but that is neither here nor there. The Government has protected them and fostered them all their lives, and naturally that has not had much of a tendency to impart to them habits of thrift and self-reliance, so I will content myself by saying that if you were to take the Choctaws from the Choctaw Nation and send them to Mississippi with the Mississippi Choctaws, and put them to work where they would all stand on an equal footing, the Mississippi Choctaws would not emerge from the comparison discreditably. What I mean to convey, gentlemen, is the idea that if the Mississippi Choctaws had been here as long as the native Choctaws have been and had been subjected to the same influences they would be just about the same, for outside of these considerations I can not see any difference between them. They all look just the same to me.

But what is their condition, gentlemen, to-day, compared with what it was when they were first brought to this country? There is a very great improvement.

Senator LONG. You think that they are rapidly acquiring the ways of this country?

Mr. VICTOR. Yes, sir; very rapidly.

Senator LONG. They have been here two or three years, have they not?

Mr. VICTOR. Yes, sir; a little longer than that—about four years.

Senator LONG. Do you see any change in them now, compared with what their condition was when they came here?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. Much of an improvement?

Mr. VICTOR. A very noticeable improvement.

Senator CLARK of Montana. They are mostly farmers, are they not?

Mr. VICTOR. Yes, sir; altogether. Not farmers as you understand farming—but farmers.

Senator CLARK of Montana. Indian farmers?

Mr. VICTOR. Yes, sir.

Senator CLARK of Montana. Do they speak the Choctaw language?

Mr. VICTOR. Yes, sir.

Senator CLARK of Montana. Do they speak the Choctaw and Chickasaw language both?

Mr. VICTOR. I can not say that they do.

Senator CLARK of Montana. Do you speak both the Choctaw and Chickasaw languages?

Mr. VICTOR. I can not really say that I do. The languages are so similar that I can understand very well anything that is said in Chickasaw, but I can not say that I can speak the language.

Senator CLARK of Montana. There is a great similarity in the languages?

Mr. VICTOR. Yes, sir; they are the same family and bear a very close resemblance. I can manage to hold a conversation, if I have to, with a Chickasaw as well as a Choctaw.

Senator CLARK of Montana. Then the citizens of these two nations can understand each other?

Mr. VICTOR. Yes, sir; very well, as a rule.

Senator LONG. Do the Mississippi Choctaws understand and speak English?

Mr. VICTOR. No; they do not talk very much English.

Senator LONG. You may proceed with your statement.

Mr. VICTOR. My reasons for saying that I believed it was beneficial to remove the restrictions from the surplus of the Indians entirely, and that it would be beneficial to the Indians to do so, was based primarily on the fact they get their purchase money. See that they get that. If they got their money, those among them who have energy and "get-up" enough about them will proceed to improve their homesteads, and that will be a benefit to them. Those who when they get their money get drunk and proceed to "blow" themselves, neither the land nor the money would do them any good in any case, and if an Indian is that kind of a man, you can put the restrictions on him for a hundred years and it will not make him any better. So if the restrictions are kept on the Indians in the hope that such restrictions will act as an educational influence or stimulus, the thing is all thrown away—it does not help the Indian and tends just that much to the retardation of the progress of the country.

The CHAIRMAN. Wherever we have been, when this matter has been

discussed, we have heard expressions of belief that the Indians would waste their money if allowed to sell their surplus. We have been told that they would spend it for whisky, would get drunk, and squander their money in other vicious ways. We have been told that some of these leases have been acquired by getting the Indian drunk and then befuddling him out of his land. I want to ask you as to this Territory, where the sale of intoxicating liquors is prohibited by law, or is supposed to be prohibited by law, whether it is or is not a fact that liquor can be easily obtained?

Mr. VICTOR. Some intoxicating drinks can be obtained.

The CHAIRMAN. Easily?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. Intoxicants that are under the ban of the law?

Mr. VICTOR. Yes, sir; I do not know that whisky can be obtained easily, but I do know that intoxicating drinks can be obtained easily at times. I am perfectly familiar with the ways these so-called "graffers" do their work, for I have seen them engaged in it many a time; but I will say this, that I never in any instance saw a grafter giving an Indian whisky. Of course I am not saying that it has not been done by some grafters who were without a conscience, and there are some of that kind here; there are some men who would take advantage of an Indian in that way, and it is that class of grafters who have worked a hardship on lots of men who are doing a perfectly legitimate business. They have got people who can not discriminate—for they do not have the time to investigate—to conclude that all real estate men are grafters, because some bad men among them use disreputable methods. There are grafters in this country who have never paid a cent for their improvements, who have just gone and jumped them, and under contracts that would specify the improvements to come to so much—the land at so much and the improvements at so much, as a further consideration—and they would lease them out again that way to farmers who were to pay for the improvements, when, as a matter of fact, the improvements never cost them a cent. In the case of minors, that is a favorite practice of theirs. They get the minor allotted on the land and a guardian appointed for the minor, and then they get a lease for five years from that guardian at a nominal rent, and in the lease they get a credit on the amount they contract to pay for these improvements that never cost them a cent, but which they put in at two or three times what they actually are worth even if they had paid for them. In that way they frequently get the land for all these years without costing them anything, and they rent it to farmers at big rents and put the whole thing into their pockets, for they do not have either rent or taxes to pay.

The CHAIRMAN. These men have brought the whole "grafting" business into disrepute?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. Do you know any of these grafters, so called?

Mr. VICTOR. Yes, sir; I am familiar with these so-called "graffers," and have some very good friends among them. I will say another thing. I do not think there is a man in this grafting business or in this leasing business who has got his money back yet. He may get it back, but I am satisfied that not one of them has done it yet.

Senator LONG. They have done what they did to help the Indian?

Mr. VICTOR. No, sir; not at all. They were ambitious, and they went into that business because they thought that they were going to make a whole lot of money out of it, and they have been fooled—that is all. I do not think they thought of the Indians at all. I have never given them credit for that much humanity. I think the only ones they thought about helping was themselves. They thought that they were going to make more money than they did out of it, and they have failed, and in the final wind up the result has been that it has placed the so-called "grafter" and the Indian both at a disadvantage.

Senator LONG. If both of them have failed, who has received the benefit? You know that there can not be anything without its compensations, and there must be some one who has been benefited by this mix up somewhere along the line.

Mr. VICTOR. Take a man who is running an allotment business and got a little the worst of it; of course, if he got the worst of it, it follows that the Indians must have got the best of it. The kind of Indians these grafters dealt with were the kind that anything that would be done for them would only be temporary. You can not do them any permanent good. They took these Choctaw Indians from Mississippi, and when they first came out here they were very ignorant, although they really were better workers than the native Indians, as I said before; but the grafters would come up in the Choctaw country and get them down here and show them the land and pay their expenses to the land office to get them to allot it, and in a great many instances when they got them there the land they intended them to file on would be filed on already, and the grafter would have to take them back there again and show them some other land and then take them back to the land office to file on that, and find that that, too, had already been filed on, and sometimes they would have to make two or three or four trips, all at the expense of the grafter, and that cost a good deal of money.

That is where the grafter got the worst of it, for he would have to get the Indian a good allotment to come out even on the lease, and where the Indian was benefited was in getting a better allotment than he could get in any other way, and they could lease their allotments for from \$50 to \$75 a year, and that was something, for after five years they would have the allotment with the improvements that the grafter would have to put on it, for he would have to improve it to make anything out of it, unless they were already on it, and he would have to leave them there anyway. I leased my allotment for \$75 a year, because I thought that was a very good price for it, for it was not improved. I took up raw land and it had to be improved.

Some of the Indians get good allotments, and some of them get sorry allotments. Some get fine surplus allotments and homestead allotments that are worthless. The grafter gets their restrictions removed and buys their surplus, and when they have to go and hunt up their homestead they find it is rocky, barren ground that is not worth anything at all, and then they do not have anything.

The Indian, when he gets his money from the grafter, is not apt to complain. As long as the grafter pays him pretty regularly, even if it is not much at a time, the Indian is not likely to complain. Where the Indian will make a kick is where the grafter, to get the lease, will say he will pay him \$100 or \$150 a year and makes the lease out for \$50 or \$75 a year, then the Indian will make a kick, just as anybody else would, and he goes off and makes a complaint about it at the agent's office, and then there is trouble.

There was a man over here the other day—one of the farmers that is always kicking about the grafters—and he came to one of my neighbors, whose name is Sam Simpson, and he said: "Sam, if you

will give me a lease on that land of yours I will take it and improve it, and in five years you will have nice improvements on it," and Sam said: "How much will you pay me for it?" and he said, "I will put these improvements on it for you." So he would not do any better than the grafter would, but he is going around kicking about the grafters. The fact is, every last one of them is a grafter if he gets a chance, and when they go around kicking about grafters it is because they haven't had a good chance to get in their own graft.

The only way, gentlemen, to get rid of these conditions is to remove all their restrictions—every one of them—wipe them all off at once, reserving only the restriction that they get their money for their land and that their homesteads are reserved also. I think that there ought to be at least forty acres reserved from sale or lease, so that they would have some place to go to, and forty acres is as much as anybody wants; at any rate, as much as any of the Indians want. If they will improve forty acres, it will make a good comfortable living for them down here.

The CHAIRMAN. Mr. Victor, it has been suggested that this estate that you referred to where the little children were not provided for—

Mr. VICTOR. Mr. Sampson's children?

The CHAIRMAN. Yes; it has been suggested by a gentleman, who just now came up here and spoke about it, that that estate was in a contest, and the whole thing is in the hands of the court, and the rents are paid into court, and that they can not be expended until that contest is disposed of. Do you know anything about that part of the matter?

Mr. VICTOR. No, sir; I do not know anything about that. I will say this, that I do not suppose, by a good deal, that all of it is in a contest. There may be a little of it contested, but I am sure that all of it is not contested. I understand there is some—I understand it was not the children's land but John Sampson's land that was contested, for I saw him the other day and he told me that he had lost out, and he had gone to the Choctaw Nation and had filed on some land there.

The CHAIRMAN. Do you know of any cases where the guardian and the grafter who leased the land were working together and dividing the spoils or profits?

Mr. VICTOR. I do not altogether understand that.

The CHAIRMAN. Did you ever find a case, or do you know of a case, where the guardian who leases the land and the grafter who gets the lease were working together and dividing the profits or spoils of the estate?

Mr. VICTOR. I do not know of more than one concern that I have understood does that, but I do not know that it does it. I only tell you what I have heard.

The CHAIRMAN. Speaking in a general way, the position of a guardian is in disrepute down here in this country or these nations?

Mr. VICTOR. I do not know how it is all over the Territory. I know it is considered a disreputable business in the Choctaw and Chickasaw nations.

The CHAIRMAN. It is in disrepute among the Indians?

Mr. VICTOR. Oh, yes; it is with everybody, the white people as well as the Indians. I think you have heard white men who have come before you and denounced it as bitterly as the Indians have.

The CHAIRMAN. That is the way it is universally looked upon down here.

Mr. VICTOR. That comes pretty near true, but there is a guardian now and then who does the right thing and looks after his wards all right. He does the best he can for them. Now and then you will find that kind of a man. I want to say this, that if a guardian comes in with a bill for railroad fare and hotel bills at \$2 a day he does not have any trouble in getting it approved, but if it is a bill for groceries or dry goods, or other necessities that he has got for his wards, he has a pretty hard time to get that approved. I do not know that there has been one account approved where the guardian was advancing \$5 a month and dry goods, and I know the children did get them—actually got them—I know that, for I went myself every month and got them. They are at my house now, going to school.

The CHAIRMAN. I want to ask you a question about the ability of these full bloods to make an allotment. Would you infer that these people who had lived here for a long time—who were born and raised here—would be familiar with all the land in their section, or at least in their neighborhood—would be familiar with that land to an extent sufficient to enable them to go and make an allotment for themselves?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. Would it not be reasonable to infer that when the time came for making allotments that they could go and pick out the land and make the allotments for themselves?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. And that they could do that without the aid or assistance of any grafter?

Mr. VICTOR. Yes, sir; they could if they were living in that country. Take the Chickasaws, who have always lived in this country. They went and selected their own allotments, for they knew the country and knew what they wanted. But take the Choctaws—the southern and northern ones, both. As a rule, they did not know anything about this Chickasaw country, and it was a natural thing that they should have some one select them. That is where the grafter got in his work.

The CHAIRMAN. Why did they come here and make their allotments? Was it because the land is better, or was it because it was represented to them that there was better land here for them?

Mr. VICTOR. Yes, sir; it has been represented to them that the land is better. Of course these so-called "grafters" had men running around all over the Choctaw Nation hunting them up and bringing them here, and that is the reason they came here. With regard to the land, I believe as a general proposition that the land in the Chickasaw Nation is better than it is in the Choctaw Nation. There is a lot of very good land in the Chickasaw Nation, and so there is in the Choctaw Nation; but on the whole I believe there is a great deal more good land here in the Chickasaw Nation than there is in the Choctaw Nation.

The CHAIRMAN. You think this is a better country than the Choctaw country is?

Mr. VICTOR. Yes, sir; I believe that the Chickasaw country, taking it all over, is a better country than the Choctaw is. I have lived in both and know them as well as anybody, and that is my opinion.

The CHAIRMAN. What is your occupation?

Mr. VICTOR. I am a farmer.

The CHAIRMAN. Where were you educated?

Mr. VICTOR. At Carlisle, Pa.

The CHAIRMAN. Are you a graduate of that school?

Mr. VICTOR. No, sir; I never took the finishing course. I left there before the examination day on account of my eyes. Although I had finished, I did not take the examinations.

The CHAIRMAN. Why did you leave?

Mr. VICTOR. I left there about three months before the time of the examination on account of sore eyes.

The CHAIRMAN. And you are cultivating a farm now?

Mr. VICTOR. Yes, sir.

The CHAIRMAN. How large a farm do you cultivate?

Mr. VICTOR. I myself cultivated this year about twenty-five or thirty acres.

The CHAIRMAN. What did you raise?

Mr. VICTOR. Corn and oats and sorghum, and such as that.

The CHAIRMAN. You have spoken about the Indians using the proceeds of their lands, if they were not restrained from doing so, and said that they had no "get up" to them, or something like that. What did you mean by that?

Mr. VICTOR. It is just about like this—I suppose in a general way that Indians are just about like white people. I think they are just about like white people. If you give some of them a thousand dollars a day, like lots of white men, they would not have a cent in thirty days.

The CHAIRMAN. Are you speaking of the full bloods?

Mr. VICTOR. Of both classes. When it comes down to business, I believe there is just about as many full bloods that are capable of doing business as there is of the mixed breeds.

The CHAIRMAN. Then your belief is that there are as great a proportion of the full bloods who are competent to do business for themselves as there is of the mixed breeds?

Mr. VICTOR. Yes, sir; I think there would not be much difference. For instance, if you take a thousand mixed breeds and a thousand full bloods, and take them just as they come and take the restrictions off them. I believe the full bloods will at the end of a year show up with just as much as the mixed breeds. These full bloods, many of them can not speak the English language, but they are capable of taking care of themselves all the same, and these people, if they had an opportunity to sell their surplus would, I believe, use their money to very fair advantage.

The CHAIRMAN. Why?

Mr. VICTOR. It would give them an opportunity to improve their homestead. On the other hand, the Indian who would not use his money to advantage in improving his homestead would not do it if he had a million dollars; so I say it does not seem to me to be any good putting these restrictions on his homestead, for if he is that kind of a man, the moment he gets his money out of his surplus he will "blow it in" anyway, whether it is rent money or money from the sale of it. They will do with it just the same as they did when the payments used to be made to them. The provident and careful ones took care of it and spent it to good advantage and the improvident ones "blew it in" as quick as they could. They would get their money one day and the next morning they would not have 5 cents. There are lots of whites just like that, too; so after all there is not so very much difference between an Indian and a white man. The mixed bloods will do that just as much as the full bloods will. I could never see much difference in them anyway.

The CHAIRMAN. Have the Choctaws a disposition to get up every day and go to work and till their land and try to raise a surplus of crops and sell it and save up money?

Mr. VICTOR. Some of them.

The CHAIRMAN. How many of them?

Mr. VICTOR. I would say 40 per cent of them would.

The CHAIRMAN. Do they do it now?

Mr. VICTOR. Yes, sir; they do it now.

The CHAIRMAN. Many of them?

Mr. VICTOR. Yes, lots of them. You have not been around much over this country, I guess. There are full bloods down here who have fine residences and as fine farms as you will find in the Territory.

The CHAIRMAN. Full bloods?

Mr. VICTOR. Yes, sir; full bloods. There is a full blood over here who, I understand, has between \$6,000 and \$7,000 in the bank at Medill. He is a full-blood Indian and he can neither read nor write, but he knows how to do business and save money. The officials tried to beat him out of it, but they failed, for he beat them. Now, that man is J. Hunter Pickens, and he is worth, I suppose, \$50,000 or \$60,000. He is not the only one, either, for a great many of the full-blood Indians are in good circumstances. All those who will let an opportunity pass them will never do any good. They are incorrigible, and you can not reform them by protecting them, and I think it is wrong to protect them at the expense of the community, for this protection, so called, is only a dream, anyway. It does not protect them. It is ineffective from that standpoint; for nothing can protect them from their own infirmities, and it retards the growth and welfare of the country. If their surplus lands were sold for them and the money kept so that they could not spend it and doled out to them monthly or quarterly, that might be of some assistance to them, and it would have the advantage anyway of getting some one on their surplus allotments that would do some good with them.

I am an Indian—more Indian than anything else—but I believe that this country ought to be permitted to advance, and a lot of worthless people of my blood should not be allowed to stand in its way. The good and progressive Indians—and there are lots of them—will hold their own, and the worthless ones will go down, and that is all there is of it. They are down—most of them—and this policy of protecting them does not tend to elevate them at all. If you keep on protecting them, they will not be one bit more capable of taking care of themselves fifty years from to-day than they are to-day. That is my opinion, and that is all I think I have to say.

Statement of Allen Wright, full-blood Choctaw Indian.

The CHAIRMAN. Where do you reside?

Mr. WRIGHT. Smithsville, Ind. T.

The CHAIRMAN. Of what nationality are you?

Mr. WRIGHT. I am a Choctaw.

The CHAIRMAN. What people, or class of people, do you represent in making your statement?

Mr. WRIGHT. The full-blood Choctaws.

The CHAIRMAN. You may proceed and make such representation as you desire.

Mr. WRIGHT. Mr. Chairman and gentlemen of the committee: I have come with my friend, Mr. Jackson, in the effort to look after the wants of our people. I represent the second district of the Choctaw Nation—seven counties of people, mostly full-blood Choctaws. In Meshaba County, where I live, I doubt if you could find more than 100 white families in the county. The county is 70 miles long and 50 miles wide. There are about 75 to 90 families of white people in the county. I was informed by the Indian agent during the last payment of town-site

funds that they paid out between 400 and 500 shares to Choctaws, which shows the population of that county.

The CHAIRMAN. How much would that show the population to be? Mr. WRIGHT. Each one gets his share. I suppose that in that area or radius of 25 miles around it would be about 500.

The CHAIRMAN. About 500 people? Mr. WRIGHT. Well, more than that. The children of the full bloods were not paid during that time and the reason why they were not paid by the Commission was this: Shortly after the probate matters were taken from the Choctaw court, the representatives of different companies, especially trust companies, and more especially a certain trust company of Atoka, sent out different agents. I could name some of them if necessary, some eight of them, some Choctaws by blood, and three white men. The principal man was A. C. Million. Another one was A. J. Walduck, of Ardmore, originally from Illinois, I think; and one was R. S. Allen, of Mena, Ark. These three men hired Indians, young men who could speak English, who went from house to house and got the names of the children that each parent had. The majority of the full bloods could not understand what they were signing. They had to sign by marks, witnessed by these men who were canvassing for those children's names, and by that means they gave what are known as "waivers" of the right of appointment.

The CHAIRMAN. An instrument waiving their guardianship rights as parents of the children?

Mr. WRIGHT. Yes. By that means the parents were deprived of control of the interests of their children. And therefore when the parents came along, they did not draw the money for their children. In fact, a great many of them now are nearly starved to death, and the trust company at Atoka has failed to pay out the money that was due to those children and some of them died without attention, some orphan children.

The CHAIRMAN. In cases of that sort, why is not complaint made to the court to see that the guardians appointed by the court perform their duty under their oath and bond? Guardians are regularly appointed by the court, are they not?

Mr. WRIGHT. Yes. They have applied to the courts. The attorneys for the nations, on probate matters, McCurtain and Hall, prosecuted this man A. C. Million and others, and in the meantime these parties showed that they had received waivers from the parents to the trust company and the trust company has made a contract with two men whom I know; one is Henry Sangwin and the other man is Peter J. Hudson, of Tuscahoma, Ind. T. These parties made application for appointment as guardians over these children, but it seems the parents made complaints to Mr. Hudson and Mr. Sangwin, and it seems that Hudson and Sangwin have no power to send money for those children, because the trust company has control of the money.

Senator CLARK of Montana. What is the name of that trust company? Mr. WRIGHT. The Southern Trust Company.

Senator CLARK of Montana. In Atoka?

Mr. WRIGHT. Yes, sir.

Senator TELLER. Are they the recipients of the money?

The CHAIRMAN. Is the money deposited with the trust company?

Mr. WRIGHT. Yes.

The CHAIRMAN. The money so deposited is subject to the order of the court, is it not?

Mr. WRIGHT. I merely wanted to show why the children were not paid, and the reason I wanted to show that is this: The parents, a great many of them, are able to take care of the children, but unknown to the parents these grafters have—

The CHAIRMAN. I will guarantee that if the parents will go into court the court will set aside that action.

Mr. WRIGHT. There are several cases like Mr. Hudson's case. He is guardian over, I think, some seventy-five or ninety children.

Senator TELLER. Is he a square man?

Mr. WRIGHT. I suppose so. I know he is a good man.

Senator TELLER. Then why does he not go into court and get an order on the trust company to pay this money out for the benefit of the children? Congress has not any control over that matter.

Mr. WRIGHT. I know that. I only wanted to show how it was that it was done.

Senator TELLER. We have trouble enough already without going into that. It is easy for the parents or the guardian to go into court. If the guardian does not do it, the parents can do it.

Mr. WRIGHT. Another thing I want to say to the committee is that a great many Choctaws over there, when the land office was open, were not able to go to it because it was more than 90 miles away.

When I got to Atoka I found that all Indians that I thought were not able to travel, on account of lack of money, had been carried over there through this town (McAlester). They went to Hatfield. What are called "land grafters" took a carload of Indians from Hatfield to Howe, and from here to Atoka, and another carload from another direction coming up by Durant to Atoka, and lined them up there.

These grafters, Roach & Co., of Mena, and others, go to Mr. Johnson, who has six children and his wife, and tells them and others over there, "I want you to file on that land; I will give you \$10 for a quarter section; I will give you \$25 for the whole allotment and I will pay your way to Atoka and back." That is the way they went over there—a carload of Indians. But, lo and behold, the land was held up at that time, and another grafter got hold of the same parties and carried them over to Tishomingo and they filed homesteads and surplus land. They could not apply for surplus until they filed homesteads first. And nearly all filed for allotment in the Chickasaw Nation.

The CHAIRMAN. To what does all this tend?

Mr. WRIGHT. The point I wanted to present to you is this: Living in the Choctaw Nation, just as soon as they filed their land in the Chickasaw Nation they make a contract for five years and take \$40 or \$50 for a full allotment, but oftentimes the parties refuse to pay.

They may pay \$25 or \$12.50 or whatever they have a mind to.

The CHAIRMAN. What is it that you want to have done?

Mr. WRIGHT. I want the law repealed which prohibits the full bloods from leasing the land.

The CHAIRMAN. You want to be allowed to lease the land?

Mr. WRIGHT. Yes, sir; only reserve 40 acres in homestead.

The CHAIRMAN. You want them to be given liberty to lease their surplus land and all their homesteads except 40 acres?

Mr. WRIGHT. Forty acres.

The CHAIRMAN. What do you say about the sale of it?

Mr. WRIGHT. There was a family living near Smithville who had surplus land near Ardmore, and some near Cornish, and they wanted to move over there and live on their own land. A man named Cobb had leased it from those parties. Mr. Cobb tells these people: "I leased from you for five years; it is now three years, and if you want to take possession of your land in the Chickasaw Nation you can pay

me \$200 down and you can have the place and the improvements I have made."

In order for the full blood to live on his homestead, he ought to have 40 acres reserved from leasing or sale, so that he could live on it.

The CHAIRMAN. Then your idea is that, so far as leasing is concerned, the full bloods should be allowed to lease everything, including the surplus, allotment, and homestead, except 40 acres?

Mr. WRIGHT. Yes.

The CHAIRMAN. Is there anything you wish to say regarding these lands?

Mr. WRIGHT. There is. As to restrictions, I think that they ought to be removed from surplus lands of the full bloods for the reason that the majority of the people are land poor. This could be done with the understanding that supervision could be exercised by either the court or the Government to look after the interests of the full bloods.

A great many deeds have been signed by Indians—full bloods—who did not know the contents of the deeds, and so gave their title away.

The CHAIRMAN. Then your view as to that is that the restrictions on the full bloods should be removed as to surplus, and they should be able to sell that surplus under conditions such as would enable it to be honestly sold?

Mr. WRIGHT. Yes.

The paper presented by Mr. Wright is as follows:

"GENTLEMEN OF THE UNITED STATES SENATE COMMITTEE: The subject that has been assigned to me by those interested in the welfare of the Territory and its people is one to which I have given serious and solicitous consideration. Affecting, as it must, the future well-being of the Indian, it is calculated to arouse the sober reflection of any person who has the welfare of his people at heart. I have often asked myself the question whether it was better to remove every restriction from the land of the Indian and place him on an equal footing with the other citizens of this country, or should the restrictions now thrown about him and his property be permitted to remain. I have tried to free myself from any bias or prejudice in considering the question and to look at it from the standpoint of a person interested in the success of this country and at the same time mindful of the Indian and his condition as I know it. The first plan, that of removing every restriction, has many things to commend it and is worthy of serious consideration, and while it would probably advance the material interests of the country to a great degree, it might do so at the expense of many ignorant and uninformed Indians—a result to be avoided. The second plan—that one now in operation—also has many things to recommend it, and if it accomplished the purposes for which it was adopted, that of benefiting the Indian, should be carried out. But those of us who are acquainted with the conditions of the country and know the prevailing circumstances among those Indians whom it is sought to protect realize that the placing of restrictions upon the land of the Indians is a detriment rather than a benefit. I am informed that this subject has already been presented to you and in a manner far better than I am capable of, and what I shall say to you will be by way of supplementing what has already been said, and I shall only briefly take up the question of the removal of restrictions upon the surplus allotments of the Choctaws and Chickasaws.

"In these two nations each citizen, as you are aware, has received as his or her allotment 320 acres of average allottable land, one-half of which, or 160 acres, is the homestead. And if we take the average family of five, consisting of husband, wife, and three children, those five persons are the owners of 800 acres of land, which is homestead land and can not be disposed of during the lifetime of the allottee, not exceeding twenty-one years, and 800 acres of surplus land. If the head of the family has accumulated enough of means to properly improve the large amount of land of himself and family, it is safe to assume that he will be abundantly able to take care of himself and his property under any state of affairs whatsoever; but if, as many of the Indians are, he is unable to improve and properly cultivate the land of himself and family, then this large acreage of land is useless to him, and in its unimproved state a serious drawback to the advancement of the country. Without means and unable to use his land as collateral with which to procure the means, his land lies idle or he is forced to lease it at a disadvantage in order to derive any income from it whatsoever. Those of us who are acquainted with the lease system as practiced in this country know that such a system is a fraud upon the Indians and a curse to the country. The majority of these leases are held by a class known as grafters, whose one aim is to secure all the land they can at the lowest possible price and sublet it at the highest price obtainable, without any thought or care as to the future condition of the land. Before the legislation passed by the last Congress the favorite plan was to lease the allottee's land for a period of five years, paying a small amount as part consideration and agreeing to place substantial improvements on the allotment as a further and the moving consideration. The improvements placed thereon, as a rule, are of such a character that at the end of five years they will be worthless and the allottee will be in as bad a condition as when he made the lease, as far as improvements are concerned. The class of subtenants who are willing to subrent these leases are not the kind of farmers who build up a country, and generally such subtenants are of the same stamp as the man from whom he subrents.

"The honest farmer who will improve and build up this fair land of ours and become a useful and substantial citizen of the State will not put forth his best efforts under such conditions. He will have none of the grafter or his questionable holdings, and until it is possible for the better class of farmers to come among us and own and improve the land of this country the country's progress must be at a standstill. We can never build up such a State as we should, and will if given the opportunity, under such a condition as prevails here. A State founded upon a system of tenancy will never develop into a prosperous State. To obtain the results that the country is capable of we must make it possible for the honest farmer to come here and obtain title to the land, and whenever it is possible to acquire good title to property we will have well-improved farms and a substantial class of citizens, instead of poorly improved farms put in under leases and the floating population which follows.

"If the allottee had the right to sell all of his surplus, I believe that both the Indian and the country would be materially benefited. The reason for this assertion, in addition to what has already been stated, is this: There has been given to each Choctaw and Chickasaw allottee, with the exception of freedmen allottees, land valued at \$1,041.28. The land was appraised at from 25 cents per acre, the lowest value, to \$6.50, the highest value, and the allottee who selected 25-cent land has received or will receive 4,165.12 acres of land, one-half of which, or 2,082.26 acres, is his homestead. The allottee who has selected the highest-priced land has received 160.19 acres, one-half of which, or 80.9

acres, is his homestead, and if he has selected average land he has received 320 acres of land, of which 160 acres is his homestead. If the Indian will cultivate well his present homestead allotment, even though he has only 80 acres, his condition will be far superior to what it is today. If the restrictions are removed, then it will be possible for the honest farmer to deal direct with the Indian and to improve a farm which will be an example to his Indian neighbor.

"The idea that prevails throughout all legislation regarding this country has been the protection of the Indian and the full-blood Indian rather than those of a lesser degree of Indian blood, and while I do not wish to be understood to question the motives which prompt such a spirit, it occurs to me too great a protection, too much paternalism and sentimentality might be of more harm to the Indian than good. New conditions now prevail, and new methods in meeting those changed conditions must be inaugurated. From a citizen of a small nation, holding his land in common with the other citizens of the nation, he has become a citizen of a great State to be, owning in fee the land allotted to him; one of the citizens of a great nation, enjoying greater privileges and having placed upon him greater responsibilities. The sooner he appreciates those changed conditions and realizes that he is only one of many individuals that go to make up the citizenship of the country, the sooner will his future be solved. I believe that the Indians of the Choctaw and Chickasaw nations will meet those conditions as they should, and if the restrictions upon their surplus allotments are removed and they are placed upon an equal footing with other citizens as regards that part of their property, that they will prove themselves worthy of the confidence reposed in them. And I do not share this opinion alone. The governor of the Chickasaw Nation, a man who has been the chief executive of his nation for three terms and who has the interest of his people at heart, and who is thoroughly familiar with their condition and standing as citizens, has every confidence in their ability to meet the new order of things, and so expressed himself in his last message to the legislature. True it is among the Indians there are many who will dispose of their land at the first opportunity and will squander the money that they receive for it, but I maintain that the restrictions that are now placed upon the land does not benefit this class of Indians. You can not any more successfully control by legislation a person's propensities to squander his substance than you can control by legislation his appetite for intemperance.

"Anyone who is acquainted with the class of Indians who would thus throw away their property will bear me out in the statement that this class will in some manner succeed in getting rid of their property. If they can not sell it, they will lease it for a mere pittance, and if they can not lease it they will enter into some sort of a contract, greatly to their disadvantage, in order to obtain a small amount of money. This class, which I believe forms a very small percentage of the Indians of these nations, and which are to be found in every race of people on earth, you can not protect, and the restrictions now on their lands only serve the purpose of checking the great majority of the Indians who wish to progress, retarding the growth and advancement of the country and at the same time giving the grafter a better chance to drive a better bargain. In other words, I believe that the restrictions upon the surplus allotments benefit only the grafter at the expense of the Indians and to the detriment of the country. But, as said before, I believe that the class of spendthrift Indians form a very small percentage, and I am firmly convinced that the great majority will appreciate the value of their land and if they sell will receive the full worth.

"There is still another argument, it seems to me, that might be urged in favor of the removal of restrictions upon surplus lands in these nations. We have just been granted the right by Congress to form a new State, under whose government, when formed, must live both the white man and the Indian. With this great privilege must also come great responsibilities and burdens. One of the heaviest burdens that must fall on the citizens at the very beginning will be the burden of taxation. The expense of State, county, and municipality must be met.

"As long as the land is bound down by restrictions and in the hands of the allottees it can not be taxed, and if the taxes can not be raised on real property then it must be levied on personal property, and will fall with equal force on the Indian and the white man. The more progressive and thrifty the Indian is and the more personal property he has acquired the heavier will be his taxes, while the Indian who has no property except his allotment is free from taxation. It is human nature to love and respect an institution to which we contribute more than to an institution to which we do not contribute, and if the Indian contributes to the support of the school, to the expense of the county, and to the maintenance of the Government, then he is going to feel an interest in that school, the affairs of the county will concern him, and he will honor and respect his State and its institutions and become a useful and positive citizen. No State can attain a greater height in the character of its citizenship than the character of the individuals who compose it, and if we are to take our proper place among the other States of the Union then must we bring the individuals of the State to a proper realization of the duties and responsibilities of a citizen of the State, and this can be best brought about by creating in the individual an interest in the affairs of the State. I for one, and I think a majority of the Indians who think about this question, do not want to shirk any of the duties that I owe my State as a citizen if I am to share equally with the other citizens of the State in the benefits to be derived from the State.

"In conclusion I will sum up what I have endeavored to say in this: I believe that the present and future interest of the Indians will be best subserved by a removal of the restrictions upon surplus allotments, and that without this the Indian will be more harmed than benefited and the progress and advancement of the State will be retarded.

"Respectfully submitted.

"ALLEN WRIGHT."

Statement of John Bullette, one-fourth Delaware Indian.

The CHAIRMAN. Are you a Creek Indian?

Mr. BULLETTE. No, sir; I am a Delaware.

The CHAIRMAN. Where is your residence?

Mr. BULLETTE. Claremore, Ind. T.

The CHAIRMAN. What is the quantum of your Indian blood?

Mr. BULLETTE. About one-fourth.

The CHAIRMAN. I do not know that we have any particular object in questioning you, but it occurs to me that I would like to have your views on the question of the restrictions.

Mr. BULLETTE. Well, Senator, I would like very much to oblige you, if I am equal to the occasion.

The CHAIRMAN. You can state your views.

Mr. BULLETTE. Yes, sir.

The CHAIRMAN. Do so, please.

Mr. BULLETTE. Gentlemen, you have before you one of the most important questions that ever confronted the Senate of the United States or the people of this Indian country. It is too deep and intricate and involved a proposition for you to undertake to settle in the next thirty or forty days. It will take more time than that if it is to be settled properly. I am, indeed, proud to say to you that it pleases all the people of this whole country who have the true interest of the Indian at heart to see the zeal and interest you have displayed in trying to get at the bottom of that question. I am an Indian, and I have thought a great deal over it, and yet I don't know that I have an opportunity to talk to you—I don't know where to begin on the question.

In the first place, there is a conflict of ideas among the people about this matter. There is a conflict of ideas among the people, both white and Indians, and this being the case I don't wonder that Congress has not been able to settle the question satisfactorily, for how can Congress be expected to solve a question that the people have not been able to settle among themselves as to what should be done. This accounts for the confusion of the past twenty-five years in Congress in attempting to legislate on this question.

To my certain knowledge—and I state it right here before Senator TELLER, who has been in the Senate for all that time—I say that for twenty-five years the only thing that Congress has been consistent about in the matter of legislation for the Indians has been the determination to make them citizens of the United States, and that they have accomplished as far as it can be accomplished on paper. They have enacted it into a law, but many people (Indians in the Territory) can't see that it has done them any good, for it has conferred on them the obligations of citizenship, and the way it is enforced is a practical denial of the most sacred right known to the individual—the right to dispose of or do with his property as it pleases him.

Yes, gentlemen, you have argued and your predecessors have argued for twenty-five years in the halls of Congress about these people, and the pendulum of legislation would swing this way and it would swing that way and then swing back again, but the only thing you followed consistently was the effort to make citizens of the people of this Territory. But enough of that.

In answer to your question, I will say that the people, taken as a whole, of the Five Civilized Tribes are as capable of taking care of themselves as any similar body of people anywhere on earth. Of course it is said that there are incompetents among them. Of course there are. Who denies it? Where is the body of people on earth that does not contain its portion of incompetents? Of course these people are competent, else you would not have made them citizens. I know of my own certain knowledge that Senator TELLER has stood in his place in the Senate and stated the Indians were incompetent and inefficient, and opposed every argument that was made in attempting to prove them to be competent; but the proofs accumulated, and at last became so convincing that he was satisfied that they were just as capable of caring for themselves as white people were, and he so stated. I repeat here that, as a nation and as a body of people, the majority are capable, and in this, as in all other instances, the interests of the majority must be first considered. The wishes of the majority should be considered, and that was the right view that was taken of it by Congress, and so were made United States citizens. A dissolution of our tribal form of government in its entirety was brought about, and the result is that the nations as heretofore constituted have practically ceased to exist. It is only the ragged and incompetent ends of these little nations that are telling you to-day that they are helpless and unable to stand alone.

Now, the question has come down to this: You can not deal with us in a body; you can not deal any longer with us as nations. We are citizens and you have to deal with us as individuals. Each and every man stands on his own bottom now in this country, and you have to deal with each one individually. You are here seeking information that will act as a guide to you in your future legislation. With that end in view you are inquiring of individuals as to their opinion about the policy to be pursued. I am one of the individual units that appear before you, and you inquire of me for my opinion. You want to know what my observation has taught me and how I look at things and understand them.

Now, gentlemen, in my humble way I have been thinking these matters over, and the question has occurred to me time and time again. What shall be done with these people? What will ultimately become of them? You use the term "full bloods" frequently here, as if that expression indicated a uniform, separate, and distinct class. It does not indicate any such thing. There is just as much difference between full bloods here in the Territory as there is between white people and full bloods. You will find that the extremes of intelligence and ignorance meet in them as perfectly as it meets in the whites in any community anywhere in the older States. In every community in these States you will find men of great intelligence and acumen and you will find men steeped in the most profound ignorance, and so it is with the full bloods. Now, I ask, are you going to deprive these intelligent full bloods or mixed bloods, whichever they may be, of all their rights to freely transfer and dispose of their property because it happens that there is a portion of the community who are ignorant and incapable? You might just as well proceed on the theory that a white man is unable to properly transact his business because one-half of him is Irish and the other half Dutch. It would be just as reasonable to deny him all the rights of a citizen as it is to deny the intelligent Indian the full rights of a citizen because half his fellows are less capable than he is. It may be contended that this is a far-fetched comparison, but I contend that the simile is just as reasonable. I contend it is exactly similar in the case of the full-blood Indians.

This matter of ignorance in the full-blood Indians is something that is largely injected into them by people who have an ulterior object to serve. It is true that there are sections in which the ignorant class largely preponderate, but, on the other hand, there are sections where the full blood is intelligent and fully able to cope successfully with any grafter that ever attempted to make him a victim of his wiles. Ask some of the grafters if that is not so; if they have not encountered some of them and came out of the fray wearing visible marks of the combat—financially, if not physically. [Laughter.] Speaking of grafters, I want to say that some of the dirtiest and most skillful of the grafters that ever operated in this country are found amongst the ranks of these same full bloods. Depraved and vicious in every instinct, they serve as the tools of their white coadjutor, who sends them out all over the country to seek out and work upon the ignorance and weakness of their fellows, and worthy they have proven themselves to work in conjunction with their white brother grafter.

The white grafter in this country knows that class of people. He knows how to get them and how to work them to the best advantage. They seek out these depraved and degraded beings, and they are the ones that ought to be made to suffer. That class of full blood deserves no protection from any source. They should be made to work—on the rock pile, if necessary. Some have argued there that the full blood should be allowed to sell his surplus—well, I'll go further and say that, in my opinion, if he is intelligent enough to sell his surplus, he is intelligent enough to sell his homestead, too. There are many such. They need no homestead, for they live in town most of the time, and, as far as a homestead is concerned, he has no earthly use for it. Well, there you have him and it is easy to dispose of him. Put him on an equal footing all along the line with other citizens and let him find his level. Put him on an equal footing with other citizens in every respect.

Again, here is the full blood down here in the hills. He has got an allotment out here on the prairie where he never was before. He never saw that allotment before in all the days of his existence in this nation. He comes up here to town. He meets with a full blood grafter, or it may be a white grafter—it don't matter much which it is—he is sure to run up against him. That is before he has made his allotment, and they take him out and show him a piece of land, and then they pay his expenses down to the land office and file on it. Lots of them do that without ever seeing the land. Now, that Indian don't want that land. He has never had any use for it. He had no use for it before and has no use for it now; and the grafter who took him out there and down to the land office to file on it and paid his expenses, and gave him a dollar or two in addition, knows that he can get that land as soon as that Indian is in a position to transfer it. He is just about as sure of it as if he had filed on it in person; and, as a matter of fact, the grafter is the fellow that is reaping whatever benefit there is in it to-day. He may be agreeing to pay him some rent for it and the Indian might be expecting it, but he offsets the rent by some improvements he is supposed to put on the land and which he may or may not be putting on it, but the result is the same—the Indian gets nothing.

That is the full blood now I am talking about, and the land the Indian has is his surplus, for he has his little homestead back there in the hills, and even that he won't improve. It is more land than he needs and more than he will ever use. He has been there for fifty years, or his people have been ever since this Cherokee Nation has been here, and that is where his family have grown up. He has been down there in these hills, and on that patch of ground he has raised a family of five or six or eight children on a patch of 20 or 30 acres of land. He has taken his homestead there, and that is his homestead, and that homestead is going to keep him just as he has been kept, and that is all he desires or wants. You can't persuade him to come out of these hills and live on this selection you have made for him elsewhere. He is attached to the section and knows every hill, spring, stream, and tree; and his attachment is strong for all these scenes and associations, and nothing you can do will persuade him to leave them. There is where he will remain despite any inducement of love or money. He will not sell his homestead even after the restrictions are removed unless the grafter comes around and induces him to do so, but that is not the kind of land the grafter is after; but if he should come around the Indian would probably sell; but they should not be removed. The point I make is that there should be discrimination, and that it should not be stipulated or declared that all full bloods are incompetent because some are incompetent, any more than all white men should be condemned as incompetent because of the manifest incompetence of some of them. Now, let us see about what they are worth—at the rate of \$4 an acre—they have 120 acres. Is that right?

The CHAIRMAN. Yes.
Mr. BULLETTE. And if it is one or two dollar land—and that is about the kind of land it is down in that country—that would give them about 60 acres for a homestead. Now, figure the amount of land a man and his wife and three or four children would have. Why, there are more than 250 acres that that family would have, and they would never sell any of it, for it is their homestead, the place of their birth and raising, and to which they are strongly attached. Now, it is simply nothing more nor less than an outrage to deprive him of the power to sell the piece of land he has up here in the country, out on the prairie—his surplus—land that he has no possible earthly use for, on which he will never live, which he will never improve, and never will derive any benefit from unless he sells it, even if he was able to do it.

The Cherokee people monopolized this whole country as public domain before the white people came in here, and yet during all the long years that they monopolized it they did not improve it and never derived any revenue from it, and there were many thousands and thousands of acres of it. That includes all this magnificent land, the best in the nation. This magnificent kingdom was public domain, and yet we did not utilize it, but kept our homes in the hills and let it all run to waste, as far as any profit realized from it was concerned. Now, are you going to restrict him from selling this land that he can't improve? Are you going to prevent him from selling this land that he can't use and take the money derived from it and apply it to the improvement of this homestead in the hills that he should improve and cultivate? If that is to be the policy of the Government, I don't think it is a consistent policy. If you are going to protect the individual, that is the way to do it. That is the only plan that will ever work out satisfactorily for the Indian and the country both. The only way is to take up some plan along the lines suggested by Mr. Hodge and carry it into effect.

I want to impress upon you Senators that the word "incompetent" has not always been explained perfectly by people who have appeared before you, and who apparently knew very well what the information was that you gentlemen wanted and the end you were trying to reach. I want to impress upon you that we are desirous of protecting every person who really needs protection, to the extent that he is worthy of protection. A person who is not competent to dispose of all his property as he sees best, is certainly not competent to retain more of it than is necessary for his absolute wants to keep him from poverty. More than that would be useless to such an individual, and he should not be protected in the possession of any more than that. We believe that every full blood, it is no matter how improvident or incompetent he is, should be protected; but we do protest that the mantle of protection should not be thrown about every full blood, because, forsooth, some are incompetent; but so far as the majority, who are competent, we protest that we should be allowed to do and transact our own business in our own way. No doubt if that is permitted many will make sad mistakes, for the wisest men make mistakes. Mistakes are unavoidable, and the man don't live, and never has or will live, that won't

make any. So remove the restrictions from us and let us be free to transact our business as a white man transacts his business.

The CHAIRMAN. Then I understand your view to be the same as Mr. Hodges's?

Mr. BULLETTE. Practically the same as far as the individual full blood is concerned; but, according to my idea of it, you have got to deal with each person individually.

The CHAIRMAN. That is, consider each individual case separate and apart from the others?

Mr. BULLETTE. That is my idea. You can not deal with sections or factions at all.

The CHAIRMAN. As I understood Mr. Hodges, that is exactly his view of it.

Mr. BULLETTE. Yes, sir; that is my idea. You have to deal with us one by one. We have passed the time when you can deal with us or protect us in a body.

The CHAIRMAN. Let me see if I get your idea. From what you have said I am not sure that I catch your idea. According to your idea the homestead of the full blood should be absolutely exempted from sale?

Mr. BULLETTE. Yes, sir; and in that connection I might use the word "indefinitely" exempted.

The CHAIRMAN. And your view is that so far as his surplus is concerned he should be allowed to go before some duly constituted authority, board, or tribunal and establish his competence and be allowed to sell, or conditionally to dispose of it, whichever you choose to call this authority, and on a showing of his competence be allowed to sell his surplus as he pleases. Is that your idea?

Mr. BULLETTE. Yes, sir; and let that tribunal or commission instruct some person to see that it is sold—to make the arrangements and submit them to the board, and after it is sold have that person instruct that Indian or consult with that Indian as to what disposition shall be made of the proceeds in improving his homestead; or better still, let that person—not the Indian—go ahead and make the permanent improvements on the homestead of the Indian, and what other improvements that are needed to improve his physical condition; for it is a sure thing that an improvement in a man's physical surroundings is always followed by a corresponding improvement in his moral and mental make up. Comfortable surroundings of a physical nature always tend to a better moral and mental standing, and I know of no better way to lift these Indians to a higher plane and a better way of life than that. It will preach with more force to them by its example than all the words that can be uttered.

The CHAIRMAN. That is all very well, as far as it goes, but it is a theory, for there might be many difficulties in the way of carrying out that plan, but let that go.

Mr. BULLETTE. It occurs to me that there would not be any particular difficulty in carrying that plan out.

The CHAIRMAN. What would you say in regard to the removal of restrictions from the half breeds or mixed bloods?

Mr. BULLETTE. There are some of the mixed bloods who need the protection of the Government in the matter of restrictions, but on the other hand there are a great many that do not need it and do not deserve it. They should be put on an equality with the white citizens of this country in all respects and made citizens in every respect; and if they are improvident and lose their substance that is their misfortune just as it is the misfortune of a white man to lose it. If they are improvident and wasteful, I believe they should not be protected, but that the very best thing that could be done for them would be to let them get away with what they have got, and then let them go to work. That is the only way that most of them will ever be made to do anything.

The CHAIRMAN. Then you make no distinction between the surplus and homestead of the mixed bloods?

Mr. BULLETTE. No, sir; I do not.

The CHAIRMAN. You put it all together?

Mr. BULLETTE. Yes, sir. It all goes in the same lot. Take the restrictions off all of it. If a man is a United States citizen and otherwise qualified, let him take his luck with the balance of United States citizens. I do not see what occasion or principle requires the Government to give him any more protection than any other United States citizen. I can't see how it would be any advantage to him to restrict him from selling his homestead any more than his surplus.

Senator TELLER. You say if he is a United States citizen he should share in the fortunes and treatment accorded to all citizens?

Mr. BULLETTE. Yes, sir.

Senator TELLER. The most ignorant full blood in the Territory is also a citizen of the United States?

Mr. BULLETTE. Yes, sir.

Senator TELLER. I will take this occasion to correct you about one thing. I never was convinced by any argument that ever was produced to me or from anything that I have seen that this allotment system was a wise thing for the Indians; and I never was convinced that it was a wise thing that the full-blood Indians were made citizens. I have always voted against it whenever I had an opportunity to vote. I have been opposed to it all the time and have always voted against it, no matter in what shape, form, or manner it came up. I have never knowingly voted for anything that had a tendency in the direction of conferring citizenship upon the Indians as a race. I believe, as you do, that while there were thousands of Indians that were capable of becoming citizens, there were many more thousands that were incapable of becoming citizens, and for that reason I have always been against the extension of the franchise to the Indians as a race.

Mr. BULLETTE. I do not remember that you acquiesced or consented to it, but I made that reference only from the fact that the policy of the Government has been carried out, and these treaties have been negotiated and acts of Congress passed that at last brought it about, and I assumed that you acquiesced.

Senator TELLER. Congress was unquestionably convinced at the time that act was passed that allotment and citizenship would be beneficial to the Indians; they also became convinced beyond question that by conferring citizenship on them they were conferring a favor. My contention was that when we did that we practically abandoned all control over the Indian only so far as the control over his lands was concerned, and we reserved the right to retain control over the disposition of his land in these treaties that were made.

Mr. BULLETTE. You will admit that the effect has been to make them citizens of the United States?

Senator TELLER. Yes; I am indeed sorry to say that I admit it. I think that was the very worst thing that ever was done for the Indian. I never had any other thought, and I always opposed it in every way in my power, and I will say further that neither on this trip nor on any other occasion since those laws were enacted and went into effect

have I seen anything that would cause me to change that opinion. Indeed I am more firmly of the opinion that I was right, and when I say that I mean the opinion that the worst calamity that has ever overtaken these Indians has been this one of citizenship and the consequent division of their estate into allotments to the individuals.

Mr. BULLETTE. That policy has been carried out and is being carried out, and you will admit that there are many of us who are as intelligent at least as the average white man, and fully as competent to carry on business as is a white man.

Senator TELLER. I have already admitted that, but unfortunately, in my opinion, there are many more who are not.

Mr. BULLETTE. That is our misfortune and we can not help it, but because some are poor and ignorant and incompetent I do not think it is fair to wrap all who have Indian blood in their veins in a blanket and adorn them with paint.

Senator TELLER. I am not doing that. I am ready to give every Indian credit for everything he possesses in the way of intelligence and educational accomplishments. I have expressly stated that there are thousands such. Understand me, I am ready to admit that every Indian citizen has just exactly the same right to control his property (and that includes his land) that I or any other citizen has. I believe as a matter of fact and law he should and does possess that right unrestricted and untrammelled, and I do not believe the Government can make any distinction. I believe that when the Government has once made, issued, and delivered these patents with certain restrictions in them the land has passed absolutely out from under the control of the Government, save only what is expressed in the patent, and that any other attempt at restriction will fall so far as it attempts to control the citizen. In other words, I believe that the land is still under our control, notwithstanding the fact that the people who hold it are citizens, the control being in the land and not in the citizen.

Mr. BULLETTE. Well, you will admit you are equal to the question of protecting the Indian if you see fit to pass such laws as you can pass for his protection?

Senator TELLER. I do not know about that, either. That remains to be seen.

Mr. BULLETTE. There must be some way of protecting the full-blood Indian who is deserving of protection.

Senator BRANDEGEE. Do you agree with the last witness, Mr. Brown, who averred that the education received by the young Indians has not availed to make them competent to manage their affairs?

Mr. BULLETTE. Well, there is such a difference—

Senator BRANDEGEE. Did you hear what he said on that matter?

Mr. BULLETTE. I do not know that I did.

Senator BRANDEGEE. He stated substantially that the education received by the young Indians was of such a character that it practically was of no value to them in the way of instilling ideas into their minds that would avail them in looking after their property. In other words, he stated that the education received by the younger generation of Indians rendered them no more capable of taking care of their affairs than their fathers had been before them.

Mr. BULLETTE. Well, I do not know about that. I know a great many educated people, whites as well as Indians, that are very incompetent in handling business affairs.

Senator BRANDEGEE. He stated it to be true as a whole. That it was the almost universal rule.

The CHAIRMAN. I understood his statement to be that the younger element were no more capable than were the Indians of forty or fifty years ago.

Senator BRANDEGEE. That is what he said. What do you say to that?

Mr. BULLETTE. I would not like to indorse that in its entirety. I think we have advanced some. It would be a sad thing indeed if we had not.

Senator BRANDEGEE. Then you think there has been some progress?

Mr. BULLETTE. I do; yes, sir.

Senator BRANDEGEE. To what extent?

Mr. BULLETTE. Well, I can not say; but there certainly has been some.

Senator BRANDEGEE. You think it has been slight?

Mr. BULLETTE. No, sir; I can not say that it has. Young men are proverbially improvident. That is a peculiarity of the white race as well as the Indian. Young men will sow wild oats; but many a man who is wild and improvident in his youth settles down into the staid and good business man. I have seen such—white and Indian both. I do not want to differ with Mr. Brown. We may both be right. He represents a different race of people from what I do. I can only speak in a general way and state what I know of my own section of the country. I believe in our section of country the more education and experience our young men have the better business workers they make; and I believe as they are educated they become more and more inclined not to indulge in bad habits, and they get more or less touched up with refinement or refined ideas in a great many ways.

Senator BRANDEGEE. I understand you to say that you favor the removal of all the restrictions on the whole class of mixed bloods, both as applied to their homesteads and surplus?

Mr. BULLETTE. Yes, sir; that is my idea of what ought to be done.

Senator BRANDEGEE. Would you remove the restrictions that exist upon the homesteads of the mixed bloods?

Mr. BULLETTE. That is my notion, that the whole thing should be removed. I do not know that I would insist upon it, but I do not know of any good reason why it should not be done. I am one of them myself, and since I am a citizen of the United States I do not know why I should enjoy any special favor or be subjected to any special restriction. I put it on that ground more than anything else, for I believe that all citizens ought to stand on the same footing and there should be no special favors or restrictions. That would apply also to the full bloods, but in their case there are special circumstances applying to many of them that take them out of the operation of the rule.

Senator BRANDEGEE. Then I understand you are in favor of removing the restrictions from the homestead as well as the surplus?

Mr. BULLETTE. Yes, sir.

Senator BRANDEGEE. Would you do that without any examination into the competency of the individual?

Mr. BULLETTE. No, sir; I do not think so. I would want an examination to be made of him.

Senator BRANDEGEE. Then you do not believe in the removal of these restrictions upon the mixed bloods as a whole without first having an examination held as to their capacity to transact their business?

Mr. BULLETTE. No, sir; not off their homestead without an examination as suggested by Mr. Hodge.

Senator BRANDEGEE. But you would remove it from their surplus without such examination?

Mr. BULLETTE. Yes, sir.

Senator BRANDEGEE. Then you would want an examination to be held as to the competency of the individuals when removing the restrictions off the surplus of the full blood and the homestead of the mixed blood?

Mr. BULLETTE. No, sir; I should insist upon the removal of the restrictions on the surplus of the mixed bloods without any examination and on their homesteads after examination, and the sale of the surplus of the full bloods after examination, and absolute restriction on the sale of the homestead. I make that distinction for this reason, that there is a wide difference in the condition of these people. Some of them live out in the country or in remote parts and hardly ever see a town, while others live in the towns and never hardly see the homestead. Many of them are in the towns and engaged in different lines of business, and they might use the money derived from the sale of their surplus lands in business, and so they might of the homestead, but the sale of the homestead is a more particular matter, and when a man makes application to do that I would make it the subject of a strict inquiry as to what he will do with the money from it. This applies to the mixed bloods. Now, I know what I am talking about. I have a boy. I don't suppose he will ever have any experience in farming. He is a stenographer. There is quite a number of our young people engaged in teaching school and as clerks in stores and one thing and another. They will never be farmers; have had no experience as farmers and don't desire to have, and I don't see any reason, if they wish to sell their homestead, why they should not be permitted to do so.

Senator BRANDEGEE. Your idea is that that should be done after an investigation by some tribunal or commission?

Mr. BULLETTE. Yes, sir; that is my notion. If it was done in any case it would have to be done in all. It might vex some people who feel they are as capable as anyone, but if it is done with one it would have to be done with all, and there are many that require it.

Senator BRANDEGEE. As to the full bloods, would you allow them to dispose of their surplus?

Mr. BULLETTE. Yes, sir.

Senator BRANDEGEE. As a class?

Mr. BULLETTE. Yes, sir.

Senator BRANDEGEE. Without any individual examination as to their competency?

Mr. BULLETTE. Yes, sir; I think so, if that would be thought best.

Senator BRANDEGEE. And as to the homesteads of the full bloods, what would you say?

Mr. BULLETTE. My notion would be to indefinitely restrict the sale of that.

Senator BRANDEGEE. And as to the intermarried whites; how about those?

Mr. BULLETTE. That is a matter you might ask me some questions about.

Senator BRANDEGEE. That is what I am doing.

Mr. BULLETTE. What do you want to know?

Senator BRANDEGEE. I asked you about your notion of restrictions on the intermarried whites. There are not restrictions on them now except as to their homesteads?

Mr. BULLETTE. No, sir.

Senator BRANDEGEE. How about the homestead of that class?

Mr. BULLETTE. I expect they ought to be turned loose like other white men.

Senator BRANDEGEE. You would turn them loose like other white men are?

Mr. BULLETTE. Yes, sir; let them go and do as they like. I do not know that the Government of the United States has any more right to protect them than it has the negroes, or the Swedes, or Germans, or French, or any other class or nationality.

Senator BRANDEGEE. I do not either. We agree on that point.

Mr. BULLETTE. I always understood that that idea of protecting the Indian originated from the fact that the United States by treaty stipulation is under treaty obligations to protect the Indian indefinitely. That is the idea these full bloods have of it, as you have heard here to-day; that it was a treaty obligation on the part of the United States to protect them in any trouble or danger indefinitely. I don't think that was ever the idea of the legislators of the United States, even if the treaties do state that they shall endure while grass grows and waters run. That is a figurative form of speech that Indians always insisted on being in treaties that were to extend to some time in the future, and I believe, it was so understood. Unforeseen and unpreventable difficulties might come up that would render it impossible of fulfillment.

The CHAIRMAN. You are a Delaware?

Mr. BULLETTE. Yes, sir.

The CHAIRMAN. I understand that the Delawares are a part of the citizenship of the Cherokee Nation?

Mr. BULLETTE. Yes, sir; and equal in every regard, both in respect to citizenship and property rights—that is, both political and property rights.

The CHAIRMAN. So in all respects you are on an equality, or your tribe is on an equality, with the Cherokees?

Mr. BULLETTE. Absolutely on the same footing.

The CHAIRMAN. How many Delawares have you?

Mr. BULLETTE. At the last census we had 1,150 of us.

The CHAIRMAN. Full bloods and mixed bloods?

Mr. BULLETTE. Yes, sir.

The CHAIRMAN. How many full bloods are there in your tribe?

Mr. BULLETTE. Very few full bloods.

Senator TELLER. You Delawares bought your rights in the Cherokee Nation?

Mr. BULLETTE. Yes, sir.

Senator TELLER. The Delawares bought their rights there?

Mr. BULLETTE. Yes, sir.

Senator TELLER. How long have you lived here in the Cherokee Nation?

Mr. BULLETTE. I came here to the Cherokee Nation in 1869.

Senator TELLER. Where from?

Mr. BULLETTE. From Kansas.

Senator LONG. What part of Kansas?

Mr. BULLETTE. From Wyandotte County. I am a Kansas man. It is a good country, too.

Senator LONG. You are right.

Mr. BULLETTE. Yes, sir; we will agree on that, Senator. They used to look upon us with a little suspicion, but I think they will get over that.

Senator LONG. You mean the Cherokees and other Indians looked upon your people with a little suspicion?

Mr. BULLETTE. Yes, sir; but they are getting over that.

Senator LONG. Do they look upon all Kansans with suspicion?

Mr. BULLETTE. With more or less suspicion. But, gentlemen, this is an awful problem for you to solve.

The CHAIRMAN. Unless there be other gentlemen who desire to be heard upon this question of the removal of restrictions we will now take a recess until 8 o'clock this evening, when we will be in session again and continue indefinitely, and we will devote that session to the further consideration of the oil and gas question.

The committee took a recess until 8 p. m., at which hour they reassembled.

Statement of Indian Rights Association.

INDIAN RIGHTS ASSOCIATION,

700 Provident Building, Philadelphia, March 25, 1908.

To the Members of the Senate and House of the United States:

We respectfully invite your attention to the pending bills (S. 5586; H. R. 15641) by which it is proposed to remove the restrictions from the alienation or incumbrance of certain lands in the State of Oklahoma allotted to members of the Five Civilized Tribes. The agreements under which a portion of the lands of the Five Civilized Tribes were allotted in severalty, and the balance opened to the white settlement, all contained provisions to the following effect:

"All the lands allotted shall be nontaxable while the title remain in the original allottees, but not to exceed twenty-one years from the date of the patent."

The agreements containing this provision were ratified and confirmed by Congress, and constitute an obligation of the Government of the United States which should remain inviolate. The policy of removing most of the restrictions heretofore imposed upon the alienation or incumbrance of lands allotted to the Indians may be unobjectionable in itself, but it ought not to be so applied as to involve the violation of national good faith. If, under the proposed legislation, an Indian should see fit to sell his allotted land, it would properly become subject to taxation in the hands of the purchaser, and if an Indian should see fit to incumber his land, it should properly be subject to taxation as long as the incumbrance lasts, the right to incumber being a new privilege, not granted under the agreements heretofore made; but section 4 of the McGuire and Clapp bills undertakes to subject to taxation all lands allotted to members of the Five Civilized Tribes, except the homesteads of those enrolled as having more than half Indian blood, even while such land remains unalienated and unincumbered in the possession of the allottees. This is a plain violation of the agreements above referred to.

This breach of national good faith would operate with peculiar hardship in the case of minors. If their lands are made subject to taxation, the greater portion of such lands will in all probability be sold for taxes, so that upon arriving at lawful age the minors will be without homes or lands, and the penalties and forfeitures for past-due taxes will be so great that they will not be able to redeem them and will be forced to sell their equity of redemption for practically nothing.

By removing restrictions from the lands of minors, in addition to other dangers to which they will be exposed, the probate courts will have authority upon application of the guardian to direct that these allotments be sold. It is well known that most of the guardians and curators of minor allottees are not the natural guardians; that they are usually not related to the minors in any manner, and have no interest in them further than to profit by securing the appointment as guardian or curator. The results under such conditions with other tribes show that minors' lands are being disposed of rapidly, indicating that the only safe arrangement is for the Federal Government to retain control of these lands. An investigation of the reports of guardians made to the courts that formerly had jurisdiction of these matters in Indian Territory, and to the probate courts of the State since statehood, will show conclusively that the minors are being charged for every conceivable service.

In Oklahoma a great deal of personal property is exempt from taxation, so that the burden falls largely upon the land, and if the scheme proposed in the McGuire and Clapp bills be carried out, Indian allotments will necessarily bear a very large share of the burden of taxation in that portion of the State which was recently the Indian Territory. In the case of allotments of minors, unimproved land, or land leased in consideration of improvements and returning no income to the owner, will almost certainly have to be sold for taxes.

It has been suggested that the State of Oklahoma can be trusted not to impose any taxation which would operate unfairly, but this suggestion overlooks the fact that under the constitution of the State the legislature can not exempt the property of any particular class of persons from taxation, nor legislate in regard to the estates of any particular class of minors.

Experience shows that where Indian lands are within the borders of a State the taxing authorities often seek to subject them to taxation without much regard to the legal rights of the Indians. An instance of this is seen in *United States v. Rickert* (188 U. S. 432), where a judgment of the Supreme Court of the United States was needed in order to defeat an attempt by Roberts County, S. Dak., to tax the permanent improvements on Indian lands and the personal property used in the cultivation of them.

The fact (if it be a fact, as it probably is) that the State of Oklahoma is in need of money may constitute a reason why the adult allottees, who are now citizens of the State, should waive some of their rights, but it can not possibly weigh against the obligations of agreements solemnly made by the United States, and, moreover, Oklahoma was admitted as a State upon the express condition that:

"The rights of the Indians shall not be impaired in any manner, nor the authority of the Government of the United States over their persons and property limited or affected by the constitution of the State."

When the State was admitted it was perfectly well known that Indian lands could not be taxed, and the State has no just right to demand that any modification of existing laws should be made in its favor and to the injury of the Indians.

The argument has been made that the Indians of the Five Civilized Tribes are intelligent, industrious, and saving, and are perfectly capable of bearing the burden of taxation. While this is undoubtedly true of a few of them, it is certainly not as yet true of the great majority; but even if it were true of all, their intelligence and industry could not constitute a reason for breaking faith with them.

For these reasons we urge that the bills be amended by the insertion of the words "of lawful age" after the word "allottees" in the fourth

line of the first section, and also by striking out the fourth section and substituting the following:

"The provisions of this act shall not apply to any lands allotted heretofore or hereafter to any minor until such minor shall attain the age of 21 years, and nothing in this act shall be held to repeal or impair any provision that allotted lands shall be nontaxable while the title remains in the original allottee, for any specified number of years from the date of the patent, in any case where such provision is found in any agreement heretofore made with any one or more of the Five Civilized Tribes and agreed to or confirmed by the Congress of the United States: *Provided, however,* That all lands encumbered by the allottees shall be subject to taxation as long as the incumbrance shall last."

We therefore ask you to use your influence against these bills; or, if it is impossible to accomplish their defeat, to endeavor to have them amended as indicated, so as to protect the rights of minors.

Respectfully,

INDIAN RIGHTS ASSOCIATION,
By CHARLES C. BINNEY, President.

Letter from Richard C. Adams.

FEBRUARY 26, 1908.

HON. PHILIP P. CAMPBELL,

Chairman of the Subcommittee on Indian Affairs:

Mr. Chairman and gentlemen of the committee, not having time to be heard before your committee yesterday, you promised to consider a letter I addressed you in reference to H. R. 15641 and other bills on the same subject then under consideration before your subcommittee.

I am a Delaware Indian and have represented my people here in Washington for the past ten years, and in their interest I desire to call your attention to certain parts of the bill now up for consideration.

I do not object to the removal of restrictions on the surplus allotments of all Indian lands in Oklahoma, nor do I object to the taxation of the homestead of those of less than one-half blood, but I do want the removal of restrictions to be the removal of restrictions in fact.

I heard a number of gentlemen claiming that it would be a great calamity to the Indians to place them on their own resources. In my opinion, the greatest calamity that has ever come to the Indians has been the fact that the Government denied to them this privilege and tried to teach them for more than one hundred years that they have no business trying to attend to their own affairs. If the Indian knows that he must depend upon himself and that the contracts he makes will be taken for what they stand for, you will not hear of such cases as were related to you yesterday, when one person will sell a tract of land seventeen times; neither will you hear so much of their selling their land for an inadequate consideration.

Since 1904 there has been a large amount of land in eastern Oklahoma sold, as has been stated yesterday, to speculators and others, but the very fact that this large amount of land has been sold has built up that part of Oklahoma and increased its population more than double.

There are many Indians to-day who have large bank accounts and are getting revenues from oil lands who a few years ago had scarcely nothing at all, and many of the Indians themselves have, with these revenues, bought other lands which were sold by the freedmen, and the greatest royalty they get to-day comes from the lands they lease free of restrictions and not encumbered by the rules and regulations of the Interior Department. Many millions of dollars have been brought into the State of Oklahoma already as the result of the removal of restrictions from the freedmen lands. There are smelters, cement works, oil refineries, glass factories, and numerous other permanent and lasting improvements, which could not have been erected had the restrictions not been removed from the freedmen lands.

No doubt you can find a number of cases where citizens of that country have mismanaged their affairs, but you can find the same proportionate amount of people right here in the District of Columbia who can boast of no better management.

I desire now to call your attention to certain parts of H. R. 15641. On page 1, line 11, after the word "their," the word "land" should be stricken out and the word "homestead" inserted. This probably is what was intended originally. I can not believe that it was for a review of the sales that were already made in accordance with the law. Certainly the freedom of our country will need no encouragement to do that anyway.

On page 2, section 2, after the words "restricted lands," in line 25, strike out "whether;" and on the next page, line 1, strike out the words "of adults or minors." This would make section 2 in harmony with section 6.

On page 4, line 2, after the words "Five Civilized Tribes," strike out "except as otherwise specifically provided by law;" and on line 10, after the word "tribes," insert "in cases where there are no duly qualified and acting guardian under authority of proper State or county courts." This would remove from the bill, as far as I am concerned and the people whom I represent, all the objections we have to it.

In support of these last amendments I wish to give you some of my own experiences as guardian of my children. I was appointed guardian of my children by the court on June 10, 1904. I leased their lands in the fall of that year and the most royalty I could get was 15 per cent. On each tract of land oil was found. The agent, under the rules of the Department, collected the royalty, deposited the money in national banks, and required me to get an order of the court to get the money out of the banks.

Up to October 11, 1906, I was compelled to get twenty-eight orders of the court to get the money from the banks or the hands of the Indian agent. These twenty-eight orders cost me from \$6 to \$10 each and the money would be kept out of my hands all the way from four to seven months. I was required by the court to earn at least 4 per cent on the money.

In September, 1906, I complained to the Department of the disadvantage this placed me under, and on October 11, 1906, the Secretary of the Interior waived the rules and regulations and allowed me to collect the royalties direct from the pipe line company. After this I sold the oil every Monday morning and received my checks every Thursday. The court gave me authority to invest the money to the best advantage of the wards at my own discretion. I invested the money in other oil lands and in most every case succeeded in getting a good tract. During that year I earned for my wards 229 per cent.

In October, 1907, the Secretary of the Interior rescinded his letter of October 11, 1906, and ordered the Indian agent to collect the royalties due my wards as he had previously done. I opposed this order and insisted that I was an officer of the court, and had the right to col-

lect the royalty direct, as that was the contract in the lease, which read as follows:

"In consideration of which the parties of the second part hereby agree and bind themselves, their successors and assigns, to pay or cause to be paid to the lessor, as royalty, the sum of 15 per cent of the value, on the leased premises, of all crude oil extracted from the said land."

The leases that were made in the last year read differently, as the royalty is to be paid to the Indian agent for the benefit of the lessor.

The Prairie Oil and Gas Company refused to turn the money over to me, and I brought suit against them. On February 18, 1908, the attorney of the Prairie Oil and Gas Company wrote a letter to Mr. Kelsey, copy of which I hand you herewith. It appears from this letter that the Indian Office has instructed the pipe line companies to decline to receive and pay for oil direct to the guardians. I can not understand why this should be, as the guardian at last must get the money. He can not get an accounting from the Indian agent except in a voucher which shows that so many barrels of oil were sold at so much money, and that 3 per cent was deducted for collecting the money. When the guardian gets an accounting from the pipe line company he gets a statement showing out of what tanks the oil was run; how many barrels were run; the date it was run, and the price it brings. In this way a guardian can keep his books straight; know that he is getting every cent that is coming to him, and is not charged anything for the collection of his money; is not kept out of the use of it, and can keep his accounts straight with the court. The accounting that the guardian gets from the Indian agent is nothing more than an abbreviated form of the statement of the account as rendered by the pipe line company to the Indian agent, so that there would seem to be no good reason why the accounting should not be made by the pipe line company to the guardian direct, and thereby save the Indian the delay and loss incident.

The lands that I bought for my children I leased without the supervision of the Interior Department, some for 25 per cent and some for 35 per cent royalty. This shows the advantage of making a lease free from the rules and regulations of the Interior Department.

I am, respectfully, yours,

RICHARD C. ADAMS.

FEBRUARY 18, 1908.

HON. DANA H. KELSEY,
Muskogee, Okla.

DEAR SIR: I hand you herewith a summons served upon our agent at Tulsa in an action instituted by Richard C. Adams, as guardian, against the Prairie Oil and Gas Company, for an accounting of the oil produced on the lands of his wards.

The company declined to pay Mr. Adams direct for reasons which you know. The only defense that we can make is that we are instructed by you to make payment for royalties through your office. If your department does not care to assume the defense of this action, I know of no reason why we should not permit Mr. Adams to take judgment against the company. This office would be very glad to have this question settled, as cases of this kind are continually occurring where we are compelled under instructions from your office to decline to receive and pay for oil direct to guardians. The situation is becoming somewhat embarrassing and should be settled once for all.

Very truly, yours,

Letter from council of the Creek Nation.

HON. JAMES S. SHERMAN,
Chairman Committee on Indian Affairs.

SIR: We beg to submit, through you, for the information of the committee, the following facts pertaining to the matter of the removal of restrictions from the lands of the citizens of the Muskogee (or Creek) Nation.

Certain bills have been presented to the present session of Congress which if enacted into law will directly affect the landed interests of a large portion of the citizenship of the Creek Nation, and, as their trusted representatives, it is but natural that we should feel a lively interest in their provisions, and we ask your kindly indulgence while we offer some thoughts on the subject.

The Creek people for many years had an organized constitutional form of government in that part of the country set apart by your Government to be the home of the Creeks as well as their neighboring tribes, enjoying the products of their farms though small in acreage, and with a resigned feeling of security and protection under their tribal laws and existing treaties. In course of time the people from the surrounding States forced themselves into the Creek Nation, who, by the terms of the treaties we had with the Government, thus became intruders subject to removal by the United States authorities from the limits of our country. The Creeks asked for the removal, according to treaty, of this fast-growing influx of intruders, and after some few abortive efforts in that direction, the Government in effect ceased its efforts and sent to us the Dawes Commission to negotiate with us for the abolishment of our government and individualization of our lands.

Your Commissioners declared that the Government could not protect the Creeks in the undisturbed occupancy and use of their lands and from the annoyance occasioned them by the lawless intrusion of citizens from the States so long as they continued to hold their land in common; but that if they shall individualize their lands they would then be in a proper condition to be protected, and the Government, instead of trying to protect the Creeks as a whole, would extend its protection to each individual citizen in the possession of his allotment. This it was declared was the only effective way of affording the relief prayed. The sacrifice required was so great that the Creeks were loath to yield it, but after many conferences, extending over some years, the Creek commissioners finally reluctantly gave in to the pressure thus brought to bear and acceded to the plans of the Government, congratulating themselves that with all these humiliating sacrifices they had at least secured permanency of ownership in the individual citizen of his allotment, and whatever else he may lose he would at least be secure in his home. In the light of what has been doing in the Creek country, however, for the last few years past, by those engaged in the practice of defrauding the Indians and freedmen of the Creek Nation of their lands, the Creeks have come to fear that they made a sad mistake; that the Government, too, must have been mistaken; that the plan for their protection is a failure, and that they are about to be left an easy prey to unscrupulous greed, spoliation, and rapine.

We feel very much that it would be just to our people to place upon record somewhere some authentic account of some of the nefarious

plans and methods pursued in the Creek Nation to defraud its citizens of their lands, as this would go to prove, when in after years a large number shall become landless and homeless vagrants, that they were not altogether to blame for their vagrancy. In pursuance of this line of thought permit us to mention some of these practices as they occur to us at the present time. Mixed bloods, freedmen, and others of our citizens holding valuable tracts of land were, in some cases, to all intents and purposes kidnapped and carried off to Kansas City, St. Louis, and other cities, away from the protective influences, friends, and kindred, feasted and entertained royally at places of amusement, and finally induced to sign away their holdings. Others were paid a few dollars with the promise that the balance would be paid when the title had been examined and found to be clear, but which promises were never fulfilled. Others still, through interpreters in collusion with the grafters, were induced to sign papers said to be leases of their allotments for a term of years for \$5 or \$10, which instruments afterwards proved to be warranty deeds. Old-fashioned barbecue and Indian dances were provided inside of an inclosed corral, the gates to which were guarded by interested parties and no one permitted to enter except such persons as the grafters desired to deal with and of whom warranty deeds were obtained. Indeed, the fact is notorious in that locality that a certain Indian was practically hog tied by the grafters or their agents, by which proceeding he was intimidated and coerced into signing a conveyance of his title to his allotment.

We have knowledge of one instance where, about six months ago, an old colored woman, a citizen of the Creek Nation, who had a very valuable allotment of land, was time and again approached by the grafters with offers to purchase her land. She resisted all overtures of the would-be purchasers for quite a long time, but after many rebuffs from the old woman a certain grafter adopted a new plan to induce her to sell her allotment. He obtained a small canvas bag such as is used by country stores to contain shot that is retailed to hunters. This he filled with nickels, dimes, and halves, and dollar pieces of silver, which in this receptacle showed up to the allottee as an immense fortune. As was expected, the scheme worked, and the buyer without even counting the money got the land. The bag of money when counted afterwards amounted to only a little over \$300. This amount was paid for land easily worth over \$2,000, and this transaction was enacted by one who lives and moves in what is regarded as good society in that neighborhood, and this is but one of many instances of the same character. Another method characterizing the fertile brain of the fraudulent dealer in land consists in obtaining from the official rolls of the Dawes Commission the names of allottees who own desirable lands, and if any of them prove by said rolls to be minors, their parents or guardians are approached and by persistent persuasion, and in some cases the free use of intoxicants, caused to execute affidavit that the minor is of age, when a deal for the allotment is at once consummated. In case any question as to the validity of the transaction is likely to arise, the affiant is threatened with imprisonment for perjury should he dare to correct his former statement and endanger the transaction. In this way the fraud remains an undisturbed cloud on numerous such titles in the Creek Nation.

The methods above indicated apply with equal effect on the full-blood, mixed-blood, and freedmen citizens, and the urgent need of the hour is some law or power that shall effectively protect our people from further like frauds. Only a few days since we learned that the Indian Bureau of this city was officially advised of action now being taken by the State courts in our country which amply justifies our apprehensions. Land dealers holding many fraudulent deeds to allotments for which they have paid ridiculously inadequate prices, ranging all the way from five to twenty-five dollars, but which in actual value are worth thousands, are applying to the State courts to quiet titles. The Indian allottee is cited to appear in court and show why these deeds may not be declared valid. In case of a full blood, he does not understand the full meaning and seriousness of the summons, and, failing to appear in court, the title under consideration is, by reason of default, declared by the courts to be valid and binding. Practically all the lawyers in our nation hold questionable deeds to Indian allotments. Some of them are large stockholders in land and trust companies, extensively engaged in the promiscuous buying, selling, and leasing of Indian lands. The interest of the lawyers thus being identically the same as that of the land grafter, it would be impossible for the Indian to employ the services of an attorney who is not prejudiced to the case of his client to appear in court to make the defense. It is very proper to assume the conclusion that no lawyer can direct the case of his client to an equitable adjustment, which, if so accomplished, would react and impair his interest in lands he illegally holds. Thus you see that ours is not a groundless fear, nor are our representations of them convulsive explosions of prejudice, but legitimate conclusions justified by the experiences and history of the past, and the activities already existent in our country. The Creeks have not forgotten their sad experience of a few generations ago in the States of Georgia and Alabama, their former homes, where were practiced almost identically the same things we see now occurring in the State of Oklahoma.

The old records will prove that the grafters of Oklahoma have adopted and are operating precisely the same methods of fraud in land deals with the Indians that were followed by the land grafters of the States above mentioned. We would very much prefer that jurisdiction in all cases involving property rights, both of adults and minors, lie in the Federal courts or some other tribunal of the United States, whose presiding head shall be an appointee of the President and not elected by the people of the State. We wish that until our full bloods and the others of our citizens for whom we speak shall have had sufficient experience and practical knowledge of the requirements of the new conditions surrounding them to fit them for intelligently caring for their own, they be exempted from the jurisdiction of the State courts, at least in cases where their landed interests are concerned.

Since arrival here we have learned that a strong effort is being made for the removal of restrictions from the allotments of mixed bloods and freedmen citizens of the Creek and other nations, including their homesteads. It is hardly necessary for us to say that we are not in sympathy with this movement.

The original freedmen, so called, were the former slaves of the Creeks, and along with their masters regarded land quite the same as they did the other cardinal elements of water, air, light, and sunshine, something spontaneous and ever existing, which has been beneficently provided by the Great Spirit for the free use and support of all His children, and not a thing on which a money valuation may be placed. A large percentage of them therefore possess no more adequate idea of the true value of an acre of land than many of our most inexperienced full-blood Indians, and we believe that to throw the bars

down now and subject them to the machinations of the unscrupulous land speculators in our country will simply mean in about a year's time a large pauper element in the State. Our lands and other property have been divided out among these people, and for forty years we have occupied the same country, living in peace and harmony, and we believe that they should be prevented for at least some reasonable period of time from frittering away the 40 acres allotted to them as homesteads, and we earnestly ask that this protection be thrown around them, which the Government did stipulate to do when we agreed to and accepted allotments.

We have to admit the fact that a mere infusion of white or other blood does not, in the case of the Creeks, always make wise and tactful business men of them, and we have therefore very many citizens who are more than half white blood, many of whom will in a few months lose their homesteads if the restrictions are removed, and we believe that the restrictions in these cases should be removed only when applied for by the allottees and the application is approved by the Secretary of the Interior.

We beg that the representations we make here be not regarded as merely perfunctory, not to be seriously considered, or which may be brushed away as the emanations of a weak sentimentality, for we are much in earnest about this matter, and hope you shall find your way clear to afford our people the coveted relief. You have set apart large tracts of country for the exclusive use and special preservation of the wild animals of the plains and forests. You have placed restrictions and watchmen on these vast reservations so that no man may appropriate them or put in operation any scheme to disturb the homes of these wild charges of the Government. Can not the great Government of the United States do as much for those classes of the Creeks for whom we speak? Once a great and noble people, friendly and hospitable to the visiting stranger, our race is run, our sun is set. You have no more great outlying West to which you may push us, as you formerly did, with the assurance that there we may live and prosper "as long as grass grows and water flows," and we beg of you to stamp out the practice of greed and avarice prevailing in our country until our citizens reach that advancement that will enable them with advantage to themselves to assume the full stature of American citizenship with all of its attendant advantages and responsibilities.

Respectfully,

MOTY TIGER,
Principal Chief Creek Nation.
G. W. GRAYSON,
SAMUEL J. HAYNES,
JOHNSON E. TIGER,
Creek Delegates.

Statement of attorneys for the Creek Nation.

[Memorandum on authority of Congress over Indian affairs, as provided for in Senate bill 5153 and House bill 16735, regulating Federal jurisdiction.]

The enabling act authorizing the admission of Oklahoma into the Union as a State contains a specific reservation in favor of the authority of Congress to legislate on matters pertaining to the affairs of the Five Civilized Tribes of Indians resident in the Territory to become a part of such State. In this reservation Congress must have had in contemplation a situation which would call for some additional legislation pertaining to these affairs.

This subject was first to receive the attention of Congress in drafting the act, section 1 thereof containing the following provision:

"That nothing contained in the said constitution shall be construed to limit or impair the rights of person or property pertaining to the Indians of said Territories (so long as such right shall remain unextinguished) or to limit or affect the authority of the Government of the United States to make any law or regulation respecting such Indians, their lands, property, or other rights by treaties, agreement, law, or otherwise, which it would have been competent to make if this act had never been passed."

This broad and comprehensive reservation of authority on the part of Congress is ample to authorize any action that Congress may deem it necessary to take to meet the exigencies of the situation in Oklahoma growing out of the duties and obligations of the Government to the Indian tribes and the property of all Indians over which the Government has retained any authority and concerning which it is necessary for it to perform any duty.

It was decided in an early day by Chief Justice Marshall, *Cherokee Nation v. State of Georgia* (5 Pet., 17), that neither an Indian nor an Indian tribe could go into the courts of the United States on their own account, and that they, being wards of the Government, must be represented by the Government in all judicial proceedings, and that the Government owed them the duty of its protecting care in all personal and property interests. The principles laid down by Chief Justice Marshall have been followed by the United States Supreme Court and the Federal courts in every instance in which a similar question has been presented.

The vast amount of new legislation pertaining to the affairs of Indians necessarily raises new questions to be determined by the courts relative to the duty of the Government to the Indian. A patent to his allotment, with legal restrictions on alienation, the conferring of citizenship upon him while under restrictions, the holding of his lands in severalty, his tribal relation and his citizenship, the status created by allotment in severalty, citizenship, tribal relation, and statehood, when these all exist together, the status arising upon the dissolution of tribal government as to those still under restrictions, etc., all present new phases, or at least new combinations, of the principles which have been announced by the court, and of course will lead to long-continued and disastrous litigation if Congress fails to make some specific declaration as to the jurisdiction and procedure in the Territory where these conditions exist; and this is true notwithstanding the numerous utterances of the courts upon some of the various phases of the questions that will necessarily arise.

The authority of the Government and the jurisdiction of the United States courts in general over Indian affairs has been presented in an exhaustive opinion by Justice Miller of the Supreme Court in the case of the *United States v. Kagana* (118 U. S., 375).

Among other things, the above opinion contains the following:

"But these Indians are within the geographical limits of the United States. The soil and the people within these limits are under the political control of the Government of the United States or of the States of the Union. There exists within the broad domain of sovereignty but these two. There may be cities, counties, and other organized bodies with limited legislative function, but they are all derived from or exist in subordination to one or the other of these. The Territorial govern-

ments owe all their power to the status of the United States conferring in them the powers which they exercise and which are liable to be withdrawn, modified, or repealed at any time by Congress. What authority the State governments may have to enact criminal laws for the Indians will be presently considered, but this power of Congress to organize Territorial governments and make laws for their inhabitants arises not so much from the clause in the Constitution in regard to disposing of and making rules and regulations concerning territory and other property of the United States as from the ownership of the country in which the Territories are, and right of exclusive sovereignty which must exist in the National Government and can be found nowhere else.

"Perhaps the best statement of their position is found in two opinions of this court by Marshall in the case of the *Cherokee Nation v. Georgia* (5 Pet., p. 1), and in the case of *Worcester v. Georgia* (6 Pet., p. 539).

"In the first of the above cases it was held that these tribes were neither States nor nations, had only some of the attributes of sovereignty, and could not be so far recognized in that capacity as to sustain a suit in the Supreme Court of the United States. In the second case it was said that they were not subject to the jurisdiction asserted over them by the State of Georgia, which, because they were within its limits, where they had been for ages, had attempted to extend her laws and the jurisdiction of her courts over them.

"In the opinions in these cases they are spoken of as 'wards of the nation,' 'pupils,' as local dependent communities. In this spirit the United States has conducted its relations to them from its organization to this time.

"These Indian tribes are the wards of the nation. They are communities dependent on the United States; dependent largely for their food; dependent for their political rights. They owe no allegiance to the States, and receive from them no protection. Because of the local ill feeling the people of the States where they are found are often their deadliest enemies. From their very weakness and helplessness, so largely due to the course of dealing of the Federal Government with them and the treaties in which it has been promised, there arises the duty of protection, and with it the power. This has always been recognized by the Executive and by Congress, and by this court whenever the question has arisen.

"The power of the General Government over these remnants of a race once powerful, now weak and diminished in numbers, is necessary to their protection, as well as to the safety of those among whom they dwell. It must exist in that Government, because it never has existed anywhere else, because the theater of its exercise is within the geographical limits of the United States, because it has never been denied, and because it alone can enforce its laws on all the tribes."

The above very lucid statement of the obligation of the Government in these matters and the relation of these people to the State and the Federal Government is as pregnant with truth at this time as when uttered by the distinguished jurist.

Analogous principles have been announced by the courts at various times.

"The duty and jurisdiction to exercise such control and wardship being so vested in the General Government, the manner of its exercise is purely a political question for determination by the political departments, and not within judicial cognizance.

"As long as the United States recognizes the national character of the Indians, they are under the protection of treaties and the laws of Congress, and their property is withdrawn from the operation of State laws.

"Necessity exists for extended Federal jurisdiction and control over Indian lands." (*U. S. v. Rickert*, 188 U. S., 533; 22 Cyc., 117; *Jones v. Meehan*, 175 U. S., 1; *Stephens v. Cherokee Nation*, 174 U. S., 445.)

The status of Indians after citizenship is conferred has received attention from the courts, and it has been held—

That the Government is not relieved from its duties of guardianship and protection of members of an Indian tribe assumed by treaty with such tribes in consequence of the Indians becoming citizens of the United States, and the fact that Indians to whom lands have been allotted in severalty are declared to be citizens of the United States does not render null and void as to them or as to the remaining portions of their tribes restrictions upon alienation of their lands contained in acts of Congress under which allotments in severalty have been made, nor terminate the right and duty of the United States to preserve the reservation lands for the use and benefit of the Indians. (*U. S. v. Mullin*, 71 Fed. Rep., 682.)

"Citizenship bestowed on the Indians is in no way inconsistent with the restrictions upon their title to their lands, and the leases obtained in the Flourney Company were utterly void." (*Beck v. Flourney Live Stock Co.*, 65 Fed. Rep., 30; 12 C. C. A., 497.)

"So long as the tribal organization is recognized by the National Government the fact that the habits and customs of the Indians have been changed by intercourse with the whites does not authorize the courts to disregard the tribal status." (5 Wall. U. S., 737; *U. S. v. Holliday*, 22 Cyc., 119.)

"They are not amenable to the laws of the Territory or State in which they reside; they are, however, subject to the plenary authority of the United States." (*Tuttle v. Moore*, 64 S. W., 585; *U. S. v. Choctaw Nation*, 193 U. S., 116; *Loanoke v. Hitchcock*, 187 U. S., 535; *Stephens v. Cherokee Nation*, 174 U. S., 445.)

It has also been held that an Indian tribe can not sue or be sued in the courts of the United States or in a State court, except where authority has been conferred by statute. (*Thebo v. Choctaw Nation*, 68 Fed. Rep., 372.) Also that the United States may as guardian of such Indians maintain an action in their behalf. (*U. S. v. Wianns*, 73 Fed. Rep., 72; *U. S. v. Boyd*, 68 Fed. Rep., 577; 22 Cyc., 121; *U. S. v. Boyd*, 83 Fed., 547; 27 C. C. A., 592.)

As said in the *United States v. Partello* (48 Fed., 667):

"The United States from the earliest organization of the National Government has assumed control over the several Indian tribes in the United States and has denied such control to the State governments.

"Also, Congress has full power to reserve in the enabling act authority over Indian tribes and property. Such reservation is with the consent of the people forming the State."

This subject was thoroughly considered in re *Kansas Indians* (5 Wall. U. S.), L. C., 755, 756, in which it is said:

"If under the control of Congress, from necessity there can be no divided authority. If they have outlived many things, they have not outlived the protection afforded by the Constitution, treaties, and laws of Congress. * * * There can be no question of State sovereignty in the case, as Kansas accepted her admission into the family of States on condition that the Indian rights should remain unimpaired and the General Government at liberty to make any regulation respecting them,

their lands, property, or other rights which it would have been competent to make if Kansas had not been admitted into the Union."

This language applies with equal force to the State of Oklahoma and her rights and prerogatives.

In *Stephens v. Cherokee Nation* (174 U. S., 446), Justice Harlan, after an exhaustive review of the authorities relating to the relative powers and rights of the General Government and those of the States in regard to Indian affairs, and in which he reiterates and approves the principles announced by Chief Justice Marshall in the case *Cherokee Nation v. Georgia*, above, and by Justice Miller in the *Kagama* case, above, uses the following language:

"Such being the position occupied by these tribes (and it has often been availed of to their advantage), and the power of Congress in the premises having the plenitude thus indicated, we are unable to perceive that the legislation in question is in contravention of the Constitution."

This decision was based upon legislation of Congress upon the subject of Indian affairs, the constitutionality of which was questioned on the theory that Congress was without power to enact it.

In *Wigman v. Conolly* (163 U. S. L. C., 62 and 63), the question of the superior power of the Federal Government over these matters again received the attention of the court in a case where the probate court of the State of Kansas, on application of a guardian for an Indian girl of about 7 years of age, had ordered the sale of her allotment at the price of 75 cents per acre. Not, however, basing the conclusion upon the injustice and inhumanity of that proceeding, the court does not fail to express its very earnest disapproval of the transaction, and in discussing the law bearing upon the case says:

"This treaty of 1867 introduced a new limitation upon the inalienability of lands patented to a minor allottee—that is, the limit of minority. And such limit must be applied to sales voluntary and involuntary and cut off the right of a guardian to dispose of the estate. The fact that the patent to this allottee had already been issued did not abridge the right of the United States to add with the consent of the tribe a new limitation to the power of the individual Indian in respect to alienation. The land and the allottee were still under the charge and care of the nation and the tribe, and they could agree for a still further protection—a protection which no individual was at liberty to challenge."

"It follows, therefore, that at the time of this assumed power of Esther Wilson to dispose of her realty such realty was inalienable, and a deed made by the guardian, though under the authority of the probate court of the county of the State in which the lands were situated, conveyed no title."

In all matters to which the judicial power of the United States is extended by the Constitution Congress may give the United States courts exclusive or concurrent jurisdiction, as it deems proper, and may change and modify the same at pleasure; and Congress may likewise provide for the transfer from a State court to a Federal court suits involving matters of Federal jurisdiction at any stage of the proceedings in such State court and even after judgment therein. And after once having relinquished its jurisdiction over a proper matter of Federal cognizance, Congress may reestablish the jurisdiction of the Federal court therefor. (*Ry. Co. v. Whitton*, 13 Wall., 271; *Martin v. Hunter*, 1 Wheat., 349; 5 Blatch., 343; *The Moses Taylor*, 4 Wall.)

Congress has power to legislate concerning the territory or property of the United States and over any subject under the control of the United States or concerning which the United States has any obligation. (U. S. Constitution, Art. IV, sec. 3; 8 Fed. Stat. Antd., 200, and authorities.) And this includes the jurisdiction of Congress over Indian reservations and Indian affairs after statehood. (9 Fed. Stat. Antd., 193, 197; *Stephens v. Cherokee Nation*, 174 U. S., 477.)

The unequal contest between the Indian under restrictions and the white man with whom he comes in contact in a business transaction is a matter of familiar knowledge, and the shameful injustice done the Indian under such circumstances, as a rule, makes imperative the duty of the Government to give him proper protection. This can only be done by comprehensive provision for adjudication of his rights in the Federal courts, where he may receive the aid of the officers of the Government, the only officers owing him (a ward of the nation) any duty under the law. To maintain restrictions upon his lands, thereby retaining a guardianship thereover, and at the same time surrendering the jurisdiction over this property to a sovereignty owing him no duty is wholly inconsistent and illogical; and the only way to prevent his interests being consumed in the confusion resulting from an obligation in one sovereignty and authority in another is to make unequivocal provision for the Government to exercise authority commensurate with its obligation to be invoked as the occasion may require. The jurisdiction of the Federal courts is extended by the Constitution to all matters in which the United States is a party, including, of course, all matters in which it has a duty or obligation. (Art. IV, sec. 3.) The power follows the duty (U. S. v. *Kagama*, above), and the facilities for executing the duty and the instrumentalities through which the duty is carried into effect should, in the nature of things, be made coextensive therewith.

Nor can it be claimed with any force whatever that this legislation is a discrimination against the State or people of Oklahoma. The subjects dealt with in this bill are of Federal cognizance and have been so regarded in the harmonious cooperation of the different departments of the Government in all acts affecting the same. If it can be said that the proposed legislation is a discrimination against the State of Oklahoma, then it can be said with equal force that the judiciary act of 1789, creating and fixing the jurisdiction of the Federal courts, was a discrimination against all the States.

That the jurisdiction of the General Government over this subject-matter is derived from the Constitution can no longer be questioned. This fact is firmly grounded in adjudication. And, even though it did not rest upon express authority of the Constitution, a right, exercised so long by a sovereign power, becomes prerogative and can not be denied by implication.

Congress has pursued a similar policy in other instances. Under act of August 15, 1894 (28 Stat. L., 305), the circuit courts of the United States were given exclusive jurisdiction in matters pertaining to the affairs of the Indians. That statute contains, among other things, the following provision:

"That all persons who are in whole or in part of Indian blood or descent who are entitled to an allotment of land under any law of Congress, or who claim to be so entitled to land under any allotment act or under any grant made by Congress, or who claim to have been unlawfully denied or excluded from any allotment or parcel of land to which they claim to be lawfully entitled by virtue of an act of Congress, may commence and prosecute or defend any action, suit, or proceedings in relation to their rights thereto in the proper circuit court

of the United States, and said circuit courts are hereby given jurisdiction to try and determine any action, suit, or proceedings arising within their respective jurisdictions involving the right of any person in whole or in part of Indian blood or descent to any allotment of land under any law or treaty."

This act specifically excluded from its operation the Five Civilized Tribes and the Quapaw Agency. This was doubtless done because it was inapplicable to their situation at that time. Under the act of February 6, 1901, the above statute was amended requiring that the United States be a party defendant in all suits brought under this act. This was deemed necessary because of the fact that the allotment to lands made under the same act reserved the right to the Government and made it its duty to act as trustee for the Indians for a period of years. Congress then deemed it wise for the United States, acting in that fiduciary capacity, to have the right to go into its own courts when any controversy was involved in which it represented the interest of the Indian, and even deemed it necessary, or proper at least, to give the United States courts exclusive jurisdiction of such controversy. No sound distinction can be taken between the duty of the Government as a trustee under such circumstances and when acting as guardian of restricted lands.

The Government has a duty to perform when acting in either capacity, and if there is any substantial difference between its duties as a trustee and as a guardian, the greater obligation goes with the guardianship because guardianship involves broader responsibilities, and therefore any power that the Government would have to protect a title which it held as trustee it would certainly have to protect title over which it was guardian and maintain restrictions. This law has received an exhaustive review from the Supreme Court of the United States in the recent case of *McKay v. Kalyton* (204 U. S., 458), in an opinion by Justice White in which the constitutionality of the act, the necessity of it, and the duty of the Government to protect in its own courts such interests as are involved when the title to Indian lands is at issue. This opinion also confirms the doctrine laid down in the *Cherokee* case by Justice Marshall, the *Kagama* case by Justice Miller, and the *Rickert* case by Justice Harlan, above referred to, and it also distinguishes the principles involved in such a controversy from that involved in the issue presented in the matter of *Heff*, in 197 U. S., p. —, holding that the decision in the *Heff* case was based upon the right of the State of Kansas to enforce police regulations only over an Indian citizen, and that that case was not in conflict with the uniform line of decisions in regard to the jurisdiction of the Government and the Federal courts over the property of a member of an Indian tribe which is not subject to alienation. These cases all discuss the question of the conflict between the States and the Federal Government and the prerogatives of the States, and all recognize the paramount authority of the General Government in matters under its control. Congress also reserved to the Federal courts in the State of New York, jurisdiction over the property, rents, and profits of the Seneca Indians, act of February 19, 1875 (1 Stat. L., 330), and many other instances might be cited in which similar legislation has been enacted.

Congress has reserved the right to legislate on subjects of this character in the enabling acts of all the States where Indian lands were located at the time of the admission and has exercised this reserved right whenever the occasion required it, and the authority to do so has never been questioned by any court.

The many fraudulent conveyances and contracts affecting lands of the Indians under restrictions placed upon them by Congress and the procedure resorted to to validate and enforce the same in the State courts of Oklahoma, with a result disastrous to the Indian, shows the necessity of this legislation.

The removal of causes from a Territorial court after admission into the Union as a State is always governed by the enabling act authorizing the admission and not by the provisions of the Federal judiciary act in relation to the removal of causes from a State to a United States court. This fact constitutes a strong reason why such enabling act should contain specific and comprehensive terms as to the right and procedure in such matters, as the court does not have the advantage of the precedent and adjudication based upon the general law applicable to the removal of causes.

Section 16 of the enabling act authorizing the admission of Oklahoma is defective in some particulars, as must be manifest to anyone who considers it. Its terms are not free from ambiguity and uncertainty, and the natural consequence to result from this will be tedious and expensive litigation. It is within the power of Congress to remedy any defects in this regard and it is in the interest of all persons, including the Government, who have substantial and legitimate interests to protect that Congress shall make a more explicit declaration of its intention in this regard.

Florida was admitted into the Union in 1845, no provision being made for the transfer of causes. In 1847 Congress enacted a law making provision for the transfer of all cases of Federal cognizance to the United States courts. (*Benner v. Porter*, 9 Howard, 235.)

Failure to make adequate provision in the enabling act for the transfer of causes under such circumstances may be corrected by a subsequent act of Congress, as has been done heretofore. (*Frieburn v. Smith*, 2 Wall., 160.)

The provisions in the proposed bill relative to this subject, especially as to the causes in which the United States is a party when suing in its representative capacity as guardian or for the use of any of the Indian tribes or for any of the Indians to protect their restricted lands, if enacted into law will prevent a vast amount of expensive litigation and great delays in determining conflicting rights, and such a result is, as a matter of course, to be desired, as a delay of justice is of the substance of a denial of justice.

An act of Congress approved May 28, 1830 (4 Stat. L., 411), applicable to the lands of the Five Civilized Tribes of Indians west of the Mississippi, contains, among other things, the following provisions:

"SEC. 3. And be it further enacted, That in the making of any such exchange or exchanges, it shall and may be lawful for the President solemnly to assure the tribe or nation with which the exchange is made that the United States will forever secure and guarantee to them, and their heirs or successors, the country so exchanged with them; and if they prefer it, that the United States will cause a patent or grant to be made and executed to them for the same: *Provided always*, That such lands shall revert to the United States, if the Indians become extinct or abandon the same."

"SEC. 6. And be it further enacted, That it shall and may be lawful for the President to cause such tribe or nation to be protected, at their new residence, against all interruption or disturbance from any other tribe or nation of Indians, or from any other person or persons whatever."

The trust created by this law, although observed by the Government and treated as obligatory on the part of the executive, legislative, and judicial departments for more than three-quarters of a century, has not been fully executed and can not be while a single restriction remains upon the lands of any Indians of said tribes and while a single tribal government exists among such Five Tribes.

The Government will hardly at this time abandon the forum in which, when necessary, it has asserted the protection of these people during all of this time.

Respectfully submitted.

M. L. MOTT,
Attorney for Creek Nation.
W. L. STURDEVANT,
Special Counsel in Creek Litigation.

[Subcommittee print. S. 4644, Sixtieth Congress, first session.]

In the Senate of the United States.

A bill for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. That all lands of adult allottees of the Five Civilized Tribes, who for over three years prior to the passage of this act have been actual nonresidents of the tribe or tribes upon whose lands he was allotted, shall be free from all restrictions. All lands, except homesteads of said allottees enrolled as mixed-blood Indians having half or more than half white blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having less than half white blood and all allotted lands of enrolled living full bloods shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act.

SEC. 2. That all land allotted to allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees for periods not exceeding five years without the privilege of renewal, except that oil, gas, or other mineral leases for any period of time, and other leases if made for more than five years, of any such restricted lands may be made with the approval of the Secretary of the Interior, and not otherwise.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes, approved by the Secretary of the Interior, shall be conclusive evidence as to the age and the quantum of Indian blood of any enrolled citizen or freedman of said tribes to determine questions arising under this act.

SEC. 3a. That all oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior, shall not be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgment of deeds, and the same shall be recorded in the county where the land is situated.

SEC. 4. That all land from which restrictions shall have been removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes. The land of allottees enrolled as freedmen shall be subject to taxation from and after sixty days from the passage of this act.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of incumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern judicial district of the State of Oklahoma as he may deem necessary to inquire into and investigate the conduct of guardians and curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian and curator or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardian and curator, said representative or representatives of the Secretary of the Interior shall have power, and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated, and to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records, and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian and curator for such minors, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That the homesteads of minors shall not be sold or encumbered by order of the court or otherwise until such minor arrives at the age of 21 years.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by substituting for the words "a United States Commissioner," at the end of said section, the words "a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions from the alienation of said allottee's lands: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of said estate.

SEC. 10. That the Secretary of the Interior be, and he hereby is, authorized to appoint a representative or representatives for the eastern district of the State of Oklahoma, as he may deem necessary, to approve leases, sales of land, and the removal of restrictions, subject to appeal to the Secretary of the Interior. Such representative is also authorized, under authority and direction of the Secretary of the Interior, to take all necessary steps to protect the lands of Indians upon which the restrictions are retained.

Mr. CARTER introduced the following bill (H. R. 19177), to wit:

A bill removing restrictions from certain lands in Oklahoma.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That on and after sixty days from the date of this act restrictions shall be removed from the alienation, lease, incumbrance, and taxation of all lands allotted, or to be allotted to the allottees of the Five Civilized Tribes in the State of Oklahoma, except as to the full-blood Indian's homestead; and that such full-blood Indian's homestead shall remain inalienable until December thirty-first, nineteen hundred and twenty-eight: *Provided*, That no person or corporation shall be permitted to acquire title to such lands as are subject to tillage and suitable for agricultural purposes in excess of one hundred and sixty acres.

Mr. CARTER. Mr. Chairman, I do not desire to discuss a question of a partisan nature, but I want to call attention to a bill which I have introduced in this House and to present reasons as best I can showing the justice and necessity of such legislation.

This bill provides for the removal of certain restrictions upon the alienation of Indian lands in Oklahoma, and it shall be my purpose to show to this committee that these restrictions have proven in the past a constant and successful barrier to the progress and development of our State, a menace to the civilization and advancement of the Indian and destructive of the very spirit of American liberty.

I do not rise for the purpose of criticising the acts of any man who has had to do with Indian affairs in the past. I have the highest regard for that able man who stands at the head of the House Committee on Indian Affairs, although I differ from him politically.

That mistakes have been made in handling the affairs of the Five Civilized Tribes in our State no one will dare gainsay. It is but human to err, and it is but natural that mistakes should have been made in settling conditions so anomalous as ours. So far as I am concerned, I am going to be generous enough to ascribe the cause of these mistakes to a misconception of the situation and to attribute such misunderstanding of the conditions to the dense and prolix complexities of the state of affairs with which these gentlemen were confronted.

I fully comprehend the many disadvantages that confront one in securing favorable consideration of a measure introduced by a minority Member. Without going into a discussion of the rules of the House, I will simply say that I understand it to be the policy of the majority to assume all responsibility for legislation, no matter which party is in power.

My remarks, however, should apply with equal force to a bill introduced by my colleague [Mr. McGUIRE], and I want to say just a word in regard to his bill. The McGuire bill is good

enough, so far as it goes, but, in my opinion, it falls short of the legislation needed in Oklahoma to-day.

This bill must not be regarded as embodying the exact ideas of the Oklahoma delegation. It smacks too much of paternalism for that. This measure should be regarded as representing the limit to which the Interior Department would agree to go at this time. It is the result of an agreement with that Department, gives a great measure of relief, and for these reasons I shall give it my unqualified support, in the hope that if my bill fails, then the removal of restrictions provided for by the McGuire bill will prove so satisfactory that there will be no objection to adopting the provisions of my bill at an early day.

PRESENT CONDITIONS.

Of one thing I am morally certain, and that is this: If the gentlemen on the floor of this House only had a thorough understanding of the conditions in Oklahoma, if they could only see these conditions in their true light and as they really exist, there would be no occasion for the presentation of my remarks to-day, for I feel sure you would pass the bill which I have presented without opposition and with very little comment.

As you all know, we have a new State out there. Our predicament was deplorable enough before our admission, but with the advent of statehood and the many burdens that come therewith, the conditions on the east side of that State, in what has heretofore been known as Indian Territory, will soon become almost intolerable.

All the lands in Indian Territory originally belonged to the Indians composing the Five Civilized Tribes and were inalienable and nontaxable. Indians, I say, Mr. Chairman. As a matter of fact, they are not real Indians, as you understand that term. A great majority of them are mixed-blood Indians, with a small degree of Indian blood. Others, white men who have intermarried into the tribe, and a great number—about 15,000, as I remember—are negroes, freedmen, former slaves of these tribes, who have had lands allotted to them, so that the actual Indian, the real full-blood Indian, only represents a very small minority of these people. But, getting back to the land question, I will say that there are about 20,000,000 acres of these lands, all inalienable and all nontaxable. To be more accurate: Restrictions have been removed on about 3,000,000 acres of these lands, leaving a residue not of 20,000,000, but of 17,000,000 acres on that side of the State, all nontaxable, and on which permanent improvements and home building are absolutely prevented, for the reason that title can not be made on account of these restrictions.

Such lands as have had restrictions removed are distributed over many of the counties on the east side, but I understand that in some of the counties no restrictions whatever have been removed. All of the land is inalienable and not one dollar in taxes can be realized from same.

The major portion of these lands have never been improved or put in cultivation, therefore produce no revenue whatever to anyone. Many of the Indians owning such lands have no funds with which to improve them, and the most inconsistent and ridiculous part of the whole system is that this very class of Indians, who are too poor to build improvements on their lands, are prevented from leasing these lands for a longer period than one year. Now, what I would like to have explained to me is how, in the name of common sense, such lands are ever to be made productive under the present system? The Indian without funds to improve his land is prevented from having it improved by leasing. So I think it can easily be understood how this very class of Indians which are incompetent must retrograde under the present law.

These conditions, of course, make our State a most undesirable abode for the man with a worthy ambition to build and own a home of his own.

Many of our best citizens have emigrated within the last eighteen months, pulled up bag and baggage, and left the State entirely. Why? For no other purpose than to seek a location where they can own a home and improve it.

Within the radius of the trade of my home town, Ardmore, I understand that 50,000 acres of land which had formerly been in cultivation lay out and produced no crops whatever last year. Every town and every commercial interest in our State has felt the baleful influence of these restrictions, and the Indian himself is the worst discommoded of all.

Our State is in its infancy. It is in the formative period, when it needs to draw upon every resource and every fiber at its command. We have no public, State, or county buildings on that side of the State. No court-houses, no jails, no school-houses, and no improved roads. As a matter of fact, outside of the towns you can not even acquire title on which to build schoolhouses under the present law. My bill will remedy all of these conditions completely, while that of my colleague will

ameliorate conditions, to a large extent, though not giving complete relief.

Now, mind you, Mr. Chairman, not a member of the Oklahoma delegation asks that the full-blood Indian be molested in his last home, but we do ask that such Indians as are civilized and competent be allowed to manage their own affairs without interference from the Federal Government, and that the progress of our State be not further retarded by such senseless restrictions on the acts of intelligent people.

HISTORY.

In order to thoroughly understand the unfairness and the creation of these unjust inhibitions on the rights of my civilized fellow-tribesmen, it will be necessary to go back a few years and recount briefly the history of these erstwhile wards of Uncle Sam.

By way of explanation, I wish to say that the word "civilized" in the term "Five Civilized Tribes" is by no means a hollow and meaningless expression. The Indians composing these tribes have been subjected to the beneficent influence of Anglo-Saxon civilization for centuries, by education, by religion, by intermarriage, and by all other means of direct association with the whites.

This very term, "Five Civilized Tribes," has been applied to these people for four generations, and for eighty years they have had regular constitutional forms of government, fashioned after the Government of the United States, by which they enacted a regular civilized code of laws, protecting their respective citizens in their property rights and punishing infractions of law and order.

Their school systems, operated entirely by the tribal governments, were the most liberal of modern times. They had what they called "neighborhood schools," similar to district schools in many of the States, and high schools with a regular prescribed curriculum, the completion of which merited and exacted a diploma. Not only were tuition and books provided without cost to the pupils or parents, but board, laundry, and medical treatment as well, and, in some schools, particularly the orphan schools, clothing and all other necessities were furnished at no direct expense whatever to the beneficiaries.

So that the Five Civilized Tribes have come to be, in deed and in fact, civilized. This is a bold assertion, Mr. Chairman, but I make it without fear of contradiction. I dare say there is as small a degree of illiteracy among some of these tribes to-day as among a similar number of people in the city of Boston, the very hub of civilization on this continent. [Applause.]

These Indians became dissatisfied with their environments during the early part of the last century and made application to their Great White Father, Andrew Jackson, for a change. This illustrious old patriot bade his children seek a new home in the wilds of the boundless West.

After searching about over the entire Western country it is no wonder that these children of nature chose the beautiful Indian Territory, with its richly productive soil, its mild, equable climate, its clear, running, crystal waters, and bountiful supply of wild game, where, as many of them thought, they would pursue their worship of nature so long as grass grew and water ran. But the Indian was quick to see the possibility of development in his country. He was early to see the advantage of raising cotton, corn, wheat, and live stock, rather than loitering in idleness and depending upon the uncertainty of the chase for a livelihood. So he invited his paleface brother to come in and assist in the development of what he called his "Land of the Fair God."

The white man came on horseback and in the prairie schooner at first. Then came his railroads and other modern means of transportation, and finally the palefaces swarmed in upon us from all sides, bringing with them their up-to-date agricultural, mining, and other machinery, their religion, their education, and their civilization, until finally the clouds of ignorance and superstition which once hovered over these people have been almost entirely dispelled, and this same Indian stands to-day in a great many instances as the very highest exponent of American civilization [applause] clamoring to have all disabilities removed from his rights and liberties and to be given full-fledged American citizenship. [Applause.]

Mr. CHANEY. Mr. Chairman—

The CHAIRMAN. Does the gentleman from Oklahoma [Mr. CARTER] yield to the gentleman from Indiana [Mr. CHANEY]?

Mr. CARTER. I do, with pleasure.

Mr. CHANEY. I would like to ask the question if there has been an opinion expressed on the bill the gentleman has introduced, by the Secretary of the Interior.

Mr. CARTER. He has agreed to the bill which has been introduced by my colleague.

Mr. CHANEY. Has he expressed an opinion in behalf of the gentleman's bill?

Mr. CARTER. He has not agreed to all the provisions of my bill.

Mr. CHANEY. I am very much interested in the gentleman's speech and interested, too, in seeing that these people have the largest possible liberty consistent with their protection; and does the gentleman tell the House that all the restrictions respecting the alienation of lands and all these matters relating to transactions between man and man could safely be removed, and that they would not be gobbled up by persons who would take advantage of them?

Mr. CARTER. No, sir; I do not pretend to tell the committee that all the full bloods are competent, but many of them are. I will come to that in a little while. My bill provides that the restrictions shall be removed from all lands except the full-blood Indian's homestead, but that his homestead shall remain inalienable for twenty years.

ATOKA AGREEMENT.

The Five Civilized Tribes had made such rapid strides in civilization in their new home, and their country had been developed and settled to such an extent that by the closing years of this same century it again became necessary to modify their conditions, so that beginning with the year 1898 certain agreements were entered into with these several tribes looking to a complete change of the Federal relation with these people. These agreements were negotiated by authorized tribal commissioners and a United States commission, commonly known as the Dawes Commission. They required the ratification of Congress and a majority of the popular vote of the tribe before they became effective. These agreements provided for a dissolution of the tribal governments within eight years, allotment of lands in severalty, and speedy settlement of all tribal affairs.

Among other things, certain restrictions were placed upon the alienation of Indian lands, the provision for such restrictions being practically the same in all of the different agreements. I will read the provision in what is known as the "Atoka agreement," made with the Choctaws and Chickasaws, which will suffice to reveal the intent of all:

All the lands allotted shall be nontaxable while the title remains in the original allottee, but not to exceed twenty-one years from date of patent, and each allottee shall select from his allotment a homestead of 160 acres, for which he shall have a separate patent, and which shall be alienable for twenty-one years from date of patent. The provision shall also apply to the Choctaw and Chickasaw freedman to the extent of his allotment. Selections for homesteads for minors to be made as provided herein in case of allotment, and the remainder of the lands allotted to said members shall be alienable for a price to be actually paid, and to include no former indebtedness or obligation, one-fourth of said remainder in one year, one-fourth in three years, and the balance of said alienable lands in five years from the date of patent.

That all contracts looking to the sale or incumbrance in any of the land of an allottee, except the sale hereinbefore provided, shall be null and void. No allottee shall lease his allotment, or any portion thereof, for a longer period than five years, and then without the privilege of renewal. Every lease which is not evidenced by writing, setting out specifically the terms thereof, or which is not recorded in the clerk's office of the United States court for the district in which the land is located, within three months after the date of its execution, shall be void and the purchaser or lessee shall acquire no rights whatever to an entry or holding thereunder, and no such lease or any sale shall be valid as against the allottee unless providing to him a reasonable compensation for the land sold or leased.

This provision is well enough, perhaps, for incompetent persons, but its application is every day proving a detriment to such civilized Indians as compose the majority of the Five Civilized Tribes.

The Atoka agreement was defeated at the first Choctaw-Chickasaw election, many of the more advanced members of the tribes opposing it on account of this very restriction provision. Another election was called, however, the importance of an early change in conditions urged, and this time the agreement was ratified by a small majority, in the main because it was thought the spirit of such agreement would be carried out, giving us a "speedy settlement of tribal affairs," and these matters of restrictions on land titles and taxation could be adjudicated prior to the advent of statehood.

Mr. BEALE of Pennsylvania. Will the gentleman allow an interruption?

Mr. CARTER. Certainly.

Mr. BEALE of Pennsylvania. In what way or by whom can these matters be determined as to whether they should have the privileges that you have said they should have?

Mr. CARTER. I do not believe I understand the gentleman's question.

Mr. BEALE of Pennsylvania. You say that under certain conditions they are to have the right of title. In one way you say it shall be done within five years and another within two years.

Mr. CARTER. I am coming to that in a minute. That law has all been changed.

Mr. BEALE of Pennsylvania. I beg the gentleman's pardon; I was only asking for information.

SUPPLEMENTAL AGREEMENT.

Mr. CARTER. Before the lapse of many years it was discovered that this Atoka agreement was inadequate and incompetent for the settlement of these affairs, and in 1902 another compact was entered into with the Choctaws and Chickasaws by the United States known as the "supplemental agreement." This supplemental agreement practically reiterated the restriction provision of the Atoka agreement, and the former procedure of enactment ensued. A strong fight was made against this agreement on account of this same restriction provision; but as it gave to these tribes an opportunity to have expunged from their rolls certain persons whom they claimed had no rights, and provided for a per capita payment of a part of the tribal funds, it was ratified at the election.

ACT OF APRIL 26, 1906.

The conditions under these two agreements were most deplorable, but not to be compared to what was yet to be handed out to us by the act of April 26, 1906. Under these two agreements the Secretary of the Interior had not been prevented from removing restrictions on the alienation of lands other than homestead allotments, whenever, in his opinion, the Indian was considered competent to manage his affairs. So that one of these Indians, who had now come to be a sovereign citizen of the United States, supposedly with all the rights, privileges, and immunities attaching thereto, could, by debasing his manhood and pride to a degree of abject servility, by admitting his inferiority to other men, supplicate and beg the right to eat the bread which he possessed, and which was justly his to do with as he pleased.

This last act referred to not only denied a part of these people this small modicum of liberty, not only prevented them from presenting their humble request for the pursuit of their happiness as they saw it, not only declared that they should not be allowed to present their modest petition to have such restrictions removed when they were competent, but placed the additional inhibition on many that they could not even lease their land without truckling to some departmental official.

Now, this is not said in any spirit of antipathy or disrespect to any departmental official. I have the highest regard for many of those people. They are not to blame. The officials of no Department are to blame for this. The system is wrong, the law is wrong, and Congress alone has power to change that law.

But says some facetious Member, "CARTER, you have no kick coming. You may have your restrictions removed. Make your application, and the Secretary of the Interior would not dare refuse to remove your restrictions."

That is true as to a part of my lands only. What I want gentlemen of this committee to understand is that I and each member of my family have 160 acres of land which no power under heaven's canopy can give us authority to alienate except this Congress.

The Indian is very much of a human being. He is subject to all the impulses and foibles of other intelligent people, and, like any other intelligent man, he resents the idea of having to ask any man's permission to do as he desires with his own property. He can see no reason why he should be called upon to submit his plans to any man in order to get supervision over what is justly his; so he hesitates to ask the Secretary of the Interior to remove any supposed restrictions there may be upon his liberties as an American citizen.

Out West, Mr. Chairman, money is scarce and interest very high. Many times in the past have the individual financial interest of business men of Indian blood suffered for the want of cheap money, which is almost always available on such real estate security as this, and which they could easily have obtained but for the imposition of these restrictions. No man may attempt to prophesy what the vicissitudes of life will bring. We may even undergo greater privations in the future than in the past. We may even see the savings of a lifetime swept away for the want of a few dollars which could be obtained in this way; but it matters not what may transpire, let the very worst come to the worst, I for one shall never bend the knee to mortal man for any financial consideration. [Prolonged applause.] And the majority of them feel just as I do, sir.

Now, Mr. Chairman, do not misunderstand me. I know that we have grafters out there. I know that we have a few Indians who are incompetent, and I would not leave the last home of the full-blood Indian to the pitiless mercy of unscrupulous grafters. Far be it from that. No man has a more profound

sympathy for these plain, artless people than I. No Member on the floor of this House feels more keenly his responsibility to them than I. Why? They elected me to Congress. But for the Indian vote I might not be a Member of this honorable body to-day, and they elected me upon the very platform that is embodied in my bill—removal of all restrictions upon the alienation of Indian lands, except the full-blood Indian's homestead. [Applause.]

Mr. CHANEY. Will the gentleman yield for a question?

Mr. CARTER. Yes.

Mr. CHANEY. I beg to ask the gentleman what his bill does more than the bill which has had the recommendation or assent of the Secretary of the Interior?

Mr. CARTER. The bill of my colleague [Mr. McGUIRE] provides for the removal of restrictions on all people not of Indian blood; upon all people whose quantum of Indian blood is less than one-half; upon the surplus lands of all people whose quantum of Indian blood is one-half or more; but it does not touch the full-blood Indian's surplus, while my bill provides for the removal of all restrictions, except upon the full-blood Indian's homestead.

Mr. FLOYD. Will the gentleman yield to me for a statement right in that connection?

Mr. CARTER. Yes; with pleasure.

Mr. FLOYD. As the gentleman is aware, I spent about two weeks in the Indian Territory last summer.

Mr. CARTER. I well recall that fact, and I think we were much benefited by the visit of the distinguished gentleman from Arkansas.

Mr. FLOYD. I want to call the attention of the House to two or three cases that were given to me by a prominent lawyer of Pryor Creek. One was the case of a young lady who was a graduate of two literary institutions and also of the Conservatory of Music at Chicago. She could not dispose of her lands on account of this provision. Another case was one that appeals to the sympathy of every man, and that was this: A lady had three children; they were full bloods, and she had an allotment for herself and three children. This attorney told me that the land allotted to her was worth \$50 an acre. She could not lease it on account of the restriction forbidding leasing. She could not sell it. She submitted a letter to her attorney, asking why it was that, with so much land, worth so much money, they could not get bread. The woman had to beg bread because the regulations prohibited her from selling her land or leasing it for more than one year to anybody. Nobody would undertake to go on and clear up those rich bottom lands, clear them of timber, and put them in cultivation on a one-year contract or an illegal contract.

This shows the far-reaching effect of these restriction laws. The first case mentioned restricts an Indian of the highest degree of education and intelligence, who is as capable of managing her affairs as any other person. The second restricts a small ignorant class rich in lands and values, and by so doing keeps them in a condition of absolute poverty and want. The law is equally detrimental to both classes.

Mr. CARTER. That is true, and there are numerous instances of this kind. College graduates with one thirty-second Indian blood are subjected to these restrictions, and I know of a number of poor full-blood Indians who are incarcerated in the jails to-day in Oklahoma for minor offenses unable to make bond, yet owning an abundance of land which can not be hypothecated even at the price of their freedom. This restriction law respects neither intelligence nor want, and its wide scope reaches from the most intelligent mixed blood and white man, who resents dictation, to the helpless full blood impoverished by its application.

Mr. THOMAS of North Carolina. Will the gentleman yield?

Mr. CARTER. I will, with great pleasure.

Mr. THOMAS of North Carolina. How many acres did the gentleman say was allotted and could not be disposed of?

Mr. CARTER. All of it is restricted by a later act, which I will get to very soon.

Mr. THOMAS of North Carolina. I thought the gentleman said he had a certain number of acres himself that he could not sell.

Mr. CARTER. I will explain that fully in just a moment.

Mr. THOMAS of North Carolina. I thought I caught a statement from the gentleman of the number of acres.

Mr. FULTON. I think I can explain that.

Mr. CARTER. I expected to explain that later in my remarks, but I yield to my colleague.

Mr. FULTON. I was simply going to say that the gentleman from Oklahoma [Mr. CARTER] said that he could have the restrictions removed on his surplus lands, consisting of 160 acres, by applying to the Secretary of the Interior, but his home-

stead of 160 acres he could not sell in any manner any more than a full blood.

Mr. CARTER. The people of Oklahoma are not antagonistic to the Indian. They have been the recipient of many favors at the hands of the Indian people, and they are appreciative of the fact. They are the neighbors and friends of the Indians, and they themselves would be the loudest in their protests if the incompetent full bloods were left unprotected. If a full-blood Indian or any other person becomes homeless, he becomes a pauper and thereby incurs an undesirable expense for his subsistence, not upon the Federal Government, but upon the State in which he resides. So, Mr. Chairman, I do not think you need to have any fear of that score. The people of Oklahoma do not want the restrictions of any incompetent men removed.

Mr. BEALE of Pennsylvania. Will the gentleman yield for a question?

Mr. CARTER. I have only a limited time, and am attempting to make a conservative argument, but will gladly yield when my remarks are concluded, if I have any time left. The majority of the Indians composing the Five Civilized Tribes can no longer be considered a savage and uncivilized people. They are civilized. They are enlightened. They are educated to a high degree, and I dare say that the stranger in Oklahoma to-day would find great difficulty in distinguishing the mixed-blood Indian from the white man, as a rule. So we believe the time has certainly come when we must distinguish between the competent and the incompetent Indian, just as we do between such classes in all other nationalities.

FULL BLOODS.

Now, Mr. Chairman, the full-blooded Indian is in reality the only real ward of the Federal Government, and my bill gives him ample protection. It provides that he may not sell his homestead allotment for twenty years, but that he may sell his surplus land and thereby procure funds with which to improve his homestead.

Under the provisions of my bill the Indian will receive a two-fold benefit. In the first place, he will receive money with which to improve his homestead and make it productive. In the second place, when his surplus lands are sold, they will be sold to some home builder who will immediately begin the erection of his home and put his land in a high state of cultivation.

This land will lie adjacent to some full-blood Indian's homestead, and as this land is improved and put in a higher state of cultivation, just in that proportion will the full-blood Indian's homestead be increased in value, so that within a few years the full-blood Indian's homestead will be worth more than his entire allotment is to-day. This I believe to be the best protection ever offered to the full-blood Indian, for the reason that it gives him actual aid and assistance, while the present law simply strains at a purpose it fails to accomplish. It intimidates and prevents the honest home seeker from entering the market and paying a legitimate price for these lands, at the same time failing to prohibit the unscrupulous adventurer from getting possession of such lands and clouding the title to same for a merely nominal consideration.

Here is a point I want this committee to catch: The Indian in his primitive state was noted for an unwavering fidelity to his obligations. I can remember during my lifetime when an Indian's word was considered as good as his bond, but not so now. This system tends to destroy this, the most commendable feature of pristine Indian character, by plainly saying to the Indian, "Go sell your land and give a deed to it, then make application to have your act set aside, to be repossessed of your property, and upon the grounds of your incompetency we will sustain you in your dishonest contentions." Did you ever hear of such teaching to a simple, unsophisticated ward by its guardian? The Indian may be a little slow to get next to the white man's virtues, but he has abundant wit to catch on to his vices. [Laughter.]

Even the most ignorant full-blood Indian is by no means benefited by these restrictions. Much of the land allotted to the full-blood Indian is unimproved. These Indians, as a rule, are poor and have no funds with which to improve their lands. If they could only lease their lands, they might have them improved in that way, so that in a few years they would provide some kind of an income. Or, better still, if they could only sell their surplus lands the proceeds of such sale might be applied to permanent improvements on their homestead, and I would not object to having my bill amended to that extent.

But, Mr. Chairman, there is one fundamental fact which we must not overlook in dealing with this proposition, and that is this: These Indians of the Five Civilized Tribes do not own

their lands by the good graces of the Federal Government. They bought these lands and paid for them. These lands were accepted by them in lieu of much more valuable lands relinquished in the old Southern States. They had a fee-simple title to these lands for generations before allotment. The only reservation in the deed being that of escheat, which I presume would have operated without such provision in the deed. We have no moral right to prevent these people from using their property to the best advantage.

POVERTY.

The Choctaws and Chickasaws are reputed to be one of the wealthiest classes of people on the face of the earth, yet to-day, with all their boasted wealth, with all this glorious paternal supervision, many of the ignorant full-bloods among them can barely keep the wolf of starvation from the door, when, as a matter of fact, they are rich—but how? Rich in lands and moneys held out of their reach by the Federal Government.

"What profiteth a man if he owns the earth and yet starves to death?"

I tell you, Mr. Chairman, it is a crime to longer keep these people under such bondage. Many of them are growing old and will soon pass away; doubtless their condition of penury will hasten death. Then, in the name of humanity, nay, I will not make hypercritical appeals to your sentiment, but appeal to your fairness instead. In the name of that spirit of fairness which rests deep down in the bosom of every true-born American, let us see to it that these poor people are given an opportunity to enjoy the possession of some of their just rights before that dreaded reaper takes them to the great beyond. [Applause.]

TAXATION.

You have exempted the Indian's land from taxation, when the most casual glance into history will disclose the fact that it has always proven a mistake to exempt any certain class of people from taxation. It is a greater injustice to those exempted from this burden than it is to those burdened by such exemption.

History will show that such injustice as this has often led to cruel and wanton bloodshed. Whenever attempts have been made to exempt any certain class from taxation a prejudice has invariably sprung up against the exempted class by those who had to bear the burden, and this prejudice has been known to exist for years after the cause has been removed.

The only prejudice existing to-day against the Indian in Oklahoma is due to the fact that he will not contribute his part to ward the support of the State. This prejudice is at present in its incipency. As taxes become due and demands are made for payment it will grow and gather force, finally to the utter excommunication of the Indian politically, socially, and commercially.

To say the most of it, ownership of this world's goods is but transient and fleeting, while this prejudice would, I am sure, be permanent and enduring.

I had much rather have my child grow up moderate in means, yet efficiently educated and rich in the love and esteem of its neighbors, than that it should attain its majority lavish in wealth, but banished from its consorts into a small minority, to be scorned and despised, for a just cause, by its equals. [Prolonged applause.]

The Indian who has seriously considered this matter will have no word of protest against having his lands taxed. He must realize that this demand for an equalization of supporting the burden of the State is a just one, and for that reason can not be permanently withstood.

He would be short-sighted, indeed, if, simply for the purpose of saving a few paltry dollars taxation, he would allow a condition to exist which would create a prejudice not only detrimental to his own interests, but which would prove a menace to his children and his children's children.

The Indian expects all the burdens and benefits that come with your American citizenship. He will not object to paying his taxes if you will only make of him a citizen in fact as well as in name and eradicate these restrictions from his liberties.

The Indian believes, no matter what his political faith may be, in that eternal principle, "Equal rights to all and special privileges to none." And should stand firmly upon the proposition that "the man who is unwilling to bear his just share of the burden of supporting his Government is unworthy to live under and enjoy the blessings of a great Government like ours." [Applause.]

PURPOSE OF INDIAN OFFICE.

Undoubtedly the purpose of the establishment of the Indian Bureau in the Interior Department was to eventually make of the Indian an independent and self-reliant citizen, and to this

end I take it has the Indian Office ever labored, educating and instructing the Indian in literature, in agriculture, and in all the different branches that go to make our cosmopolitan American citizenship.

This paternalistic attitude is well enough for the full-blood Indian, who, as stated before, is the only real ward of the Government, but when an Indian or any other person reaches the point of intelligence at which he is competent to think and act for himself any further attempt to supply the demands of his life or stand sponsor for his acts simply stimulates the indolence in the nature of that individual and destroys such independent and initiative character as you have been able to construct.

The intelligent mixed-blood Indians of our tribes have unmistakably attained the object of Federal supervision, to wit—intelligent, self-reliant citizenship. What such educated Indians as these need is to be let alone. Let the Federal Government loosen its hold. Remove their restrictions; make them free; give them a show, and I guarantee they will make good as American citizens.

KICKING KICKAPOOS.

The Kickapoo land frauds recently unearthed have been cited and exploited as an argument against the removal of restrictions for the Five Civilized Tribes. Such acts of loot and plunder as seem to have been committed on these poor, ignorant people are most reprehensible and warrant rigid punishment under the law; but the argument that this circumstance is any reason for the retention of restrictions on the lands of intelligent Indians is the sheerest kind of sophistry.

These Kickapoos are Indians of the very lowest degree of civilization and mentality, uneducated, and almost savage in instinct. They sold their lands to move to Mexico, and the very fact that they wanted to leave a great country like this and go to Mexico or any other place ought to have been sufficient notice that the Kicking Kickapoos were incompetent.

But seriously and in fairness these people can no more be compared with the educated mixed-breed Choctaw, for instance, simply because they are both of American Indian stock, than can the most ignorant, dog-eating Igorot be compared to the shrewd, aggressive Jap because they are both of Asiatic-Malay origin.

To sum up briefly, I said I believe the imposition of these restrictions, according to existing laws, bad for the Indian, bad for the State of Oklahoma, and contrary to the spirit of American liberty. It is bad for the mixed-breed Indian, because it hampers the independence of an intelligent man; prevents him from using his property to the best advantage; teaches him to lean upon another; teaches him to be a tax dodger, and destroys his self-reliance, which we will all agree is the most potent element contributing to the composition of untrammelled American manhood. It is bad for the uneducated full blood, because it strains at a goal it has failed to reach; teaches him duplicity and knavery, which crimes he is not given to in his primitive state; denies him the funds with which to improve his lands, and cheapens the price of his lands by limiting the market to adventurous purchasers only.

It is bad for the State of Oklahoma, because during the embryonic period of this young Commonwealth it takes from its tax sheets almost one-half of the lands, prevents legitimate dealing in land, prevents permanent improvements on lands, prevents home building, and builds up a system of tenantry the like of which American civilization has never seen before. It is contrary to the spirit of American liberty, because it places restrictions on the rights and acts of competent and intelligent people, sovereign citizens of the United States, who are not charged with the commission of any offense whatever against either law or morals.

Not being versed in the law, it would be presumptive in me to attempt to discuss the legality or constitutionality of this question before this body of eminent lawyers. I do, however, ask the indulgence of the committee in calling to its attention certain Supreme Court decisions which I believe affect, vitally, this question.

In the case of *The Cherokee Nation v. The State of Georgia* (5 Peters, p. 1) Chief Justice Marshall delivered an opinion which I understand to be the first legal definition of the term "Indian tribes." Mr. Marshall stated, in substance:

Indian tribes are not foreign states, but must be regarded as domestic, dependent aliens.

This Supreme Court decision is reenforced by numerous other opinions, some of which are *Jones v. Mehan* (175 U. S., p. 1), *Eastern Band of Cherokees v. United States* (112 U. S., p. 288).

If these tribes are domestic, dependent aliens, it would naturally follow that each constituent element thereof is a domestic, dependent alien. But United States citizenship was conferred on all members of the Five Civilized Tribes by the act of March

2, 1901. Now, it seems to me that the term "dependent alien" is absolutely incompatible with United States citizenship, therefore restrictions might be maintained upon the liberties of Indians who are domestic, dependent aliens, but not upon United States citizens, and in view of these citations, it seems to me a very close question if such restrictions can really be legally and constitutionally maintained.

But that matters not, granting for the sake of argument that such provision should be upheld by the court. Grant that this provision may not be a technical legal violation of the Federal Constitution. Nevertheless, I believe that to restrict an intelligent man in such a manner as this is morally violative of the spirit of that provision of the Constitution which guarantees life, liberty, and pursuit of happiness.

If I am a sovereign citizen of the United States, of sound mind, and competent to manage my own affairs, you have no more moral right to single me out and place specific restrictions on the disposition I shall make of my effects on account of my Indian blood than you have to restrict an Irishman in the wearing of the green on St. Patrick's Day on account of his Irish blood, and I do not think this House would want to attempt to regulate that—not the New York City Members, anyway. [Laughter.]

In conclusion, I want to say, if you will remove these restrictions, if you will give Oklahoma an equal start with all the other States at the time of their admission, we will give you a sample of progress of which the parent Government may well feel proud. Our country will be filled with home seekers, worthy constituents of many of these gentlemen, who will build homes and convert the rich virgin soil into blossoming fields of grain and cotton.

The worthy pioneer will then have an opportunity to realize the ambition of his life. Consider for a moment the American pioneer. Consider this sturdy, stout-hearted yeoman who has helped to develop this country and make it fit to live in; who has taken his life in his hands, as it were, and hewn from the great primeval forests of the West his modest home far in advance of law and order, thereby making possible the existence of all the great States west of the Alleghenies and contributing to the magnitude and grandeur of this stately Republic. [Applause.]

Is not this worthy citizen entitled to some consideration at the hands of the Government he has helped to build and make great? Why, think you, has this sturdy citizen braved all the dangers of frontier life? Why has he undergone all the privations of the early settler? For the just and righteous purpose that he and his beloved little family might secure some hearth and fireside, humble though it be, that they could call home. [Applause.] If you remove these restrictions you do no less than justice by all, yet you grant to this steadfast citizen a life which will have a new meaning. He will move from the humble hut where he has been forced to live and pay rent in the past and begin the erection of a new home, all his own, paying tribute to none save his country and Almighty God. [Loud applause.]

It shall be our utmost endeavor and highest ambition to give to the parent Government an example of unalloyed devotion and loyalty; if in the troublous times of war it should become necessary to call for good men, brave and true, to battle for the rights of this great Republic, you will find that no State in this Union will respond more willingly than the infant State of Oklahoma. [Loud applause.] None shall be permitted to rally around the Old Glory more graciously and more patriotically than the sons of the Indians, "Land of the Fair God;" and in the piping times of peace we will endeavor to contribute to the National Congress honest, patriotic Members always, who will dare to do the right as they see it no matter what their political faith may be. [Loud general applause.]

Mr. BEALE of Pennsylvania. I would ask what it is that the gentleman would have and that they think they require for Oklahoma?

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. CARTER. Mr. Chairman, I thank the committee for its considerate attention.

Mr. BEALE of Pennsylvania. Then I will state, if I have the time, that if there is anything this House could do for Oklahoma, I am sure it will do it after the statements that have been presented by the gentleman from Oklahoma. [Applause.]

[H. R. 15641, Sixtieth Congress, first session. Report No. 1454.] In the House of Representatives, January 29, 1908. Mr. McGUIRE introduced the following bill, which was referred to the Committee on Indian Affairs and ordered to be printed.

April 6 (calendar day, April 16), 1908, reported with amendments, committed to the Committee of the Whole House on the state of the Union, and ordered to be printed.

[Omit the parts in brackets and insert the part printed in italics.]

A bill for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions, but all sales or incumbrance of their lands prior to March 1, 1909, shall be void unless the adequacy of the consideration and the fact of its actual payment or proper security therefor be approved by the Secretary of the Interior. All lands, including homesteads, of said allottees enrolled as less than half Indian blood shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood and all allotted lands of enrolled living full-bloods shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance [until] prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act: *Provided, That these lands shall not be subjected or held liable to any form of personal claim or demand against the allottees arising or existing prior to the passage of this act.*

SEC. 2. That all land allotted to adult allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees, or in the case of minors as provided in section 6 hereof, for periods not exceeding five years without the privilege of renewal, except that oil, gas, or other mineral leases for any period of time, and other leases of adults if made for more than five years, of any such restricted lands, [whether of adults or of minors,] may be made with the approval of the Secretary of the Interior and not otherwise.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior [and the enrollment records connected therewith] shall be conclusive evidence as to the age and the quantum of Indian blood of any enrolled citizen or freedman of said tribes to determine questions arising under this act.

SEC. 3a. That all oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall not be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgement of deeds, and the same shall be recorded in the county where the land is situate.*

SEC. 4. That all land from which restrictions shall have been removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes. [The land of allottees enrolled as freedmen shall be subject to taxation from and after sixty days from the passage of this act.]

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of incumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

[SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes, except as otherwise specifically provided by law, shall be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern district of Oklahoma as he may deem necessary to care for the allotted restricted land of allottees, whether adults or minors of the Five Civilized Tribes, including, when the supervision of the Secretary of the Interior is authorized by law, the sale or leasing of such lands and the disposal, for the benefit of the Indians, of the proceeds of such sales or leases. Said appointed representatives shall, without charge except necessary court fees, if any, care for the restricted allotted land of minor allottees of the Five Civilized Tribes, and shall annually account concerning such restricted land, both to the Secretary of the Interior and to the respective probate judges having jurisdiction of the persons and property of such minors. The probate judge may appoint the representative of the Secretary of the Interior having charge of the restricted land of any such minor to act as guardian for such minor without fee or charge, except necessary court charges and expenses incurred under order of the court. Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under direction of the Secretary of the Interior.]

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall, except as otherwise specifically provided by law, be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern judicial district of the State of Oklahoma as he may deem necessary to inquire into and investigate the conduct of

guardians and curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian and curator, or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardians and curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated, and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian and curator for such minors, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees, adult or minor, having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character, made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: Provided, That the homesteads of minors shall not be sold or incumbered, except loans authorized by law, by order of the court or otherwise, until such minor arrives at the age of 21 years.

And there is hereby further appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available and available until expended as the Attorney-General may direct, the sum of \$50,000, to be used in the payment of expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern district of Oklahoma.

Sec. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

Sec. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by substituting for the words "a United States commissioner," at the end of said section, the words "a judge of a county court of the State of Oklahoma."

Sec. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions from the alienation of said allottee's land: Provided, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of said estate.

[House Report No. 1454, Sixtieth Congress, first session.]

REMOVAL OF RESTRICTIONS FROM PART OF LANDS OF ALLOTTEES OF FIVE CIVILIZED TRIBES.

April 6, 1908, committed to the Committee of the Whole House on the state of the Union and ordered to be printed.

Mr. McGUIRE, from the Committee on Indian Affairs, submitted the following report, to accompany H. R. 15641:

The Committee on Indian Affairs, to whom was referred the bill (H. R. 15641) for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes, have considered said bill at length with others containing the same subject-matter and beg leave to report as follows:

The Five Civilized Tribes referred to in this bill are the Choctaws, Chickasaws, Cherokees, Creeks, and Seminoles, occupying that portion of the State of Oklahoma formerly known as the Indian Territory.

Under existing law all land allotted to these five tribes by previous acts of Congress is inalienable and nontaxable except that the Secretary of the Interior, under such rules and regulations as he may prescribe, may remove the restrictions against the alienation of the land which was allotted to persons of less than one-half Indian blood. These five tribes occupy practically all of that country formerly designated and known as Indian Territory, now a portion of the State of Oklahoma, comprising nearly one-half of the entire State. Since the admission of Oklahoma to the Union that part of the State has been divided into counties and subdivided into townships, school districts, etc. There has been elected a full set of county officers in each county, township officers in each township, and school district officers wherever school districts have been organized.

The only taxable real estate is that contained within the corporate limits of cities and towns and real estate outside where restrictions have been removed and where the Indian has disposed of his land.

As appears by another page of this report, restrictions had been removed on 3,028,196.58 acres, on the 24th day of December, 1907, but less than half this amount had been alienated. There has been since that date some removal of restrictions and some additional sales.

It will be readily observed from the foregoing statement that there is little taxable property in that portion of the State of Oklahoma except personal property and real estate in the corporate limits of cities and towns. The meaning of this is that there is a government, State and local, to support with practically no real estate upon which there may be a levy for taxable purposes. The cities are required to bear the expenses of county and State government, with the exception of personal property and a small per cent of outside real estate mentioned in the preceding paragraph. This leaves a portion of the people of that

State bearing all the burdens of taxation, and relieves another—the most wealthy of the people of the State—from any of the burdens of taxation. The result is that it is impossible to support schools except in the extremely wealthy section more than two or three months in the year. For those persons who are taxed, the per cent of taxation is enormously high—almost unbearable.

The territory occupied by the Five Civilized Tribes, as shown by the preceding, in all amounts to 19,688,069.52 acres. On December 24, 1907, restrictions had been removed from 3,028,196.58 acres, but of this amount a comparatively small portion had been alienated, and under existing law it is not taxable until alienated.

Practically all mixed-blood Indians of the Five Civilized Tribes are educated and entirely capable of transacting their own business. There are very few exceptions to this statement. This bill does not seek to remove the restrictions from mixed-blood Indians having one-half or more than one-half Indian blood, and does not seek to remove the restrictions from the full-blood Indians. Thus it will be seen that the bill only relates to the removal of restrictions from those persons having less than one-half Indian blood, also intermarried white persons and freedmen who have by previous acts been provided with allotments.

The bill does provide that the Secretary of the Interior, in his discretion and under such rules and regulations as he may prescribe from time to time where sufficient showing has been made to him, remove restrictions from persons of half or more of Indian blood.

The following tables will show the number of Indians and their blood among these Five Civilized Tribes, and the amount of land made alienable and taxable by this bill, amounting, in all, to 8,434,749.42 acres:

STATEMENT OF LAND CONDITIONS IN THE STATE OF OKLAHOMA.

Tribal enrollment showing degree of blood of Indians in the Five Tribes.

		11,006	160	1,760,960.00
Total		13,615		2,074,040.00
Land alienable at present				1,032,592.00
Restrictions removed by bill				1,041,448.00
Total number of acres on which restrictions are removed by bill				8,434,749.42

It is estimated that of the 19,600,000 acres of land embraced in the Five Civilized Tribes not more than 6 per cent has been alienated and is taxable.

Under the present laws there is little improvement of the allotments, and the revenues received from them by the Indians is not large. This bill will enable the large portion of Indian allottees who are capable of managing their affairs to sell the portion of their lands not required by them and to so improve that which they retain that it will afford them a good income. It will result in the large portion of Oklahoma occupied by the Five Civilized Tribes becoming the property of the men who till the soil, and will ultimately do away with the present lease system, which checks the development of that State. There is a limit to the amount of taxes that the small portion of the people now bearing this burden can stand, and unless provision is made whereby the lands in the Five Tribes may be taxed, there can be no adequate public school system, necessary bridges can not be constructed, public roads can not be opened and improved, and the county and district government can not be properly conducted. Thus the development of this portion of the State would be further hampered.

The Indian citizens are now enjoying the same privileges and benefits of State and local government in Oklahoma as the white citizens. Besides affording relief to all of the citizens of the State this bill should prove a benefit to the Indian allottees, as they are the large property owners and would have the advantage of the increased valuations that would come with the development of the resources of their portion of the State through the ending of the lease system, the equalizing of taxation, and the establishment of efficient public schools, good roads, and the other benefits of local government.

Your committee therefore recommends that the bill (H. R. 15641) do pass with the following amendments:

After the word "restrictions," in line 10, on page 1, strike out "but all sales or incumbrances of their lands prior to March 1, 1909, shall be void unless the adequacy of the consideration and the fact of its actual payment or proper security therefor be approved by the Secretary of the Interior."

On page 2, in line 9, strike out the word "until" and insert in lieu thereof "prior to."

After the word "act," in line 18, on page 2, insert—

"Provided, That these lands shall not be subjected or held liable to

any form of personal claim or demand against the allottees arising or existing prior to the passage of this act."

In line 19, on page 2, after the word "to," insert "adult."

In line 24, after the word "lessees," insert "of adults."

In line 25, on page 2, after the word "lands," strike out "whether of adults or minors."

In line 5, on page 3, after the word "Interior," strike out "and the enrollment records connected therewith."

After the word "act," in line 9, on page 3, insert:

"Sec. 3a. That all oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall not be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior, as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease, and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgment of deeds, and the same shall be recorded in the county where the land is situated."

In lieu of section 6 insert—

"Sec. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall, except as otherwise specifically provided by law, be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern judicial district of the State of Oklahoma as he may deem necessary to inquire into and investigate the conduct of guardians and curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian and curator or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardians and curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian and curator for such minors without fee or charge."

"And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees, adult or minor, having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands."

"Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That the homesteads of minors shall not be sold or encumbered, except loans authorized by law, by order of the court or otherwise, until such minor arrives at the age of 21 years."

"And there is hereby further appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available and available until expended as the Attorney-General may direct, the sum of \$50,000, to be used in the payment of expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern district of Oklahoma."

[S. 6720, Sixtieth Congress, first session.]

In the Senate of the United States, April 20, 1908. Mr. OWEN introduced the following bill, which was read twice and referred to the Committee on Indian Affairs:

A bill for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All allotted lands of said allottees enrolled as freedmen, except homesteads, shall be free from all restrictions: *Provided*, That adult freedmen may lease their homesteads for five years for agricultural purposes, and not to exceed fifteen years for mineral purposes.

All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having half or more than half white blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having less than half white blood and all allotted lands of enrolled living allottees of more than half Indian blood shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the

proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act.

SEC. 2. That all land allotted to adult allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees, or, in the case of minors, as provided in section 6 hereof, for periods not exceeding five years, without the privilege of renewal, except that oil, gas, or other mineral leases for any period of time, and other leases if made for more than five years, of any such restricted lands, may be made with the approval of the Secretary of the Interior and not otherwise.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior shall be conclusive evidence as to the age and the quantum of blood of any enrolled citizen or freedman of said tribes to determine questions arising under this act.

That all oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall not be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior, as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior or his designated agent a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgment of deeds, and the same shall be recorded in the county where the land is situate.

SEC. 4. That all land from which restrictions shall have been removed shall be subject to taxation and all other civil burdens, as though it were the property of other persons than allottees of the Five Civilized Tribes. The land of allottees enrolled as freedmen shall be subject to taxation from and after sixty days from the passage of this act.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of incumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act, shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern judicial district of the State of Oklahoma as he may deem necessary to inquire into and investigate the conduct of guardians and curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian and curator or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardian and curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian and curator for such minor, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That the homesteads of minors shall not be sold or incumbered except as to leases authorized by law by order of the court or otherwise until such minor arrives at the age of 21 years.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, or after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by substituting for the words "a United States commissioner," at the end of said section, the words "a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions from the alienation of said

allottee's land: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of said estate.

SEC. 10. That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available as the Attorney-General may direct, the sum of \$20,000, to be used in the payment of expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern district of Oklahoma.

[H. R. 15641, Sixtieth Congress, first session.]

In the Senate of the United States, April 23, 1908, read twice and referred to the Committee on Indian Affairs.

An act for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as of less than half Indian blood shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood and all allotted lands of enrolled living full bloods shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act.

SEC. 2. That all land allotted to adult allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees, or, in the case of minors, as provided in section 6 hereof, for periods not exceeding five years without the privilege of renewal, except that oil, gas, or other mineral leases of adults for any period of time, and other leases of adults if made for more than five years, of any such restricted lands, may be made with the approval of the Secretary of the Interior and not otherwise.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior shall be conclusive evidence as to the age and the quantum of Indian blood of any enrolled citizen or freedman of said tribes to determine questions arising under this act.

SEC. 3a. That all oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall not be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgment of deeds, and the same shall be recorded in the county where the land is situate.

SEC. 4. That all land from which restrictions shall have been removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes: *And provided further*, That allotted lands shall not be subjected or held liable, to any form of personal claim, or demand, against the allottees arising or existing prior to the removal of restrictions, other than contracts heretofore expressly permitted by law.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of incumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall, except as otherwise specifically provided by law, be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives for the eastern judicial district of the State of Oklahoma as he may deem necessary to inquire into and investigate the conduct of guardians and curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian and curator, or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardians and curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated, and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian and curator for such minors, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees, adult or minor, having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character, made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior; *Provided*, That no restricted lands of living minors shall be sold or encumbered, except leases authorized by law, by order of the court or otherwise.

And there is hereby further appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available and available until expended as the Attorney-General may direct, the sum of \$50,000, to be used in the payment of expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern judicial district of Oklahoma.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and other purposes," approved April 26, 1906, is hereby amended by substituting for the words "a United States commissioner," at the end of said section, the words "a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions from the alienation of said allottee's land: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of said estate.

[H. R. 15641, Sixtieth Congress, first session. Report No. 575. Calendar No. 588.]

In the Senate of the United States, April 23, 1908, read twice and referred to the Committee on Indian Affairs. April 28, 1908, reported by Mr. OWEN, with amendments.

[Omit the part in brackets and insert the part printed in italics.]

An act for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as of [less than half] one-quarter or less than one-quarter Indian blood shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having [half or] more than [half] one-quarter or less than three-quarters Indian blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having [half] one-quarter or more than [half] one-quarter Indian blood, including minors of such degree of blood, and all allotted lands of enrolled living full bloods, including minors of such degree of blood, shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act. *No restriction of alienation shall be construed to prevent the exercise of the right of eminent domain in condemning rights of way for public purposes over allotted lands. All restricted allotted land of allottees of the Five Civilized Tribes shall be subject to taxation where such land has been leased, but taxes thus levied shall not become a lien against the land but shall be paid by the lessee and shall be a lien against any crops or values produced from the land.*

[SEC. 2. That all land allotted to adult allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees, or in the case of minors as provided in section 6 hereof, for periods not exceeding five years without the privilege of renewal, except that oil, gas, or other mineral leases of adults for any period of time, and other leases of adults if made for more than five years, of any such restricted lands, may be made with the approval of the Secretary of the Interior and not otherwise.]

SEC. 2. That all lands other than homesteads allotted to members of the Five Civilized Tribes from which restrictions have not been removed may be leased by the allottee for a period not to exceed five years: *Provided*, That leases of oil, gas, or other minerals, and of restricted homesteads and leases for more than five years, may be made under rules and regulations provided by the Secretary of the Interior, and not otherwise, and leases of the lands allotted minors may be made as provided in section 6 of this act.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior shall be conclusive evidence as to [the age and] the quantum of Indian blood of any enrolled citizen or freedman of said tribes and of no other persons to determine questions arising under this act, and the enrollment cards of the enrollment records shall be conclusive evidence as to the age of said citizen or freedman: *Provided*, That if any such card shall be lost or destroyed said rolls shall be conclusive evidence as to the age of said citizen or freedman.

[SEC. 3a.] That [all] no oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall [not] be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgment of deeds, and the same shall be recorded in the county where the land is situate.

SEC. 4. That all land from which restrictions [shall] have been or shall be removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes: *[And provided further] Provided*, That allotted lands shall not be subjected or held liable, to any form of personal claim, or demand, against the allottees arising or existing prior to the removal of restrictions, other than contracts heretofore expressly permitted by law.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of encumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall, except as otherwise specifically provided by [law] this act, be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives [for the eastern judicial district of] within the State of Oklahoma who shall be citizens of that State as he may deem necessary to inquire into and investigate the conduct of guardians [and] or curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardians [and] or curator, or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value, by reason of the negligence or carelessness or incompetency of the guardians [and] or curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated, and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian [and] or curator for such minors, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees, adult or minor, having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character, made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That no restricted lands of living minors shall be sold or encumbered, except by leases authorized by law, by order of the court or otherwise.

And there is hereby further appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available and available until expended as the Attorney-General may direct, the sum of [fifty] thirty thousand dollars, to be used in the payment of necessary expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern judicial district of Oklahoma: *Provided*, That the sum of ten thousand dollars of the above amount, or so much thereof as may be necessary, may be expended in the prosecution of cases in the western judicial district of Oklahoma.

Any suit brought by the authority of the Secretary of the Interior against the vendee or mortgagee of a town lot against whom no fraud has been established may be dismissed and the title quieted upon payment of the full balance due on the original appraisal of such lot.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by [substituting for the words "a United States commissioner,"] adding at the end of said section, the words "or a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions [from] upon the alienation of

said allottee's land: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of [said] the estate of said deceased allottee.

Sec. 10. That nothing in this act shall be so construed as to abridge, change, or affect the rights of any citizens by blood or freedmen, or their heirs, of the Five Civilized Tribes, who may hereafter by the order of court, or of the Interior Department, be adjudged entitled to enrollment.

Sec. 11. That the Secretary of the Interior is hereby authorized and directed to pay, out of any money in the Treasury of the United States belonging to the Chickasaw Nation, any and all outstanding general and school warrants duly signed by the auditor of public accounts of the Chickasaw Nation and drawn on the national treasurer thereof prior to April 26, 1906, and submitted for payment to the United States Indian agent at Union Agency, at Muskogee, Okla., with interest at 6 per cent per annum from the respective dates thereof: *Provided*, That said Secretary shall not pay such warrants until he investigates the issuance and transfer of said warrants and is satisfied that the respective owners of said warrants purchased the same in good faith for a valuable and reasonable consideration and had no reason to suspect fraud in the issuance of said warrants.

Sec. 12. That the Secretary of the Interior may permit any lessee having a coal and asphalt lease covering segregated coal or asphalt lands in the Choctaw and Chickasaw nations in Oklahoma, which lease has been approved by the Secretary of the Interior, to surrender any tract or part thereof and to substitute therefor, subject to the terms of the lease and approval by the Secretary of the Interior, adjoining land within said segregation substantially equal in area to the land surrendered.

And all royalties heretofore accrued or hereafter arising from mineral leases by Seminole allottees heretofore or hereafter made shall be paid to the United States Indian agent, Union Agency, for the benefit of the Indian lessor or his proper representative to whom such royalties shall hereafter belong; and all royalties accrued or hereafter accruing under any oil lease made under section 13 of the act of Congress approved January 28, 1898, entitled "An act for the protection of the people of Indian Territory, and for other purposes," shall be paid to allottees of the land included in such lease pro rata according to the area of their respective holdings, or to their lawful assigns.

Sec. 13. That all records pertaining to the allotment of lands of the Five Civilized Tribes shall be finally deposited in the office of the United States Indian agent, Union Agency, when and as the Secretary of the Interior shall determine such action shall be taken, and there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available, as the Secretary of the Interior may direct, the sum of \$15,000, or so much thereof as may be necessary to enable the Secretary of the Interior to furnish the various counties of the State of Oklahoma certified copies of such portions of said records as affect title to lands in the respective counties.

Sec. 14. That section 15 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, shall become operative immediately upon the approval of this act.

Statement of lands affected by removal-of-restriction amendments made and proposed in the Senate to H. R. 15641.

The amendment on page 2, line 4, replaces restrictions on the surplus allotments of all Indians of three-quarter and more Indian blood, except full bloods. The statement as to restrictions, as replaced by this amendment, follows:

	Total enrollment.	Acreage.
Choctaws and Chickasaws.....	1,125	160 180,000
Cherokees.....	2,720	80 215,000
Creeks and Seminoles.....	900	120 108,100
Total.....	4,745	503,700

Total number of acres on which restrictions are replaced by above amendment, 503,700.

The different amendments changing the status from "less than one-half" to "one-quarter or less than one-quarter," affects removal of restrictions as follows:

	Total enrollment.	Acreage.
Choctaws and Chickasaws.....	1,023	160 163,620
Cherokees.....	1,936	30 58,080
Creeks and Seminoles.....	300	40 12,000
Total.....	3,259	233,700

Total number of acres on which restrictions are replaced by above amendment, 233,700.

The amendment proposed by Senator McCUMBER, to wit: To further replace restrictions on surplus lands of "one-quarter-blood Indians," affects removal of restrictions as follows:

	Total enrollment.	Acreage.
Choctaws and Chickasaws.....	2,611	160 317,760
Cherokees.....	4,025	30 121,550
Creeks and Seminoles.....	1,076	40 42,040
Total.....	7,712	481,350

Total number of acres on which restrictions are replaced by proposed McCumber amendment, 481,350.

Total number of acres restricted by all amendments, 1,218,750.

Respectfully submitted.

C. D. CARTER.

[H. R. 15641, Sixtieth Congress, first session.]

In the House of Representatives, May 12 (calendar day, May 14), 1908. Ordered to be printed with the amendments of the Senate numbered. [Omit the part printed in brackets and insert the part printed in italics.]

An act for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as of (1) [less than half] one-quarter or less than one-quarter Indian blood shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having (2) [half or] more than (3) [half] one-quarter or less than three-quarters Indian blood shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having (2) [half or] more than (3) [half] one-quarter Indian blood (6), including minors of such degree of blood, and all allotted lands of enrolled living full bloods (7), including minors of such degree of blood, shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act. (8) No restriction of alienation shall be construed to prevent the exercise of the right of eminent domain in condemning rights of way for public purposes over allotted lands.

(9) [SEC. 2. That all land allotted to adult allottees of the Five Civilized Tribes and subject to restriction may be leased by the allottees, or in the case of minors as provided in section 6 hereof, for periods not exceeding five years, without the privilege of renewal, except that oil, gas, or other mineral leases of adults for any period of time, and other leases of adults if made for more than five years, of any such restricted lands, may be made with the approval of the Secretary of the Interior, and not otherwise.]

SEC. 2. That all lands other than homesteads allotted to members of the Five Civilized Tribes from which restrictions have not been removed may be leased by the allottee for a period not to exceed five years: *Provided*, That leases of oil, gas, or other minerals, and of restricted homesteads and leases for more than five years, may be made under rules and regulations provided by the Secretary of the Interior, and not otherwise, and leases of the lands allotted minors may be made as provided in section 6 of this act.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior shall be conclusive evidence as to (10) [the age and] the quantum of Indian blood of any enrolled citizens or freedman of said tribes (11) and of no other persons to determine questions arising under this act (12), and the enrollment cards of the enrollment records shall be conclusive evidence as to the age of said citizen or freedman: *Provided*, That if any such card shall be lost or destroyed said rolls shall be conclusive evidence as to the age of said citizen or freedman.

(13) [SEC. 3 a.] That (14) [all] no oil, gas, and other mineral leases entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall (15) [not] be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgement of deeds, and the same shall be recorded in the county where the land is situate.

SEC. 4. That all land from which restrictions (16) [shall] have been (17) or shall be removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes: (18) [And provided further] *Provided*, That allotted lands shall not be subjected or held liable, to any form of personal claim, or demand, against the allottees arising or existing prior to the removal of restrictions, other than contracts heretofore expressly permitted by law.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of encumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall, except as otherwise specifically provided by (19) [law] this act, be subject to the jurisdiction of the probate courts of the State of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives (20) [for the eastern judicial district of] within the State of Oklahoma (21) who shall be citizens of that State as he may deem necessary to inquire into and investigate the conduct of guardians (22) [and] or curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian (23) [and] or curator, or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardians (24) [and] or curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated, and go to the further

extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian (25) [and] or curator for such minors, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees, adult or minor, having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character, made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That no restricted lands of living minors shall be sold or encumbered, except (26) by leases authorized by law, by order of the court or otherwise.

And there is hereby further appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available and available until expended as the Attorney-General may direct, the sum of (27) [fifty] thirty thousand dollars, to be used in the payment of (28) necessary expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern judicial district of Oklahoma (29): *Provided*, That the sum of \$10,000 of the above amount, or so much thereof as may be necessary, may be expended in the prosecution of cases in the western judicial district of Oklahoma.

(30) Any suit brought by the authority of the Secretary of the Interior against the vendee or mortgagee of a town lot against whom no fraud has been established may be dismissed and the title quieted upon payment of the full balance due on the original appraisement of such lot.

The Secretary of the Interior shall be further authorized, at the request of any allottee with restricted land, to bring suit on his behalf to remove cloud from the title thereto without cost or charges to the said allottees, and all necessary expenses incurred under this section shall be defrayed from the money herein appropriated as hereinafter provided.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by (31) [substituting for the words "a United States Commissioner,"] adding, at the end of said section, the words (32) "or a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions (33) [from] upon the alienation of said allottee's land: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of (34) [said] the estate (35) of said deceased allottee.

(36) SEC. 10. That nothing in this act shall be so construed as to abridge, change, or affect the rights of any citizens by blood or freedmen, or their heirs, of the Five Civilized Tribes, who may hereafter by the order of court, or of the Interior Department, be adjudged entitled to enrollment.

(37) SEC. 11. That the Secretary of the Interior is hereby authorized and directed to pay, out of any money in the Treasury of the United States belonging to the Chickasaw Nation, any and all outstanding general and school warrants duly signed by the auditor of public accounts of the Chickasaw Nation and drawn on the national treasurer thereof prior to April 26, 1906, and submitted for payment to the United States Indian agent at Union Agency, at Muskogee, Okla., with interest at 6 per cent per annum for the respective dates thereof: *Provided*, That said Secretary shall not pay such warrants until he investigates the issuance and transfer of said warrants and is satisfied that the respective owners of said warrants purchased the same in good faith for a valuable and reasonable consideration and had no reason to suspect fraud in the issuance of said warrants.

(38) SEC. 12. That all royalties heretofore accrued or hereafter arising from mineral leases by Seminole allottees heretofore or hereafter made shall be paid to the United States Indian agent, Union Agency, for the benefit of the Indian lessor or his proper representative to whom such royalties shall hereafter belong; and all royalties accrued or hereafter accruing under any oil lease made under section 13 of the act of Congress approved January 28, 1898, entitled "An act for the protection of the people of Indian Territory, and for other purposes," shall be paid to allottees of the land included in such lease pro rata according to the area of their respective holdings, or to their lawful assigns.

(39) SEC. 13. That all records pertaining to the allotment of lands of the Five Civilized Tribes shall be finally deposited in the office of the United States Indian agent, Union Agency, when and as the Secretary of the Interior shall determine such action shall be taken, and there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available as the Secretary of the Interior may direct, the sum of \$15,000, or so much thereof as may be necessary to enable the Secretary of the Interior to furnish the various counties of the State of Oklahoma certified copies of such portions of said records as affect title to lands in the respective counties.

(40) SEC. 14. That section 15 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the

Indian Territory, and for other purposes," approved April 26, 1906, shall become operative immediately upon the approval of this act.

(41) SEC. 15. That for six months after the approval of this act the Secretary of the Interior be, and he is hereby, authorized and directed to enroll as members of either the Choctaw, Chickasaw, Cherokee, Creek, or Seminole tribes, such persons as the records in his office may show were wrongfully omitted from the rolls of either of said tribes by reason of error of law or of inadvertence, or because of want of time to properly consider their applications for enrollment, and he may consider any evidence heretofore filed for or against such applicants, and the said Secretary is further authorized in any case where he is satisfied from the evidence and records in his office that a member was wrongfully enrolled as a freedman and should have been enrolled as an Indian to transfer said member from the approved freedman roll to the roll of citizens by blood of such tribe: *Provided*, That in suits brought to restore the names of persons struck from the final rolls of the Five Civilized Tribes the Secretary of the Interior, as defendant, may offer as a defense the record to show that such name had been erroneously placed upon such roll, and the name of no person shall be restored to such roll who was not originally entitled under the law to have been enrolled, and the burden of proof in such cases shall be upon the Secretary of the Interior: *Provided further*, That the children of Choctaw freedmen, entitled under the act of April 26, 1906, to make application under that law, and who failed to apply for lack of proper notice, shall have ninety days from and after the passage of this act within which to make such application, and such application shall have the same effect as if it had been made within the time originally proposed by such law.

(42) SEC. 16. That the provisions of section 13 of the act of Congress approved April 26, 1906 (34 Stat. L., p. 137), shall not apply to town lots in town sites heretofore established, surveyed, platted, and appraised under the direction of the Secretary of the Interior, but nothing herein contained shall be construed to authorize the conveyance of any interest in the coal or asphalt underlying said lots.

Passed the House of Representatives April 20, 1908.

Attest: A. McDOWELL, Clerk.

Passed the Senate with amendments May 13, 1908.

Attest: CHARLES G. BENNETT, Secretary.

[House report No. 1731, Sixtieth Congress, first session.]

REMOVAL OF RESTRICTIONS FROM PART OF LANDS OF FIVE CIVILIZED TRIBES.

May 12, 1908, ordered to be printed.

Mr. SHERMAN, from the committee of conference, submitted the following conference report (to accompany H. R. 15641):

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 15641), an act for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 2, 4, 5, 19, 27, 36, 41.

That the House recede from its disagreement to the amendments of the Senate numbered 10, 11, 13, 15, 16, 17, 18, 20, 22, 23, 25, 26, 28, 29, 31, 32, 33, 34, 39, 42; and agree to the same.

Amendment numbered 1:

That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and on page 1, line 8, after the word "whites," strike out "shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as freedmen shall be free from all restrictions. All lands, including homesteads, of said allottees enrolled as of" and insert after the word "whites" , as freedmen, and as mixed-blood Indians having less than half.

On page 2, line 1, after the word "blood," insert the words including minors.

And the Senate agree to the same.

Amendment numbered 3:

That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof half and less than three-quarters; and the Senate agree to the same.

Amendment numbered 6:

That the House recede from its disagreement to the amendment of the Senate numbered 6, and agree to the same with an amendment as follows:

In line 2 of the proposed amendment change the word "degree" to degrees.

On page 2, line 4, of the bill, after the word "enrolled" strike out the word "living," and in line 5, after the word "full-bloods," insert , and enrolled mixed-bloods of three-quarters or more Indian blood , and the Senate agree to the same.

Amendment numbered 7:

That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment as follows:

In line 2 of the proposed amendment change the word "degree" to degrees; and the Senate agree to the same.

Amendment numbered 8:

That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment as follows:

After the word "lands," in line 4 of the proposed amendment, change the period to a comma and add: and for such purposes sections thirteen to twenty-three, inclusive, of an act entitled "An act to grant the right of way through Oklahoma Territory and the Indian Territory to the Enid and Anadarko Railway Company, and for other purposes," approved February twenty-eighth, nineteen hundred and two (thirty-second Statutes at Large, page forty-three), are hereby continued in force in the State of Oklahoma; and the Senate agree to the same.

Amendment numbered 9:

That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof: SEC. 2. That all lands other than homesteads allotted to members of the Five Civilized Tribes from which restrictions have not been removed

may be leased by the allottee, if an adult, or by guardian or curator under order of the proper probate court, if a minor or incompetent, for a period not to exceed five years, without the privilege of renewal: *Provided*, That leases of restricted lands for oil, gas, or other mining purposes, leases of restricted homesteads for more than one year, and leases of restricted lands for periods of more than five years may be made, with the approval of the Secretary of the Interior, under rules and regulations provided by the Secretary of the Interior, and not otherwise: *And provided further*, That the jurisdiction of the probate courts of the State of Oklahoma over lands of minors and incompetents shall be subject to the foregoing provisions, and the term minor or minors, as used in this act, shall include all males under the age of twenty-one years and all females under the age of eighteen years.

And the Senate agree to the same.

Amendment numbered 12:

That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof and the enrollment records of the Commissioner to the Five Civilized Tribes shall hereafter be conclusive evidence as to the age of said citizen or freedman; and the Senate agree to the same.

Amendment numbered 14:

That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment as follows:

On page 3, in line 6, change "and" to "or" and in the same line strike out the word "leases" and insert the word *lease*; and the Senate agree to the same.

Amendment numbered 21:

That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment as follows:

At the end of the proposed amendment add the words: *or now domiciled therein*; and the Senate agree to the same.

Amendment numbered 24:

That the House recede from its disagreement to the amendment of the Senate numbered 24, and agree to the same with an amendment as follows:

In line 11 of page 5 strike out the word "guardians" and insert the word *guardian*; and the Senate agree to the same.

Amendment numbered 30:

That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof: *Any suit brought by the authority of the Secretary of the Interior against the vendee or mortgagee of a town lot, against whom the Secretary of the Interior may find, upon investigation, no fraud has been established, may be dismissed and the title quieted upon payment of the full balance due on the original appraisal of such lot: Provided, That such investigation must be concluded within six months after the passage of this act.*

Nothing in this act shall be construed as a denial of the right of the United States to take such steps as may be necessary, including the bringing of any suit and the prosecution and appeal thereof to acquire or retain possession of restricted Indian lands, or to remove cloud therefrom or clear title to the same, in cases where deeds, leases, or contracts of any other kind or character whatsoever have been or shall be made contrary to law with respect to such lands prior to the removal therefrom of restrictions upon the alienation thereof; such suits to be brought on the recommendation of the Secretary of the Interior, without costs or charges to the allottees, the necessary expenses incurred in so doing to be defrayed from the money appropriated by this act.

And the Senate agree to the same.

Amendment numbered 35:

That the House recede from its disagreement to the amendment of the Senate numbered 35, and agree to the same with an amendment as follows:

At the end of the proposed amendment add:

Provided further, That if any member of the Five Civilized Tribes of one-half or more Indian blood shall die leaving issue surviving, born since March fourth, nineteen hundred and six, the homestead of such deceased allottee shall remain inalienable, unless restrictions against alienation are removed therefrom by the Secretary of the Interior in the manner provided in section one hereof, for the use and support of such issue, during their life or lives, until April twenty-sixth, nineteen hundred and thirty-one; but if no such issue survive then such allottee, if an adult, may dispose of his homestead by will free from all restrictions; if this be not done, or in the event the issue hereinbefore provided for die before April twenty-sixth, nineteen hundred and thirty-one, the land shall then descend to the heirs, according to the laws of descent and distribution of the State of Oklahoma, free from all restrictions: Provided further, That the provisions of section twenty-three of the act of April twenty-sixth, nineteen hundred and six, as amended by this act, are hereby made applicable to all wills executed under this section.

And the Senate agree to the same.

Amendment numbered 37:

That the House recede from its disagreement to the amendment of the Senate numbered 37, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof: *Sec. 11. That the Secretary of the Interior is hereby authorized and directed to pay, out of any moneys in the Treasury of the United States belonging to the Choctaw or Chickasaw nations, respectively, any and all outstanding general and school warrants duly signed by the auditor of public accounts of the Cherokee and Chickasaw nations, and drawn on the national treasurer thereof prior to January first, nineteen hundred and seven, with six per cent interest per annum from the respective dates of said warrants: Provided, That said warrants be presented to the United States Indian agent at the Union Agency, Muskogee, Oklahoma, within sixty days from the passage of this act, together with the affidavits of the respective holders of said warrants, that they purchased the same in good faith for a valuable consideration, and had no reason to suspect fraud in the issuance of said warrants: Provided further, That such warrants remaining in the hands of the original payee shall be paid by said Secretary when it is shown that the services for which said warrants were issued were actually performed by said payee.*

And the Senate agree to the same.

Amendment numbered 38:

That the House recede from its disagreement to the amendment of the Senate numbered 38, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof:

Sec. 12. That all royalties arising on and after July first, nineteen hundred and eight, from mineral leases of allotted Seminole lands heretofore or hereafter made, which are subject to the supervision of the Secretary of the Interior, shall be paid to the United States Indian agent, Union Agency, for the benefit of the Indian lessor or his proper representative to whom such royalties shall thereafter belong; and no such lease shall be made after said date except with the allottee or owner of the land: Provided, That the interest of the Seminole Nation in leases or royalties arising thereunder on all allotted lands shall cease on July thirtieth, nineteen hundred and eight.

And the Senate agree to the same.

Amendment numbered 40:

That the House recede from its disagreement to the amendment of the Senate numbered 40, and agree to the same with an amendment as follows:

Strike out all of the proposed amendment and insert in lieu thereof:

Sec. 14. That the second paragraph of section eleven of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April twenty-sixth, nineteen hundred and six, is hereby amended to read as follows:

"That every officer, member or representative of the Five Civilized Tribes, respectively, or any other person, having in his possession, custody or control any money or other property, including the books, documents, records or any other papers, of any of said tribes, shall make full and true account and report thereof to the Secretary of the Interior, and shall pay all money of the tribe in his possession, custody or control, and shall deliver all other tribal properties so held by him to the Secretary of the Interior, and if any person shall willfully and fraudulently fail to account for all such money and property so held by him, or to pay and deliver the same as herein provided, prior to July thirty-first, nineteen hundred and eight, he shall be deemed guilty of embezzlement, and upon conviction thereof shall be punished by fine of not exceeding five thousand dollars, or by imprisonment not exceeding five years, or by both such fine and imprisonment, according to the laws of the United States relating to such offense, and shall be liable in civil proceedings to be prosecuted in behalf of and in the name of the tribe or tribes in interest for the amount or value of the money or property so withheld."

And the Senate agree to the same.

ROBT. L. OWEN,
MOSES E. CLAPP,
CHARLES CURTIS,

Managers on the part of the Senate.

J. S. SHEEMAN,
BIRD MCGUIRE,
JNO. H. STEPHENS,

Managers on the part of the House.

STATEMENT OF MANAGERS ON THE PART OF THE HOUSE.

The Senate receded from amendments Nos. 2, 4, 5, 19, 27, 36, and 41. The House receded from amendments Nos. 10, 11, 15, 16, 17, 18, 20, 23, 25, 26, 28, 29, 31, 32, 33, 34, 39, and 42.

And from all other amendments the House receded with an amendment.

Amendment No. 1 is merely a change of phraseology and does not change the intent of the bill.

Amendment No. 3 in the bill, as it passed the House, provided that all lands, except homesteads, allotted to mixed bloods of more than one-half Indian blood should be free from restrictions. The amendment, as agreed to in conference, changes this provision so that the lands that are free from restrictions are those allotted to Indians of more than one-half and less than three-fourths Indian blood.

Amendment No. 6 provides that mixed bloods of more than three-fourths Indian blood can sell their homes only after application to the Secretary of the Interior and approval by him. This provision, as it passed the House, provided that full bloods could dispose of their homestead only upon application to the Secretary of the Interior. This amendment, as agreed to in conference, provides that Indians of three-fourths or more Indian blood shall be under the same restriction as full bloods.

Amendment No. 7 includes minors of such degrees of blood within the restrictions provided in amendment No. 6.

Amendment No. 8 provides that no restrictions on alienation shall prevent the exercise of the right of eminent domain, and in conference a provision was agreed to making it certain that the provision of the railroad right-of-way act should not be repealed by this provision.

Amendment No. 9 struck out section 2, as passed by the House, and inserted a new section 2. This change was substantially a phraseological change. The amendment, as agreed to in conference, changes the phraseology of both the Senate and the House provisions, enlarges the scope of the provision somewhat, and defines what is a "minor."

Amendment No. 12, as agreed to in conference, provides that the enrollment records made by the Commissioner to the Five Civilized Tribes shall be conclusive evidence as to the age of the person thus enrolled.

Amendments Nos. 13, 14, 15, 16, 17, and 18 are purely phraseological changes.

Amendment No. 20 changes the territory within which the Secretary of the Interior shall exercise certain powers from a portion of the State of Oklahoma to the whole State.

Amendment No. 21 provides that only citizens or persons domiciled within the State of Oklahoma shall be employed by the Secretary to perform certain services therein.

Amendments Nos. 22, 23, 24, 25, and 26 are purely phraseological.

Amendment No. 28 is the insertion of the word "necessary," so that the appropriation therein made shall be used only for "necessary" expenses.

Amendment No. 29 provides that \$10,000 of the money appropriated may be used in the prosecution of actions in the western district of Oklahoma.

Amendment No. 30 gives the authority to the Secretary of the Interior to dismiss suits brought against the vendee or mortgagee of a town lot where, after investigation, it is found that no fraud has existed, and where such vendee or mortgagee has paid the full price of the original appraisal. This amendment also provides that nothing in the act can be construed as a denial of the right of the United States to take such steps as it is thought necessary to conserve the rights of the Indians.

Amendments Nos. 31, 32, 33, and 34 are purely phraseological.

Amendment No. 35, as agreed to in conference, makes provision for the disposition of restricted lands where the original allottee dies.

Amendment No. 37 makes provision for the payment of the warrants heretofore issued by the Choctaw and Chickasaw councils.

Amendment No. 38 provides for the disposal of the moneys received as royalties under mineral leases of the lands in the Seminole Nation.

Amendment No. 39 provides that all records pertaining to the allotments of any member of the Five Civilized Tribes shall be deposited in the office of the agent at the Union Agency, and makes provision for carrying this into effect.

Amendment No. 40 amends section 11 of the second Curtis Act relating to the transfer of property, money, books, etc., in the possession of the former officers of any of these tribes to the Secretary of the Interior.

Amendment No. 42 makes provision for the disposal of town lots in town sites heretofore established wherein mineral has been found beneath the surface of said lands.

J. S. SHERMAN,
B. S. MCGUIRE,
JOHN H. STEPHENS,
Managers on the part of the House.

[PUBLIC—No. 140.]
[H. R. 15641.]

An act for the removal of restrictions from part of the lands of allottees of the Five Civilized Tribes, and for other purposes.

Be it enacted, etc., That from and after sixty days from the date of this act the status of the lands allotted heretofore or hereafter to allottees of the Five Civilized Tribes shall, as regards restrictions on alienation or incumbrance, be as follows: All lands, including homesteads, of said allottees enrolled as intermarried whites, as freedmen, and as mixed-blood Indians having less than half Indian blood, including minors, shall be free from all restrictions. All lands, except homesteads, of said allottees enrolled as mixed-blood Indians having half or more than half and less than three-quarters Indian blood shall be free from all restrictions. All homesteads of said allottees enrolled as mixed-blood Indians having half or more than half Indian blood, including minors of such degrees of blood, and all allotted lands of enrolled full bloods, and enrolled mixed bloods of three-quarters or more Indian blood, including minors of such degrees of blood, shall not be subject to alienation, contract to sell, power of attorney, or any other incumbrance prior to April 26, 1931, except that the Secretary of the Interior may remove such restrictions, wholly or in part, under such rules and regulations concerning terms of sale and disposal of the proceeds for the benefit of the respective Indians as he may prescribe. The Secretary of the Interior shall not be prohibited by this act from continuing to remove restrictions as heretofore, and nothing herein shall be construed to impose restrictions removed from land by or under any law prior to the passage of this act. No restriction of alienation shall be construed to prevent the exercise of the right of eminent domain in condemning rights of way for public purposes over allotted lands, and for such purposes sections 13 to 23, inclusive, of an act entitled "An act to grant the right of way through Oklahoma Territory and the Indian Territory to the Enid and Anadarko Railway Company, and for other purposes," approved February 28, 1902 (32 Stat. L., p. 43), are hereby continued in force in the State of Oklahoma.

SEC. 2. That all lands other than homesteads allotted to members of the Five Civilized Tribes from which restrictions have not been removed may be leased by the allottee if an adult, or by guardian or curator under order of the proper probate court if a minor or incompetent, for a period not to exceed five years, without the privilege of renewal: *Provided*, That leases of restricted lands for oil, gas, or other mining purposes, leases of restricted homesteads for more than one year, and leases of restricted lands for periods of more than five years, may be made, with the approval of the Secretary of the Interior, under rules and regulations provided by the Secretary of the Interior, and not otherwise: *And provided further*, That the jurisdiction of the probate courts of the State of Oklahoma over lands of minors and incompetents shall be subject to the foregoing provisions, and the term minor or minors, as used in this act, shall include all males under the age of 21 years and all females under the age of 18 years.

SEC. 3. That the rolls of citizenship and of freedmen of the Five Civilized Tribes approved by the Secretary of the Interior shall be conclusive evidence as to the quantum of Indian blood of any enrolled citizen or freedman of said tribes and of no other persons to determine questions arising under this act and the enrollment records of the Commissioner to the Five Civilized Tribes shall hereafter be conclusive evidence as to the age of said citizen or freedman.

That no oil, gas, or other mineral lease entered into by any of said allottees prior to the removal of restrictions requiring the approval of the Secretary of the Interior shall be rendered invalid by this act, but the same shall be subject to the approval of the Secretary of the Interior as if this act had not been passed: *Provided*, That the owner or owners of any allotted land from which restrictions are removed by this act, or have been removed by previous acts of Congress, or by the Secretary of the Interior, or may hereafter be removed under and by authority of any act of Congress, shall have the power to cancel and annul any oil, gas, or mineral lease on said land whenever the owner or owners of said land and the owner or owners of the lease thereon agree in writing to terminate said lease and file with the Secretary of the Interior, or his designated agent, a true copy of the agreement in writing canceling said lease, which said agreement shall be executed and acknowledged by the parties thereto in the manner required by the laws of Oklahoma for the execution and acknowledgment of deeds, and the same shall be recorded in the county where the land is situated.

SEC. 4. That all land from which restrictions have been or shall be removed shall be subject to taxation and all other civil burdens as though it were the property of other persons than allottees of the Five Civilized Tribes: *Provided*, That allotted lands shall not be subjected or held liable to any form of personal claim or demand against the allottees arising or existing prior to the removal of restrictions other than contracts heretofore expressly permitted by law.

SEC. 5. That any attempted alienation or incumbrance by deed, mortgage, contract to sell, power of attorney, or other instrument or method of encumbering real estate, made before or after the approval of this act, which affects the title of the land allotted to allottees of the Five Civilized Tribes prior to removal of restrictions therefrom, and also any lease of such restricted land made in violation of law before or after the approval of this act shall be absolutely null and void.

SEC. 6. That the persons and property of minor allottees of the Five Civilized Tribes shall, except as otherwise specifically provided by law, be subject to the jurisdiction of the probate courts of the State

of Oklahoma. The Secretary of the Interior is hereby empowered, under rules and regulations to be prescribed by him, to appoint such local representatives within the State of Oklahoma who shall be citizens of that State or now domiciled therein as he may deem necessary to inquire into and investigate the conduct of guardians or curators having in charge the estates of such minors, and whenever such representative or representatives of the Secretary of the Interior shall be of opinion that the estate of any minor is not being properly cared for by the guardian or curator, or that the same is in any manner being dissipated or wasted or being permitted to deteriorate in value by reason of the negligence or carelessness or incompetency of the guardian or curator, said representative or representatives of the Secretary of the Interior shall have power and it shall be their duty to report said matter in full to the proper probate court and take the necessary steps to have such matter fully investigated, and go to the further extent of prosecuting any necessary remedy, either civil or criminal, or both, to preserve the property and protect the interests of said minor allottees; and it shall be the further duty of such representative or representatives to make full and complete reports to the Secretary of the Interior. All such reports, either to the Secretary of the Interior or to the proper probate court, shall become public records and subject to the inspection and examination of the public, and the necessary court fees shall be allowed against the estates of said minors. The probate courts may, in their discretion, appoint any such representative of the Secretary of the Interior as guardian or curator for such minors, without fee or charge.

And said representatives of the Secretary of the Interior are further authorized, and it is made their duty, to counsel and advise all allottees, adult or minor, having restricted lands of all of their legal rights with reference to their restricted lands, without charge, and to advise them in the preparation of all leases authorized by law to be made, and at the request of any allottee having restricted land he shall, without charge, except the necessary court and recording fees and expenses, if any, in the name of the allottee, take such steps as may be necessary, including the bringing of any suit or suits and the prosecution and appeal thereof, to cancel and annul any deed, conveyance, mortgage, lease, contract to sell, power of attorney, or any other incumbrance of any kind or character, made or attempted to be made or executed in violation of this act or any other act of Congress, and to take all steps necessary to assist said allottees in acquiring and retaining possession of their restricted lands.

Supplemental to the funds appropriated and available for expenses connected with the affairs of the Five Civilized Tribes, there is hereby appropriated, for the salaries and expenses arising under this section, out of any funds in the Treasury not otherwise appropriated, the sum of \$90,000, to be available immediately, and until July 1, 1909, for expenditure under the direction of the Secretary of the Interior: *Provided*, That no restricted lands of living minors shall be sold or encumbered, except by leases authorized by law, by order of the court or otherwise.

And there is hereby further appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available and available until expended as the Attorney-General may direct, the sum of \$50,000, to be used in the payment of necessary expenses incident to any suits brought at the request of the Secretary of the Interior in the eastern judicial district of Oklahoma: *Provided*, That the sum of \$10,000 of the above amount, or so much thereof as may be necessary, may be expended in the prosecution of cases in the western judicial district of Oklahoma.

Any suit brought by the authority of the Secretary of the Interior against the vendee or mortgagee of a town lot, against whom the Secretary of the Interior may find, upon investigation, no fraud has been established, may be dismissed and the title quieted upon payment of the full balance due on the original appraisal of such lot: *Provided*, That such investigation must be concluded within six months after the passage of this act.

Nothing in this act shall be construed as a denial of the right of the United States to take such steps as may be necessary, including the bringing of any suit and the prosecution and appeal thereof, to acquire or retain possession of restricted Indian lands, or to remove cloud therefrom or clear title to the same, in cases where deeds, leases, or contracts of any other kind or character whatsoever have been or shall be made contrary to law with respect to such lands prior to the removal therefrom of restrictions upon the alienation thereof: such suits to be brought on the recommendation of the Secretary of the Interior, without costs or charges to the allottees, the necessary expenses incurred in so doing to be defrayed from the money appropriated by this act.

SEC. 7. That no contest shall be instituted after sixty days from the date of the selection of any allotment hereafter made, nor after ninety days from the approval of this act in case of selections made prior thereto by or for any allottee of the Five Civilized Tribes, and, as early thereafter as practicable, deed or patent shall issue therefor.

SEC. 8. That section 23 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended by adding at the end of said section the words "or a judge of a county court of the State of Oklahoma."

SEC. 9. That the death of any allottee of the Five Civilized Tribes shall operate to remove all restrictions upon the alienation of said allottee's land: *Provided*, That no conveyance of any interest of any full-blood Indian heir in such land shall be valid unless approved by the court having jurisdiction of the settlement of the estate of said deceased allottee: *Provided further*, That if any member of the Five Civilized Tribes of one-half or more Indian blood shall die leaving issue surviving, born since March 4, 1906, the homestead of such deceased allottee shall remain inalienable, unless restrictions against alienation are removed therefrom by the Secretary of the Interior in the manner provided in section 1 hereof, for the use and support of such issue, during their life or lives, until April 26, 1931; but if no such issue survive, then such allottee, if an adult, may dispose of his homestead by will free from all restrictions; if this be not done, or in the event the issue hereinbefore provided for die before April 26, 1931, the land shall then descend to the heirs, according to the laws of descent and distribution of the State of Oklahoma, free from all restrictions: *Provided further*, That the provisions of section 23 of the act of April 26, 1906, as amended by this act, are hereby made applicable to all wills executed under this section.

SEC. 10. That the Secretary of the Interior is hereby authorized and directed to pay out of any moneys in the Treasury of the United States belonging to the Choctaw or Chickasaw nations, respectively, any and all outstanding general and school warrants duly signed by the auditor of public accounts of the Choctaw and Chickasaw nations, and drawn on the national treasurers thereof prior to January

1, 1907, with 6 per cent interest per annum from the respective dates of said warrants: *Provided*, That said warrants be presented to the United States Indian agent at the Union Agency, Muskogee, Okla., within sixty days from the passage of this act, together with the affidavits of the respective holders of said warrants that they purchased the same in good faith for a valuable consideration, and had no reason to suspect fraud in the issuance of said warrants: *Provided further*, That such warrants remaining in the hands of the original payee shall be paid by said Secretary when it is shown that the services for which said warrants were issued were actually performed by said payee.

Sec. 11. That all royalties arising on and after July 1, 1908, from mineral leases of allotted Seminole lands heretofore or hereafter made, which are subject to the supervision of the Secretary of the Interior, shall be paid to the United States Indian agent, Union Agency, for the benefit of the Indian lessor or his proper representative to whom such royalties shall thereafter belong; and no such lease shall be made after said date except with the allottee or owner of the land: *Provided*, That the interest of the Seminole Nation in leases or royalties arising thereunder on the allotted lands shall cease on June 30, 1908.

Sec. 12. That all records pertaining to the allotment of lands of the Five Civilized Tribes shall be finally deposited in the office of the United States Indian agent, Union Agency, when and as the Secretary of the Interior shall determine such action shall be taken, and there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available as the Secretary of the Interior may direct, the sum of \$15,000, or so much thereof as may be necessary, to enable the Secretary of the Interior to furnish the various counties of the State of Oklahoma certified copies of such portions of said records as affect title to lands in the respective counties.

Sec. 13. That the second paragraph of section 11 of an act entitled "An act to provide for the final disposition of the affairs of the Five Civilized Tribes in the Indian Territory, and for other purposes," approved April 26, 1906, is hereby amended to read as follows:

That every officer, member, or representative of the Five Civilized Tribes, respectively, or any other person, having in his possession, custody, or control, any money or other property, including the books, documents, records, or any other papers of any of said tribes, shall make full and true account and report thereof to the Secretary of the Interior, and shall pay all money of the tribe in his possession, custody, or control, and shall deliver all other tribal properties so held by him to the Secretary of the Interior, and if any person shall willfully and fraudulently fail to account for all such money and property so held by him, or to pay and deliver the same as herein provided, prior to July 31, 1908, he shall be deemed guilty of embezzlement and upon conviction thereof shall be punished by fine of not exceeding \$5,000, or by imprisonment not exceeding five years, or by both such fine and imprisonment, according to the laws of the United States relating to such offense, and shall be liable in civil proceedings to be prosecuted in behalf of and in the name of the tribe or tribes in interest for the amount or value of the money or property so withheld.

Sec. 14. That the provisions of section 13 of the act of Congress approved April 26, 1906 (34 Stat. L. p. 137), shall not apply to town lots in town sites heretofore established, surveyed, platted, and appraised under the direction of the Secretary of the Interior, but nothing herein contained shall be construed to authorize the conveyance of any interest in the coal or asphalt underlying said lots.

Approved, May 27, 1908.

Civil and Religious Liberty.

SPEECH

OF

HON. JAMES T. LLOYD,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. LLOYD said:

Mr. SPEAKER: No people have more cause for patriotic devotion than Americans. None have received greater heritage than the citizens of this Republic. Civil and religious liberty has been the goal of ambition. Our ancestors have made everything subservient to it. Those who have preceded us have marked plainly the path which their successors may safely follow. Political parties may divide the people, and properly so. Different policies in government may be declared and their contentions be earnest and determined, as they should be, but if the flag be assailed the people with one accord may be depended upon to rally to its support. Misfortunes may overtake citizens of the Republic, hardships and privations may be endured by them, financial panic and distress may, like a scourge, come upon them, storm and flood may devastate, fire and earthquake may destroy, drought with its blight and destruction may sorely distract, the unemployed may be in need of bread, but with it an attacking foe may be assured that Americans are ready to sacrifice comfort, property—yes, life itself, if need be—to maintain the honor and integrity of the Government they love so well.

The colonists, when they determined to throw off the yoke of oppression, laid down certain fixed and determinate principles which they declared were the inalienable rights of men. These were tersely and forcefully asserted in the Declaration of Independence, which was the chart by which the people of 1776 were guided and the sheet anchor of the hopes of mankind from that time until this. This Republic was builded upon it as its chief

corner-stone. How carefully, yet surely, were the rights of men there expressed. What deliberate resolution was shown in their pledge of loyalty to its execution in placing on the altar of sacrifice property, life, and character. Their principal grievances were taxation without representation, the quartering of standing armies amongst them without their consent, the placing in control over them officers not of their choosing nor of their number. Because of these grievous burdens it was determined to throw off the yoke of bondage and establish a free government based upon what is asserted as self-evident truths and God-given rights. It was proclaimed that, "Whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it and to institute a new government, laying its foundation on such principles."

If these fundamental doctrines were correctly stated by Thomas Jefferson in his presentation of them to the Continental Congress, they ought to be of equal force to-day. Then the colonists were the oppressed and were seeking redress of their grievances. Now their descendants are in the enjoyment of the full fruition of their achievements. Our forefathers secured a heritage for this generation in government, boundless resources, and extraordinary opportunities not surpassed in the annals of history. Within one hundred and thirty-two years after their solemn announcement to the world of their determination to enjoy the rights denied to them, their successors are in the possession of all the blessings necessary to human happiness and prosperity.

I wish, in the few moments allotted to me, to call attention, in a brief way, to the different kinds of governments now found under the American flag. No greater range of authority is found under any other flag. The English Crown, on whose possessions the sun in its daily journey never sets, has no greater variety of government. President Roosevelt to-day holds sway from the representative government of the mainland to the extreme of military despotism elsewhere.

Mr. Speaker, I ask you to view the situation and to contemplate the conditions that are presented. This Republic has been the asylum of the oppressed and has been the field for the culture and development of human liberty, but it is now so far removed from its ancient moorings that I beg to inquire if it has not itself become an oppressor, and whether it is not violating the very principles for which it so strenuously contended in the beginning.

There are at present three Territories, Arizona, New Mexico, and Hawaii, that have local government, make their own laws, and have Delegates in this body to speak for them. Their governors are appointed by the President, but their Delegates and local officers are chosen by the people. Hawaii presents a strange spectacle in having no county organizations nor municipal governments. The city of Honolulu, with its population of 40,000, is not incorporated and its lawmaking body is the legislature of Hawaii.

In 1873 a treaty was made with the then Hawaiian Government by which the United States was to have and control Pearl Harbor, a superior inland refuge for vessels at Honolulu, and on account of this concession the Government was to admit Hawaiian products free of duty. If the sugar sent to the United States from Hawaii since 1873 had all paid duty at the regular rate, the aggregate would have been many millions of dollars. Notwithstanding our anxiety to secure that splendid harbor, it is a surprising fact that it has been completely neglected and that to-day no war vessel of any considerable size could enter it. Not a single battery has been located to defend it. The people of the island are left almost wholly unprotected and are subject to the attack of any foe that might present itself.

In Alaska there is a governor appointed by the President, but upon whom but few duties are imposed. The government there may be said to be a rule of judges and marshals. There are no county organizations and but few municipal governments. They have no system of taxation, excepting in their towns for local purposes and an occupation or license tax which is levied on every class of business enterprise. The revenue thus acquired goes into the National Treasury. The population is between thirty and forty thousand and is confined to comparatively few localities.

The output of gold in Alaska last year was about \$30,000,000, and its salmon fisheries are the greatest in the world. Alaska has territory that is nearer the North Pole than to New York. It has sections which have the greatest rainfall of any portion of the United States. Other parts of the country hardly have rainfall at all. A part of it is so warm that in winter ice can hardly be obtained for summer use. Other districts are so cold that they are never free from ice. The possibilities of this great country are beyond conception.

Its development has hardly begun. It now asks for Territorial government and begs the right of self-control. Will Congress give it or deny it?

Another subject of American sympathy and interest is the island of Santo Domingo. The President of the United States became a kind of receiver of it—collected its revenues by its consent and deposited them in New York banks. Later, by treaty, the United States agreed to collect the revenues of the island and pay 40 per cent of them to the creditors of the island and expend the remainder to meet the current expenses of the Santo Domingo Government. The obligation assumed for the creditors is to have delivered to them 40 per cent of the revenue, and for this Government of the United States is morally responsible. For the islanders the United States is expected to receive and honestly account for, according to contract, what comes into its hands. Any default would be chargeable to our Government. It is difficult to explain what may be the effect of these relations or to determine what complications may grow out of them. Our ships of war have been used for their enforcement, and both the Army and Navy may be needed to carry out our obligations. The people there are turbulent, restless, and insurrectionary, and no one can tell when there may be a clash of authority.

Porto Rico is the most desirable island in the West Indian group. It is 36 miles in width and 100 miles in length and has a population of more than 800,000. It is smaller in area than Connecticut and more populous than Maine or Colorado. It came into the control of the United States as a result of the Spanish-American war. It willingly assumed the new relation and its people gladly gave up their allegiance to Spain to accept the authority of this Government. They are a poor, but law-abiding, people. They had the courage and ability to settle the question of human slavery without the shedding of blood. They have been a subject people for hundreds of years, but have never been rebellious or reactionary. These people are now wholly dependent upon this Government. They are pleading for the same rights that our fathers claimed in 1776. They are urging complaints similar to those that were lodged against King George. They insist that they have a government without their consent and in which they have no proper representation. They have a governor appointed by the President and amenable to him. They have a legislature of two branches, the upper house of which is appointed by the President. No law can therefore be enacted without the consent of his appointees. Porto Rico has no complete Territorial government and no Representative or Delegate in Congress. The appeals of the Resident Commissioner, Mr. LARRINAGA, have been most forceful. His story of the disappointment of his people is pathetic. By the courtesy of the House of Representatives, in the last Congress, he was permitted to address it. In speaking of his people, among other things, he said:

The people whom I, in a peculiar way, represent, contend that they have a full right to be represented here in this House as it was represented for thirty-five years in the Spanish Congress. We had there sixteen full-fledged representatives, who had to look after the laws regarding Porto Rico. They passed the most important law that any Congress ever passed or will pass in centuries to come. It was the Porto Rican delegation with their votes that made the law that set 50,000 slaves free in their community.

At another time in his speech, in speaking of the present régime, he remarked:

The government of the island has been conducted entirely by the absolute and tyrannical rule of our executive council, or upper house, formed of eleven members appointed by the President, the majority of whom are, at the same time, the heads of the different departments. They make the laws, vote our taxes, collect our money and expend it without any satisfaction being given to the people of the island. Each head of a department may act in the most independent and arbitrary way without any regard whatever to the will of the people.

The executive council, to whom Mr. LARRINAGA refers, is composed of the secretary, attorney-general, treasurer, auditor, commissioner of interior, and commissioner of education of the island, and five other persons named by the President. On concluding his remarkable speech, this astounding statement was made:

Our status is entirely repugnant to the people of Porto Rico, and I wish here to solemnly protest before Congress and the American people of that feature of our organic act which makes the upper house appointed by the President and not elected by the people.

Shall their appeal be heeded? Is their demand a reasonable one? I ask you seriously to inquire whether, on principle, our Government has done the best for these people that could be done and whether their complaints are not well founded? They have the right to control their local affairs and are fully capable of doing so. They are anxious for greater freedom and are entitled to enjoy it and I beg you, sir, to grant it, and to that extent defend the Constitution and preserve the honor and integrity of the Government.

There came under the dominion of our flag, by the payment of \$20,000,000, certain islands of the Far East, a part of the Eastern Hemisphere, with a population of 8,000,000 souls. The inhabitants had expected liberty, but in return received discontent. They had been allies in war, but they became enemies in peace. They demanded of the United States the freedom which they supposed they had secured and insisted upon its enjoyment, but our Government silenced them with shot and shell. Their subjection is known, but their just deserts may not be understood. Their present condition can be ascertained, but their status in the future is uncertain and gives them but little hope. Viewing the situation from the standpoint of the Filipino, have these people any right to complain? There can be but one answer to this question.

It may be argued that we do not know what disposition is to be made of the Philippine Islands nor what policy is to be adopted in their control, but this is certain, as much as some may regret it, they are now subject to the authority of the United States. The rights of the Filipino are fundamental and should be recognized. Why should this weak and defenseless people be denied the right of trade when the Cuban Republic is, both by treaty and law, especially favored? These people had nothing to say in becoming a part of our country; they were bought with a price. Shall they be treated as so many slaves, or shall they be given the rights of free men? Their liberties should be maintained; their rights must be observed. Their country should not be a chattel of the United States, to be carried hither and thither wherever caprice, expediency, and selfish interest would demand, but they should be recognized as substantially a part of the Republic. If they are to enjoy the benefits of American liberty, on what principle can they be denied? If they are not sufficiently advanced in civilization to be capable of self-government, then how much more care should be taken to give them every possible opportunity of trade and education that they may become fitted for it.

The desire for liberty is found among these people. They are longing for its enjoyment. Can we justify our own conduct on the ground of their inability? It was said in 1776 that our forefathers were not capable of self-government. Numbers of people among the colonists believed it, but that ability has been fully demonstrated. It may be that these people can more nearly satisfactorily perform the functions of government than politicians claim. If it be true that we are not carrying to them that degree of liberty and self-government which is properly theirs, we are bringing reproach upon the good name of those who purchased our liberty with their own blood and have given to us such a valuable heritage.

In Guam, the Panama Canal Zone, and some smaller islands of the sea our flag floats in authority and government is maintained under it, but in no place does its authority place our Government in a more delicate position than in the island of Cuba. Within ten years they were in revolt trying to rid themselves of the tyranny of Spain. Our Government, with the spirit of magnanimity not surpassed in human history, came to the rescue of the downtrodden and liberty-loving Cubans and asked the Spanish Government to permit them to control their own affairs and enjoy the freedom for which they contended, but Spain would not consent. Congress then made a formal decree, and said to the world: "Cuba is free, and of right ought to be free," and pledged to the Cubans the lifeblood of the citizenship of this Republic to maintain their demand, and at the same time assured mankind that no motive prompted but humanity, no desire except that the people of Cuba should be protected in the enjoyment of that liberty so dear to the oppressed. American blood and treasure paid the penalty and Cuba became free. With what pleasure was the new Republic with its one star heralded among the nations. But what is its condition to-day? Held under the iron heel of martial law by the power which rescued it. No governor, no legislative assembly, no representation—ruled alone by the strong arm of the military of the United States. For months this condition has been endured, and now no immediate promise of relief. The American flag is up in Cuba. It floats in defiance over its ramparts, but should it be hauled down? If so, when and under what circumstances? How, in good conscience, is that flag regarded by the 2,000,000 Cubans who wish to conduct their own affairs and enjoy the freedom of their Government?

Mr. Speaker, in the light of the conditions to which I have alluded, may not the inquiry be properly made, Has not our nation drifted away from its former idea of human liberty? Has it not become so intoxicated with power as to be oblivious to the rights of those less fortunate who are subject to it? Have the principles of the rights of men laid down in 1776 become obsolete? Were our fathers wrong in their contentions?

If not, how can those whose rights are jeopardized be disregarded?

No ambition is more genuine than the desire to be free. All men are entitled to the blessings of freedom. It is the mission of our Republic to carry the sunshine of equality to the hearts of the enslaved and bid them throw off their shackles and enjoy the rights of free men. Our Government asks all men to be partakers of the joys of national prosperity and bearers of the burdens when adversity does come. It would have the door of every heart unlocked to the realization that this Government brings the greatest known blessings to its participants. The Revolutionary fathers declared their labors for the benefit of themselves and their posterity forever. We bless the world by extending free government to those who have it not and by removing the obstacles that may hinder others in its complete enjoyment. This is certainly our mission with reference to our outlying possessions. Is our country willing to assume it or will it shrink from the burden? Must the Porto Ricans continue dissatisfied because they are not permitted to elect their own lawmakers and manage their own fiscal affairs, or will they be given self-government? Will the Filipino not be given the hope of ultimate freedom, either as a part of the United States or independent of it? Why not make him feel that liberty is to be his portion and that our beautiful flag can carry no other sentiment to any struggling people? Why not lift the Cubans to the enjoyment of their fondest dreams— independence—and thereby show to everyone subject to the American flag that freedom is his; that the mission of this Republic is to remove all shackles of bondage, and that political subjugation will no more be tolerated than human slavery?

Currency Bill.

REMARKS

OF

HON. ADOLPH J. SABATH,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. SABATH said:

MR. SPEAKER: For years we have been told by the great authorities on banking that our present system of currency legislation was preposterously ill adapted to the needs of the country. For three years the panic had been looming ahead, and yet this great smash of Republican prosperity and trust-bred inflation is now to be used as the very means of making worse the evils that brought on this present panic. For years we have been laboring under the conditions brought about by the banking magnates. Whether this Republican panic was intensified by the deliberate attempts of the great banking interests, or whether it was a consequence of the overproduction inherent in and the consequence of the actions of the régime in power, need not to be discussed now.

Ever since the panic of October, 1907, and certainly for six months, we have been told that currency legislation was necessary and that some plan should be found whereby a repetition of the conditions would become impossible. During all this period of time no honest attempt to bring about a reform has been made. The Republican majority has shown itself incapable of producing statesmanlike legislation such as is demanded by the people of the United States. To-day we are witnessing a spectacle that would have been unbelievable a few years ago. At the close of the long session of Congress a currency bill, the contents of which is unknown to anyone, of which a copy can neither be seen nor secured, is called up for passage under the gag rules which are drawn so iniquitously and in such distrust of all Members that they condemn the legislation sought to be enacted.

The conference report is brought in under a rule limiting the debate and discussion on this vital and important measure to sixty minutes. No amendments are to be made to it, and yet its effect is to be as far-reaching as any legislation brought before the country in the last twenty-five years.

In the six months we have spent here enough time has been frittered away not only to elaborate a carefully drafted currency bill, acceptable and beneficial to the country, but we have had sufficient time to have passed other legislation strenuously demanded and insisted upon by the American people, such as revision of the dishonest tariff, which is robbing and plundering the people in the interests of the trusts.

We might have passed the Wilson bill, an amendment to the Sherman antitrust law; we might have passed the anti-injunction law; the eight-hour law; besides, by enacting the compensation bill (H. R. 16739), introduced by me, but not permitted to be called up, which, enacted into law, would have protected thousands upon thousands of workmen who are being killed and injured each and every year; or my other bill, which provides for trial by jury in contempt proceedings where the contempt is not in the presence of the court, and other legislation needed and justly demanded by the workmen of this country. Yes; we have had enough time to pass a postal savings bank bill, which would have been a great benefit and blessing to the country, but not desired by the banking magnates. But instead the time has been taken up in passing corporation bills, voting away up to this time the enormous sum of nearly one thousand million of dollars of the people's money, and I am satisfied that the amount will reach the billion-dollar mark before the close of the session. This in the face of the fact that our Treasury shows a deficit of millions of dollars each and every month, thereby increasing the nation's indebtedness from day to day. Whatever time was not consumed in voting away the people's money has been used for land-grabbing bills and political speeches delivered with the sole intent of misleading the people.

In the last minutes of this long session, without giving Members any opportunity to be heard, this nefarious bill, which no honest man wants and no one asks for outside of the gang of Wall street operators, and which I am sure will cause untold damage, is sprung on us. I am of the opinion that the people of this country will not much longer tolerate the treatment that is now being accorded them. I believe that it is high time that some laws should be passed that are not only for the interests of the favored few and against the interests of the vast majority, and that the laws I mentioned above would be in the interests of all of the people of the United States.

Now, let us glance at the bill, based as it is on those proposals the House has heretofore rejected and now must swallow, and see what it provides. It starts out to create a bank trust, just as if we had not enough trusts now. By this bill you are creating one more, which will be the most powerful and dangerous of them all, by providing that any ten national banks with a capital of not less than \$5,000,000 may organize associations which shall have the right to take notes, commercial paper, any kind of railroad or other bonds, and deposit them in the Treasury of the United States and secure 75 per cent to 90 per cent of bank notes, which are to be circulated by them as money. Grand and capital idea, and very good for the Wall street magnates.

Mr. Speaker, the more I think of the provisions of this bill and our currency system the more I am satisfied that the entire system of ours is wrong and it is solely in the interests of the very rich and favored bankers—the money kings and the money changers of Wall street. The Government, instead of issuing what money is required, issues and sells interest-bearing bonds. The banks buy these bonds, deposit them with the Government as security, and secure from the United States Treasury that amount of bank notes, currency, or what they call "money," and which they circulate as money, upon which they pay the Government a tax of one-half of 1 per cent. The banks receive interest on the United States bonds they deposit with the Government and also on the money which they obtain, double and triple interest, mind you, not on their money, but on the money belonging to the people deposited with them as bankers. In addition to the private function of banking they have been granted the special privilege of issuing bank notes through these transactions, special and governmental privileges, namely, of issuing notes; they earn from 15 to 36 per cent a year and very frequently more. This bill provides that these banks shall pay 4 per cent on the notes, or rather on the clearing-house bank notes. But what is this tiny charge in comparison with the heavy interest they force the people to pay in the form of direct taxes for private gain?

I wish to ask, Why should not the Government issue the money and currency directly to such amount as is actually required to carry on our commerce and required by the people in due course of business, and thus save the community from this double and triple interest charge, the most iniquitous form of public taxation for private ends? By keeping the note-issuing function where it belongs we would put an end to the wild gambling and speculation which is responsible for the excessively high interest rates and depressions occurring every year and culminating in the usual panic every time overproduction affects us, when coupled with the similar plethora of international dumping.

I desire to remind the American people not only of what some of our greatest men from time to time have said on this very question of the banking power and its sinister abuses, but also of what the Constitution provided and what the framers of our Constitution believed, by whom and how money should be issued. I am satisfied if we had lived up to the teachings of the fathers of the Republic, the country would not be obliged to kneel before the throne of J. Pierpont Morgan—whom his indiscreet flatterers in a recent magazine article called "Morgan the Magnificent," in comparison with a profligate Italian tyrant, Lorenzo the Magnificent. So far from Morgan having saved the country from financial ruin, it was the one act of intelligent self-interest that the capitalist class has shown in sixty years. The country, as a matter of fact, could not be and was not saved by Morgan's and Rockefeller's spectacular aid to the gamblers and their banking allies in Wall street; and the humiliation and disgrace of the richest and greatest nation of the world are again threatened by this very class of financial magnates unless this infamous bill is allowed to become a law.

The reason for this is not far to seek. The power that could crush out the aspiring new Western powers from sharing in the bankers' loot, that could gobble up the few independent steel works and the Westinghouse shops and copper mines, that could squeeze its enemies and get its revenge for the panic of March, 1907, and at the same time gather in all those interests that heretofore had escaped them—this power would not hesitate to strike at the commerce and financial stability of the country for the purpose of marketing its rotten securities by the means of this bill. And this is the whole matter.

The true object of the bill is not, however, to save the country from the recurrence of the panic; it probably will bring one on quicker than the usual course of unnatural overproduction, inherent in the system, calls for. Its object is rather to afford a market for the stocks, now called "convertible bonds," which are to be worked off on the gullible public. To do this effectually the Government is to give them the stamp of its approval by permitting their use as the basis for bank-note currency.

Let us see whether this is mere assertion without basis of fact. When the Aldrich bill was first introduced Senator LA FOLLETTE wanted to save the savings and hoardings of the people from the undigested provisions of the bill. He knew that once a bond was acceptable to the Treasury for currency purposes, it was sure to be used as a permissible investment for savings banks, and had the Harriman Alton railroad bond savings bank bill signed by Roosevelt as governor of New York before his eyes. Senator LA FOLLETTE proposed that only those bonds were to be used as a basis of bank circulation as had been passed on by the proper officials, and after a *systematic valuation of the stocks and bonds* had been made by the Government. This, of course, was what the stock-jobbing magnates did not want. As well ask a green-goods man to spend a few hours in the assay office and test his gold brick. Without more ado the bill was sunk out of sight. Everyone supposed that for once decency had triumphed, and that the light of day had stopped the machinations of the financial bunco steerers. In the last moments of the session this bill, without a chance of discussion and, as I have said, without an opportunity for study or criticism, is jammed through the House at the orders of the same interests, who, when defeated in their attempt to push through the Penrose bill to muzzle the press, slipped its provisions in as a rider to the post-office appropriation bill, and thus fastened on any opposition paper the noose of instant and arbitrary extinction. In the same manner, when this bill will have become law, the little bankers throughout the country will be forced to howl for and insist on the creation of a great central bank. Were it possible to have the central bank free from the manipulations of the Wall street gang, it would not be so bad as is this scheme of a gang of stock jobbers, working off their watered stocks, converted into and in the guise of bonds, on the public, through the indorsement which these so-called "securities" are to receive as soon as they are to be receivable for Government securities and currency.

Mr. Speaker, I wish to ask, Why should not the Government issue the money and currency directly to such amount as is actually necessary for the carrying on of our commerce and is needed by the people in due course of business, and thereby save the people this double and triple interest charge? By doing so we would put an end to wild gambling and speculations, responsible for high interest rates for call money, reacting on legitimate demands of every trader and every merchant, and a sure forerunner of every panic.

I am satisfied that if we had lived up to these rules of sound finance the country would not have been obliged to kneel before J. Pierpont Morgan, and, as his friends claim, beg him to save it

from financial ruin. And yet we are told that unless this outrageous bill is enacted we shall again have such a panic with us in the fall of this year. The idea is preposterous. The gamblers have been bled, their frenzied dupes have been wiped out. The bankers are not required to lend their surplus to big and little gamblers as in the past. The bank rates in every large capital city in Europe are forced down by the plethora of money kept there by recuperating savings and investment seekers, and therefore money is a drug on the market and no immediate recurrence of a money stringency is to be feared in the natural course of events. Bad as the methods of distribution of money are now, artificial as they can be manipulated by the headman, common sense, if not business acumen, will show that the bankers' class can not afford to arrange the money matters of the nation so badly that the repetition of the same lack of management is to be apprehended this year. There will be no congestion, because the panic has cleansed the blood in the body politic, and any attempt to make us believe in its imminent recurrence is made in bad faith for the sole purpose of passing this stockjobbing bill.

WHAT THE CONSTITUTION PROVIDES.

Article I, section 8, of our Constitution provides that Congress alone shall have power "to coin money and regulate the value thereof and of foreign coins." This shows that the National Government has the supreme authority over the money of the nation, but so that this clause may not be misunderstood it is provided in Article I, section 10, of the Constitution that "no State shall coin money, issue bills of credit, or make anything but gold and silver coin a tender in payment of debts." Thus the framers of the Constitution tried to doubly emphasize the fact that the National Government alone was to exercise the power of issuing money, and that the several States were not to interfere.

Why, then, give that power to banks?

The highest courts in all countries have repeatedly held that the issue and control of money is a prerogative of Government, and can only be rightly performed by the highest power in the land.

But what do our financial kings care for the Constitution, who, whenever they feel so disposed, issue millions of clearing-house certificates, which they circulate as money without any regard to law or opinion of the people?

Thomas Jefferson foresaw the impending danger of this system when he said:

I believe that banking institutions are more dangerous to our liberties than standing armies. Already they have raised up a money aristocracy that has set the Government at defiance. The issuing powers should be taken from the banks and restored to the Government and the people to whom it properly belongs.

That peerless champion of the people, Andrew Jackson, sixty years ago said:

If Congress has the right under the Constitution to issue paper money, it has been given them to be used by themselves, not to be delegated to individuals or corporations.

John C. Calhoun's remarks on this self-same question have materialized time and time again. This is what he says:

Place the money power in the hands of a combination of a few individuals and they by expanding and contracting the currency may raise or sink prices at pleasure, and by purchasing when at the greatest depression and selling when at the greatest elevation may command the whole property and industry of the community. The banking system concentrates and places this power in the hands of those who control it. Never was an engine invented better calculated to place the destiny of the many in the hands of the few.

A prediction that has been verified to the letter.

The United States Senate Chamber still rings with the echo of Gen. John A. Logan's speech wherein he sounded the warning in the following language:

I can see the people of our Western States, who are producers, reduced to the condition of serfs, to pay interest on public and private debts to the money sharks of Wall street, New York, and of Threadneedle street in London, England. And this will be accomplished by withdrawing the Treasury notes from circulation and destroying them until the banks can control the entire volume of money, and then compel the people to use personal checks in lieu of money—checks passing through the clearing houses which the banks will establish in all the larger cities, to enable them to make a fictitious showing of prosperity and fool the people with the great volume of business, which they will cause to be published in the daily and weekly newspapers. But remember, checks are not money (1874).

Eminent statesmen and students of finance have from time to time deprecated the great influence and power which the banks exercise principally to further their interests and secure, to the detriment of the country and its people, an absolute control of the financial situation.

The great Webster expressed himself during the course of his great speech on the financial problem, as follows:

There never has been devised by man a plan more specious by which labor could be robbed of the fruits of toil than the banking system. The people not only take bank paper as money, paying interest on it

at enormous rates, but when the banks suspend the people lose the discount, while the bankers gain it.

The people wonder why financial panics occur so frequently. I can tell them why. It is to the interest of the bankers and brokers that they should occur. It is one of the specious methods by which these despotic and utterly useless knaves rob the producing, manufacturing, and mercantile classes of their honest earnings. It is one of the chief plans by which this infamous ring is riveting the chains of slavery upon the limbs of labor. It is one of the chief means adopted to build up a money aristocracy that shall live in idle luxury and ape the pretentious airs of European nobility.

How true are the remarks of this great man! Does this not portray the present time?

I also desire to embody in my remarks the following from the Republican Philadelphia North American of this date (May 29, 1908):

THE CURRENCY CRIME.

The Republican party is about to go before the people with the mongrel, hybrid, cheating, swindling thing labeled the Aldrich-Cannon currency bill as its claim to the ballots of American workers and business men, already long-suffering and embittered victims of the gamblers of New York.

It has been whipped through the House, to the shame of the men who have stilled their own convictions and crouched cowards under the lash of the vulgar tyrant in the speaker's chair for fear of his threat to deprive them of their slices from "the pork barrel"—their appropriations in the omnibus building bill.

It will be whipped through the Senate in like fashion, in all likelihood, thanks to the feebleness of the Democratic minority, playing the donkey's rôle as usual in their inability to see the chance to gain favor by a filibuster that would be patriotic statesmanship.

Worst of all, we believe that Roosevelt will make the bill a law by signing it. He will hurt his country and his party not because of lack of courage or of good intent. He will do this sin because of lack of understanding.

In grasp of financial questions he is an infant. He trusted Cortelyou. That was excusable. But he continued to trust him after last December. And now again, with the best of motives, he will commit one of those blunders which Talleyrand rightly called "worse than a crime."

Has not Roosevelt enough friends there to save him from himself?

Are there not enough loyal Republicans to keep the party from being rushed into gravest peril by this foisting upon the people at the dictates of a Wall street law immeasurably worse than the one condemned by practically every organized body of business in the nation?

Even the original Aldrich bill was better than this iniquity. Even the two-headed freakish thing promised by the conference conspirators was not so vicious as the swindle rushed to passage in the House after one hour's debate, before a single member had a chance to read the bill upon which he voted.

It was only eighteen months or so ago that Aldrich on the floor of the Senate made this declaration regarding municipal and railroad bonds: "In these days they are fluctuating widely, and no prudent banker could afford to buy bonds other than the bonds of the United States."

But that was before he had new orders from 26 Broadway and the National City Bank, and before J. P. Morgan's office boy in Washington received the message that illegal bond issues would be needed for Wall street's convenience in addition to \$250,000,000 deposits of the people's money.

Those high financiering banks of New York owed outside banks \$410,000,000 just before last fall's panic. From August until December the country could squeeze only 5 per cent of its own money from New York's clutches. And Wall street made a virtue of paying \$20,000,000 of its \$400,000,000 indebtedness to the distressed country, during a period when the accommodating Cortelyou increased the Treasury deposits in New York banks \$47,000,000.

But Wall street had bonds in plenty—railroad and municipal bonds unsalable, unacceptable by savings banks, and so speculative and unstable that many of them fluctuated from 10 to 20 per cent within a year.

New York was the defaulter of the nation, with its illegal clearing house certificates.

There were bonds enough when Mr. Cortelyou opened the Treasury doors to them to increase the deposits of railroad and municipal bonds with the Government from \$87,000,000 in October to \$200,000,000 in December. And still Wall street gasped for breath under its load of dubious securities.

It was to dump upon the Government that load that Aldrich introduced the bill that he did not himself dare defend except as a makeshift. And it was that bill which brought forth an outburst of indignation from every board of trade and commercial body throughout the land.

And now, at the eleventh hour, the conspirators deliver their stab at the commerce of the country. They rush forward a bill well described as "half Senate infamy and half House infamy," embodying every rotten Wall street device that lay in the earlier bills and discarding every amendment for the protection of honest banking and legitimate business.

Commercial paper is mentioned and railroad bonds are not. Oh, the wisdom of these pirates, thinking they can mask their purpose with such word twisting! Just as if the business men of this country would not understand the meaning of "other bonds" and "any securities including commercial paper."

State, county, and municipal bonds to be accepted at 90 per cent of their market value. "Other bonds" and commercial paper to be taken at 75 per cent only after arranging complicated and elaborate associations feasible only for the New York banks.

This law will mean the turning over of the Treasury of the United States to the gamblers of the New York Stock Exchange for a period of six years.

It will mean the making of "good times" and "bad times" of "bull" markets and "bear" markets according to the pleasure of Rogers and Rockefeller in the National City Bank and J. P. Morgan in the National Bank of Commerce.

It will mean not the slow and certain movements of contraction and inflation by the natural laws of commerce, but sharp changes forced at will by the master gamblers.

It will mean the gift to the chief enemies of the nation of the power to issue or retire half a billion of dollars, exciting speculation or compelling disaster according to whichever best suits their betting book.

What the effect will be upon the coming elections we do not know. We do not know what measure of punishment a long-suffering people will inflict upon their betrayers.

It is not the time to think of politics or partisanship. A thing is being done which will affect every employer and every employee in America, every banker, merchant, manufacturer, clerk, and mechanic.

We wish merely to warn one and all. The country will be in the condition of a convalescent to whom drugs that are powerful stimulants, but poisonous, would be administered. * * * And after the North American and the few like us have been mocked at as false prophets and pessimists, pay day will come. And the price will be a bitter one.

Mr. Speaker, in the midst of prosperity, with everything in abundance, the fields yielding great crops (not due, however, to a Republican Administration), mines producing millions upon millions of wealth, with the country full of resources, and all at once, without any reason, we find our beloved country in the midst of a panic which has forced the closing of thousands of shops and factories, kept 400,000 freight cars idle, when fifteen months ago a car famine caused the community untold losses, ruined thousands of business men and threw out of employment millions of our laboring men, and thus caused untold suffering.

Who has suffered deepest because of this conspiracy and made-to-order panic? In the first place the laboring men (the men forced to work for a living) and the producers of our wealth, and, in the second place, the business men, as well as the manufacturer, who was obliged to close his place of business, shop, plant, or factory, being unable to pay bills that were coming due, or even to pay his workmen, since the money has been centralized by the criminal money combination of Wall street for speculative purposes. But what is one man's loss is another man's gain, but in this case we can say: "What was and is millions' loss is one man's gain." Who was the gainer by this prearranged panic? No one but the very man who now controls our friends—J. Pierpont Morgan—who was and who is hailed all over this country—yes, even on the floor of the other Chamber and in magazine articles by the great friend of the people, that much overworked Senator from New York (a director of sixty-four corporations), as a savior of this country.

Do you not think, Mr. Speaker, that a country where such things are possible is in danger? That where such a currency anarchy exists, it is responsible for these conditions, and that a scheme that gives one man or a clique of men such great power as to be able to stop a panic, very dangerous? For if he or they have the power to stop a panic they must have had the power to create the panic. They have actually done this very thing and are guilty of all subsequent developments, of which this wretched makeshift bill is the most sinister.

And in this connection I will be bold enough to ask, What did the present publicity and fame-seeking Administration do to assist the public? What step did the Republican Administration take? Did the responsible leaders insist or send out any order that the banks should comply with the laws of the land and pay, or return to the public money deposited in these banks, honestly believing that they could obtain it whenever needed or demanded?

Oh, no! On the contrary, instead of trying to protect and assist the commercial world and the great mass of people of the United States, our entire reserve, amounting to about \$250,000,000, was placed at the disposal, yes, deposited and turned over to these New York banks and bankers so as to enable them with greater ease to crush out the life and existence of our commerce and ruin all those that were in their way—their war of conquests, then, mind you—this enormous sum of money was turned over to them without receiving a single cent of interest. When I say "Without a single cent of interest" I mean the Government did not receive a single cent of interest, and that in the face of the fact that this money, so deposited, was bringing the gamblers of Wall street up to 100 per cent for call money to continue their devil's game.

Now, these very bankers and their hirelings are out clamoring and crying that the country has not enough money to do business with, when they know that it is false and untrue. We had, and right now have, more money in circulation than ever in the history of this country. Statistics show that in 1800 we had only \$5 per capita; in 1830, \$6.29; in 1850, \$12; in 1862, \$10.23; in 1870, \$17.50; in 1879, \$15.32; in 1889, \$22.52; in 1893, \$24.56; in 1897, \$22.87, and at the present time (or in October, 1907, just before the panic) \$34.71 per capita. Does this not show we have more money than ever before? Absolutely so. The only trouble is that it is not where it should be and is where it should not be. The distribution is unjust, because it permits a perversion of public functions for private graft. I admit that at present we need a larger amount

of money per capita than before, for the reason that the prices of all commodities have increased and that notwithstanding we are on a gold basis and have the so-called "sound dollar."

Although the circulating medium has increased with our population, yet so utterly has the past lack of system in banking perverted (here as in all its aspects true to its class instinct of selfish exploitation) its functions that instead of increasing our facilities of interchange and prosperity it has become a means of crushing all except the master devils in control of the money machine. In every instance prices have increased they have increased much more than the slight increase in money wages temporarily granted by the master class. For instance, on the necessities of life and on all articles controlled and manufactured by the protected thieving trusts the margin between the possible savings from the small wages and absolute destitution has been wiped out. Does this not, and should it not, satisfy anyone that my contention is correct that this country has had enough circulating money? The mischief lies in the defects of distribution, and this bill not only intensifies it, but makes it more dangerous and directly sinister. Ever since the banking interests perceived that some form of regulation of the railroads became inevitable, water was poured into all the stocks and bonds of every carrier. The purpose was twofold. In the first place, it permitted a tiny minority to control through a holding company vast railroads; and, secondly, and more directly, to soak the community with a lot of inflated paper so-called "securities." In order to market these and to give them the apparent approval of the Government, this bill becomes the necessary lever with which to unload the so-called "securities" on the public.

Surely the country has enough money, but it is not properly distributed, nor is it where it by right belongs, with the people.

Now, who is clamoring for more money and elastic currency—the people? No; the banks.

For whose benefit—the people's benefit and interest? No; for the bank magnates' own gain and benefit.

Now, if you desire to make it still easier for banks to bleed and rob the people and make it still easier for them to control the wealth of this country, then in this case pass this Wall Street Morgan-Rockefeller bill for which they are clamoring, but for heaven's sake do not try to make the American people believe that it is done for the interest of the country. Be honest and admit that it is done for the poor, oppressed, and lean banks who are only declaring from 30 per cent up to 60 per cent dividends on their capital and whose \$100-shares are worth up to two thousand and in some instances more, because it is they and no others who want this legislation.

I believe that this clamor on the part of these banks for currency legislation, Mr. Speaker, is a great bluff and nothing else. By their actions they are trying to blind the people and keep the people's thoughts from the abuses that now exist, fearing that if the public would awaken, it would demand repeal of all the obnoxious acts which make it possible for the banks of this country to do what they please with the public.

Government money should be substituted for the national-bank notes called money.

Until this is done the user will continue to grow more automatic and powerful and the toiler more completely his slave.

In the belief that our present monetary system is enriching a privileged few and doing an incalculable wrong to the many, we demand its abolition, root and branch, and advocate a substitute for all coin and currency now in use, full legal-tender paper money (not notes), to be issued by the Government for a consideration and in sufficient volume for doing the business of the country for cash.

This money should be issued direct to the people without the intervention of interest-bearing bonds or bankers and, being receivable for taxes and for all dues to the Government, would be self-redeeming, thus making unnecessary all coinage of precious metals for redemption purposes.

Under an equitable monetary system a favored few will not have their products stamped as money, thereby giving them an immense advantage over their fellow-producers to whom this privilege is denied, but all producers will be placed on an equal footing, and no one will be able to obtain money unless he gives to society some useful product or service in return.

The monopoly to issue money enjoyed by private individuals has led to numberless other monopolies, and will in time concentrate all wealth in a few hands if the present system is not reversed.

Let the Government issue all money; let it be issued for a consideration and services only, and received as it is issued, thereby forming a natural and perfect circulation.

Under this system the money will first come into the posses-

sion of the industrious people, and those social parasites who have been absorbing labor's products by the mere control and manipulation of money will be compelled to either live on what they have accumulated or else become industrious also.

I honestly and firmly believe that the foregoing plan or system proposed by the Monetary Association should, and some day surely will, be established, and in connection establish postal savings banks and within a short time the people and the country will free themselves from the deadly grip of this mammoth money octopus.

The question is, Will you do it?

Remember, by your deeds you shall be known.

This evil legislation is bound to recoil on its authors. It is sure to emphasize in the minds of all thinking people not only the vacuity of mentality of the Republican party, but it will surely make the people understand that mere worship of the fetish of the full dinner pail and Republican prosperity no longer can hold good. For years the senseless howl about the Democratic panic of 1893 has done good service. What can be said of the Republican panic that began in 1907 and whose end no man can foretell? It is idle to say that other causes of international nature contributed to it. It is undisputed that the great malefactors of corporation finance precipitated it and made use of it to punish their adversaries, and to some extent were caught in its maelstrom of financial rottenness. To escape from this they find their only relief in working off on the people their inflated converted bonds under the aegis of this proposed legislation. Let all this be disputed—what have the Republicans to say to the charge that this panic came while they had, and have had, uninterrupted control of the Presidency and of both Houses of Congress for a long period of years?

Here is an extract from the New York Evening Post of January 18, 1908:

KILLING THREE SUPERSTITIONS WITH ONE PANIC.

Every man regrets that the panic had to come. We all suffer, and shall suffer from it; for its effects will be with us for months to come. Secretary Taft, whose account in his Boston speech of the origin of our financial troubles was so informed, is too clear-sighted to be under any delusion about the effect passing away, as some obstinate optimists believe it will, in a night. He predicted that industrial crippling would be a certain and continuing result. That but heightens the sense of the calamity which has befallen the country. Yet, if it had to be, there are many public grounds for satisfaction that it fell just when it did. It came at precisely the right moment to kill, or at least scotch, three of our most harmful political superstitions at the same time.

Defining superstition as a conviction without reason, or in the face of reason to the contrary, we need have no hesitation in calling one belief about the Republican party superstitions. It is that the Republican party is, somehow, "good for business." With that this nation has been for some years grievously afflicted. It has been in vain to point out mistaken policies, insensate leaders, and corrupt management. Never mind all that, people have said; we have noticed that when the Republican party is in power work is plenty, wages are high, the tall chimneys smoke, exchanges mount up, profits are great, prosperity is abundant; and we don't propose to run the risk of a change. Of course this was based on a memory as short as the argument was fallacious. The Republican party was in power in 1873-1877, among the most disastrous years of our history. Per contra, the Democratic party, when in control from 1884 to 1888, was distinctly good for business. But political memories in this country rarely cover more than a year or two of the immediate past, and so the superstition we speak of has come to hold thousands in its grasp. But they must feel its hold broken to-day. The hard fact has done what all the reasoning in the world could not effect. Men in all parts of the country are out of work. The public revenues are steadily declining, and a large Treasury deficit is plainly in sight. The business and manufacturing outlook is gloomy, yet there, all the while, is the Republican party in full power. The spell of a mere name has not worked. Providence has ceased to be a member of the Republican party. The result can not fail to be to cause the Republican managers to think with less reverence of their own supernatural wisdom and of the divine bounty with more.

The twin superstition is the persuasion that a high tariff has a magic in it to make good times. We have had this dinned into our ears to such an extent for ten years past that even ordinarily sensible men have come to think there might be something in it. The result has been to make the tariff sacrosanct, to touch which was both a crime and a sacrilege. Some of the best heads in the Republican party have been given over to believe this strong delusion and lie. They have been ready with instant objection to any proposal to revise the tariff, since it would mean a great blow to business. Well, business has now received a succession of staggering blows, and the high tariff has been no protection against them whatever. When men have talked about the unnecessary and oppressive duties on iron and steel, the answer has been that we could not afford to disturb the high tariff which kept that vast industry at its pitch of activity. Well, the iron and steel business has been cut squarely in half, though not a single duty has been pared down by a shaving. Suppose such a tremendous shock had followed tariff reduction. Every Republican finger in the land would have pointed to the awful warning. But to-day the awful warning has come with the high tariff in full vigor. This ought to put an end to the worship of the tariff as a fetish for at least a decade.

Superstitions are nonpartisan. * * * But that superstition, too, shriveled before the breath of the panic.

The part which unreasoning hopes and fears, with unfounded beliefs, have played in political history, everyone knows to have been large, and no man in his senses expects that it will be more than relatively smaller as education and experience make their slow and painful conquests. But it is always a relief when a political obsession ceases even temporarily to hamper rational discussion. That amount of adversity's sweet milk we can draw from the panic. It has made certain pet delusions so absurd that they can no longer be maintained with a

straight face. And historians will be able to say of the panic of 1907 that, if it wrecked banks, it also destroyed superstitions.

The panic of 1893 came on the country as an aftermath of the panic of 1892. The panic of 1907 belongs to and should be borne by the Republican party without any partners except their silent partners, the corporation magnates and trust beneficiaries. The panic of 1893 all but burst forth in Harrison's Administration. President Harrison's Secretary of the Treasury had the plates for the bonds engraved and was getting ready to issue bonds, the same bonds that were afterwards used by Cleveland to save the credit of the Government—all but wrecked by the expenditures of the Republican House and Republican Senate. The wastefulness of that period is duplicated to-day, and the Republican panic of 1907 has not taught the Republicans anything whatever.

But this time you will not be able to mislead all the people. They have found you out and your Wall street gamblers' bill shows what straits you are in. You are at the end of your rope and, like Bill Sykes, you are about to play a trick of unspeakable and needless financial ruffianism before your political end. You are not even grateful to your wretched dog, and are illtreating that portion of the little bankers who have filled your campaign funds with this loathsome financial flimflam.

How much longer this will be tolerated by the American people I do not know, but I predict this, that it will not take long. The American people will some day in the near future come to realize that whenever the condition in a country reaches that stage that it is possible for one man to stop or steer a panic for his own ends, that it is also possible for that same group or that same man to cause to be or bring about a panic. Both feats have already been accomplished and are fresh in the people's minds. They have left ruin and desolation and misery all over our country, and the end is not yet in sight, in spite of skillfully manipulated stock markets and faked enthusiasm. If nothing else showed the pitiable condition of the Republican party it is shown by the fact that the stock markets rise and keep on rising on the killing in the stock markets and curbs that can be made when this currency bill becomes law, and this in spite of over 400,000 freight cars idle and empty, and in spite of a national deficit unheard of in a solvent State in times of peace. The party of Lincoln and of Sherman and of Boutwell has become an annex to and a servant of a gang of stockjobbers. With this well deserved gibbeting I pity the people of these United States, who must in the last instance pay the piper for the untold evils of this mongrel currency bill.

Education.

Education is the foundation upon which to build a nation's prosperity, happiness, and liberties.

SPEECH

OF

HON. RICHMOND P. HOBSON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. HOBSON said:

Mr. SPEAKER: Under the leave to print granted by the House, I desire to have printed in the RECORD the following articles and information from the General Educational Board, which is doing a mighty work for the general cause of education in America:

IMPROVED CONDITIONS FOR THE SOUTHERN FARMER.

[An address delivered by Dr. Seaman A. Knapp, of the United States Department of Agriculture, at the tenth conference for education in the South, at Pinehurst, N. C.]

In discussing this topic it is necessary to arrive at a just estimate of present conditions in our Southern rural districts.

Some years since a traveler said that the farms of the South looked like a bankrupt stock ready for the auctioneer; the soils were impoverished, the brush and briar patches conspicuous, the buildings dilapidated, the fences a makeshift, the highways but little more than much-used bridle paths; the churches and schoolhouses were built upon the plan of inclosing the necessary space at the least expense, and the graveyards appeared as if the living did not believe in the resurrection.

This view point is not mine. To me the Southern States surpass all of the countries of the earth of equal area in material resources,

mainly undeveloped. Underneath almost every acre is concealed a mineral wealth of surpassing value; within almost every acre are agricultural resources that, touched by intellect and labor, will reveal marvelous products. To me the Southern people are the purest stock of the greatest race the world has produced. The rural population has lived under unfortunate conditions for the best development, but the essential material of their natures is not impaired, and it requires but leadership but to maintain great results. "Scratch a Filipino and you may uncover a Malay;" scratch a poor white of the South and you reveal a hero. Great gains have already been made and greater are yet to come. There are some retarding conditions. What are they? The following are a few of the most important:

First. In the older States of the South the annual product per acre has greatly decreased, owing to the rapid loss of soil fertility, and moderate production is only maintained at increased cost. Even comparatively new States, like Texas, indicate rapid loss of fertility.

Second. Within the last half century vast areas of virgin prairie soils have been opened for settlement by the construction of railway lines, and have attracted many from the older States. Economic and rapid transportation are equalizing the land values of the world, depressing them in older and more populous sections and rapidly enhancing values in the newer. This is true in Virginia, in New York, in England, and elsewhere.

Third. The large body of freedmen settled throughout the rural districts of the South has tended to lower farm values and depress agriculture. I am not claiming that they intentionally do this or are morally responsible for the effect. The effect is not the result of color, but is caused by lower planes of living. I simply mention it as a factor.

Fourth. The poverty of the laboring whites should be taken into account. It takes resources to build and maintain a high civilization. If the poor whites and the colored people, constituting nine-tenths of the country population, do not have means to buy farms, nor improve them, nor purchase equipment, nor to pay current expenses, country conditions must fall to a low level. Considerable of this is due to the war between the States, which financially ruined the South. It takes a long time for a people to recover from sweeping disasters, and it takes longer when nine-tenths of them have but slight knowledge of thrift.

Fifth. The credit system has been a potent factor in depressing agriculture. To some extent it might have been a necessary evil in a limited way forty years ago, but it prospered and became dominant, oppressive, and insolent. It unblushingly swept the earnings of toil from the masses into the coffers of the few. It substituted voluntary for involuntary servitude, ownership by agreement, and poverty by contract under fear of the sheriff for the ownership by birthright and a government by proprietary right. So we have lived under a slavery where the chains are ingeniously forged and the bands riveted with gold. It is all the same in effect—the impoverishment of the masses.

Sixth. Evolution in manufactures has wielded a mighty influence against the general development of the country. Sixty years ago most of our mechanics lived in the country upon small farms, which they and their families tilled for support, and they sold their surplus labor to supplement the home income. People were honest and thrifty, because all were employed; to-day these mechanic farmers reside in town or city, sell all their labor, and live out of a canned garden and milk a tin cow. Of course their sons and daughters are idle.

Seventh. To foster the mechanic arts we have levied a duty upon the farmers, thereby destroying competition and increasing the cost of what they purchase about 50 per cent. This with the marvelous improvements in machinery and mechanical power has given the mechanic an earning capacity (as shown by the last census) of from four to six times that of the average farmer. This is the main magnet which attracts the best youth from the farms and deprives the rural districts of their rightful leaders.

Eighth. To cap the climax of depressing influences most of the money of the country has been diverted into commercial channels through the banking laws. In olden time there were men in the country who loaned money to farmers; later all such funds have been absorbed by banks, until banks directly and indirectly control the money of the country. Farmers can deposit in a bank; but they can not borrow from that bank, even their own money, to make a crop. It requires at least six months to make and market an average crop upon a farm. Banks can loan only for ninety days. Suppose all of the deposits of a village bank were made by farmers, that money must be loaned upon short time and hence is not available for crop raising to any extent. Thus the banking capital of our country, a considerable portion of which belongs to farmers, has not promoted agriculture, but has stimulated commercialism and by its concentration in cities has fostered gambling in stocks. The great fluctuation in the values of farms and farm products lies in the fact that the money of the country is not backing them. It has been loaned to the merchant, the manufacturer, and the speculating interests. This is not intended as an argument against banks. Banks are a necessity. The criticism holds against a phase of our banking laws which by process of law diverts the money of farmers into commercial channels.

This backward condition of the country as compared with the city is not a new problem. It dates from the earliest historical periods. Many of the words of reproach or opprobrium in the English language were the designation of farmers, in the several languages from which they were derived, such as villain, heathen, clown, and boor. While rural conditions were such as these names indicate, the weavers of Bruges and the trainbands of London were winning victories for liberty.

Every effort to improve the country has been more or less of an uplift. When manufacturers were established in the villages of England and in New England an important step was taken in economic production. It helped the marketing of farm products and gave employment to the surplus labor of the country. This should still be the policy of manufacturers, if the most economic production is sought. These villages were a social as well as an economic gain.

The establishment of country schools was another advance. They had been far from perfect and possibly should be modified to meet present conditions; but they have been an inspiration to thousands who lived remote from urban refinement. They were expensive, but infinitely cheap as compared with the barbarism of ignorance.

Another advance of the country was the establishment of agricultural colleges. These democratic institutions attracted the sons of farmers by their gospel of labor and the introduction of studies helpful in vocations of toil.

It was hoped, and by many expected, that the graduates of these colleges would return to the country, become captains of rural industries,

and revolutionize conditions. This did not occur, but good was done. Thousands of the undergraduates are upon the farms. Many of these colleges have established short courses for the tillers of the soil. Farmers' institutes have been organized to carry agricultural knowledge to the scattered homes in the country and deliver it orally. They have fostered investigations along agricultural lines, and they keep the necessity of more agricultural knowledge as a live issue before the people.

Another class of reformers is prescribing "diversification of farm products" as a remedy. Diversifying is a great aid to success in agriculture, under certain conditions; but how can the man who has nothing to diversify? He can not go into dairying nor stock farming, because he can not buy the fraction of a cow or a pig. He can not plant new crops, because the merchant regards the move as an experiment, and he will not advance on an experiment. The only way such farmers can prosper is by remaining in the old rut and improving the rut.

Other advocates of reform are clamoring for improvement of rural conditions—better homes, passable highways, free delivery of mails, etc. These are excellent suggestions; but they do not reach the main difficulty, which is the lack of means to do anything.

I once heard a poor tenant farmer complain that he could not make a living farming; a passing stranger remarked, "Why don't you quit farming, if there is no money in it, and go to banking?" "Mister!" replied the poor man, "I don't know whether you are insane or an idiot. It sounds like both." To men on the farm hunting for a breakfast, considerable of the advice sounds like both.

There is another remedy for the country, very popular just now, and that is the teaching of agriculture in the common schools. Properly defined and understood, there is a certain amount of helpfulness in it. However, if taught universally in the country schools, no sweeping revolution will result, for the following reasons:

First, Agriculture is not a science and it has but little science in it. That little science can be taught. The remainder must be acquired by observation, experience, and business methods. Some instruction may be given in soils, in plant classification, in the way plants feed and grow and are propagated, in insect and bird life, and in animal structure and requirements. These may go into secondary schools in a limited way. It appears to me impracticable to introduce them generally into the rural common schools, as they are now organized; at least till teachers are trained to instruct. If these schools can be consolidated into township schools, properly graded, it will then be possible to introduce some object-lessons and primary instruction in nature studies. In the common country schools, it is at present unwise to attempt much looking to agriculture beyond object-lessons. These are always valuable, and oral instruction should be given with them.

It is estimated that there is a possible gain of fivefold in the earning capacity of each farm laborer above his present income. Practically the whole gain is due to the following plan: Fill the soil with humus; prepare a deeper and more thoroughly pulverized seed bed; better seed; proper fertilization; more cultivation; the use of stronger teams; better machinery and tools; and utilize the idle lands by grazing. Four-fifths of the gain is in the economic use of better teams and tools and the introduction of animal husbandry. A majority of our common school teachers are women, ignorant of practical agriculture, but no more so than 60 per cent of the male teachers. How are such teachers to instruct in these branches, which requires a farm fully equipped and practical experience?

I have been talking about common schools. In our portion of the United States there are no common schools. They are most extraordinary schools. The children are given science lessons, language lessons, social economy, French, Latin, drawing, vocal and piano music, etc. Possibly later they may learn to read and spell. I asked the patron of one school how the pupils progressed in Latin. He replied, "Very well, indeed. The only difficulty is that they are required to write their translations in English and they do not know how to write English."

Let us drop this farce. The need in common schools is for thorough training in the fundamental English branches. If there is time for more, let the boys study bookkeeping and business methods. If still there be room, introduce nature studies and object-lessons. Let the girls take for higher branches the lost science of cooking, housekeeping, and physiology. I am asking for a substantial foundation upon which to build a useful life for such people as must be practical, because they must earn their bread by toil. For people of means and with love of learning, I commend a life of study, broad, deep, and thorough, well rounded by extensive travel and observation. We need great scholars. The common toiler needs an education that leads to easier bread.

In the centuries the American people have been at work on the problems of rural reform some progress has been made, and we are now prepared for the complete accomplishment of what we have so earnestly sought, the placing of rural life upon a plane of profit, of honor, and power. We must commence at the bottom and readjust the life of the common people.

First, by increasing the earning capacity of the small farmers. More comfortable homes, better schools, improved highways, telephones, free delivery of mails and rural libraries—all require money. They can not be installed and maintained without it; hence the basis of the better rural life is greater earning capacity of the farmer. Farm renovation and maximum crop production are now fully understood, and they can be explained and illustrated in such a simple and practical way that it would be a crime not to send the gospel of maximum production to the rural toiler. It is said by some that the farmers are a hard class to reach and impress. That is not my experience. They are the most tractable of people, if you have anything substantial to offer—but they all want proof. They do not take kindly to pure theories, and no class can more quickly discriminate between the real farmer and the book farmer than the men who till the soil. The message to the farmers must be practical and of easy application. Who shall take this message? Our experience is in favor of farmers of fair education and acknowledged success on the farm. They may make mistakes, from a scientific standpoint, in delivering the message, but these are easily corrected. The main thing is to induce the farmer to act, and no one can do that like a fellow-farmer. Of what avail is it that the message be taken by a man of science, if the farmer will not give heed? In general it is not the man who knows the most who is the most successful, but the man who imparts an implicit belief with his message. The greatest failure as a world force is the man who knows so much that he lives in universal doubt, injecting a modifying clause into every assertion and ending the problems of life with an interrogation point.

The process of changing the environment of a farmer is like that of transforming a farm boy into a scholar. First, the farmer is selected

to conduct a simple and inexpensive demonstration. Second, a contract is drawn with the United States Department of Agriculture by which he agrees to follow certain instructions. Third, better seed is furnished him and his name is published in the papers. Fourth, each month when the Government's field agent goes to inspect his demonstration many of his neighbors are invited; consequently he will almost unconsciously improve his farm so as to be ready for company and cultivate all of his crops better. Fifth, a report of his extra crop is made in the county papers. His neighbors talk about it and want to buy seed. Sixth, he sells the seed of his crop at a high price. His neighbors ask him how he produced it. He is invited to address public assemblies. He has become a man of note and a leader of the people and can not return to his old ways. Soon there is a body of such men; a township, a county, and finally a State is transformed. The power which transformed the humble fishermen of Galilee into mighty apostles of truth is ever present and can be used as effectively to-day in any good cause as when the Son of God turned His footsteps from Judea's capital and spoke to the wayside children of poverty.

The environment of men must be penetrated and modified or little permanent change can be made in them. The environment of the farmer is limited generally to a few miles. The demonstration must be carried to this limited area and show how simple and easy it is to restore the virgin fertility of the soil, to multiply the product of the land per acre, to increase the number of acres each laborer can till by three or four fold, and to harvest a profit from untilled fields by animal husbandry. This is our farmers' cooperative demonstration work.

The second step in rural regeneration is the establishment of agricultural banks, through which reliable men may be assisted to own the lands they till. In the United States there are over 2,000,000 rented farms, more than one-third of the total number. The majority of these farmers would become owners if properly encouraged and aided. In addition there are tens of thousands of mechanics in the towns and cities who were raised on farms and would return to the country and purchase lands for homes if slightly assisted.

Agricultural banks should be established to assist in carrying out the plan of colonizing the country with thrifty home owners. Furthermore, it is equitable, because while millions produced by the farms of the nation have by the process of banking been transferred to commerce, no way has been provided, under the law, by which the money of the people can be used by the people for time investments in providing for ownership of rural homes—the royal right of American sovereigns and more honorable than the Order of the Garter or the Golden Fleece.

The third advance in the great uplift of rural conditions consists in teaching farmers' wives and daughters how to feed, clothe, and doctor their families. When the township graded school takes the place of the scattered district schools, it will be plain how to accomplish this work by school demonstrations.

If these three progressive steps be taken, the rest will follow as a natural evolution. It is not a matter of pure deduction which assures me that the farmers will make their homes more comfortable and more beautiful, will perfect the rural school system, will construct good roads, telephones, and electric railways, when they have the means to do so. Wherever our farmers' cooperative demonstration work has been conducted long enough for the farmers to get out of debt, there is a marked improvement in buildings and farm equipment to do good work. The farmers' families are better clothed and fed; thrift and comfort have appeared in places formerly as destitute of these as the jungles of Africa.

The State can accelerate the progress of rural improvement by encouraging good works. In England better highways have been promoted by a law which provides for the general Government taking charge and thereafter maintaining all roads which the people construct and improve up to certain excellence. In a similar way the State could encourage the building of the best macadam or Roman type of roads by offering premiums for every mile constructed by a township or county, and important highways might even receive national aid. Such a highway as the Spaniards constructed from Ponce to San Juan is worthy of national aid and is more valuable to the country than a railroad and at less cost. The life of a Roman highway is more than two thousand years. Several such highways should bisect every county in the United States and be a part of a great national road system. The secondary highways will of course for many years be dirt roads; but they should be of the best type. With our waterways improved, connecting canals constructed, and a system of national highways developed, the problem of transportation will be largely solved and an immense impetus given to better country conditions.

In a similar way a wise governmental policy can foster schools by special annual appropriations to township and county graded schools of a certain excellence. Under such a system a high school fully equipped to instruct in the practical branches required for successful farm life could be maintained in every county.

Telephones should be made a part of the postal system and extended through the farming districts of the United States where the people have shown ability to construct and maintain a first-class highway, one-half the expense of installing the telephone to be borne by the rural route and a rental charge made, as for post-office boxes. In addition there should be a rural express on every highway of the first class. Thus a farmer residing 10 miles from his market town could make an order by phone and receive the package by express in a short time. By the same conveyance the sons and daughters of the farmers could attend a central high school.

Upon this general plan, and no other, can the country become what it should—a home-making place, where the farmer will reside upon his farm. The mechanic and the merchant wanting more space for their homes will choose it 5 or 10 miles in the country, and professional men will seek rural quiet and rest. Our civic centers are expanding with amazing rapidity, not because men love brick walls and electric elevators, but because they there find greater earning capacity and certain conveniences and comforts, which have become a necessity. Make it possible to have all of these amid the quiet and beauties of nature, with rapid transit to business centers, and vast numbers that have sought an urban home will turn to the country for a home at less cost with purer air and water, greater convenience and beauty, cheaper food and more contentment.

Let it be the high privilege of this great and free people to establish a republic where rural pride is equal to civic pride, where men of the most refined taste and culture select the rural villa, and where the wealth that comes from the soil finds its greatest return in developing and perfecting that great domain of nature which God has given to us as an everlasting estate.

The Democratic Congressional Committee.

SPEECH

OF

HON. JAMES T. LLOYD,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. LLOYD said:

Mr. SPEAKER: Political parties are necessary to the best interests of the Republic and have been important factors in the progress of our Government. There must be organization to make these parties effective. In every part of the country the machinery is established to carry out these purposes. Committees are selected which, in a representative way, look after the work of the party. The two great parties each have a Congressional committee, composed mainly of Members of Congress, who are charged with the responsible work of assisting in the various Congressional districts in the attempt to secure control of the next Congress.

The Democratic Congressional committee is composed of the following Members of the House of Representatives and the Senate: JOHN L. BURNETT, Alabama; STEPHEN BRUNDIDGE, Arkansas; FRANK CLARK, Florida; JAMES M. GRIGGS, Georgia; HENRY T. RAINEY, Illinois; LINCOLN DIXON, Indiana; D. W. HAMILTON, Iowa; BEN JOHNSON, Kentucky; JOSEPH E. RANDELL, Louisiana; JOHN GILL, Maryland; JOHN A. KELIHER, Massachusetts; W. S. HAMMOND, Minnesota; E. J. BOWERS, Mississippi; JAMES T. LLOYD, Missouri; G. M. HITCHCOCK, Nebraska; GEORGE A. BARTLETT, Nevada; WILLIAM HUGHES, New Jersey; WILLIAM H. RYAN, New York; WILLIAM W. KITCHIN, North Carolina; T. T. ANSEBERRY, Ohio; JAMES S. DAVENPORT, Oklahoma; JOHN G. McHENRY, Pennsylvania; D. L. D. GRANGER, Rhode Island; D. E. FINLEY, South Carolina; JOHN WESLEY GAINES, Tennessee; JOHN M. MOORE, Texas; H. D. FLOOD, Virginia; CHARLES H. WEISSE, Wisconsin; MARCUS A. SMITH, Arizona; ROBERT L. OWEN, Oklahoma; ROBERT L. TAYLOR, Tennessee; HENRY M. TELLER, Colorado; A. S. CLAY, Georgia; THOMAS S. MARTIN, Virginia; WILLIAM J. STONE, Missouri; FRANCIS G. NEWLANDS, Nevada; JAMES P. TALIAFERRO, Florida; JOHN H. BANKHEAD, Alabama, and CHARLES A. CULBERSON, Texas.

This committee met and organized by the selection of the following officers: JAMES T. LLOYD, chairman; DAVID E. FINLEY, and D. L. D. GRANGER, vice-chairmen; FRANK CLARK, secretary; WILLIAM HUGHES, assistant secretary, and Joseph J. Sinnott, a messenger in the House of Representatives, sergeant-at-arms.

Its various subcommittees have been chosen and are as follows:

Executive committee, HENRY T. RAINEY, chairman; D. E. FINLEY, WILLIAM J. STONE, LINCOLN DIXON, D. W. HAMILTON. Campaign committee, LINCOLN DIXON, chairman; D. E. FINLEY, D. W. HAMILTON, CHARLES A. CULBERSON, WILLIAM W. KITCHIN, WILLIAM HUGHES, STEPHEN BRUNDIDGE, W. S. HAMMOND, GEORGE A. BARTLETT, HENRY M. TELLER, THOMAS S. MARTIN, JAMES S. DAVENPORT, T. T. ANSEBERRY.

Literature committee, JOHN WESLEY GAINES, chairman; G. M. HITCHCOCK, E. J. BOWERS, HENRY T. RAINEY, ROBERT L. OWEN, D. L. D. GRANGER, FRANK CLARK, JOHN A. KELIHER, JOHN L. BURNETT, JOHN G. McHENRY, ROBERT L. TAYLOR, JOSEPH E. RANDELL, MARCUS A. SMITH.

Finance committee, H. D. FLOOD, chairman; WILLIAM H. RYAN, JAMES M. GRIGGS, W. J. STONE, FRANCIS G. NEWLANDS, A. S. CLAY, CHARLES H. WEISSE, JOHN GILL, BEN JOHNSON, JAMES P. TALIAFERRO, JOHN M. MOORE, JOHN H. BANKHEAD.

The Republicans selected a Congressional committee, whose names I have not been able to obtain. They effected an organization by naming JAMES S. SHERMAN, of New York, chairman, and HENRY C. LOUDENSLAGER, of New Jersey, secretary.

Each committee is preparing some kind of handbook of information for distribution. This book contains extracts from the CONGRESSIONAL RECORD of speeches and statements of prominent men, which have been printed.

This is a wonderful country. Party spirit may run high, contest for supremacy may be intense, contending parties may widely differ as to the internal policy; but when the honor of the country is assailed or its rights trampled upon by an outside foe, there is but one voice in defense—that is the voice of the whole people, who are willing to die, if need be, to maintain the integrity of the Republic.

The Currency Law.

SPEECH

OF

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. BENNET of New York said:

Mr. SPEAKER: Under leave to print I insert in the RECORD this new currency law, believing it to be a matter of general interest, and also an interesting article by William Henry Knox, of the New York bar, which article appeared in the Albany Law Journal in January last:

[Public—No. 169.]

H. R. 21871. An act to amend the national banking laws.

Be it enacted, etc., That national banking associations, each having an unimpaired capital and a surplus of not less than 20 per cent, not less than ten in number, having an aggregate capital and surplus of at least \$5,000,000, may form voluntary associations to be designated as national currency associations. The banks uniting to form such association shall, by their presidents or vice-presidents, acting under authority from the board of directors, make and file with the Secretary of the Treasury a certificate setting forth the names of the banks composing the association, the principal place of business of the association, and the name of the association, which name shall be subject to the approval of the Secretary of the Treasury. Upon the filing of such certificate the associated banks therein named shall become a body corporate, and by the name so designated and approved may sue and be sued and exercise the powers of a body corporate for the purposes hereinafter mentioned: *Provided*, That not more than one such national currency association shall be formed in any city: *Provided further*, That the several members of such national currency association shall be taken, as nearly as conveniently may be, from a territory composed of a State or part of a State, or contiguous parts of one or more States: *And provided further*, That any national bank in such city or territory having the qualifications herein prescribed for membership in such national currency association shall, upon its application to and upon the approval of the Secretary of the Treasury, be admitted to membership in a national currency association for that city or territory, and upon such admission shall be deemed and held a part of the body corporate, and as such entitled to all the rights and privileges and subject to all the liabilities of an original member: *And provided further*, That each national currency association shall be composed exclusively of banks not members of any other national currency association.

The dissolution, voluntary or otherwise, of any bank in such association shall not affect the corporate existence of the association unless there shall then remain less than the minimum number of ten banks: *Provided, however*, That the reduction of the number of said banks below the minimum of ten shall not affect the existence of the corporation with respect to the assertion of all rights in favor of or against such association. The affairs of the association shall be managed by a board consisting of one representative from each bank. By-laws for the government of the association shall be made by the board, subject to the approval of the Secretary of the Treasury. A president, vice-president, secretary, treasurer, and an executive committee of not less than five members shall be elected by the board. The powers of such board, except in the election of officers and making of by-laws, may be exercised through its executive committee.

The national currency association herein provided for shall have and exercise any and all powers necessary to carry out the purposes of this section, namely, to render available, under the direction and control of the Secretary of the Treasury, as a basis for additional circulation, any securities, including commercial paper, held by a national banking association. For the purpose of obtaining such additional circulation, any bank belonging to any national currency association, having circulating notes outstanding secured by the deposit of bonds of the United States to an amount not less than 40 per cent of its capital stock, and which has its capital unimpaired and a surplus of not less than 20 per cent, may deposit with and transfer to the association, in trust for the United States, for the purpose hereinafter provided, such of the securities above mentioned as may be satisfactory to the board of the association. The officers of the association may thereupon, in behalf of such bank, make application to the Comptroller of the Currency for an issue of additional circulating notes to an amount not exceeding 75 per cent of the cash value of the securities or commercial paper so deposited. The Comptroller of the Currency shall immediately transmit such application to the Secretary of the Treasury with such recommendation as he thinks proper, and if, in the judgment of the Secretary of the Treasury, business conditions in the locality demand additional circulation, and if he be satisfied with the character and value of the securities proposed and that a lien in favor of the United States on the securities so deposited and on the assets of the banks composing the association will be amply sufficient for the protection of the United States, he may direct an issue of additional circulating notes to the association on behalf of such bank to an amount in his discretion, not, however, exceeding 75 per cent of the cash value of the securities so deposited: *Provided*, That upon the deposit of any of the State, city, town, county, or other municipal bonds, of a character described in section 3 of this act, circulating notes may be issued to the extent of not exceeding 90 per cent of the market value of such bonds so deposited: *And provided further*, That no national banking association shall be authorized in any event to issue circulating notes based on commercial paper in excess of 30 per cent of its unimpaired capital and surplus. The term "commercial paper" shall be held to include only notes representing actual commercial transactions, which, when accepted by the association, shall bear the names of at least two responsible parties and have not exceeding four months to run.

The banks and the assets of all banks belonging to the association shall be jointly and severally liable to the United States for the redemption of such additional circulation; and to secure such liability,

the lien created by section 5230 of the Revised Statutes shall extend to and cover the assets of all banks belonging to the association and to the securities deposited by the banks with the association pursuant to the provisions of this act; but as between the several banks composing such association, each bank shall be liable only in the proportion that its capital and surplus bears to the aggregate capital and surplus of all such banks. The association may at any time require of any of its constituent banks a deposit of additional securities or commercial paper, or an exchange of the securities already on deposit, to secure such additional circulation; and in case of the failure of such bank to make such deposit or exchange the association may, after ten days' notice to the bank, sell the securities and paper already in its hands at public sale and deposit the proceeds with the Treasurer of the United States as a fund for the redemption of such additional circulation. If such fund be insufficient for that purpose, the association may recover from the bank the amount of the deficiency by suit in the circuit court of the United States and shall have the benefit of the lien hereinbefore provided for in favor of the United States upon the assets of such bank. The association or the Secretary of the Treasury may permit or require the withdrawal of any such securities or commercial paper and the substitution of other securities or commercial paper of equal value therefor.

SEC. 2. That whenever any bank belonging to a national currency association shall fail to preserve or make good its redemption fund in the Treasury of the United States, required by section 3 of the act of June 20, 1874, chapter 343, and the provisions of this act, the Treasurer of the United States shall notify such national currency association to make good such redemption fund, and upon the failure of such national currency association to make good such fund, the Treasurer of the United States may, in his discretion, apply so much of the redemption fund belonging to the other banks composing such national currency association as may be necessary for that purpose; and such national currency association may, after five days' notice to such bank, proceed to sell at public sale the securities deposited by such bank with the association pursuant to the provisions of section 1 of this act, and deposit the proceeds with the Treasurer of the United States as a fund for the redemption of the additional circulation taken out by such bank under this act.

SEC. 3. That any national banking association which has circulating notes outstanding, secured by the deposit of United States bonds to an amount of not less than 40 per cent of its capital stock, and which has a surplus of not less than 20 per cent, may make application to the Comptroller of the Currency for authority to issue additional circulating notes, to be secured by the deposit of bonds other than bonds of the United States. The Comptroller of the Currency shall transmit immediately the application, with his recommendation, to the Secretary of the Treasury, who shall, if in his judgment business conditions in the locality demand additional circulation, approve the same, and shall determine the time of issue and fix the amount, within the limitations herein imposed, of the additional circulating notes to be issued. Whenever after receiving notice of such approval any such association shall deposit with the Treasurer or any assistant treasurer of the United States such of the bonds described in this section as shall be approved in character and amount by the Treasurer of the United States and the Secretary of the Treasury, it shall be entitled to receive, upon the order of the Comptroller of the Currency, circulating notes in blank, registered and countersigned as provided by law, not exceeding in amount 90 per cent of the market value, but not in excess of the par value of any bonds so deposited, such market value to be ascertained and determined under the direction of the Secretary of the Treasury.

The Treasurer of the United States, with the approval of the Secretary of the Treasury, shall accept as security for the additional circulating notes provided for in this section bonds or other interest-bearing obligations of any State of the United States or any legally authorized bonds issued by any city, town, county, or other legally constituted municipality or district in the United States which has been in existence for a period of ten years, and which for a period of ten years previous to such deposit has not defaulted in the payment of any part of either principal or interest of any funded debt authorized to be contracted by it, and whose net funded indebtedness does not exceed 10 per cent of the valuation of its taxable property, to be ascertained by the last preceding valuation of property for the assessment of taxes. The Treasurer of the United States, with the approval of the Secretary of the Treasury, shall accept, for the purposes of this section, securities herein enumerated in such proportions as he may from time to time determine, and he may with such approval at any time require the deposit of additional securities or require any association to change the character of the securities already on deposit.

SEC. 4. That the legal title of all bonds, whether coupon or registered, deposited to secure circulating notes issued in accordance with the terms of section 3 of this act shall be transferred to the Treasurer of the United States in trust for the association depositing them, under regulations to be prescribed by the Secretary of the Treasury. A receipt shall be given to the association by the Treasurer or any assistant treasurer of the United States, stating that such bond is held in trust for the association on whose behalf the transfer is made and as security for the redemption and payment of any circulating notes that have been or may be delivered to such association. No assignment or transfer of any such bond by the Treasurer shall be deemed valid unless countersigned by the Comptroller of the Currency. The provisions of sections 5163, 5164, 5165, 5166, and 5167 and sections 5224 to 5234, inclusive, of the Revised Statutes respecting United States bonds deposited to secure circulating notes shall, except as herein modified, be applicable to all bonds deposited under the terms of section 3 of this act.

SEC. 5. That the additional circulating notes issued under this act shall be used, held, and treated in the same way as circulating notes of national banking associations heretofore issued and secured by a deposit of United States bonds, and shall be subject to all the provisions of law affecting such notes except as herein expressly modified. *Provided*, That the total amount of circulating notes outstanding of any national banking association, including notes secured by United States bonds as now provided by law, and notes secured otherwise than by deposit of such bonds, shall not at any time exceed the amount of its unimpaired capital and surplus: *And provided further*, That there shall not be outstanding at any time circulating notes issued under the provisions of this act to an amount of more than \$500,000,000.

SEC. 6. That whenever and so long as any national banking association has outstanding any of the additional circulating notes authorized to be issued by the provisions of this act it shall keep on deposit in the Treasury of the United States, in addition to the redemption fund

required by section 3 of the act of June 20, 1874, an additional sum equal to 5 per cent of such additional circulation at any time outstanding, such additional 5 per cent to be treated, held, and used in all respects in the same manner as the original redemption fund provided for by said section 3 of the act of June 20, 1874.

SEC. 7. In order that the distribution of notes to be issued under the provisions of this act shall be made as equitable as practicable between the various sections of the country, the Secretary of the Treasury shall not approve applications from associations in any State in excess of the amount to which such State would be entitled of the additional notes herein authorized on the basis of the proportion which the unimpaired capital and surplus of the national banking associations in such State bears to the total amount of unimpaired capital and surplus of the national banking associations of the United States: *Provided*, *however*, That in case the applications from associations in any State shall not be equal to the amount which the associations of such State would be entitled to under this method of distribution, the Secretary of the Treasury may, in his discretion, to meet an emergency, assign the amount not thus applied for to any applying association or associations in States in the same section of the country.

SEC. 8. That it shall be the duty of the Secretary of the Treasury to obtain information with reference to the value and character of the securities authorized to be accepted under the provisions of this act, and he shall from time to time furnish information to national banking associations as to such securities as would be acceptable under the provisions of this act.

SEC. 9. That section 5214 of the Revised Statutes, as amended, be further amended to read as follows:

"SEC. 5214. National banking associations having on deposit bonds of the United States, bearing interest at the rate of 2 per cent per annum, including the bonds issued for the construction of the Panama Canal, under the provisions of section 8 of 'An act to provide for the construction of a canal connecting the waters of the Atlantic and Pacific oceans,' approved June 28, 1902, to secure its circulating notes, shall pay to the Treasurer of the United States, in the months of January and July, a tax of one-fourth of 1 per cent each half year upon the average amount of such of its notes in circulation as are based upon the deposit of such bonds; and such associations having on deposit bonds of the United States bearing interest at a rate higher than 2 per cent per annum shall pay a tax of one-half of 1 per cent each half year upon the average amount of such of its notes in circulation as are based upon the deposit of such bonds. National banking associations having circulating notes secured otherwise than by bonds of the United States shall pay for the first month a tax at the rate of 5 per cent per annum upon the average amount of such of their notes in circulation as are based upon the deposit of such securities, and afterwards an additional tax of 1 per cent per annum for each month until a tax of 10 per cent per annum is reached, and thereafter such tax of 10 per cent per annum, upon the average amount of such notes. Every national banking association having outstanding circulating notes secured by a deposit of other securities than United States bonds shall make monthly returns, under oath of its president or cashier, to the Treasurer of the United States, in such form as the Treasurer may prescribe, of the average monthly amount of its notes so secured in circulation; and it shall be the duty of the Comptroller of the Currency to cause such reports of notes in circulation to be verified by examination of the banks' records. The taxes received on circulating notes secured otherwise than by bonds of the United States shall be paid into the division of redemption of the Treasury and credited and added to the reserve fund held for the redemption of United States and other notes."

SEC. 10. That section 9 of the act approved July 12, 1882, as amended by the act approved March 4, 1907, be further amended to read as follows:

"SEC. 9. That any national banking association desiring to withdraw its circulating notes, secured by deposit of United States bonds in the manner provided in section 4 of the act approved June 20, 1874, is hereby authorized for that purpose to deposit lawful money with the Treasurer of the United States and, with the consent of the Comptroller of the Currency and the approval of the Secretary of the Treasury, to withdraw a proportionate amount of bonds held as security for its circulating notes in the order of such deposits: *Provided*, That not more than \$9,000,000 of lawful money shall be so deposited during any calendar month for this purpose.

"Any national banking association desiring to withdraw any of its circulating notes, secured by the deposit of securities other than bonds of the United States, may make such withdrawal at any time in like manner and effect by the deposit of lawful money or national bank notes with the Treasurer of the United States and upon such deposit a proportionate share of the securities so deposited may be withdrawn: *Provided*, That the deposits under this section to retire notes secured by the deposit of securities other than bonds of the United States shall not be covered into the Treasury, as required by section 6 of an act entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes,' approved July 14, 1890, but shall be retained in the Treasury for the purpose of redeeming the notes of the bank making such deposit."

SEC. 11. That section 5172 of the Revised Statutes be, and the same is hereby, amended to read as follows:

"SEC. 5172. In order to furnish suitable notes for circulation, the Comptroller of the Currency shall, under the direction of the Secretary of the Treasury, cause plates and dies to be engraved, in the best manner to guard against counterfeiting and fraudulent alterations, and shall have printed therefrom, and numbered, such quantity of circulating notes, in blank, of the denominations of \$5, \$10, \$20, \$50, \$100, \$500, \$1,000, and \$10,000, as may be required to supply the associations entitled to receive the same. Such notes shall state upon their face that they are secured by United States bonds or other securities, certified by the written or engraved signatures of the Treasurer and Register and by the imprint of the seal of the Treasury. They shall also express upon their face the promise of the association receiving the same to pay on demand, attested by the signature of the president or vice-president and cashier. The Comptroller of the Currency, acting under the direction of the Secretary of the Treasury, shall, as soon as practicable, cause to be prepared circulating notes in blank, registered and countersigned, as provided by law, to an amount equal to 50 per cent of the capital stock of each national banking association; such notes to be deposited in the Treasury or in the subtreasury of the United States nearest the place of business of each association, and to be held for such association, subject to the order of the Comptroller of the Currency for their delivery as provided by law: *Provided*, That the Comptroller of the Currency may issue national bank notes of the present form until plates can be prepared and cir-

culating notes issued as above provided: *Provided, however*, That in no event shall bank notes of the present form be issued to any bank as additional circulation provided for by this act."

SEC. 12. That circulating notes of national banking associations, when presented to the Treasury for redemption, as provided in section 3 of the act approved June 20, 1874, shall be redeemed in lawful money of the United States.

SEC. 13. That all acts and orders of the Comptroller of the Currency and the Treasurer of the United States authorized by this act shall have the approval of the Secretary of the Treasury, who shall have power, also, to make any such rules and regulations and exercise such control over the organization and management of national currency associations as may be necessary to carry out the purposes of this act.

SEC. 14. That the provisions of section 5191 of the Revised Statutes, with reference to the reserves of national banking associations, shall not apply to deposits of public moneys by the United States in designated depositories.

SEC. 15. That all national banking associations designated as regular depositories of public money shall pay upon all special and additional deposits made by the Secretary of the Treasury in such depositories, and all such associations designated as temporary depositories of public money shall pay upon all sums of public money deposited in such associations interest at such rate as the Secretary of the Treasury may prescribe, not less, however, than 1 per cent per annum upon the average monthly amount of such deposits: *Provided, however*, That nothing contained in this act shall be construed to change or modify the obligation of any association or any of its officers for the safe-keeping of public money: *Provided further*, That the rate of interest charged upon such deposits shall be equal and uniform throughout the United States.

SEC. 16. That a sum sufficient to carry out the purposes of the preceding sections of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 17. That a commission is hereby created, to be called the "National Monetary Commission," to be composed of nine members of the Senate, to be appointed by the Presiding Officer thereof, and nine Members of the House of Representatives, to be appointed by the Speaker thereof; and any vacancy on the Commission shall be filled in the same manner as the original appointment.

SEC. 18. That it shall be the duty of this Commission to inquire into and report to Congress, at the earliest date practicable, what changes are necessary or desirable in the monetary system of the United States or in the laws relating to banking and currency, and for this purpose they are authorized to sit during the sessions or recess of Congress, at such times and places as they may deem desirable, to send for persons and papers, to administer oaths, to summons and compel the attendance of witnesses, and to employ a disbursing officer and such secretaries, experts, stenographers, messengers, and other assistants as shall be necessary to carry out the purposes for which said Commission was created. The Commission shall have the power, through subcommittee or otherwise, to examine witnesses and to make such investigations and examinations, in this or other countries, of the subjects committed to their charge as they shall deem necessary.

SEC. 19. That a sum sufficient to carry out the purposes of sections 17 and 18 of this act, and to pay the necessary expenses of the Commission and its members, is hereby appropriated, out of any money in the Treasury not otherwise appropriated. Said appropriation shall be immediately available and shall be paid out on the audit and order of the chairman or acting chairman of said Commission, which audit and order shall be conclusive and binding upon all Departments as to the correctness of the accounts of such Commission.

SEC. 20. That this act shall expire by limitation on the 30th day of June, 1914.

Approved, May 30, 1908.

MONEY PROBLEM AND ITS SOLUTION.

[By William Henry Knox, member of New York City bar.]

1. Can the members of the various legislatures and of the Congress, soon to assemble, solve the money problem?

The stock of money was two and a half billion dollars, or, if not diminished by export, is only \$27 per person, nearly as low as in European kingdoms, Denmark having \$9 per person. It can not be increased by our Government, as appears by the money laws of Congress passed in 1837, 1838, 1849, 1853, 1861, 1862, 1863, 1864, 1865, 1873, 1876, 1878, 1882, 1890, and 1891, which, of course, suspend and prohibit all coinage or additions. It has not been increased for a generation, when, I believe, it was about \$40 per person. Our present 90,000,000 persons have found it, for several years, insufficient to carry their myriads of transactions. If \$12,000,000,000 are on deposit in the banks, as common report states, what kind of dollars are they? If that is true, then there is about \$150 per person. That can not be true, because the Administration claims only \$30 per person. However, if it is true, the explanation is that two billion real dollars have been redeposited by the 20,000 banks with one another a half a dozen times over. One fair, safe, and plain way somewhat to increase the stock of money would be for our Government (by permission of a law to be enacted) to coin into money all gold hereafter offered and actually extracted from mines within our country, until it is \$100 per person, and, perhaps as a penalty, to charge its offerers, for the services of our mint, an adequate seigniorage.

2. Can usury ever be abolished?

Gold and silver coin, our only lawful money, should be deemed and made not a commodity or kind of personal property, but the medium on which to float and move transactions, and with which to do away with the necessity of exchange by barter, just as the waters rushing through the Narrows, an arm of the high seas, are the unpurchasable medium on which are floated and moved the vessels of commerce and pleasure plying between this port of New York and the rest of the world, and which no one but our Government shall have power to raise or lower.

Dealing in money, except by strict lawful banking, should be made as unprofitable and dangerous as it is immoral. Buying or selling money or accepting premiums for purchases or sales of it, is scandalous, and should be prohibited as a crime.

Every one who deals in money, or who is one of the moneyed class—the few that pay or ought to pay large sums annually as taxes upon their bank balances—is opposed to increasing the stock of money, and to imposing an export tax upon money leaving our country. Every one who deals in property—that is, in commodities, lands, services, and all other kinds of property except money—is in favor of increasing and keeping here the stock of money, or the odd one that thinks he is not

would be if he saw the distinction and the difference between money and property which wise men have seen for centuries, and which the usury and larceny sections (528 and 378) of the Penal Code saw and see.

Every dealer in money should be forbidden by penalty of felony from preying upon the necessity of a failing borrower. He needs and makes famines, panics, and failures. He gets rich from outrageous rates of interest. He wants our Government to borrow unnecessary and fabulous sums, and then, so as to paralyze the people and their commerce and pleasures, to tax them to pay the immense interest, leaving future generations to pay the principal, and then he has his golden period to make money. He prefers, as a security, our Government's I. O. U. to a citizen's I. O. U. He wants to mar any law proposed to curb his class. While he is a *laissez faire* and always concerned about crops, he is in favor of any scheme to drive the real dollar out of our country. His specious schemes for "an elastic currency," for "a contraction currency," for "an emergency currency," for "check-currency," for "bank credits currency," for "I. O. U.-based-on-future-taxation-but-not-on-present-gold-coin-money currency," and for the assumption of a function of our Government—his scheme should be reprobated and condemned. Really he wants the real dollar rare and dear so it will buy a heart's blood! He should be whipped out of the temple of money and forever kept out.

There is not in the world any legitimate business of dealing in property for the borrower to invest his loan in that can pay more than 6 cents for the use of \$1 in it for the full three hundred and sixty-five days; and if he borrowed his call loan at a greater rate, he must fail. Observations by commercial agencies show that the most profitable wholesale businesses earn, on an average, only 5 per cent net; and that 90 per cent of all firms and individuals, if not actual failures, are far from successes. There are few corporations in the world a hundred years old.

Usury always was held a wicked wrong. "Ye exact usury," charged Nehemiah, in 350 B. C. (Ch. v, v. 7). "Will ye even sell your brethren? I pray you, let us leave off this usury." Then they said: "So will we do!" Shaking out his lap, Nehemiah prayed: "So, God, shake out every man from his house and from his labor that performeth not this promise, even thus be he shaken out and emptied!"

Four hundred million Mohammedans believe that a commission of usury is a mortal sin. They will not accept any interest on their bank balances.

"They who devour usury, or who return to usury," cursed Al Koran, in A. D. 650 (Ch. li), "shall not arise from the dead, but as he ariseth whom Satan hath infected by a touch and shall be companions of hell fire and continue therein forever. He, therefore, who abstaineth from usury," rewarded Al Koran, "shall have what is past forgiven him and shall spread for himself couches of repose in paradise."

Says our law (ch. 538 of Laws of 1879):

"No greater rate of interest upon a loan of money shall be charged than \$6 upon \$100 for one year."

That wise law has an exception (ch. 237 of Laws of 1882, and sec. 56 of the banking law):

"Upon a call loan," says that exception, "banks and bankers may charge interest at any rate."

That evil exception is the chief cause of all famines, panics, and failures. It is the root of that gangrene growth—all margin and future gambling. It makes this oppressive and dishonorable trick and gamble of dealing in money a lawful business—which felonious practice—thanks to this special class legislation—some bankers, brokers, and other individuals are not ashamed to engage in openly. It creates and presents the spectacle of call loans bearing bankrupting rates of interest, of the borrowers abandoning all their collateral pledges, and of helpless depositors unable to get their own money back.

Should not that ruinous exception—the call-loan law—be repealed?

3. Is conversion by a banker a larceny or not?

It helps to cause famines, panics, and failures. If an executor or any other fiduciary receives a deposit of money and fails to pay it over he is guilty and punishable. But, if a banker or bank receives a deposit of money from his depositor and fails to pay it over to him he is not punishable—on the theory, says the law, that the deposit erected between them merely the relation of debtor and creditor. He is presumed to have invested the deposit according to the banking law. If the presumption is violent and untrue, plainly the law for the same guilt should lay the same punishment. Banking in violation of law seems to be a safe child's play although there have been some convictions.

4. Should the standard for bank director be raised by law?

The qualifications possessed and the quantity of stock owned by a stockholder in a banking corporation, or indeed in other corporations, to be eligible for director in it should be great enough (to be required by new additions to the penal code) to insure public confidence in his character and capacity and insure that he will never, through his corporation, commit conversion, check kiting, overcapitalization, merger, waste, bribery, usury, and such kinds of crime. A director and his corporation should be prohibited from owning any stock, bond, salary, or other interest in a similar, rival, competing, or parallel corporation. Otherwise radical reformers will arise and will, perhaps, get a law giving only one vote to each stockholder no matter how many shares of stock he owns instead of, as at present, one vote to each share of stock, which reform would wreck all corporations or at least drive them down to the level of partnerships. However, it must be admitted that the average corporation is a one-man concern—every director, officer, and employee being the boss's mere "rubber-stamp."

5. Would a bank conducted by our Government help to prevent future famines, panics, and failures?

So that bankers and banks shall never be superior to our Government—as they seem to be assuming one of its functions at present—they should have a competitor, say in every branch money-order post-office, which should be for an inhabitant within its vicinage a place of deposit of money to the extent of \$1,000 without paying him any interest, and which of course would keep those deposits within our country and would be as sound as our Government itself. Our Government should invest those deposits in \$20,000 or less sums in real estate bond and mortgage security at 3 or less per cent. At times, poor persons may not like to risk their ready money with banks for any rate of interest, nor be able to pay rents for safe deposit boxes. They would trust our Government with it, thus keeping it in circulation. Except to that limited extent our Government should never be granted any power or discretion in banking save to coin and issue money, and banking should be regulated solely by strict provisions of civil and criminal statute law, Federal or State.

6. Do the collections of the customs and other revenues help to cause famines, panics, and failures?

The income of our Government, roughly \$2,000,000 a day, instead of being deposited in bank is hoarded up in our Government's vault. If it is a good thing to hoard up its income until it is, say, fifty millions, why is it not a good thing to hoard it up until it is, say, the entire two and a half billions and thus leave every one without a dollar and the prey of foreign government bank usurers? Certainly they have millions of our gold coin money in their hands at present which they are ready to sell to us at Shylockian rates—rates higher than they have charged in thirty-four years.

In a word, let laws be enacted coining money, abolishing usury, defining conversion by bankers, directing the deposit of our Government's income in bank daily, and requiring bank checks to be payable only through the clearing house, where there is one, and the chief causes of famines, panics, and failures will be destroyed.

WILLIAM HENRY KNOX.

The Currency Bill.

SPEECH

OF

HON. JAMES T. LLOYD,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. LLOYD said:

Mr. SPEAKER: The Democratic party, which was so marvelously triumphant for the first seventy years of the country's history, still lives to bless mankind and bring hope to those who believe in its teachings.

For nearly fifty years the Republican party has controlled the legislation and, to a great extent, the political destiny of the Republic.

We are now entering upon a contest between these two great parties which will be intense until the people have again asserted themselves at the ballot box. Many people have been led to believe the statement which has been so forcibly and frequently made, that "Republican supremacy insured prosperity, and Democratic success brought adversity," and to reach the truth must be disabused of this heresy.

The panic of 1893, with its necessary business depression, has been charged directly to the Democratic party by Republican leaders in every section of the country, and many have been deluded by the statement. The truth of history shows, however, that the Democrats were not responsible for it, and that the cause of the panic, if in legislative and administrative conditions, existed when Mr. Cleveland was inaugurated.

In May, 1893, as in October, 1907, business failures precipitated financial alarms; money was withdrawn from circulation and hoarded in private places. Mr. Cleveland in 1893 found a depleted Treasury, which was the heritage of Republican rule, and to meet the exigencies of the times and the demands on the Treasury was forced to borrow money to meet the expenses of the Government. In 1907, with large sums of money in the Treasury, Mr. Roosevelt loaned to the banks many millions of dollars, and in this way depleted the Treasury, and found it necessary to borrow money to meet the daily obligations of the Government.

The Democrats of 1893 have been abused and condemned by Republican politicians for borrowing money when it was absolutely necessary to do so to prevent the drafts on the Treasury going to protest. If this censure was just, what should be the opprobrium in 1907 when, instead of protecting the Treasury, money was placed in the banks for their protection to such an extent it was impossible to meet the daily demands on the Treasury without borrowing money? If the Democrats in 1893 were in any way censurable for securing a loan to replenish a depleted Treasury, how utterly inexcusable were the Republicans in 1907 for placing themselves in a position where it became necessary to borrow money?

The Republicans, in trying to fix responsibility for the panic of 1893 on the Democrats, have charged that it was brought about by the then threatened revision of the tariff, and yet they are now asserting that the tariff must be revised and go so far as to inform the country that this revision must take place at special session, either in November next or in March, 1909. This course positively discredits their statements heretofore made, for if the panic of 1893 was brought about by the proposed revision of the tariff, would any Republican now advocate the revision of the tariff if he believed that such advocacy would result in financial disaster and ruin? Their course brands their previous contention with error and fully justifies the course which was pursued by the Democrats in 1893.

In justice and fairness to the American people, that party should apologize to the country for the false charges made against the Democracy and openly admit that its statements were without foundation.

This country owes much to its natural advantages. Government through legislation has greatly helped and in some instances hindered that progress. As a rule, the market for the farmer has been good, both at home and abroad. In recent years its half billion surplus products each year, instead of hoarding or selling at ruinous prices, have found a ready market beyond the seas at a living price. The products of mine and factory alike have found surplus market in both Orient and Occident. The soil and climate with sunshine and rain combine to increase the products and wealth of the country. The industry and enterprise of labor, together with the supply of ore and raw minerals, unite in affording opportunities not found elsewhere. On these elements which enter into the American success there is no political patent nor limited copyright, so that no political party is wholly responsible for everything that makes prosperity nor entitled to credit for every element in that prosperity.

Despite political conditions, there has been material prosperity during the last fifty years, within which time the Republican party has been in the ascendancy. During all these years, from the incipency of the Government, the Democratic party has been a vital, active force in its affairs. For seventy years in the formative period of the Republic it was responsible for the enactment of laws and their enforcement, and since that time has been a forceful organization which has frequently served as a great balance wheel to protect the people from most pernicious and extreme legislation.

This party deserves to live. It ought to receive the plaudits of men, whether they are Democrats or Republicans, for what it has achieved. He who would contemptuously refer to Democracy's splendid record of more than a century would crush truth to earth that error might arise in its stead. During Democratic supremacy there was the most marvelous development ever known in any country. The young Republic, built upon the ruins and desolation of the Revolutionary period, arose in prominence by the most rapid strides and soon took a position never before attained by any government so young in years. Its population increased from 3,900,000 in 1790 to 31,440,000 in 1860. Its per cent of increase was greater during each decade than in any like period since 1860. Its wealth increased during the seventy years from \$620,000,000 to \$16,160,000,000—a per cent of increase not shown in any other country and not equalled in this country since 1860.

Its exports and imports amounted to \$43,000,000 in 1790, which increased to \$687,000,000 in 1860, more than sixteen times as great, and a per cent of increase much larger than since that date.

Many believe that the prosperity of a country may be determined by its circulating medium. In 1800 there were twenty-six and a half millions of money, or \$5 per capita, and in 1860 this sum, which increased more than sixteen fold, reached the enormous sum of four hundred and thirty-five millions, or \$13.85 per capita, a greater per cent of increase than in the years which have followed.

In 1791 the public debt was seventy-five and a half millions, or \$19 per capita, and its total wealth was \$160 per capita, but in 1860 the debt was so reduced as to amount to \$1.91 per capita, and this notwithstanding two wars had intervened, with their necessary additional expenditures.

In 1860 the farmer had 49 per cent of the wealth of the country; he now has 23 per cent. What has brought about this change? Let the Republican party answer.

The condition of labor is not as good now as then. Why has it not received its share of material increase? The boasted prosperity of the Republican party suddenly sank into panic and disaster in October last. The cause assigned is that the Republican party, with its eleven years of supremacy, had failed to provide the laws necessary to protect against such contingency. What fearful responsibility is admitted in this confession!

An unwilling Congress has been forced by the Speaker of this House to accept an emergency remedy in the Aldrich-Vreeland bill, because it is claimed there is likely worse financial disaster in store and such legislation may prevent it. If this be true, similar legislation passed a year ago should have prevented the present depression and the loss of the billions within the past eight months. This action is the admission of the lack of foresight on the part of the Republican party in not providing the necessary currency legislation.

I shall not follow up the record of the Republican party, but can safely say that its achievements are not equal to those of

the Democracy, and that the onslaughts and abuses which that party from time immemorial have heaped upon the Democracy have been unwarranted, unjust, and untrue. The Democracy is not an infallible party, but its record is one which no man need be ashamed of, and it now stands, as it formerly did, for progress and for the best interests of the whole people.

I wish to present a statement made by Senator ROBERT L. OWEN, of Oklahoma, on "Panics in relation to the Democratic and Republican parties," as expressed in a letter addressed by him to Hon. GILBERT M. HITCHCOCK, of Nebraska. The letter, in part, is as follows:

Since the Republican party came into power there have been four great panics—those of 1873, 1884, 1893, and 1907. Three of these were confessed panics which occurred at a time when the Republicans were in complete control. These were the panics of 1873, 1884, and 1907. The panic of 1893 occurred immediately after Cleveland went into office, and was produced by the banks associated in the New York Clearing House, who constricted credits and suggested to all their correspondent banks throughout the United States to constrict credits, on the alleged ground that gold was leaving the country, but probably for the purpose of securing a repeal of the purchasing clause of the Sherman Act and to prevent further recognition of silver.

All panics have one vitally important feature in common which might be called "the soul of a panic"—that is, the withdrawal of money from the banks and from circulation by frightened depositors and by the hoarding of such funds. The fear of depositors may arise from a variety of causes. When bank depositors realize that a situation has arisen whereby they can not obtain their bank deposits in cash on demand, many will withdraw their funds and lock them up. Whenever this happens in any important degree it paralyzes commerce, causes bank suspensions, the bankruptcy of merchants, and the suspension of business activities. It closes factories and throws men out of employment sometimes on a vast scale, as in each of the four great panics I have named.

THE RATIO OF DEPOSITS TO ACTUAL CASH.

The report of the Comptroller of the Currency demonstrated that the ratio of actual cash in the banks of the country as compared to the actual deposits of the banks is approximately 10 to 1; that is, the deposits are ten times greater than the cash in the banks. If 10 per cent, therefore, of all the bank depositors should, on a given day, withdraw their deposits from the banks of the United States, we would not have a dollar of currency remaining in the banks. They would have under such a contingency the same assets as before, invested in stocks, bonds, and commercial paper, but no cash. No such demand as 10 per cent of bank deposits has ever been made on a given day in the United States, nor has it ever been approximately made; yet in the panic of 1893, during the course of six months (one hundred and eighty days) 18 per cent of the deposits were actually withdrawn from the national banks of the United States, or at a rate of one-tenth of 1 per cent per day during the one hundred and eighty days. This process did not diminish the cash in the banks, because the banks compelled their borrowers to liquidate. Their weakest borrowers, therefore, sold their property at a very low rate compared with the normal values, and those who had ready money bought such property at a greatly reduced rate, and the money from the proceeds of such sales went immediately back into the bank.

THE EFFECTS OF PANICS.

The Comptroller's report shows that bank "exchanges," consisting of checks and drafts, etc., diminished one-half in the panic of 1893, and the same substantial effect was witnessed in the panics of 1873 and 1884. These "exchanges" make an enormous volume of quasi currency, amounting to a sum approximately equivalent to our total supply of currency in gold, silver, and paper money. The shrinkage of 50 per cent in which these "exchanges" (which served the function of currency in ordinary business) always has the effect of causing a violent shrinkage of normal values with ruinous effect upon business, causing bankruptcy and paralysis in business.

If the Democrats were responsible for the panic of 1893, it was a grievous responsibility. If the Republicans were responsible for the panics of 1873, 1884, and 1907, they were responsible for three panics, and for business calamities three times as serious, but the fact is, the Republican party was really responsible for all four of these panics, because it lacked the wisdom (if it had the power) to provide a remedy against panics.

THE CAUSE OF PANICS.

The primary cause of a panic is the fear of the people that they can not get cash for their bank deposits. The immediate effect of this fear of a panic is the withdrawal of currency from the banks, and the hoarding of such currency in lock boxes and hiding places. The coincident effect of this withdrawal of currency is frightening the bankers into a bankers' panic, and they make it worse by the suspension of credit, and the suspension of credit means a paralysis of business, because all men do business on debt and credit basis, extending credit or receiving it.

THE REPUBLICANS AT FAULT.

The best witness of the responsibility of the Republican party of the panic of 1907 is Senator ALDRICH, of Rhode Island, the leader of the Republican party in the Senate of the United States, and I will call your attention to his statement made on the floor of the Senate, which is a complete demonstration and confession of the great sin and omission of that party and its direct responsibility for every panic since the war. In offering Senate bill No. 3023 as a remedy for the prevention of panics, Senator ALDRICH, of Rhode Island, chairman of the Committee on Finance, on February 10, 1908, said:

"There should be no misunderstanding as to the sole controlling purpose of this bill. It proposes by its provisions to prevent panics and to furnish means of relieving panic conditions."

Mr. ALDRICH further said:

"The serious defect of our monetary system as disclosed by our recent bitter experience is the fact that we have no means whatever for providing the additional issues necessary to meet or prevent panic conditions."

He further said:

"We are clearly answerable for any defects or omissions which we have in our power to remedy. If we should fail to take some effective action to provide against a crisis such as that through which we have just passed, we should assume a grave responsibility, which I feel that we can not afford to take. It is difficult to overestimate the magnitude of this responsibility."

The declaration of future responsibility for preventing a panic is a confession of past responsibility for not having prevented the panics of the past. He confessed that the Republican party is clearly answerable for future panics due to such defect in the laws, and yet if this be true, it was the very defect of the law and the omission to pass proper laws that permitted the panics of 1873, 1884, 1893, and 1907. That the leader of the Republican party in the United States Senate was not unmindful of the terrible result of this sin of omission of his party is evidenced by the manner in which he opened his speech of February 10, 1908. He said:

"The financial crisis from which the country has just emerged, which culminated in a serious panic in October, was the most acute and destructive in its immediate consequence of any which has occurred in the history of the country. It is impossible to conceive, much less to measure, the losses which would have resulted from such a calamity. The country was saved by a narrow margin from an overwhelming catastrophe whose blighting effect would have been felt in every household. A total collapse was avoided, but the shrinkage in the values of securities and property and the losses from injury to business resulting from and incidental to the crisis amounted to thousands of millions of dollars."

It is perfectly obvious from this statement that Senator Aldrich believed that if the Republican party had done its duty it would have passed legislation protecting the United States against panics long years ago and would have prevented the panics of 1873, 1884, 1893, and 1907.

One of the stock arguments of the Republican partisans since the panic of 1893 has been that Democracy is synonymous with panics and coincident with hard times. Only the unlearned could be misled by such a pretense. The panics of 1873, 1883, and 1907 occurred at a time when the Republicans had full control.

The panic of 1893 was ripe and ready to blossom forth when Cleveland came into power the second time.

It is a well-established fact that President Harrison, before his retirement on March 4, 1893, had gone so far as to prepare plates for a bond issue, and these very plates were used by President Cleveland as an inheritance from the Republican Administration.

It has been the sin of omission in not having heretofore provided a remedial statute that puts the fault of previous panics at the door of the Republican party. Even when the Democratic leader, Hon. James K. Jones, offered in the Senate a remedy in 1900, they refused it and failed to act, leaving the country to suffer the terrible injury of the panic of 1907, which was deliberately brought about by big interests which enormously profited by the losses of weaker people. The beneficiaries of the panic of 1907 are those who, in the past, have made vast money contributions to Republican campaigns and who will do so in this campaign, for there is no publicity bill exposing such corrupt and vicious contributions of money, notwithstanding the pretense that the party in power earnestly favored a publicity bill.

Employment of Child Labor.

SPEECH

OF

HON. CHARLES W. FULTON,

OF OREGON,

IN THE SENATE OF THE UNITED STATES,

Wednesday, May 6, 1908.

The Senate having under consideration the bill (S. 4812) to regulate the employment of child labor in the District of Columbia—

Mr. FULTON said:

Mr. PRESIDENT: I do not suppose anyone will contend that this legislation is necessary for the protection of every child who is under 14 years of age. There are so many cases similar to those so vividly pictured by the Senator from Massachusetts where a law of this character is necessary that it becomes our duty, I think, to enact some legislation along the lines here proposed. But it must be admitted that there are many cases in every community where the child will be advantaged by being engaged in some character of employment. If left an orphan, for instance, it may be far better for it to be permitted to engage in some useful employment than to be put in an orphanage. There are many instances where the child is not an orphan, but the parents are poor and need his earnings, and in order that the child may have the opportunity that it desires and that the parents desire for him, and in such case it may be better if it be allowed to go out to work.

These considerations perhaps of themselves would not be sufficient to move us to defeat entirely the proposed legislation, but if we can make provision that will take care of those cases where the child might be properly employed, although under the age of 14, it seems to me that it is our duty to do so.

The proposition of the Senator from Washington is to submit such cases to the juvenile court and let the judge determine whether or not the particular place that it is proposed to employ the child, the particular work at which it is proposed to employ him, will be to his disadvantage or not; and if the court concludes that it will not, then he will make the order permitting the employment.

Mr. President, will anybody contend that every instance in history where a child under 14 years of age has been employed and has been put at work has been to its disadvantage, has corrupted its morals, or stunted its growth, or weakened its powers in maturity?

The Senator from Iowa this afternoon paid a glowing and deserved tribute to the Senator from West Virginia [Mr. Scott], and said that if every employer of children was such a person as he, animated by that same high sense of humanity, by that kindly disposition which prompted the loving care that he exercises over those in his employ, there would be no occasion for legislation of this character. The Senator was quite right. And yet, Mr. President, there are thousands of such employers, and a child placed under such is far better off than he is in idleness, far more fortunate than in some institution of charity.

I think no Senator here who if compelled to leave his child would not far rather have it committed to the care of such an employer than that it should be put in some public institution of charity.

These institutions are usually excellently conducted and well designed to take care of the helpless children who are cast upon the world friendless and unprotected, but it does not follow that all such children must be committed to those institutions if better provision can be made for them.

Is it probable that the judge who presides over the juvenile court, who is selected for that position because of the peculiar characteristics that fit him for the work, will be less considerate of the character of the morals and of the welfare of the child than will be the overseer or superintendent of the orphan asylum? You have, after all, to take some chances, and do not be carried away with the idea that you take no chances when a child is sent to a public institution of charity. You take some chances there—and tales have been told and investigations have, unfortunately, in some instances, proven them to be true—of conditions existing in such institutions far more cruel than any that obtain in factories, cruel as they may be. We all know of the indignities and wrongs that the little folks suffer in these great centers of industry, but let me tell you they suffer wrongs and indignities indescribable oftentimes in public institutions, because they are presided over by men and women animated not by love and affection for the poor little unfortunates, but by greed and avarice and considerations personal to themselves.

Therefore, Mr. President, I am perfectly willing to leave the question to a judge who presides over the juvenile court, and if a case is presented to him where a child can be given to the tutelage and care or placed in the employment of a person whom he knows to be humane, whom he knows to be a kindly employer and knows that he will look after the morals and the physical welfare of the child as if it were his own, I would give him the power to commit the child to his charge.

Currency, Antitrust, and Publicity Legislation.

SPEECH

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. BURNETT said:

Mr. SPEAKER: Never has the Republican party gone into a campaign with as much slime upon its garments as it carries into the present one.

Never has it gone into one where it has realized that its shortcomings, its sins, and its infamies are so fully known to the great masses of the people as at this time.

For the last twelve years it has invoked the doctrine of the full dinner pail to bamboozle the people, and it has raised the cry of prosperity as the slogan for its success.

Thousands of honest men have been deceived by the specious arguments of its spellbinders, and thousands of toilers have cast their ballots for its candidates because they believed that Republican success meant bread and meat to their wives and their children, and that Democratic victory meant hunger and want for those whom they loved. But, Mr. Speaker, you "can't fool all the people all the time," and at last the greed of your vampires has caused the scales to fall from the eyes of the American voters, and your day of retribution is at hand.

The objects of your Republican care and benefactions had become so entrenched in their own arrogant lawlessness that they believed no power could ever drive them out. It would

have yet been many a long year before they could have been dislodged but for the fact that they became so greedy with devouring the people that their insatiable maws forced them to turn to devouring themselves. Then it was that the light began to be turned on and the people began to see that the very foundations of their liberties were being threatened.

When the noise of revolt began to rise from a murmur to a storm the President took notice. He knew that he owed his election to these very pampered foals of a Republican dam, and no doubt he would have gladly shielded them from the impending storm had he dared to do so.

But, whatever else may be said of the President, no one has ever accused him of being a poor politician, and good politics required him to pretend to line up with the people. "My Dear Harriman" was soon forgotten, and those who had contributed most liberally to his campaign fund, when they were overtaken and exposed, were permitted to exile themselves as outlaws and pariahs or to die in disgrace and transmit to their posterity the heritage of a tarnished name. While he was consigning Judge Parker to the Ananias club, those managing his campaign were reaching forth for trust funds, knowing that the goal of a position in the President's official family would reward their fidelity to the cause of their lord and master. While posing as the champion of the people against unlawful trusts and combinations, we find the President giving a certificate of good character to a former member of the Cabinet whose own admissions showed him guilty of the very crimes so loudly denounced by the President.

After the successful fat frying by Cortelyou in the last Presidential campaign it was generally understood that he would be the President's candidate for his successor. Gratitude seemed to demand as much, and had there been no exposures he no doubt would have been the President's heir to the nomination.

But again the sagacity of the President asserted itself. He knew that it would never do to try to name as his successor one about whose hands still lingered the odor of tainted money, and with the same grateful appreciation with which we saw him throw "My Dear Harriman" overboard we find him dumping Cortelyou into the trash pile of has-beens. In the meantime, as the campaign approached, the President began to realize that the mimic warfare which he had been carrying on against the trusts had gone too far for another fat frying, and that even the trusts were taking his "horseplay" too seriously. So we find him again consorting with the agents of some of those against whom he had pronounced his "anathema maren-atha."

What better proof of that fact could we have than the following little colloquy that occurred in the hearings before the House Judiciary Committee on the Hepburn antitrust amendment between the chairman and Mr. Low, of the Civic Federation:

The CHAIRMAN. Right there, Mr. Low, if there is no objection, who are the people that actually participated in the preparation of the bill? Who are the men who actually drew it?

Mr. Low. We conferred with Mr. Gary, of the United States Steel Corporation.

The CHAIRMAN. E. H. Gary, president of their board of directors?

Mr. Low. E. H. Gary, who is likely to be here this morning. He is in Washington, and I think he came on for purpose for this meeting. The lawyers actually engaged in the drafting of the bill were Mr. Stetson—

The CHAIRMAN. That is, Francis Lynde Stetson?

Mr. Low. Francis Lynde Stetson; and Mr. Morawetz.

The CHAIRMAN. Victor Morawetz?

Mr. Low. Victor Morawetz. Professor Jenks, of the Federation, was in constant collaboration upon the subject. We also kept in close touch with the administrative departments of the Government through the Bureau of Corporations.

The CHAIRMAN. That is, Mr. Herbert Knox Smith?

Mr. Low. Mr. Herbert Knox Smith; yes.

Who can doubt after reading this extract the character of the little game going on between Gary, the president of the board of directors of the United States Steel Corporation, and Herbert Knox Smith, the President's trusted lieutenant? A most outrageous plot was being enacted between the executive department of the Government and the officials of the trusts.

What business did Stetson and Morawetz have in the councils of those who honestly wanted to curb the trusts? One glance at the Hepburn antitrust amendment will show that they were there to render aid, not to the people, but to the criminals who had so long oppressed the people. The President and his press bureau had paraded the prosecution of the trusts till the natural inquiry began to arise, Who of these violators of law and morals are personally wearing stripes? Fines against the corporation would not stop it, for at last the consumer pays the fine, and a demand was growing louder and louder for some personal punishment of the malefactors. To inflict the personal punishment might check the campaign funds, and the Repub-

lican party was going to need the funds worse than at any time in its history.

Something must be done, and in collaboration with the directors and attorneys for the trusts section 4 of the Hepburn anti-trust amendment was brought forth, which says:

No suit or prosecution by the United States under the first six sections of the said act approved July 2, 1890, shall be begun after one year from the passage of this act for or on account of any contract or combination made prior to the passage of this act, or any action thereunder.

Here is one of the many jokers in the bill, and who can doubt that the trust officials and attorneys laughed in their sleeves when they saw how easy the President was to placate on the heels of the coming campaign?

Another of the many fruits of the little seances held between the leaders of the Republican party and the systems who were expected to furnish the sinews of war to crush the people at the polls was the farce enacted by the House on the heels of the session, in which it was pretended that legislation was desired to regulate contributions to campaign funds.

For the purpose of preventing such legislation the Crum-packer bill, seeking to humiliate and crush the white civilization of the South, was attached to the publicity bill. Who is such a fool as not to see through the hypocrisy of the Republican party in this fiasco, and who is so obtuse as not to understand that this was intended to defeat any legislation that would restrict the power of that party to thrust its hands into the tills of widows and orphans and loot them of their funds for the purpose of corrupting elections?

The Anti-Trust League, through its secretary, Mr. H. B. Martin, begged the appropriate committee of the two Houses of Congress to permit the production of evidence that would unfold the nefarious plot between corporate interests and the Republican party to crush out the liberties of the people, but their entreaties were only met with the "horselaugh," so often resorted to by the leaders of that party. As a part of my remarks, I desire to attach a part of the correspondence and hearings on this subject.

At a hearing of Mr. H. B. Martin, before the Senate Judiciary Committee, the following occurred:

MR. MARTIN. The request I make is made on behalf of the Anti-Trust League, and of Judge S. H. Cowan, representing the Cattlemen's Association, who is not able to be present to-day. It deals with a matter that was suggested in the hearings before—that a commission be appointed to sit during the recess of Congress and report to Congress next fall. That commission, I believe, was to be appointed by the President.

Senator DEWEY. Whom do you represent?

MR. MARTIN. The Anti-Trust League and Judge Cowan, who represents the Cattlemen's Association.

We are very much opposed to the appointment of a commission by the President to report at the next session. What I am referring to now is that part of the bill relating to capitalists, and not that relating to the laboring men.

The part of the bill I refer to is that part that relates to combinations of capital. What we desire is that that be considered by the members of the committees of both Senate and House of Representatives—by the duly elected lawmakers of the country, the responsible members of the lawmaking body—for the reason that some of the most grievous objections to this legislation grow out of the relations between these great combinations of capital, forbidden by the present law, and the executive branches of the Government. We desire that the legislature—the Senate, as representing the lawmaking branch of the Government—shall deal with this question on its own responsibility. We desire also that this committee, if possible, secure from the Senate a resolution authorizing it to subpoena witnesses and to take testimony and to require the production of persons and papers, because we believe and are sure that we can show to the committee—if it is clothed with that power—that that part of the proposed legislation which refers to the combinations of capital has been prepared and suggested and brought before Congress as a means of exempting from the provisions of the law of one or more of the most dangerous combinations of capital in the United States or in the world.

Senator DEWEY. Do you mean that the bill submitted by the Civic Federation had that object?

MR. MARTIN. I do. I believe that we can show, if the committee will get the Senate to give it the resolution of which I have spoken, that that part of the bill was framed—

Senator DEWEY. Mr. Seth Low is a friend of mine, and he is one of the most humane and sympathetic of men. Do you mean that he was or would be a party to a thing of that kind?

MR. MARTIN. Mr. Low stated that he did not draw the provisions of the bill—that they were handed in by him, but that they were drawn by Mr. Stetson, attorney for the steel trust, and by Mr. Morawetz and other members of large corporations.

It was further stated by Professor Jenks, representing the executive branch of the Government—he himself being a member of the executive branch of the Government—that it was not only drawn in that way, but that it had the approval of Mr. Gary, of the steel trust.

We are prepared, further, to show that this bill before it was presented to this body—before being presented to Congress—was presented to bankers, trust magnates, and railroad magnates in New York City, with the purpose of reaching an agreement that the executive branch of the Government would use its influence to put this legislation through, which granted immunity to them for their offenses against the law in return for cooperation and support in matters connected with the nomination and election of men in the executive branch of the Government. We can prove these things, if the committee will get from the Senate authority for the production of witnesses and papers.

That does not relate to the labor part of the matter at all. We are perfectly willing that the committee may report that part of the bill to-day and pass it to-morrow.

Senator DEWEY. But when you come to mingle in that way the Civic Federation with such serious charges as you make, you still further confuse my idea on the matter of good trusts and bad trusts, to which I alluded the other day. I do not know whether Mr. Gompers's attention was called to that. It seems that when the fleet, in its marvelous trip, reached San Francisco, it was arranged that they should be entertained by two classes of people who could not agree. One class was designated locally by some of the newspapers as the "good trust," and the other the "bad trust." [Laughter.] Both the good-trust people and the bad-trust people gave a banquet in their honor. Both invitations were accepted. The good-trust banquet was \$10 a plate, and the bad-trust banquet \$20 a plate. The governor attended the bad-trust banquet. [Laughter.] Then I wanted to know what it was that constituted a man a member of the good trust and what a member of the bad trust, so I looked the subject up.

I found that the members of the good trust were those who cornered the necessities of life, while those who belonged to the bad trust were those who secured great franchises. [Laughter.]

MR. MARTIN. Under the present law offenders are liable to fine and imprisonment for their offenses. Those same gentlemen get together and prepare a change in the law, bring it to Congress, and ask Congress to pass it—a law which will exempt them from the punishment which they have incurred through a long series of years. They are like the Irishman who was arrested for horse stealing, when I was a boy. The people said to him: "Now, Pat, you are guilty; you stole the horse; the punishment is hanging, and we are going to hang you in five minutes. But," they said to him, "we will give you the privilege of naming the kind of tree you will be hung to." He said: "I'll be hung to a gooseberry tree." [Laughter.] "But," they said to him, "a gooseberry tree is not big enough to support you." "Well," he says, "I'm in no hurry; I'll wait till it grows." [Laughter.]

We have now a good big oak tree in the shape of the Sherman anti-trust law on which to hang the trust criminals for their offenses; and now come these gentlemen of the steel trust and the President of the United States and his friends, and propose a gooseberry tree in the shape of the Hepburn bill as a substitute, and they are willing to wait until it grows. [Renewed laughter.]

On the 18th of May, Mr. Martin addressed the following letters to Hon. KNUTE NELSON, chairman:

WASHINGTON, D. C., May 18, 1908.

HON. KNUTE NELSON,
Chairman of subcommittee of Committee on Judiciary,
now considering proposed amendments to antitrust laws.

SIR: We respectfully petition yourself as chairman and the members of the subcommittee of the judiciary, now considering the proposed amendments to the antitrust laws, to secure the passage by the Senate of a resolution empowering your subcommittee to sit during the sessions and during recess of the Senate, and empowering your subcommittee to subpoena witnesses, administer oaths, and compel the production of persons and papers. The resolutions also to empower the committee to employ necessary clerks, stenographers, messengers, and experts for the conduct of an inquiry into the origin and character of proposed amendments to the antitrust laws, and to report on the same to the Senate as early as possible.

The necessary expenses of the committee to be paid out of the contingent fund of the Senate.

Some of the reasons which fully warrant your committee in asking and the Senate in adopting such a resolution were submitted by me to the subcommittee on Saturday last. The facts which I then set forth and many others amply justifying the passage of the resolution by the Senate are so well known, not only to myself but to the members of the Senate, and at least a part of the public, and are of so grave a character and so seriously affecting the interests of the people of the United States as to make necessary for the public welfare the adoption at once by the Senate of such a resolution.

Respectfully submitted.

H. B. MARTIN,
National Secretary American Anti-Trust League.

OFFICE OF NATIONAL SECRETARY,
AMERICAN ANTI-TRUST LEAGUE,
Washington, D. C., May 18, 1908.

HON. KNUTE NELSON,
Chairman, and the Members of the subcommittee of the
United States Senate Committee on the Judiciary,
Washington, D. C.

SIRS: On January 10, 1906, F. E. Stebbins and R. C. Wright appeared before Assistant United States Attorney-General Purdy and presented to him the cases of the violation of the antitrust act of 1890 by the Eastern Railroad Association, of Washington, D. C., a combination of individuals and corporations engaged in a conspiracy to restrain and monopolize interstate commerce in inventions and appliances on railroads, which combination was operating and is operating greatly to the injury of the inventors, the railroads, and the public. Although the evidences of violation of law was ample and complete, the said Assistant Attorney-General Purdy refused and neglected to proceed against the violators of the law.

Again, in February, 1907, said Stebbins and Wright called upon Assistant Purdy and once more urged him to take action against the said Eastern Railroad Association on the evidence they had submitted to him and which evidence some of the most eminent attorneys in the United States had pronounced ample ground for prosecuting by the Department of Justice. Again Mr. Purdy refused to act.

Upon the refusal of Purdy to proceed Messrs. Stebbins and Wright presented themselves at the White House and asked for an audience with President Roosevelt in order to present the matter to him. When the President was informed by his secretary what the business was on which they wished to see him, he refused them an audience, saying he would not see them on that case, that they should go to the Department of Justice (where they had just been refused any relief).

In April of 1908 Mr. Stebbins again went to the Department of Justice to ascertain if any action could possibly be procured from Assistant Attorney-General Purdy in this case. Mr. Purdy said he had not changed his mind in regard to the matter and would do nothing, although the proofs of violation of the law were before him. This evidence had been declared amply sufficient for prosecution by such eminent lawyers as Judge J. S. Wilson, leader of the bar of the Dis-

trict of Columbia; Senator William E. Chandler, of New Hampshire; Senator and ex-Judge George Turner, of the State of Washington, and Senator George F. Hoar, then chairman of the Judiciary Committee of the United States Senate. The charges and evidence in this case are still in the hands of the said Assistant Attorney-General Purdy, who has recently been rewarded by the President by an appointment as judge of the United States district court of Minnesota, and is now pending for confirmation or rejection before the Senate.

We respectfully petition your honorable committee and the Senate not to confirm Mr. Purdy's appointment as judge until you have fully investigated the facts in this case, after which we feel sure that you will conclude that a man who, as Assistant Attorney-General, prevents the prosecution of violators of the antitrust law is not a proper man to administer the law as a judge of the United States district court, especially when the Minnesota district, to which the President seeks to appoint him, is one where immense operations are being conducted by the steel trust, one of the most notorious and dangerous violators of the law.

It will further be found by your committee that recently one F. B. Kellogg, chief counsel in the Minnesota district of the steel trust, appeared in Washington and actively urged the appointment of Mr. Purdy as United States judge in that district.

The persuasions of the steel trust attorney, Kellogg, were evidently effective with President Roosevelt, but we earnestly hope that they may not prove equally convincing to your honorable committee and the Senate of the United States.

Trusting in the great historic precedents which have proven the legislative branch of government to be the defender of popular rights against executive abuses, we are,

Respectfully, yours,

H. B. MARTIN,

National Secretary American Anti-Trust League.

Mr. Martin has correctly stated the facts in the above communication.

F. E. STEBBINS.

The following is a memorial presented to the House of Representatives by the Anti-Trust League:

MEMORIAL.

WASHINGTON, D. C., May 28, 1908.

To the honorable the House of Representatives of the United States:

The undersigned, representing the national committee of the American Anti-Trust League, respectfully call your attention to certain matters of the greatest and most urgent importance to the Government and the people of the United States, which require action at once if the most vital interests of the Government and the people are to be safeguarded from the most insidious attack ever planned against the welfare of a free people.

This impending assault upon the public rights takes the form of two pieces of legislation now pending before Congress, one of which is known as the "Hepburn-Warner amendment to the antitrust law" and the other as the "Aldrich-Vreeland emergency currency bill." No possible excuse can ever be framed by any Senator or Member of Congress which will justify him to the people of America if either or both of these iniquitous bills should be enacted into law by his aid. The injury to the people would be so enormous and irreparable that the legislative offense in passing them would be absolutely unpardonable by the voters of the country when they become fully cognizant of the menace to their interests involved therein.

We mention these two bills together because they are but parts of one wide scheme of plunder and oppression devised by the lawless and predatory individuals who control the great trusts and monopolies of finance, transportation, mining, and manufacturing of our country, and who in the pending elections are seeking to buy control of the Government in all its branches.

The close and questionable connections shown herein to exist between the great moneyed monopolists and the Executive Departments of the Government prove in a most conclusive way the imperative need of the passage at the present session of Congress of the bill for publicity of campaign contributions, in order that corporation corruption funds may not be the controlling factor in the coming national election.

In the matter of certain dangerous proposed amendments to the antitrust laws, which are commonly known as the "Hepburn amendments," and which ex-Mayor Seth Low, of New York, admitted were drawn by the officers and attorneys of a great law-breaking monopoly known as the "United States Steel Corporation" after secret conferences between the head officials of said steel trust and certain high executive officers of the United States Government, we call attention to the astounding facts disclosed in the following extracts from the statements of ex-Mayor Low and others, taken from the official report of the hearings before the House and Senate Committees on the Judiciary.

We also call your attention to the remarkable statements made in President Roosevelt's recent messages on this subject, showing an extraordinary harmony between the opinions of the President and those of the malefactors of great wealth.

We also submit for your consideration the statements of certain Wall street bankers who are well informed of the inner workings of Wall street and Washington finance, and one of whom is prominently identified with the steel-trust conspiracy in violation of the antitrust law of 1890, as well as with certain great railway combinations, and who was a prominent figure in the manipulation of the made-to-order financial panic of October, 1907. His statement shows the perfect agreement existing between the Wall street plutocrats and the President as to the fact that they both want Taft as the next President of the United States.

We further call to your attention the convincing and weighty evidence of ex-Secretary of the Treasury Hon. Leslie M. Shaw, for five years a member of President Roosevelt's Cabinet, who by virtue of his long experience in that official circle is necessarily well acquainted with the inside relations existing between the Executive Departments of the United States Government and the great combinations and criminal trusts who are looting the entire nation by Presidential permission. Mr. Shaw's statement is positive, definite, and convincing as to the unlawful indulgence granted by President Roosevelt to the steel-trust officers to violate the plain provisions of the law in strangling their principal competitor, the Tennessee Coal and Iron Company, through the instrumentality of their self-made panic of October, 1907.

One of the most amazing examples of the immunity to commit crime which is enjoyed by the steel-trust coterie is exhibited in the reports of the meetings of the steel-trust officials and others, controlling a

monopoly of 95 per cent of the steel production of the United States, which have been held in New York during the past week for the purpose of combining to control prices and perfect their monopoly in violation of the statutes of the United States. This, too, in face of the fact that Congress is in session at the time and the President is in full possession of the power to put an end to their offenses.

We direct your attention to the fact that instead of being guided by the stern and just interpretations of the law laid down by Judge Landis in one of the greatest decisions in the history of American jurisprudence, viz, that these great monopolists "are worse than the men who rob the mails or counterfeit the coin of the realm," and sending the officers of the law to arrest the lawbreakers who attended the steel trust meeting, the same as he would have done to a group of small counterfeiters, President Roosevelt appears to have been acting in harmony with Gary, Morgan, and Carnegie, the very chiefs of the conspiracy.

This is further shown in the New York World's published report of the understanding, agreement, and combination of influence existing between President Roosevelt and Chairman Gary, of the steel trust, which we submit herewith, the joint results of which are to the campaign advantage of the President's political faction and candidate and the strengthening of the grip on the resources and people of America of the unlawful and oppressive monopoly of the steel corporation.

We also call your attention to the numerous published statements as to the understanding that is reported to have been arranged between the executive department and certain great railroad combines, whereby the latter were to be allowed to violate the law by the wholesale raising of rates and by the consolidation and control of competing lines.

We also call your attention to the published accounts of the remarkable understanding said to have existed between the President of the United States and the president of the New Haven Railroad, whereby the former was to suspend the operation of the law for the benefit of the latter, who, on a former occasion, the Presidential campaign of 1904, was one of the first of the gentlemen controlling great lines of transportation to announce his support of the President in that campaign and his contribution of a \$10,000 check to that end.

Another circumstance, showing the close, if not questionable relations existing between the Executive departments and the steel trust is indicated in the statements regarding the interference of the agents of the steel combine's armor-plate branch in favor of the President's bill for four battle ships recently before the Senate and the House. For years it has been a public scandal that the armor-plate trust, which is a branch of the steel monopoly, has been operating in brazen violation of the law and looting the Public Treasury by their extortionate prices for armor for the Navy Department.

The Aldrich-Vreeland bill should never be enacted by Congress, because it virtually authorizes and creates a monopolistic trust of banks, which would inevitably be dominated by the great steel trust and Standard Oil banks combination of New York. And still more dangerous is the fact that the Aldrich-Vreeland bill, if enacted into law, would be substantially an abdication by the Government of its high constitutional function of issuing money, and the surrender of that essential attribute of national sovereignty to a group of trust bankers in the great cities who to-day should be standing trial before a jury for their numerous offenses against the laws of the United States.

No currency bill should be enacted by Congress which does not contain the provision embodied in the amendments offered by Senator LA FOLLETTE, of Wisconsin, and Senator GORE, of Oklahoma, when the bill was last before the Senate.

The utterly indefensible action of a dominant faction of the House of Representatives in jamming through the House, with only sixty minutes of debate, of a cunningly and secretly concocted, unprinted bill of such enormous importance as the Aldrich-Vreeland bill, should not be tolerated, and fully warranted the Senate in sending it back for fuller and fairer consideration. Such a bill could not bear the light of public discussion and honest amendment; hence the secrecy and haste shown in its preparation and passage.

The gravest injury, both to the political and business welfare of the people of the United States, will surely follow should the steel trust and its affiliated banks and railroads be allowed to name the next President and control the next Congress of the United States. Such a lamentable result may well follow the passage of the Aldrich-Vreeland bill and the failure of the legislative branch of the Government to take energetic hold of this matter and defeat the Aldrich-Vreeland bill and to promptly and fully expose the whole fact in relation to the matters which we have recited herein.

Therefore we most earnestly appeal to your honorable body to adopt the resolution asked for by the committee of the Anti-Trust League in its verbal request and written letter recently submitted to the Judiciary Committee of the Senate. Plain language and prompt action are absolutely necessary in times of public danger. We have used the one, and "trusting in the great historic precedents which have proven the legislative branch of the Government to be the defender of popular rights against Executive abuses," we appeal to the Senators and Representatives to protect the people with the other.

Respectfully submitted.

H. B. MARTIN,

National Secretary National Committee
American Anti-Trust League.

So threatening have become the conditions that thoughtful men and thoughtful newspapers all over the country became alarmed, and on every side are heard notes of warning and appeal.

I beg leave here to insert a few of these:

DEAL WITH STEEL TRUST FOR TAFT CAMPAIGN FUND—CARNEGIE ALREADY HAS GIVEN \$250,000, ANTI-TRUST LEAGUE ALLEGES, IN RETURN FOR HEPBURN BILL CONCESSIONS—PROPOSED LAW GRANTS IMMUNITY AFTER A YEAR—CHARGES FILED WITH SENATE COMMITTEE AGAINST PURDY ALLEGED TOLERATION OF TRUST.

WASHINGTON, May 19, 1908.

Through its secretary, H. B. Martin, the American Anti-Trust League proposed to-day to the Judiciary Committee of the Senate to prove that for sufficient funds to secure the Presidential nomination for Secretary Taft President Roosevelt and his Administration have bargained with the United States Steel Corporation to sell out the Sherman antitrust law.

The league proposes to put Andrew Carnegie, E. H. Gray, chairman of the executive committee, and a number of directors on the stand and show that Mr. Carnegie already has given his personal check for \$250,000 to the manager of the Taft campaign and that he and his company have agreed to give a great deal more if the Hepburn bill,

which provides for the practical emasculation of the Sherman law, is passed at this session.

The Anti-Trust League proposes to prove further that Mr. Carnegie is in the habit of making contributions to Senatorial campaign funds, giving all the way from \$10,000 to \$50,000 in each State where any friend of the steel trust is in danger of being defeated or where there is a chance to defeat for reelection a man who has been unfriendly to the great corporation.

All the league asks is that the subcommittee of the Senate Judiciary Committee report favorably on its request for an investigation to be held during the coming recess of Congress. This committee is composed of Senators NELSON, DILLINGHAM, DEPEW, BACON, and CLARKE of Arkansas.

The charge that the Administration and the trusts had made a deal was first published exclusively in the World on April 25.

"This effort to trade a law for money and political support is without a precedent in our national history," said Mr. Martin to-night. "The truth is that the President and his henchmen became panic-stricken, and they determined to do everything possible to secure the nomination of Mr. Taft. We have sources of information which they did not know about, and all we ask is that the Senate Judiciary Committee disregard political consequences and allow us to produce the proof."

Though Senator NELSON, chairman of the subcommittee of the Judiciary Committee, to which the charges have been referred, is said to be deeply impressed, there is little likelihood of any action being taken until after the election.

[From New York World, May 24, 1908.]

ROOSEVELT'S PLEA KEEPING STEEL UP?—REDUCTION IN PRICE WOULD CUT WAGES AND HURT REPUBLICAN PARTY'S CHANCES.

At a meeting of the presidents of the subsidiary companies of the United States Steel Corporation last week President Gary vaguely explained that it would be necessary for them to work out their policies without any expectation that prices would be reduced on any of the products. There were also various conferences during the week in New York of the sales agents of the United States Steel Corporation. There are twenty-two of these men who are heads of departments. All were present.

On Thursday twenty of the twenty-two very strongly urged that there be a cut in prices. They maintain that they can do no business now with the price of pig iron away down and the price of refined steel and iron maintained at the old levels. They said that the public was too smart not to understand that their prices were being fictitiously maintained and that the possible purchasers were holding off until there was a break.

They said that if the prices were cut now it would start business booming, and that later on the prices could be pushed back to the present levels. That was on Thursday. President Gary said he would give an answer next day. On Friday he informed them that a reduction in prices was impossible. He said they would have to go ahead and fight it out the best they could under the present conditions.

One of the men who got these instructions said there was no doubt that the thing in the background was an understanding between Mr. Gary and others of the United States Steel Corporation and President Roosevelt that present prices were to be artificially maintained so that there would be no necessity for any cut in wages.

The President, and possibly other Republican leaders, feel that a considerable cut in wages of steel and iron workers would result in strikes all over the country, which would work against the interests of the Republicans in the coming campaign. The managers of the steel corporations say that it is impossible to make a large cut in prices without also cutting the wages of the men.

This the President wants to avoid and therefore is willing to countenance the present artificial maintenance of prices. This complete command of the selling and labor situation would not have been possible without the acquisition of the Tennessee Coal and Iron Company, which was accomplished by slaughterhouse methods in the days of the panic last October.

SECRETARY SHAW TALKS OF MORGAN DEAL WITH ROOSEVELT—WHITE HOUSE SANCTIONED STEEL TRUST'S CONTROL OF TENNESSEE COAL AND IRON, HE INDICATES—EX-HEAD OF TREASURY ASSAILS THE PRESIDENT—DESIGNING PRESIDENT COULD PERPETUATE FRIENDS IN OFFICE BY GRANTING IMMUNITY.

CHICAGO, May 22, 1908.

Leslie M. Shaw, for five years Secretary of the Treasury under President Roosevelt, delivered an address to-day before the convention of the National Electric-Light Association, in which he attacked the President. He said in part:

"Until recently we have had the benefit of a progressive and a conservative party. But now both political parties have become progressive, if not radical. For the first time in human history a great English-speaking people is without conservative leadership. I have never ceased to be thankful that a minority has always stood ready to challenge the majority, but there is now no challenging party."

"A few months ago the largest capitalized corporation on the globe sent its representative to the Chief Executive of the United States asking permission to take over its principal competitor. It is currently reported that permission was granted, and so far as I know the American people approve."

"I have no hesitancy in saying that this is the only first-class country in the world where permission could have been obtained from the executive department of the Government. Anywhere else such a request would have been answered, 'Go consult your lawyer.'"

"I am expressing no opinion as to the wisdom or want of wisdom of such procedure. I am simply citing instances to illustrate the operation of the law of evolution which carries us onward, and, undoubtedly, in the main, toward better things."

"Every condition, however, is fraught with danger. The pessimist is never without foundation for his fears, nor the optimist for his hopes; I am an optimist, but I want to emphasize the fact that a designing, unscrupulous, and ambitious Executive, clothed with authority to fix rates, to determine the life tenure of corporations and business combinations, and to grant or withhold franchises would be in a position to perpetuate himself and his friends in office as long as he was willing to accept political support as the price of immunity. I want to suggest that it is wise to protest against the day when the unmitigated demagogue shall be exalted."

Ex-Secretary Shaw tells for the first time of a trade which current rumor has now made a part of political history between President Roose-

velt and J. Pierpont Morgan. The Trust Company of America last fall was facing a run and applied to the Wall street magnates for assistance. This concern controlled the Tennessee Coal and Iron Company, the only opposition in America of any moment to the steel corporation.

Morgan, so the story runs, responded to the appeal for aid and promised to pull the trust company through if it turned over to the steel corporation, of which he is the guiding spirit, the control of the Tennessee Coal and Iron Company. The trust company, driven to the wall, consented, but before the deal could be made it became necessary to obtain the approval of the national authorities, as it was in direct violation of the Sherman antitrust law.

This consent was given, according to report, upon the consideration that Morgan take an active part in financing the next Republican national campaign. Morgan, so it is said, in return exacted the promise that FORAKER be returned to the Senate from Ohio and Ex-Governor Frank Black be sent to the Senate from this State as the successor of Senator PLATT.

MONEY POWER'S STILL-HUNT—BANKER SAYS CORPORATIONS SEEK TO CONTROL GOVERNMENT—HENRY CLEWS SEES UNOBTUSIVE, SUB ROSA WORK BY RAILROADS TO RULE AT WHITE HOUSE—SUPPORT FOR TAFT.

MANCHESTER, N. H., May 20, 1908.

"The nation's corporation problem" was the subject discussed to-night at the first meeting of the Economic Club of Manchester. The speakers were Henry Clews, a banker, of New York; Prof. Frank Parsons, and Walter A. Webster, both of Boston. P. R. Sullivan acted as toastmaster. Mr. Clews said in his address:

"It may surprise some to learn that the great power concentrated in the President's hands by Congress has made the great corporations, including the railway companies and banking institutions, ambitious and eager to control the Federal Government itself, and they are resolutely working to control it as far as they can by the force of capital, but as unobtrusively as possible. They know that their designs to make the money power supreme would arouse popular indignation, so they are engaged in a still hunt, and Samuel J. Tilden used to say that this is what wins in politics and a political campaign."

"The Government control of trusts, the railways, and other corporations has become so great that it is hardly to be wondered at that the great object that they now have in view should be to control the Government's policy, and already they are, sub rosa, powerful political machines."

"In this connection, it is significant that some large railway and banking interests have identified themselves with the Taft movement. Every fresh extension by Congress of the President's power over corporate interests has made the large corporations, industrial, railway, and financial, with their enormous capital and resources, more and more bold and determined in their efforts to control the Presidency, if, indeed, that is possible, and this motive underlies a great and growing amount of corruption in our national politics."

"We can therefore see in the attitude and aims of the great corporations, with their wealth and political influence, a possible menace to our Republic and its free institutions."

[From New York Sun, May 23, 1908.]

CLASH IN THE WHITE HOUSE—BONAPARTE THREATENED TO QUIT THE CABINET—HE ANNOUNCED THAT HE HAD FILED SUIT AGAINST THE NEW HAVEN ROAD AND THE PRESIDENT ORDERED THE ANNOUNCEMENT KILLED—THEN THE PRESIDENT YIELDED.

WASHINGTON, May 22, 1908.

There was a clash of policies at the White House this morning, and the encounter came near causing a rupture of official relations between President Roosevelt and Charles J. Bonaparte, Attorney-General. The President had one policy and Mr. Bonaparte another, and both had to do with the filing of a legal action against the New York, New Haven and Hartford Railroad Company as an alleged combination in restraint of trade.

There was an earnest and emphatic discussion between the President and Mr. Bonaparte, culminating in a threat from the Attorney-General to resign his office. The President yielded, for a reason which will appear later, and the petition against the New Haven road was filed in Boston this afternoon, although Mr. Roosevelt was opposed almost until the last moment to this action by the Department of Justice. Told chronologically, the events which culminated in to-day's sensational event in the Cabinet room are as follows:

Several months ago representatives of the Department of Justice began an investigation of the New Haven road, involving its ownership of electric lines in Massachusetts, Rhode Island, and Connecticut and its large interest, acquired last year, in the Boston and Maine Railroad. District Attorney French, at Boston, reported in favor of a suit against the company, setting forth that the investigation had shown to his satisfaction that the New Haven road enjoyed almost a complete monopoly of the transportation facilities in New England and this monopoly had been formed by the purchase and consolidation of formerly connecting lines of steam and electric road.

When Mr. French's report came to Washington, it was examined pretty thoroughly by Milton D. Purdy, assistant to the Attorney-General, whose office was specially created to deal with prosecutions under the antitrust laws. Mr. Purdy has sometimes been called the chief trust buster of the Administration, and his nomination for a Federal judgeship in Minnesota is now before the Senate. After a careful examination of the report Mr. Purdy reported to Attorney-General Bonaparte that he did not think the case against the New Haven road was a strong one, and that no action should be taken toward the dissolution of the alleged merger.

In the meantime representatives of the New Haven road, including two of its vice-presidents, had several interviews with President Roosevelt, and in each case received the assurance that he had not consulted with the Attorney-General about any legal action against the company, although, as was well known, the investigation had been completed and a report made to the Department of Justice. The President led the New Haven road's officers to believe that nothing would be done toward a prosecution of the company under the antitrust laws, and he assured them positively that in no event would any action be taken without notification to them.

About ten days ago it was said on competent authority, almost the highest, and was so reported in the Sun, that a suit was to be filed against a railroad company, but persons who asked the President about the contemplated action were assured that nothing had been determined upon and that the matter had not been brought to his attention in any way.

This assurance was repeated by the President yesterday in the strongest terms when Timothy E. Byrnes, one of the New Haven road's vice-

presidents, called at the White House. The President's statement caused Mr. Byrnes to say when he came from the White House that Mr. Roosevelt had given no directions that a suit be filed and to predict that no action whatever against the New Haven road would be taken.

Probably one of the most surprised men in the country this morning was Mr. Byrnes when it became known that the Attorney-General had formally announced through the several press agencies that a petition would be filed against the New Haven road in Boston this afternoon. He was not more surprised, however, than President Roosevelt himself.

The announcement came from the Department of Justice shortly before 10.30 o'clock. Half an hour later Mr. Bonaparte went over to the White House to attend the regular meeting of the Cabinet, but the news of the contemplated action against the railroad company had preceded him and the President immediately asked him for an explanation of his action. The President's request for information was in the nature of taking Mr. Bonaparte to task, but the Attorney-General met the issue squarely, explaining that he had found, after a competent investigation, that the New Haven road was violating the terms of the Sherman antitrust law, and that he understood it to be the policy of the Administration to prosecute such cases.

Either just before or just after the Attorney-General's arrival at the White House the President caused a telephone message to be sent to Mr. Bonaparte's private secretary, directing that he notify the newspaper correspondents to "kill" the announcement from Mr. Bonaparte's office that the New Haven road was to be prosecuted under the Sherman law. The private secretary was told that no suit or petition would be filed and that the newspapers should be so informed. It was found, however, that the early editions of some of the evening papers had already published the announcement.

In the meantime the discussion between the President and the Attorney-General proceeded to the point where Mr. Bonaparte offered his resignation from the Cabinet as an alternative to the filing of the suit against the New Haven road. Further details of the discussion are lacking, except that the President, evidently in view of the fact that the fat was in the fire as a result of the publication of Mr. Bonaparte's announcement, decided to yield.

Here we have the statements of a celebrated banker and of a former member of the President's Cabinet, showing the enthrallment of our country by the very ones to whom the President and Secretary Taft are now holding out the olive branch of peace. On every hand we hear that the heads of the great trusts are declaring for Taft, and who doubts the prediction that if he should win a flag of truce will at once be unfurled between them. The appeals of the Antitrust League to be permitted to furnish evidence that for a consideration peace had been declared between the warring camps, was refused, and the following resolution met the same fate:

Resolution asked for by the Anti-Trust League in order that the true origin and purpose of the Hepburn amendment might be exposed.

Resolved, That the Committee of Interstate Commerce of the House of Representatives, or any subcommittee thereof, be, and the same is hereby, authorized and directed to consider the question whether the present laws against trusts and pooling agreements regulating railroad rates of transportation ought to be reinforced and strengthened; and that for the purpose of said inquiry said committee be authorized and directed to investigate the workings in every particular of said laws; to ascertain whether offenses against them have been impartially and vigorously prosecuted; whether any omissions and failures to prosecute have happened by reason of any agreements or understandings between officers of the Government and the malefactors; and if so, what was the nature of the same and what were any inducements or motives leading thereto, with all the details thereof concerning which Congress and the public ought to be informed; and also whether any such agreements or understandings have existed looking to a joint effort of the parties thereto to obtain changes in the aforesaid laws, and if so, whether such agreements or understandings have been carried out in whole or in part and the extent of the progress therein and the motives thereof; also whether assent has been given by officers of the Government to any acquisition by one corporation of the stock or securities of another corporation for the purpose of preventing competition, and if so, in what cases, and especially whether or not it is expedient to provide that reasonable agreements in restraint of trade and for preventing competition in transportation or otherwise may be granted licenses by the Government; and said subcommittee shall report by bill or otherwise, to sit during the coming recess of the Senate, to send for persons and compel their attendance, and to send for papers and documents and compel their production, and to sit by subcommittee of not less than three members—the expenses of the inquiry to be paid from the contingent fund of the House.

The passage of the currency bill a few days ago, under whip and spur, was another evidence of the straits into which the buccaneers of the Republican party had fallen. The conference report was made to the House and adopted with an hour's debate. Hon. OLLIE JAMES asked for unanimous consent that it be passed over till morning and printed so that Members could know what they were to vote on. This was refused. Why such indecent haste? Because the bankers of the East, whence the campaign funds were expected to come, had again triumphed, and Republican leaders knew that it would never do for Western Members to hear from their people before they were whipped into the shambles. This outrageous bank-trust act will make many a Republican Congressman from the West bite the dust of defeat, and they ought to do so. Men who will so shut their eyes to the interests of their own people and kiss the hand of the money changer who is applying the lash to the people ought to be driven from the halls of legislation with a scourge of scorpions by those whom they so misrepresent. Mr. Speaker, the voice of 4,000,000 of unemployed throughout this country will not be hushed, and your party, when the polls are closed in November, will meet that retribution which its infamies and its iniquities so justly deserve.

1908.

SPEECH

OF

HON. EDWARD L. HAMILTON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 26, 1908.

Mr. HAMILTON of Michigan said:

Mr. SPEAKER: Fifty-four years ago the Republican party came into being as the incarnation of an aroused national conscience, and took its place for all time among the forces that have ruled mankind for nobler purposes.

It came into being as a protest against the extension of slavery in our Territories.

It wrought out the problems of reconstruction; it stood fast for sound money and national honesty; it stood fast for protection to American labor and American industry, and, with the chart of its founders before it, guided the nation safely across the line of the twentieth century, undivided and unsurpassed among the nations of the earth.

During all that time, in the language of William McKinley, this Government "never repudiated an obligation either to its creditors or to humanity. It never struck a blow except for humanity and it never struck its colors."

Our leaders have come up from our midst, performed their appointed tasks, and gone their way to dusty death and immortality, crowned with the approving judgment of mankind, including those who denounced them in their lifetime.

Democratic self-government is based upon the theory that one man's judgment at the polls is as good as another man's judgment at the polls; that each is more likely to be right than to be wrong and that a majority must be right.

Therefore the Democratic national platform of 1904, following Thomas Jefferson, rightly declares "absolute acquiescence in the will of the majority" to be "the vital principle of Republics."

If, therefore, the Republican party has been given power for almost two generations of the most progressive years in our history, it is because the Republican party has had the confidence of the people and because no other party has had their confidence.

To deny this would be to deny a self-evident truth.

So strongly has the Republican party been entrenched in public confidence during all these years, and so erratic have been the various kinds of opposition to it, that, in the language of Bolingbroke in describing the alignment of parties in England during his lifetime, "accidental passions" have been arrayed upon the one side and "the settled habits of thinking people upon the other."

Nowhere does the individual citizen, the average man, associate himself more intimately with the purposes and ideals of his government than here in America; and the individual citizen, the average man, associates himself with the purposes and ideals of his government here in America by voting for or against political policies promulgated by political parties through political platforms.

In the last national election about seven and a half million voters identified themselves with the purposes and ideals of their government by voting the Republican ticket.

Even admitting that a popular vote is an average among conflicting views which are merged in final results, still it is fair to say that the Republican party does represent, and for a long time has represented, the purposes and ideals of a majority of the people of the United States, so far as their purposes and ideals can be expressed in a political way. To assume otherwise would be to assume that the people of the United States have been incompetent to run their own government for about forty-seven years.

THE INEFFECTUALNESS OF A DEMOCRATIC VOTE THIS YEAR.

At the outset of any political discussion this year we are met by the fortunate fact that the Senate of the United States is Republican, and is likely to continue to be Republican indefinitely.

Therefore every man who goes to the polls to vote this year will be confronted with the question, which he must determine for himself, not whether any Democratic policy shall be put in operation, because obviously no Democratic policy can be put in operation, but whether we shall continue to go forward on the upgrade under Republican policies or whether we shall stagnate and stand still with an ineffectual Democratic House of Representatives and an ineffectual Republican Senate and an in-

effectual Democratic President mutually blocking the way to the accomplishment of any policy by any party.

Therefore if any man, Republican or Democrat, wants to see the Dingley law revised to meet commercial changes he ought to vote the Republican ticket.

If any man, Republican or Democrat, wants to see this Government go on with the business of resuming control over itself by making corporate combinations subservient to law and order he ought to vote the Republican ticket.

If any man, Republican or Democrat, wants to avoid a period of commercial stagnation, for which no party could be held responsible, he ought to vote the Republican ticket.

Now, on what grounds will the gentlemen on the other side invite public confidence this year?

Certainly not because of anything they can possibly hope to accomplish during the next four years. Everybody admits that.

Certainly not because of anything they did accomplish during the years from 1893 to 1897 when they had a chance. Nobody claims that.

Certainly not because of the successful exhibition in practice of any principle which they have ever heretofore advocated. Nobody claims that.

REASONS.

But if from the various views expressed any coherent statement of reasons can be deduced, it would appear—first, that gentlemen on the other side believe that most of the policies of this Administration are right, that they themselves claim many of them as their own, and therefore the Republican party ought to be defeated. But when before has an indorsement of a policy been used as an argument for a change?

Second, that they concede that they were wrong on the money question, and that we were right, and therefore we ought to be defeated.

But when before has a confession of error been filed as an argument for future confidence?

Third, that this Administration, having grappled with the problem of corporate combinations, which a Democratic Congress recognized and dodged by referring the facts disclosed by an investigating committee to "subsequent Congresses," therefore the Republican party ought to be defeated. But why should shuffling irresolution be given leadership?

Fourth, that having declared against trusts in their last national platform, and at the same time having nominated a Presidential candidate to stand on that platform whose nomination, according to Mr. Bryan, "virtually nullified the antitrust plank" in that platform, therefore the Republican party ought to be defeated. But how can a confessed straddler for expediency be trusted to execute a straight-out policy?

Fifth, that both parties having declared for tariff revision, and the Republican party having declared for revision from time to time to meet commercial changes under the policy of protection, and the Democratic party having declared for revision in the direction of free trade, and having denounced protection as robbery, thereby openly announcing that if permitted to revise the tariff it would not revise it so as to protect American labor and American industries, therefore the Republican party ought to be defeated.

But why turn out success, not ordinary success, but success which makes all the world wonder, and send experts here to study our conditions, and substitute a policy of discrimination against our own people in favor of foreign capital and foreign labor?

Sixth, that the Senate of the United States, which was then controlled for purposes of ratification by Democrats, Populists, and Free Silver Republicans, having ratified the treaty of peace with Spain whereby we acquired the Philippine Islands, and the Republican party having set up a stable government there, therefore the Republican party ought to be defeated.

But why defeat the Republican party for faithfully executing a trust which the Democratic party is at least in part responsible for imposing?

PARTIES.

Without political parties popular government is impossible. What is a political party? There are at least two definitions. One is, that a political party is a voluntary association of men holding certain fundamental political principles in common which they seek to express in legislation. That is the Republican party.

Another definition is that a political party is a miscellaneous, heterogeneous, kaleidoscopic, phantasmagoric aggregation of discordant inconsistencies revolving from force of habit around a vacant place once occupied by a political principle never incorporated into law. That is not the Republican party.

If you ask, What is a Republican? I answer you that ac-

cording to the last election he was about two-thirds of everybody.

If you ask me, What is a Democrat? I am obliged to state to you that in my search for reliable Democratic exposition on this subject I have found it impossible to reconcile conflicting authorities, and can only present to you some of the more recent authoritative Democratic declarations on this somewhat vexed question.

For illustration, some time ago the Albany Argus charged that the New York World had "not had a Democratic thought or drawn a Democratic breath or experienced a Democratic instinct or sentiment in more than a decade."

To which the World, after observing that in that case it, the World, "must be almost as undemocratic as the Democratic party itself," proceeded to reply by inquiring, "But what is a Democrat in this particular year of our Lord?"

And inquiring further said:

"If Mr. Bryan is a Democrat, what is Mr. Cleveland?"

"If Mr. Cleveland is a Democrat, what is Mr. Hearst?"

"If Mr. Hearst is a Democrat, what is Judge Parker?"

"If Judge Parker is a Democrat, what are Murphy, Connors, and McCarren?"

"If they are Democrats, what is Woodrow Wilson?"

"If he is a Democrat, what is Tom Taggart?"

"If Taggart is a Democrat, what are DANIEL and RAYNER and CULBERSON and Morgan and JOHN SHARP WILLIAMS?"

"And if they are Democrats, what are Ryan and Belmont?"

That was last year.

If you ask me what is a Democrat this year I refer you to Mr. Cleveland's recent letter to the Hartford Times in which he discusses the importance of impressing the Democratic creed upon the people this year, but he does not tell what that creed is; and almost simultaneously with Mr. Cleveland's deliverance Senator TILLMAN, who is another kind of a Democrat, in a colloquy in the Senate March 16, denied that Mr. Cleveland is a Democrat at all and called him something worse.

For further cotemporary authority I refer you to the recent attempt of Mr. Murphy of Tammany Hall to read the Hon. BOURKE COCKRAN out of Tammany Hall and the Democratic party, although Mr. COCKRAN, who is still another kind of a Democrat, says he has "written all the definitions of Democracy accepted and approved by Mr. Murphy during the last four years." But evidently Mr. COCKRAN was unable to keep pace with the moving picture.

Even here on this floor Democracy is not the sum of all its parts.

There is a legend that all the animals and birds once assembled to hear one Orpheus play upon his lyre; and the legend runs that, forgetting their several appetites—some of game, some of prey, and some of quarrel—they sat all sociably together listening to the airs and accords of the lyre; the sound whereof had no sooner ceased, however, than they straightway all returned again to their several appetites—some of game, some of prey, and some of quarrel.

So our brethren on the other side assemble peaceably enough from time to time to listen to the more or less mellifluous phrases of some of their number; but the sound thereof no sooner ceases than they all return again to their several appetites—some of game, some of prey, and some of quarrel.

Is there the shadow of a half of a half substantiated half reason why we should abandon the tried, coherent, and definite policies of the Republican party and take our chances with a party whose warring elements can give no guaranty of anything except confusion?

PANICS AND PROSPERITY.

We are just now emerging from a period during which the commerce of the country has been compelled to pause for a time and take breath in the swift rush of enterprise which began with the inauguration of William McKinley and increased with the increasing prosperity of our whole population.

On the 22d day of August last there were more than thirteen billion dollars on deposit in the various banks and trust companies in this country; but notwithstanding that, for about nine weeks, beginning about November 1 last, the entire banking system of the country practically suspended cash payment and held this enormous sum inactive in its vaults.

This was brought about not by a wild stampede, but by the reasoned apprehension of thinking men in New York City, whose fears were aroused by the disclosures of the New York Clearing House that certain bankers were using their resources to promote the questionable enterprises which an era of phenomenal prosperity always stimulates. This apprehension spread westward and money ceased to circulate for a while.

But as compared with the long, dreary dead level of depression from '93 to '97, this brief financial stringency is only a

breathing space on the march of "a strong land's swift increase."

From '93 to '97 every report of our Treasury was a mathematical demonstration of a general condition of distress, in the midst of which cities and towns were devising ways and means of public charity, and three million men were out of work.

Twelve years ago we elected William McKinley as the advance agent of prosperity, and fulfillment followed close upon the heels of prophecy.

The day he took the oath of office he summoned Congress to convene in extra session March 15, and before that Congress had adjourned it passed the law which bears the name of Nelson Dingley and was signed by William McKinley.

From that time on until October last, the only time when enterprise slackened down was when all the wheels of trade stood still and the nation stood for an instant with bowed head in spirit beside the grave of William McKinley.

In the language of JOSEPH G. CANNON—

Attribute this condition to what cause you may, speculate about it as you will, call it confidence in men or measures, the fact remains that it exists and that there never was recorded anywhere such industrial development and such a wave of prosperity as has swept over the United States in the last decade.

AMERICAN HOMES AND AMERICAN CITIZENSHIP.

Now, while it is true that the greatest gains of nations as of individuals can not be presented in the form of a balance sheet, still it is true that the material condition of a people has direct relation to their mental, moral, physical and political welfare, and idleness is the heaviest of taxes.

Multiply idleness and you multiply hunger, want, crime, bankruptcy, and industrial rust and cobwebs.

Multiply business and you multiply invention, ingenuity, enterprise, manhood, womanhood, libraries, schools, and churches.

Therefore a policy that builds American homes on American soil, in sight of the American schoolhouse, under the American flag, and gives to every man, woman, and child some hope of better things with which to lure them on from day to day to higher levels of manhood, womanhood, and patriotism, rightly takes rank among the things of highest national importance.

Humanity may sometime meet upon some higher level than patriotism, but at present there is no nobler trait in human nature than love of a man's own country, and the love of home is the heart of patriotism.

There is a greater prosperity than the mere prosperity of dollars and cents.

The best things in this world can not be measured by money. Mr. Bryce, in his *American Commonwealth*, says:

Sometimes, standing in the midst of a great American community, one is startled by the thought of what might befall this huge yet delicate fabric of laws and commerce and social institutions, were the foundations it has rested on to crumble away. Suppose that all these men ceased to believe there was any power above them, any future before them, anything in heaven or earth but what their senses told them of?

We may build forts, we may build big ships, we may forge great guns, and we may recruit armies and navies, but the progress and the power and the glory of our country depends upon the quality of our manhood and our womanhood.

Every issue of the coming campaign, or any other campaign, is subordinate to the vital issue of good citizenship and honest government.

It is really not of such vital importance whether the Senate is encroaching upon the House, or the House upon the Senate, or the Executive upon both, or whether one demagogue shall fool the people more conspicuously than another demagogue; or whether one man shall be reputed to be closer to the President than another; or, indeed, whether one man shall be closer to the Presidency than another man.

These things are part of the stuff that some lives are made of, that are drawing their daily nutriment from the Government, and part of the stuff that other lives are made of that would like to draw their daily nutriment from the Government. But above all, the vital principle of our Republic is clean living and honest citizenship taught in American homes, and the quality of American homes and the quality of American citizenship is intimately connected with political policies.

PROTECTION.

To the policy of protection to American labor and American industry are not only geared all the shafts, bands, and wheels of a tremendous range and variety of production, transmutation, and exchange, but it is intimately connected with the character of American citizenship.

The energy generated by the confidence of 87,000,000 people in the stability of the Republican policy of protection has set in motion, and kept in motion, 600,000 factories, running day and night, with some slackening since October last, which have supplied our home demand and an export trade with manufactured products, which, added to our agricultural exports, have so shifted the balance of trade in our favor that some people have expressed the fear that we might somehow get a first mortgage on the rest of the world and have to run it by commission.

This prosperity is not the result of free trade or a debased currency.

Twelve years ago, in the midst of hunger and want and bankruptcy and industrial rust and cobwebs, we were talking about repudiating our debts in the face of the world.

Since that time, with a little falling off since October last, whether measured by horsepower units, kilowatt hours, volts, amperes, dollars and cents, or human happiness, no parallel can be found in human history for the splendid progress of the people of the United States of America.

Within the last ten years we have increased our national wealth from \$70,000,000,000 to \$120,000,000,000; our wealth per capita from \$1,100 to \$1,400; the value of our farms and farm property from about \$18,000,000,000 to \$27,000,000,000; our total foreign commerce from \$1,500,000,000 to \$3,000,000,000, while our internal commerce is estimated at \$22,000,000,000, a sum equal to the international commerce of all the world; and our manufacturing conditions have shifted from 3,000,000 men out of work in 1895 to 6,000,000 men employed in 1907 at higher wages and shorter hours than ever before.

We are not only producing gold from American mines, but we are adding to that gold foreign gold, exchanged for American goods made by American labor.

We have more money per capita than ever before, more money in savings banks deposited by labor than ever before, more farm products than ever before, bringing more money than ever before because there has been more work for more people than ever before.

Statistics are only the bare framework of description, but when the balance is on the right side it means hope, which paints even upon bare walls far-stretching, blooming landscapes of possibility, and stakes them with the landmarks of success, and when it is on the wrong side, it means rent due and nothing to pay with, misery at home, and discontent at the polls.

CURRENT AND INCIDENTAL EXPENSES.

Meanwhile we have gone on paying our debts instead of running in debt, notwithstanding the expenses of our war with Spain, in which we raised, equipped, trained, and transported an army halfway round the world, and at the close of which we paid Spain \$20,000,000 on account of the treaty of peace, and shipped her captured soldiers home to her clothed and fed.

Since that time we have annexed Hawaii, established the Republic of Cuba, reorganized the island of Porto Rico, recognized the Republic of Panama, set up a stable government in the Philippine Islands, preserved the administrative entity of China, defined Alaskan boundaries by peaceful arbitration, strengthened the Monroe doctrine, reorganized our Army, strengthened our Navy, extended forest reserves, and irrigated deserts off the face of the map.

Incidentally we paid \$5,000,000 for the relief of Porto Rico on account of the hurricane there; we joined in the relief of Martinique, and we joined in the relief of the legations beleaguered in Peking.

Meanwhile we have gone on paying the current expenses of the greatest nation on earth, maintaining harbors along more miles of coast than any other nation on earth; extending rural mail delivery from 321 routes in 1890 to 36,000 now, over which mail is delivered at the gates of the rural homes of 12½ million people, and at the same time we have been gladly paying pensions to disabled soldiers and to the widows and orphans of soldiers who helped to keep this nation whole upon the map of the universe.

Not only that, but we paid out \$50,000,000 for the right of way of the Panama Canal without a ripple in financial circles, and since that time we have added that colossal undertaking to our current expenses at the rate of about \$16,000,000 a year during the last four years.

This is the brief and incomplete inventory of our national achievements under the Republican Administrations of William McKinley and Theodore Roosevelt, which, however, does not take into account our stupendous private enterprise, except as public enterprise presupposes private prosperity.

Here in America we have set up factories within easy reach by easy transportation of fields of raw material, and gone on in prosperous evolution reducing friction, waste and cost, increasing output, by-products and wages, reducing profits per unit and increasing profits in gross, extracting the uttermost essence of utility, until our factories have developed an aggregate of fifteen million horsepower.

Notwithstanding the recent financial stringency, every business test demonstrates that we are prosperous.

THE QUANTITATIVE THEORY.

Gentlemen who adhere to the idea that the hard times from 1893 to 1897 were not in any way associated with the Wilson-Gorman law, but were the natural reaction from the good times preceding them, and that the good times since 1897 are not in any way associated with the Dingley law, but are the natural reaction from the hard times from 1893 to 1897, and that therefore bad times produce good times and good times produce bad times, will have no difficulty in arriving at the conclusion that the financial stringency which began last October was the direct result of the period of prolonged prosperity since 1897 without any further analysis.

They tell us that crops are good and that good crops help to make good times, but that good crops are not the product of protection, but are the product of the magic of the sun and the wind and the rain, just as they always were, and that is true, except that prosperity always stimulates production.

But crops were good from 1893 to 1897 and times were bad, and we never had a bigger crop than last season, and yet money ceased to circulate for a time.

No convulsion of nature marked the transition from Democratic to Republican times. The seasons kept their ceaseless round. Nothing happened but a restoration of public confidence.

Ninety-five per cent of business is done on credit and credit is confidence, and when this confidence is shaken by the policy of a political party or the threatened policy of a political party or by any other cause money ceases to go freely from hand to hand.

The people had no confidence in the Democratic party from 1893 to 1897; hence hard times.

It is said that we have more gold and silver now than ever before, and that more gold and silver make better times, but that more gold and silver is not the product of protection, but is the product of discovery and improved machinery.

But this is only partly true. Money comes not only from mines, but in exchange for goods. There was a heavy annual increase of American gold from 1893 to 1897 and times were bad. Since that time, however, we have not only been adding to our gold the gold dug from the earth and panned from Alaskan rivers, but we have been adding to our gold the gold of other nations, exchanged for American goods, made by American labor and gold derived from the increased value of our farms and the increased value of our crops, and the increased number of our factories and the increased employment of our people.

Democrats have constantly accounted for our phenomenal prosperity upon Mr. Bryan's theory that more money makes higher prices, and therefore they advocated free silver, because more money makes higher prices.

At the same time, when discussing the tariff, they advocate lower duties, because, they say, lower duties make lower prices.

This theory that more money makes higher prices is the so-called quantitative theory, which is as old as political economy, but it is an essential part of that theory that it is only money in use and circulation that affects prices, only money that "goes to the market of commodities," in the language of John Stuart Mill, and "is there exchanged against goods," that affects prices, and therefore affects prosperity.

Inasmuch as the circulation of money and the extension of credit depend upon public confidence, this quantitative theory of money ceases to act affirmatively under a Democratic Administration.

It is true that the question of sound money has passed from argument to judgment by confession, and nothing remains of Coin Harvey except a faded photograph in the gallery of political necromancers; and nothing is left of free silver except a hole in the Democratic national platform adopted at St. Louis, covered over with a Western Union telegram, signed Parker; but Mr. Bryan still continues in session as "unfinished business," with the prospect of being again called up on the national calendar this year, and none of these things can be said to be settled until he is disposed of.

Cotton Exchange Methods.

SPEECH

OF

HON. THETUS W. SIMS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. SIMS said:

Mr. SPEAKER: On May 18 the gentleman from Texas [Mr. BURLESON] included in his very able argument replying to criticisms on his address on April 2 in advocacy of the passage of his bill for the suppression of certain gambling, the letter of submittal of part 1 of the report of the Commissioner of Corporations, Mr. Herbert Knox Smith, as appears from the RECORD of that date.

I do not think it possible to use the pages of the CONGRESSIONAL RECORD to better purpose than the printing therein of the letter of Mr. Smith transmitting the second part of his very able and exhaustive report, to the end that both letters may be read and studied together.

DEPARTMENT OF COMMERCE AND LABOR,
BUREAU OF CORPORATIONS,
Washington, May 29, 1908.

SIR: I have the honor to submit herewith Part II and Part III of the report on the operations of cotton exchanges, made in accordance with House resolution 795, of February 4, 1907. These parts deal with cotton-exchange methods of classification of cotton and with the range of contract grades. Subsequent parts will take up the effects of exchange rules and other conditions upon the price.

METHODS OF CLASSIFICATION.

For the purposes of delivery on future contracts cotton is classed into a number of grades—eighteen in New York and about the same in New Orleans, these two being the only American markets doing a future business. The classification is based chiefly on color and amount of dirt and trash in the cotton. Many criticisms have been made upon the rules of classification in both these exchanges and upon the way in which these rules have been applied. Many difficulties are inherent: the classification of cotton will probably never be an exact science, but must always depend more or less upon the discretion of experts and be open to honest differences of opinion. Moreover, there are no uniform standards of grades in the cotton trade. Grades of the same name in different exchanges differ considerably in quality. This in itself causes much of the difference of opinion.

Radically different methods of classification are employed in the New York and New Orleans exchanges. The New Orleans system is largely a private affair between the parties, the exchange merely furnishing the arbitrators. Each lot of cotton when tendered for delivery is submitted to such arbitrators, and they, having before them the price differences "off" or "on" middling cotton officially quoted by the exchange, determine what differences shall be applied respectively to the various grades of cotton in the particular lot, though they necessarily determine also, as part of this process, what these grades are.

The New York system is distinctly different. New York has what is called a certificated stock of cotton, and the New York exchange officially determines, through its classification committee, what cotton shall be admitted to that stock and its grade therein, while the inspection fund of the exchange is responsible to the owner of such cotton for mistakes made by the committee in such classification. All cotton intended for contract delivery in New York is submitted, upon arriving at that port, to the classification committee. If accepted, a certificate is issued setting forth its grades. This cotton thereafter is dealt in on the basis of that certificate, unless the same be changed by reclassification. The classification at New York is thus much more closely bound up with the exchange itself, and its effects are more a part of the operations of the exchange than in New Orleans.

A number of criticisms have been made against the New York system as to principle. Thus, lots of cotton are certified as having so many bales of such and such grades, but without identifying the grades of the individual bales. The result is that when the buyer receives a lot of cotton he can not, from the certificate, sort it out into even-running grades, because he has no means of knowing which bales belong to the given grades. To sort it out he must examine the cotton itself, at considerable expense and delay. This increases the reluctance of buyers to accept the actual delivery of cotton on future contracts.

Another criticism is that the New York rules do not provide for the exclusion of extremely weak or "perished" staple cotton, as the New Orleans system practically does. While the New York classification committee asserted that as a matter of principle they would not admit perished staple, nevertheless, so far as the rules are concerned, the grades are determined chiefly by color and amount of trash, and there is no definite standard by which weak or perished staple can be determined and excluded, and some such cotton has actually been certificated. It seems probable that the amount is not large, but the presence of any of it is extremely objectionable, owing to the seller's option of selecting grades to be delivered. The admission of even a small amount of such low grades has a very injurious effect in depressing disproportionately the price of future contracts. The charge, however, that the New York stock is the refuse accumulation of many years is disproved by the fact that in September, 1904, the entire stock was reduced to 15,600 bales, of which a considerable part was of high grade.

Criticisms have been made also as to the application of the New York system. There has been considerable overclassification or overgrading by the New York committee. This is conclusively proved by the payments from the inspection fund. This fund, it will be remembered, is used to indemnify the owners of certificated cotton for mistakes in grading by the classification committee. From 1890 to 1906, sixteen years, these payments, including the net payments for rejections, averaged less than \$1,250 a year, a total of less than \$20,000, while for the single year ended April 30, 1908, under a reform management, the net total was almost \$27,000. This great increase in these

payments shows that the previous classification must have been far too high.

A specific instance of deliberate overgrading took place in the latter part of 1906, when the board of appeals of the New York Exchange instructed the classification committee to admit to the certificated stock all cotton which passed the preliminary and informal examination of the assistant inspectors at the dock, although the same might later have been held rejectable by the classification committee on its final classification. This cotton, thus forced in, was to take the lowest grade of the certificated stock.

This ruling was in direct conflict with the by-laws of the exchange. The classification committee entered a protest, and even noted upon certificate slips of such rejectable cotton "should have been rejected." When the new management of the exchange came into office in June, 1907, this practice was stopped.

A contrary criticism has been made of the New Orleans Exchange, to the effect that there is an undergrading there, and while the proof of this is not conclusive, it is probable that in certain cases it is true. It is quite likely that the effect of the general opinion of the exchange has been to cause the arbitrators to be, consciously or unconsciously, too severe in their classification at certain times. A number of Southern merchants have made such assertions very vigorously.

The Bureau does not consider the New York system of classifying and certificating cotton, as distinguished from its "fixed-difference" system, as wrong on general principle. Under the conditions surrounding the New York business it is a proper development, capable of proper application. The principal difficulties on both exchanges have been with the careless or improper manner of applying their rules. In regard to certain details, however, a number of changes, most of which have already been widely discussed, seem desirable.

The New York rules, as well as New Orleans, should expressly provide some method by which extremely weak or perished staple should be definitely excluded from the certificated stock.

The New York certificate of classification should identify each individual bale by grade. It is objected that increased expense of handling and of storage would result, but it seems probable that this increased expense would be no greater than the expense now thrown on the receiver of cotton in attempting to identify or reclassify a mixed lot of bales, and such identification would also greatly facilitate the handling of certificated cotton and its segregation into even-running lots for consumption.

There should certainly be a system of uniform grades throughout the cotton trade, if possible. It would greatly simplify the business and stop a number of abuses. The practical difficulties in the way of arriving at such a system are considerable, and probably the best that can be done at present is to make a persistent effort to approach gradually such an ideal as near as may be.

RANGE OF CONTRACT GRADES.

Very numerous criticisms have also been directed at the large number of grades now deliverable on future contracts on both cotton exchanges. It must always be remembered that the buyer of a future contract has no option as to grades. He must take whatever the seller chooses to deliver to him. There are now eighteen grades deliverable on New York and New Orleans contract, covering a very wide range. In practice it frequently happens that deliveries on a single contract embrace ten different grades and half grades, so that lots thus delivered are often greatly mixed. This is true both in New Orleans and in New York, though not to so great an extent in the former place.

So far as spinners are concerned, the practical certainty of receiving several different kinds of cotton on one contract makes it impossible for them to buy their cotton on the exchanges. The range of quality of cotton which can ordinarily be used by a given spinner is extremely limited, owing to the mechanical restrictions of his mill and the requirements of his particular custom. So limited, indeed, is this spinner's range that it is wholly out of the question to so restrict the range of grades on exchanges as to make this contract generally acceptable to spinners and still maintain a practical future market. The spinner will probably always buy directly through spot transactions, although he should be able to use the exchange for hedging purposes.

It is obvious that the more mixed a delivery is the less desirable it is. It has happened that sellers of contracts have deliberately tendered lots of very indiscriminate character for the purpose of forcing the buyer to sell out his contract rather than receive the cotton, making it possible for the seller to buy in the contract at a profit. The present wide range of deliverable grades makes this possible.

On the other hand, there must be a considerable range of grades, as, unlike certain other great staples, there is a very wide range of actual difference in the quality of a given crop of cotton; there is also a demand for most, if not all, of these grades. This is often expressed in the phrase that "the contract must be broad enough to take care of the crop."

The contract must also be broad enough to induce general trading thereon, and thus furnish the broad market necessary to fulfill the true functions of an exchange. There is no reasonable obligation, however, to take care of that part of the crop which is for most purposes unspinnable, and the admission of very low grades of such unmerchantable or unspinnable cotton into the exchange stocks creates several evils. The effect of such cotton is to depress the price of future contracts, and this tends to affect unfavorably the value of the entire crop, the great bulk of which is of much better quality. It is certainly wholly improper that a small fraction of very low grade cotton should be allowed on exchange contracts if it has such effect. The extent of this particular effect, however, will be considered fully in a later part. Secondly, this low-grade cotton is the cause of by far the greater part of the numerous difficulties and controversies as to classification and the establishing of price differences in both markets. In the third place, the producer is encouraged to grow and pick a low quality of cotton.

LOW-MIDDLING CLAUSE.—The most practical suggestion for a limitation of the present range of grades is the so-called "low-middling clause"; that is, the exclusion of all white cotton below the grade of low middling, and possibly all tinged or stained cotton below that in value. The Bureau is strongly inclined to favor such a change; it would not only eliminate a number of the lowest grades now deliverable, which are objectionable both on account of the controversies to which they give rise and on account of their unfortunate effect in reducing the contract price, but it would also tend to exclude substantially all unspinnable cotton. It must be remembered that the amount of so-called "unspinnable cotton," while comparatively small, has a disproportionate effect upon the price of all future contracts, so that the benefit to the rest of the crop by its elimination would be much greater than any hardship thereby created as to this small fraction of the crop.

As distinct from the limitation of the present range of tenderable grades, a number of suggestions have been made for restricting deliveries on single contracts within that range so as to make the contract a more certain and advantageous one.

These suggestions may be commented on briefly.

First. A "specific" contract: It is wholly out of the question to make the contract an absolutely specific one; that is, to provide that only one particular grade shall be delivered. In view of the fact that future contracts are largely made before the quality of the crop is known, very few sellers of future contracts would dare to agree to deliver any particular grade of cotton on an exchange contract, owing to constant danger of intentional manipulation resulting in corners and squeezes. Such a restriction would practically destroy the future market by making it very narrow.

Second. That not more than three grades of cotton should be delivered on any single contract. The Bureau regards this not only as impracticable, but as having little advantage over the present system.

Third. To have two contracts, one for the delivery of middling cotton and above, and the other for the delivery of middling cotton and below. Such an arrangement would be wholly experimental and its results are not easy to calculate.

Fourth. That all deliveries should be substantially "even running"; that is, that on any single contract only a range of a half grade either way from the medium grade tendered should be deliverable, the seller having still the option, however, of selecting such medium grade. It is not believed that this is entirely practical, or even that it would accomplish the results desired, inasmuch as the buyer would still be left in great uncertainty as to what grades would ultimately be delivered. This system also would greatly add to the difficulties of classification and the controversies arising therefrom.

Fifth. Possibly a more practical suggestion is that of a premium for even-running deliveries, to be inserted in the contract itself.

A further and a practical suggestion is that the seller, on the day that he issues notice of delivery, which in New York is three days and in New Orleans five days before the delivery, shall specify the grade or grades of cotton which he intends to deliver. This would give to the buyer an opportunity to make provision for disposing of it in accordance with its quality.

It is believed that by the adoption of the low-middling clause many of the difficulties of classification would be removed; much of the evil effect of very low cotton on contract prices, as well as the controversies as to "differences," would be eliminated; no real hardship would be worked; and, if a proper system of differences were fairly applied thereto, with uniform and accurate classification, many of the present tenable objections to the business of the exchanges would be removed.

In making these suggestions the various objections thereto, which have been fully heard, have been carefully considered, and while numerous other suggested reforms have been also considered, only those have been set forth here which seem to merit serious attention. The importance of the exchanges of New York and New Orleans in the cotton trade, and their unquestioned effect on all concerned in this great industry, make it desirable that careful consideration be given to those lines of improvement which seem practical.

Very respectfully,

HERBERT KNOX SMITH,
Commissioner of Corporations.

The PRESIDENT.

To Regulate Interstate Commerce in Intoxicating Liquors.

SPEECH

OF

HON. CHARLES E. LITTLEFIELD,

OF MAINE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 28, 1908.

Mr. LITTLEFIELD said:

Mr. SPEAKER: In the early part of this session I introduced a bill (H. R. 4776) to regulate interstate commerce in intoxicating liquors, popularly known as the Littlefield bill. This bill reads as follows:

A bill to limit the effect of the regulation of commerce between the several States and Territories in certain cases.

Be it enacted, etc., That the interstate-commerce character of all shipments of intoxicating liquors, including ale, wine, and beer, from one State or Territory into another State or Territory shall terminate immediately upon their arrival within the boundary of the State or Territory in which the place of destination is situated and before the delivery of said liquors to the consignee, and said liquors and all corporations and persons engaged in such shipment shall then become subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers to the same extent and in the same manner as though such liquors had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise: *Provided*, That shipments of such liquors entirely through a State or Territory and not intended for delivery therein shall not be subject to the provisions of this act, nor shall this act authorize the infringement of the right of common carriers to continuously transport such merchandise from without such State to a station therein.

SEC. 2. That in all such shipments to be paid for on delivery, commonly called C. O. D. shipments, the sale shall be held to be made at the place of destination or where the money is paid or the goods delivered.

While I have made an energetic and persistent effort to get this bill favorably reported from the Judiciary Committee, to which it was referred, my efforts have been unavailing. I can not with propriety refer to what has taken place in the committee, but I think I am safe in saying that every member of that committee will concede that I have exhausted every legitimate parliamentary expedient in endeavoring to make progress therein.

This bill has been vigorously attacked as being unconstitutional. It seeks to remove the impediment of the commerce clause of the Constitution so as to allow the police powers of the State to operate with full force and vigor the moment the liquor comes within the borders of the State whose police powers are to operate thereon. Strictly speaking, it can not be said that Congressional legislation to that end is without constitutional authority and effect, because there can be no question but that so far as the Congress has the power, it can exercise it in removing the impediment or restriction, and the question as to power can only be specifically raised when the State legislature undertakes to exercise its powers over the liquors which were the subject of interstate transportation. Even if the legislation undertook to operate at an earlier point of time than Congress could constitutionally authorize its operation, the State legislation would be held unconstitutional and the Congressional legislation inoperative for the purpose desired.

It is true that the bill goes a step further than the existing law, but it goes in precisely the same direction, and its constitutional competency is governed, I believe, by exactly the same legal principles upon which the Wilson bill was sustained, and this bill is a direct logical sequence of the law as laid down by the Supreme Court of the United States on this subject. I do not go so far as to say that there is no room for an honest and intelligent difference of opinion upon the constitutional question involved, but I do say that in my judgment the court will be compelled to sustain this legislation unless it overrules in some material particulars some of its recently decided cases. They result logically in a complete justification of the principle upon which this bill is predicated. A great deal of confusion in the discussion, in my judgment, results from a profound misconception of the characteristics of interstate commerce. The power to regulate articles of merchandise under the commerce clause of the Constitution is limited to the time when the article of merchandise becomes the subject of interstate commerce or to the period or zone during which its interstate character exists. Without for the moment undertaking to define where the points are, it is clear that this interstate character begins at some point and ends at some point. The interstate zone has a definite place of beginning and an equally definite place of ending. Outside of this zone, before it begins and after it ends, the power of the State is supreme and exclusive. Within this zone the interstate character is an indivisible whole, a continuous entity. It is within the exclusive control of Congress and can not be invaded by State legislation, at least without Congressional action removing the restriction upon the State. It has the same qualities at the beginning as at the end. It is simply a question of transit, and the character of the transit is the same at all stages of its progress. It is the same when it ends as it is when it begins. This transit is not made up of aliquot or fractional parts or major or minor incidents. It can not be divided up into separate and independent integers or factors. If there be a factor that is an incident of this interstate transit at the end of the zone, that same factor is also present at the beginning of the transit and continues throughout the whole zone.

While we are not concerned in this discussion in scientifically delimiting the beginning of the zone, it may be assumed, I think, without controversy, that the zone begins when the liquor actually starts on its interstate transit. The question that is vital to the discussion is, When does the zone end or the transit terminate? After a long course of somewhat varying decisions, the Supreme Court of the United States held, in the case of *Leisy v. Harden* (135 U. S., 100), that the zone did not end or the interstate character of the shipment of liquor did not terminate until the original package was broken up in the hands of the original consignee or until the liquor was sold in the original package by the original consignee, as only then did the liquor become commingled with the mass of goods in the State, and a part of State, as distinguished from interstate, commerce. This was an authoritative delimitation of the interstate zone. That zone, which remained intact until the original package was broken or sold by the original consignee, could not be invaded by State legislation, and it was held in that case that liquor in the original package in the hands of the original consignee could not be affected by the police power of the State. It was readily perceived that the drawing of this line of demarcation would seriously embarrass the States in prohibiting or even regulating the sale of intoxicating liquors, and in pursuance of a suggestion made in the opinion in *Leisy v. Harden* ("the responsibility is upon Congress, so far as the regulation of interstate commerce is concerned, to remove the restriction upon the State in dealing with imported articles of trade within its limits which have not been mingled with the common mass of

property therein. * * * Up to that point of time we hold that in the absence of Congressional permission to do so the State had no power to interpose any seizure or any other action," 124) the Wilson law was passed for the purpose of shortening or narrowing this zone. This act became a law August 8, 1890, and reads as follows: "That all fermented, distilled, or other intoxicating liquors or liquids transported into any State or Territory or remaining therein for use, consumption, sale, or storage therein, shall, upon arrival in such State or Territory, be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers to the same extent and in the same manner as though such liquors or liquors had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original packages or otherwise." It undoubtedly intended to narrow the zone so that the line of the State would be the delimitation of its ending as against the breaking or sale of the original package in the hands of the original consignee, as held in *Leisy v. Harden*. By a forced construction, however, the court held that this act did not narrow the zone to that extent, but only to the extent of making the actual delivery to the consignee the ending of the zone. In the hands of the consignee, the liquor, though in the original package, by virtue of the Wilson law is now subject to all of the police powers of the State. In *Leisy v. Harden* the court referred to the right of sale in the original package in the hands of the consignee as being "an inseparable incident to the right to import it," but it was no more an inseparable incident at that stage of the transit than it was and is through the whole zone from the beginning until the end.

Since that case the right of sale has been at times referred to as "only an incident," but this does not advance the argument, as it does not appear whether or not it is a major or minor incident, or is still held to be an "inseparable incident," and there is nothing that makes any distinction in the application of this incident to the original package in the hands of the consignee after actual delivery and its application to the same original package at any stage of its transit. As a matter of law the package when it enters the zone is constructively delivered to the consignee and is at his risk, and the power of sale as an incident only, major or minor or "inseparable," is a characteristic of the package through the whole zone. Moreover, the fact that since the Wilson law the sale of the original package in the hands of the original consignee can be prohibited is a minor factor in the operation of the police power upon the liquor in the original package in the hands of the original consignee. The zone having thus been narrowed by the Wilson law by moving forward the line of demarcation, the original package in the hands of the original consignee can be seized and destroyed by the State under appropriate legislation, so that not only was the right of sale which it is claimed was "only an incident" destroyed, but the original package itself, the very subject-matter of the interstate transportation, can also be destroyed, and thus the fruit of the extraterritorial contract is as a matter of legal construction wholly destroyed. The Wilson law, which has produced these results, has been sustained. It narrowed the zone, terminated the transit at a point earlier than that before laid down, and wholly destroyed the interstate character of the liquor the moment it passed that point. If *Leisy v. Harden* was well decided in fixing the time of demarcation ending the zone of interstate shipment, and in *Re Raher* (140 U. S., 545) and *Rhodes v. Iowa* (170 U. S., 412), sustaining the Wilson act in making a new line of demarcation in placing forward the ending of the zone in the process of the interstate transit are also well decided, no reason is perceived why the zone can not be still further narrowed by confining the line of demarcation to the boundary line of the State.

The effect of thus further narrowing the zone will be precisely the same to all legal intents and purposes as the narrowing that has already taken place under the Wilson law. That law enabled the State not only to prohibit the sale, but to destroy the subject-matter of the transit and of the extraterritorial contract at a point earlier than it otherwise could do. No other or further consequences of any kind can flow from placing forward the line of delimitation. Under the Wilson Act, the sale of the original package in the hands of the original consignee can be prohibited, and the liquor itself can be destroyed, things which it was held could not be done before that act was passed. Under the proposed bill the sale can be prohibited and the property destroyed before physical delivery takes place to the consignee, results which are identically the same as results which flowed from the Wilson Act. Moreover, inasmuch as the title to the property and the risk, unless otherwise agreed, is in the consignee from the time liquors are delivered to the carrier

for interstate transit, in what way does a bill that prohibits the consignee from selling the liquor before it reaches him differ in its legal or practical effect upon the extraterritorial contract, from one that prevents him from selling it as soon as it actually reaches his hands? Under the Wilson law the consignee can neither sell nor use (if there is appropriate legislation against it) liquor which he has purchased under an extraterritorial contract, after it reaches his hands. From what source does that exclusive and especial sanctity come that zealously protects the transportation of an article of merchandise on the ground that unless protected the extraterritorial contract is defeated and the laws of one State would be able to defeat a contract made in another, and then sustains a statute that enables the law of the State to destroy absolutely the whole subject-matter of the contract the moment it is actually delivered to the consignee? This position, if sound, magnifies the right of sale into an indestructible quality of the merchandise, as the only beneficial use the consignee could make of the merchandise in such a case would be to sell it during transit while in the zone. It seems clear that if this zone can be constitutionally narrowed by Congressional legislation as it has, that it can be still further narrowed for the same reason to accomplish the same results and to be attended by exactly the same effects upon the rights of the consignee.

It is to be observed in passing that this bill is not open to the objection that it delegates to the States the power to regulate commerce. Under the authority of *In re Raher* it simply removes "an impediment to the enforcement of the State laws, in respect to imported packages in their original condition." It imparts "no power to the State not then possessed," but allows "imported property to fall at once upon arrival within the local jurisdiction" (564).

There are those who seem to be very much impressed with the idea that liquors intended for the personal use of the consignee are affected by some peculiar quality which makes it constitutionally impossible for Congress by legislation to authorize the States to interfere with the use of liquor thus transported. The only right that the consignee has to the transportation of liquors is derived from the commerce clause of the Federal Constitution. I submit, with the greatest respect, that the particular use for which liquors are intended can have absolutely no effect whatever in determining the constitutionality of the proposed legislation. The power to "regulate" at all is predicated solely upon the power to "regulate commerce." This power to regulate is not only plenary in its character, but is absolutely without qualification, limitation, or distinction. It does not relate to the particular manner or to the particular purpose for which the commerce is carried on. It relates to all commerce, irrespective of purpose or intent or character and is without qualification; so long as it is "commerce" it is the subject of regulation. For what purpose "commerce" is carried on is entirely immaterial so far as the power to regulate it is concerned. The fact that liquor may be intended for the personal use of the consignee, not only does not give it any peculiar sacro sanct character, so far as the power of the Congress or the State to regulate or control it is concerned, but if anything, it contraindicates such character. To deliver liquor to a consignee for his personal use is clearly to segregate it from its "commerce" character; to take it out of "commerce." If it is delivered for the purpose of being bought and sold, then the liquor retains its "commerce" character, and if there is any constitutional distinction (which I do not think there is) between the two purposes, it would seem that the purpose that preserved rather than the purpose that destroyed the "commerce" character would be beyond the power of Congress to impair, as it is more clearly in line with the rational and dominating purpose of the constitutional provision.

I have not taken time to engage in a discussion of decisions or the authorities subsequent to the three cases hereinbefore referred to for the sufficient reason, that in my judgment, none of them either add to or take from, so far as the conclusions and reasoning of the court are concerned, the cases already cited, but they all proceed on precisely the same lines and are covered by the same legal and constitutional considerations.

I wish to say a few words about the practical reasons for the enactment of this legislation, as in my judgment they are compelling in their character. The abuses which have sprung up all through the country are intolerable. They are not abuses in the sense that they are violations of the law, but they are abuses in the sense that the parties engaged in the sale of intoxicating liquors avail themselves of the peculiar constitutional rights disclosed by the decisions hereinbefore referred to, and are therefore able to substantially nullify local legislation. The rights of the original consignee to receive liquors in any quantities for any purpose has developed a multitude

of interstate liquor express company saloons in both prohibition and license States, which are absolutely beyond the power of local legislation. There is no limit to the number of their patrons or to the quantity that may be delivered to each, and the State has no power to prevent the delivery under such circumstances to any patron. It can not prevent the delivery in unlimited quantities to any consignee whether he be a wholesale or a retail dealer in intoxicating liquors. It does not approach an answer to the demand for this legislation for relief from these difficulties to inquire whether the laws of a given State are or are not effectively enforced. To refuse to allow the passage of Federal legislation that is essential to enable a State to effectively enforce its laws, on the ground that the State does not now enforce its laws in this regard largely on account of this constitutional difficulty, is obviously a puerile absurdity. That would be equivalent to advising a man who could not get out of a pit without the aid of a rope that he could not have the necessary rope because he had not extricated himself from the pit without it.

Under the existing constitutional conditions it is perfectly competent to have established and maintained in every village, town, and city, in either prohibition, licensed, or local-option States, an interstate liquor saloon from which can be served in small or large quantities an unlimited list of customers. This legislation does not supplement any particular form of regulation or control that the States may exercise over this traffic. It leaves that to each State to settle for itself. Inasmuch, however, as the opposition to the legislation is largely based on the opposition to and criticism of the prohibitory law, I think something may well be said upon the question of this kind of legislation against the traffic. I am in favor of such legislation as will most effectively minimize the evils that everyone concedes flow from the sale of intoxicating liquors. The efficacy of any legislation must be subject to the same test that is applied to all matters that are the subject of legislative action—that is, the test of time and experience. As to the prohibitory law, the test popularly suggested is "does prohibition prohibit?" In the sense of entirely eliminating the sale of intoxicating liquors, it does not prohibit and never can prohibit, nor in that sense does any other law prohibit. Laws or prohibitions never have and never can entirely eliminate the evils against which they are aimed, and the only question is, Does the prohibitory law more effectively minimize the evils against which it is aimed than any other system of legislation? In Maine it is my belief that it does. Some of the reasons which I have for that belief have been stated by me in two articles, with which I conclude these remarks, and I think they fully justify me in that conclusion. In addition to these articles, inasmuch as the great name of Lincoln has at times been invoked upon the other side of this controversy, I will also append an extract from one of his speeches, which I think clearly indicates his attitude with relation to legislation of this character.

"THE OPERATION OF THE PROHIBITORY LAW IN MAINE, BY HON. C. E. LITTLEFIELD, CONGRESSMAN FROM MAINE.

"The Maine law, by reason of the long-continued, conspicuous, and consistent attitude of the State of Maine with reference to the liquor traffic, has long been known the world over as the synonym of legislation prohibiting the sale of intoxicating liquor. The propriety and necessity of restricting the sale of intoxicating liquors within the narrowest possible limits is now generally conceded by all right-thinking people who have the general welfare in any degree at heart.

"The legal validity, as well as the wisdom and propriety from a moral and economical standpoint, of laws controlling and restraining the liquor traffic have long been well settled by the highest authority. In 1847 Mr. Chief Justice Taney, of the United States Supreme Court, said in an opinion holding license laws constitutional: 'And if any State deems the retail and internal traffic in ardent spirits injurious to its citizens, and calculated to produce idleness, vice, or debauchery, I see nothing in the Constitution of the United States to prevent it from regulating and restraining the traffic, or from prohibiting it altogether if it thinks proper. Of the wisdom of the policy it is not my province or my purpose to speak.' Mr. Justice Woodbury in the same case expressed himself more directly as to the propriety of such legislation. He said: 'From the first settlement of this country, and in most other nations, ancient or modern, civilized or savage, it has been found useful to discountenance excesses in the use of intoxicating liquor,' and after stating that the legislation in question was not 'apparently designed to promote other objects than physical, social, and moral improvement,' said: 'On the contrary, its tendency clearly is to reduce family expenditure, secure health, lessen pauperism and crime.' Mr. Justice Grier, in sustaining the legislation, said: 'I take

this occasion, however, to remark that the true question presented by these cases, and one which I am not disposed to evade, is, whether the States have a right to prohibit the sale and consumption of an article of commerce which they believe to be pernicious in its effects and the cause of disease, pauperism, and crime. * * * It is not necessary for the sake of justifying the State legislation now under consideration to array the appalling statistics of misery, pauperism, and crime which have their origin in the use or abuse of ardent spirits.' In answering the commercial argument he said: 'And if a loss of revenue should accrue to the United States from a diminished consumption of ardent spirits, she will be the gainer a thousandfold in the health, wealth, and happiness of the people.'

"In 1852 Mr. Chief Justice Shepley, of Maine, in sustaining that provision of the Maine law providing that liquor kept for unlawful sale should not constitute property, speaking for a unanimous court, said: 'The State by its legislative enactments, operating prospectively, may determine that articles injurious to the public health or morals shall not constitute property within its jurisdiction. It may come to the conclusion that spirituous liquors, when used as a beverage, are productive of a great variety of ills and evils to the people, both in their individual and in their associate relations; that the least use of them for such a purpose is injurious, and suited to produce, by a greater use, serious injury to the comfort, morals, and health; that the common use of them for such a purpose operates to diminish the productiveness of labor, to injure the health, to impose upon the people additional and unnecessary burdens, to produce waste of time and of property, to introduce disorder and disobedience to the law, to disturb the peace, and to multiply crimes of every grade. Such conclusions would be justified by the experience and history of man.' The most earnest advocate of prohibitory legislation could hardly state with more perspicuousness and force the reasons which justify it than is found in these great judicial declarations.

"Since 1851, with an interregnum of two years, from 1856 to 1858, Maine has had a prohibitory law. Prior to 1851 she had had experience with the unrestricted and the licensed sale. Incorporated as a State in 1820, one of her early legislative acts (March 20, 1821) was to authorize the licensing of 'persons of sober life and conversation, and suitably qualified for the employment,' as 'sellers of wine, beer, ale, cider, brandy, rum, or other strong liquors by retail.' In the contemplation of these early legislators beer and cider seem to have been 'strong liquors.' This act prohibited them from allowing persons to 'drink to drunkenness' in the house or shop of the retailer, and prohibited the sale to 'common drunkards, common tipplers or common gamblers' after their names had been posted by the selectmen, and authorized the selectmen or assessors to prohibit the sale to any person who by idleness or excessive drinking of spirituous liquors should be a misspender of his estate.

"In 1834 some changes were made in the law, and 'persons of sober life and conversation,' etc., were again authorized to be licensed. In 1841 it was discovered that mere 'sober life and conversation' were not sufficient to properly qualify a man for the trying business of liquor-selling; a broader and higher standard of qualifications was adopted, and no one could be licensed unless he was a 'person of good moral character.' In 1846 an act was passed 'to restrict the sale of intoxicating drinks,' and licenses were authorized to be issued to sell liquor 'to be used for medical and mechanical purposes, and no other,' to persons of good moral character—one in towns less than 1,000, two between 1,000 and 3,000, and not less than three nor more than five in towns over 3,000. The act did not apply to liquors imported into the United States from any foreign port or place.

"In 1851 came the first prohibitory liquor law. This was repealed in 1856 and a license law enacted; and in this connection it is interesting to note that it had been discovered that a 'good moral character' was no longer requisite to qualify a man for the responsible position of a liquor seller, as 'suitable persons,' which might mean anything besides a 'good moral character,' were authorized to be licensed. In 1858 we have one of the earliest instances of the referendum idea in legislation. A prohibitory liquor law was passed in 1858, and at the same session an act was passed entitled: 'An act to ascertain the will of the people concerning the sale of intoxicating liquor.' This act provided for submitting to the people two questions, the 'license laws of 1856' and the 'prohibitory law of 1858,' and further provided that if the license law should have a majority the prohibitory act of 1858 should be 'hereby repealed' and the license law of 1856 'should be thereby revived.' The legal effect of a vote for license might have been open to some doubt; but this question was not raised, as in a total vote of

35,588 license received only 5,912 and prohibition 28,864, with 912 defective ballots, or nearly 5 to 1 in favor of prohibition. While it was true that only about a third of the voters expressed themselves upon the law (the vote for governor that year being 102,261), of those that did the majority was decisive for prohibition.

"The law has been amended and perfected from time to time, until in its present form as a system of prohibitory legislation it is probably the most effective in existence, and only needs thorough enforcement to produce the best results possible under the prohibitory method in minimizing the sales of intoxicants. In 1884 a constitutional amendment prohibiting the sale of liquor was adopted by a vote of 70,783 for and 23,811 against the amendment in a total vote for governor that year of 141,156. In this instance about 70 per cent of the voters expressed their wishes, being 3 to 1 in favor of prohibition.

"There has been considerable agitation over this legislation recently. That it has not been enforced for some time past in portions of the State as thoroughly and effectively as it can and should be is no doubt true. Its opponents claim, among other things, that by reason of the difficulties attending its enforcement it is less restrictive and effective than a license law would be. If it be true that the liquor traffic flourishes better under it than it would under a license system you would naturally expect those engaged in the sale to prefer a continuance of the present law. As the result of the agitation the question of resubmission of the prohibitory amendment was presented to the legislature of 1901. There were 3,000 petitioners for the change and 8,000 remonstrants. Anomalous as it may appear, all of the liquor dealers in the State, it was asserted in the debate and not challenged, were found among the petitioners opposing prohibition and favoring license, for the purpose, if their assertions were to be relied upon, of curtailing their own business. None were found remonstrating. 'Beware of the Greeks bringing gifts.' Their actions spoke louder than their protestations. No matter what the argument was, they evidently knew what was desirable for them. The vote was decisive—in the senate 22 against resubmission and 3 for, in the house 84 against and 34 for. Such is the legislative history.

"Has the law justified itself and the reasonable expectation of its friends? Undoubtedly many of its friends expect, and all of its enemies demand, more of the law than it can be reasonably expected to accomplish. The law prohibits the sale of liquor. Hence it is inferred that if the sale is not entirely eliminated the law is a failure. This by no means is to be conceded. The law absolutely prohibits theft and embezzlement. The fact that men still embezzle and thieves still break through and steal does not demonstrate that the law prohibiting these crimes is a failure. Notwithstanding the fact that the crimes in the decalogue are prohibited, they always have been and will, no doubt, continue to be committed until the millennium arrives; and it does not occur to law-abiding citizens that because of that fact the laws which protect society (so far as it is susceptible of protection by law) should be repealed. There is no reason for expecting or demanding of a prohibitory liquor law any different results from those which attend the enforcement of other criminal laws. Can you make a man sober by statute? Can you make a man honest by statute? Each question requires the same answer. The law can make it easier for him to do right and harder for him to do wrong. While no reasonable man should expect, or demand, that the prohibitory law should entirely extirpate the traffic, if it will restrict the traffic within narrower limits than any other plan, and thus do the most to minimize the evils caused thereby, its existence is justified. Can the Maine law stand this test? The record must show.

"Prior to 1851 liquor was sold in nearly every grocery store in Maine. A set of books in a general store in a village near Portland shows that 84 per cent of the entries were for liquor. 'Boots, shoes, dress goods, sheeting and shirting, hats, caps, and groceries' appeared at rare intervals, but rum was spotted on every page. 'A wholesale grocer's books in Portland showed that two-thirds in number of all his sales were of liquors.' The proprietor stated that 'they were taken by the ox-teams of the traders and carried in every direction from Portland—north, east, west—and their course could be also as distinctly marked by poverty, dilapidation, and decay as the path of a conflagration through a forest.' It was estimated from old account books that the people of Raymond consumed more liquors in every period of eighteen years than the entire valuation of the town. To-day no liquor tax is paid in the town. It will not be pretended that anything like these conditions exist to-day. Then it was not an unusual thing to see twelve vessels in Owl's Head Bay laden with West India rum for discharge in Maine ports. None can be seen now. All the liquors that are consumed in

Maine come by rail or steamboat, and are smuggled in with greater or less secrecy as the law is more or less effectively enforced. Under these circumstances it is easy to see that the capacity of men to earn was then largely impaired and their earnings largely wasted. Then there was one licensed dram shop for every 225 inhabitants. In April, 1901, 1,234 persons in Maine paid tax as dealers in liquors. This tax is \$25, and as the penalties for nonpayment are very severe and vigorously enforced, this undoubtedly includes practically all persons who are dealing in liquors. These figures are only relative, as they include all town agents who can sell only for medicinal, mechanical, and manufacturing purposes. The State has 506 cities and towns and 78 plantations. The United States taxpayers are confined to 203 cities and towns, leaving 302 towns and 78 plantations without liquor dealers. Take the State as a whole and there is one dealer for 564 inhabitants, as against one for every 225 before; of these dealers, 841, or two-thirds of the whole, are found in twenty cities and towns; 457, more than one-third of the whole, in three cities—Portland, Bangor, and Lewiston; and 597, nearly one-half of the whole, in six cities, showing the manner in which the law has concentrated the traffic in the larger cities. This is better illustrated by Cumberland County, in which Portland, the largest city in the State, is situated. The county has a population of 100,689, and 218, one-sixth of the number in the State, are United States taxpayers, 194 of whom are located in Portland, leaving 24 for the remainder of the county, or one for every 2,106 inhabitants.

"Here it may be stated, as illustrating the changed conditions, that when Portland had a population of 4,000, 81 places were licensed to sell liquor, or 1 for every 50; and in 1823, with about 9,000 population, there were over 200 licensed places, or 1 for every 45 people, while to-day with 50,000 people it has 194 liquor taxpayers, or 1 for every 257 people.

"There were in the year 1900, 236,679 United States taxpayers in connection with distilled and fermented liquors, or 1 for every 322 persons. If Maine had the same proportion, she would have 2,156 instead of 1,234, or nearly twice what she has. Illinois, the State which paid the largest amount of internal revenue to the United States on account of distilled spirits and fermented liquors (\$44,406,765.14), had, in 1900, 20,969 taxpayers, or 1 for every 299 persons. Maine, to be in proportion, should have 3,032, or about two and one-half times what she has. Massachusetts had 1 taxpayer for every 362 persons. For the purpose of comparison I take the four States paying the largest amount of internal revenue on account of distilled spirits and fermented liquors:

	Internal revenue.	Tax-payers.	One for every—
			Persons.
Illinois	\$44,406,765.14	20,969	229
Kentucky	18,710,422.36	4,487	470
Ohio	13,976,177.82	17,632	235
Pennsylvania	14,544,727.76	17,990	350
Maine	28,291.72	1,502	564

"Maine's amount is estimated as proportional to 1887, the last year when her returns were given separately as a State; she is now included with New Hampshire and Vermont in the District of New Hampshire.

"Illinois paid internal-revenue tax per capita, \$9.20; Kentucky paid internal-revenue tax per capita, \$8.72; Ohio paid internal-revenue tax per capita, \$3.36; Pennsylvania paid internal-revenue tax per capita, \$2.30; Maine paid internal-revenue tax per capita, \$0.04.

"One of the most reliable indications of the thrift and prosperity of a people is the amount of its savings. In 1850 Maine had no savings banks; she now has deposited in her savings banks \$66,132,677. While she ranks only the thirteenth in population among the States of the Union, there are only six that outrank her in the amount of deposits, and only seven which have a larger number of depositors. Illinois, with about seven times the population of Maine, has \$2,000,000 less deposits. Kentucky has no savings deposits. Ohio, with nearly six times the population of Maine, has \$22,000,000 less deposits. Pennsylvania, with nine times the population of Maine, has only \$40,000,000 more deposits. In other words, Maine has in her savings banks \$95.22 for every inhabitant; Illinois only \$13.43; Kentucky, none; Ohio, \$10.71; Pennsylvania, \$16.72. These figures are made more significant by the fact that during the last two decades the accumulations of Maine have been sent to the West for investment steadily, continuously, and, relatively to her means, in a prodigious amount. In these investments the losses have been heavy. Notwithstanding this her savings deposits have increased \$40,000,000 in the last thirty-eight years,

and while her population since 1850 has increased only 20 per cent, her valuation per capita has increased 252 per cent.

"The only material difference in legislative policy between the States compared is the prohibition policy of the State of Maine. In virgin natural resources and opportunity for the acquisition of wealth and the accumulation of savings Maine is not the equal of the other States. The substantial prosperity of her people under her policy challenges the emulation of and can hardly be made the subject of adverse criticism by these sister States, or by those who decry her consistent adhesion to prohibition. She can challenge comparison not alone from a material standpoint but in all of the elements essential to the social, moral, and mental welfare of her people, and in the conservation of law and order. During the forty years ending in 1890 there has been a gradual increase of the unfortunate insane.

"In Illinois the increase was 520 per cent; in Kentucky the increase was 174 per cent; in Ohio the increase was 211 per cent; in Pennsylvania the increase was 94 per cent; in Maine the increase was 104 per cent.

"The number of paupers among a people, and their increase or decrease, is perhaps the surest indication of the lowering or raising of the welfare and quality of a people, whether they are improving or retrograding. From 1850 to 1890 the percentage of paupers increased in Illinois 176 per cent; in Kentucky, .073 per cent; in Ohio, 138 per cent. In Pennsylvania it remained practically the same, while in Maine the percentage has decreased 245 per cent. The percentage of criminals in a community illustrates to some extent its character as law-abiding or otherwise. During this period the percentage of crimes committed, as shown by prosecutions, increased in Illinois 247 per cent; in Kentucky, 204 per cent; in Ohio, 108 per cent; in Pennsylvania, 593 per cent; and in Maine, 354 per cent. Massachusetts is nearer to Maine in location, and in social and moral condition may be thought to be more nearly parallel. She is a local-option State, with license as a rule in her larger cities. In 1898 she had 7,454 prisoners, or 33 for every 10,000 people, while Maine had 841, or 13 for every 10,000.

"A comparison of vital statistics taken from the Bulletin of the Department of Labor for September, 1900, will be suggestive. For comparison I take Portland, the largest city in Maine, several larger cities, and a number of cities nearly the same size in other States.

Arrests for drunkenness.

	Population.	In every 10,000.
Portland	50,145	84
Boston	560,892	426
Philadelphia	1,293,679	221
Chicago	1,698,575	231
Indianapolis	169,164	60
Youngstown, Ohio	44,885	353
Harrisburg, Pa.	50,167	174
Canton, Ohio	30,667	173
Springfield, Ill.	34,159	239
Taunton, Mass.	31,036	311
Brockton, Mass.	40,063	187
Lynn, Mass.	68,513	371
New Bedford, Mass.	62,422	208

Cost of maintenance of police departments and jails per capita.

	Police departments.	Jails.
Portland	\$1.05	\$0.07
Boston	2.95	.29
Philadelphia	2.10	.58
Chicago	2.16	.13
Indianapolis	.88	.03
Youngstown, Ohio	.72	.07
Harrisburg, Pa.	.66	.09
Springfield, Ill.	.82	
Taunton, Mass.	1.17	.04
Brockton, Mass.	1.03	
Lynn, Mass.	1.19	
New Bedford, Mass.	1.88	

"The fact that these statistics do not amount to a mathematical demonstration, and that conditions not unlikely vary in all of these instances, is fully appreciated. Portland is the largest city in Maine, a seaport town, and has probably a larger percentage of floating population than any other, which would naturally tend to the most unfavorable exhibit in these particulars. The figures may be said to approximate the real conditions. Only one place, Indianapolis, shows fewer arrests for drunkenness, while all the other cities show from two to four times as many. Only five show a less cost of maintenance of police departments, jails, police courts, etc., and six show a larger cost. The maritime cities, moreover, which are like Portland as to these conditions, such as Boston, Philadelphia,

Chicago, and New Bedford, show nearly double the cost. These facts are entitled to some significance.

"When the fact is remembered that the enforcement of this law has not been and is not now as steady, persistent, continuous, vigorous, and effective as it might be and ought to be, this record fully justifies the references to this subject made by Hon. John F. Hill, the present governor of Maine, in his first inaugural message, when he said:

"The deliberate adoption of this policy by a people naturally careful and conservative in their judgment was the inevitable result of a moral evolution which recognized the demoralizing and far-reaching evils of intemperance, and sought to eradicate them from the community, and embodied the conviction that a traffic which took men from the ranks of productive industry, robbed them of their sober faculties, destroyed their self-respect, and made them a burden and a menace to those who had a right to look upon them for support and protection—a traffic which filled the poorhouses, prisons, and asylums with human wrecks, and imposed its greatest misery upon the innocent and helpless—was hostile to the public interests and wholly contrary to the spirit and purpose of a Christian civilization.

"Fifty years ago the so-called Maine law prohibiting the sale of intoxicating liquors was placed upon our statute books, where it still remains. While it has not accomplished all its advocates and supporters hoped for, it has been a powerful force in the development and promotion of a healthy temperance sentiment among the people of our State.

"To-day in a large majority of our country towns there exists practical prohibition, and the law against the liquor traffic is as well enforced as against other forms of crime. Even in our cities and larger villages, where the liquor interests are the most active and aggressive and where the law is most persistently violated, it has not failed to exert a restraining and salutary influence, and it has been a power in stimulating and promoting that intelligent and vigorous public opinion which is the support of all effective law, and without which any legislative enactment must fall far short of its purpose."

"The bitter feeling engendered by active participation in the enforcement of the law tends to deter even law-abiding people from taking a conspicuous part in such enforcement. While every citizen is morally bound to contribute his share to its enforcement, the duty is a disagreeable one, sometimes attended with great personal discomfort, and is naturally more honored in the breach than the observance. Public officials, upon whom the duty especially rests, as a rule move only when compelled. Persons engaged and interested in the sale of liquor are always active and aggressive. Inspired by enormous profits, the liquor seller's interest is direct, specific, and, with many, overpowering, as there are few things men will not do for the almighty dollar. That of the community is indirect and general, and requires continual vigorous agitation to produce results. Such agitation is inevitably intermittent. Hence the intermittent character of the enforcement of the law.

"But the effective instrument is at hand whenever the people are aroused and see fit to use it. The temper and sentiment of Maine people with reference to this question was indicated by the late State election in Cumberland County, where Rev. Samuel F. Pearson ran for the office of sheriff upon the sole issue of the enforcement of the law, against the regular Republican and Democratic nominees, and was elected in the full tide of a Presidential election. Pearson had 6,395 votes, the Republican candidate had 5,958, and the Democratic candidate had 4,465.

"The manner in which the enforcement of this law aids the workingman in diverting his wages from a worse than useless to a laudable purpose is shown by an instance that came under the observation of Sheriff Pearson after he began his vigorous campaign as sheriff. The men who worked on the docks in Portland, loading and unloading English steamers, receive their pay from the head stevedore in the shape of checks, showing their time and the amounts due them. Saloon keepers have been taking these checks in payment for liquor, and getting them cashed by the cashier of the Grand Trunk Railroad every month. Before January 1, 1901, the liquor dealers frequently passed in such checks to the amount of between \$1,700 and \$1,900. Since then the highest amount passed in by them was \$153. I understand that Sheriff Pearson is meeting with gratifying success in curtailing the liquor traffic, showing that there is no difficulty in doing the same thing everywhere where the proper effort is made."

"MAINE AND MASSACHUSETTS—A TEST OF THE PROHIBITION LAW—A COMPARISON INVITED BY EX-GOVERNOR GARVIN OF RHODE ISLAND—BY THE HON. CHARLES E. LITTLEFIELD, MEMBER OF CONGRESS FROM MAINE.

"An article in The Christian Endeavor World of Boston, by ex-Governor Garvin of Rhode Island, was a discussion of 'Questionable reforms.' In the course of the article Governor

Garvin made unfavorable remarks regarding the State prohibition law of Maine, contrasting Massachusetts with the Pine Tree State, to the disadvantage of the latter. The editor of The Christian Endeavor World asked Congressman Littlefield to present the matter from his standpoint, and the following paper was the result. It shows in a clear and unmistakable way the exact effect of prohibition in Maine, so far as statistics can show it.

"I am obliged to the editor for calling my attention to Mr. Garvin's reference to prohibition in Maine and the three reasons which he gives why 'prohibition is seen to be a superficial reform.'"

"The first is purely political, and is peculiarly a matter of personal opinion as distinguished from one of concrete fact, and has greater or less weight, as political obligations or fealty rests more or less lightly upon the individual whose action is to be determined by the considerations involved. It is therefore speculative rather than demonstrative in its character.

"The second is one of fact, so far as the facts are demonstrable by attainable data. The assertion that men get drunk as often in Maine as in Massachusetts, and that 'if the prosperity of a community is rightly measured by its increase of wealth and population, then Maine ranks as one of the least prosperous of all the States,' while somewhat guarded and circumscribed in its scope, is still a fair illustration of the hasty and ill-considered generalizations frequently met with in the discussion of this subject by the uninformed. I think Maine can successfully stand the test laid down.

"Inasmuch as Massachusetts has been referred to by way of comparison, and as she is popularly understood to be at least a fair representative of development in the line of moral, social, and material welfare, thus giving an exacting standard, I will confine myself to that State for comparisons. All of the statistics to which I shall refer, unless otherwise specified, are from the United States census, where they can be easily verified. They have the advantage of being disinterested, and of all being taken on the same basis. The United States during the last decade increased in population 20.7 per cent, Massachusetts 25.3 per cent, and Maine 5 per cent. The percentage of increase in Massachusetts was a little less than in the preceding decade, Maine's about three times as much, 5 per cent against 1.9 per cent. It is a very pregnant fact in this connection that, while Maine's population in 1900 was only 694,466, there were then living in other States 216,551 persons who were born in Maine. It is true that Massachusetts made great progress, but Maine furnished for her 98,000 and received in return only 15,000, giving from her small population more than six times as many as she received. In any fair analysis Maine's vital contribution of some of her most valuable material to her sister States must be considered, and when given its due weight it will clearly appear that she is by no means 'one of the least prosperous of all the States' from the standpoint of population.

"Whether or not a community has prospered during a given period, from the material point of view suggested by Mr. Garvin, clearly depends upon the accumulation of wealth per capita, and its increase or decrease, and there Maine easily outstrips Massachusetts, as her per capita wealth in 1850 was \$210, while in 1900 it was \$982, an increase of four and one-half times. Massachusetts had per capita in 1850 \$577, and in 1900 \$1,553, an increase of only two and four-fifths times.

"This is the period covered by the Maine law. Moreover, from 1880 to 1902 Maine has decreased her indebtedness per capita \$10, and Massachusetts has increased hers by the same amount. The town of Raymond, Me., is relatively typical of the State's material development. Prior to 1851, with 1,192 souls, with a valuation of about \$150,000, per capita \$126, it is estimated from actual sales taken from old account books that the value of liquor consumed in every period of eighteen years was more than the entire valuation of the town. To-day no liquor tax is paid in the town; and, while the population has decreased to 823, the valuation has increased to \$218,072, or \$265 per capita, doubling in per capita wealth. The population of Massachusetts in 1900 was 2,805,346, in round numbers four times that of Maine, and in the analysis to follow, in order to stand on a level with Maine, that proportion should be maintained.

"This marked relative increase of wealth in excess of Massachusetts is emphasized when attention is called to the fact that this increase was made under relatively decidedly adverse conditions. It is a well-known fact that farming in New England, and especially in Maine, where the disadvantages are probably the greatest, is not an occupation marked by rapid money making, however much there may be to commend it from other points of view. In Maine in 1900 there were 59,299 farms,

with an acreage of 6,279,946, and a valuation, with land improvements and buildings, of \$96,502,150, with an annual product of \$37,113,460, or an average of \$626 a farm; while in Massachusetts there were only 37,715 farms, with an acreage of 3,147,064, a like valuation of \$158,019,290, and an annual product of \$42,298,274, or an average of \$1,121 a farm. While unattractive for large profits, farming would seem to be twice as profitable in Massachusetts. If Massachusetts had a proportionate number of farms, instead of 37,715, there would be about 246,000.

"Maine has males 10 years of age and over engaged in farming 73,911, more than 10 per cent of her population, and Massachusetts only 64,662, a little more than 2 per cent of her population, leaving a much larger percentage free in Massachusetts for other and more gainful occupations. Massachusetts not only has fewer persons engaged in the less profitable occupation, but those that are engaged therein are making a greater profit, giving her a decided advantage.

"Manufacturing enterprises are generally accepted as the desirable avenues through which wealth can be accumulated, and here the advantage is decidedly with Massachusetts, as she had in 1900 an investment of capital in manufacturing of \$823,264,287, with wage-earners numbering 497,448, and an annual product of \$228,240,442, as against in Maine a capital of \$122,918,826, wage-earners numbering 74,816, and a product of \$28,527,849, Massachusetts exceeding Maine nearly eight times instead of four, as she would if the proportion were equal, again a decided advantage in the line of the acquisition of wealth.

"These facts speak in no uncertain tones in favor of Maine people and her policy.

"It is no discredit to Maine, however, to note the fact that from 1880 to 1900 she has increased by \$124 the average amount paid her wage-earners, while Massachusetts has made an increase of only \$87.

"The home is the basic and essential unit of our Christian civilization, and the capacity to establish, maintain, and own homes is the most significant characteristic of the highest development of a people. The average percentage of families having free and unencumbered homes in the North Atlantic Division, consisting of the New England States and New York, New Jersey, and Pennsylvania, is 22.3 per cent. Maine has 49 per cent, Massachusetts only 18 per cent. Maine is exceeded in this particular in all of the States and Territories only by Idaho, with 61.8 per cent; Montana, 49.5; Nevada, 60.4; New Mexico, 66.9; North Dakota, 56.7; Oklahoma, 63.5; Utah, 59.6, and Alaska, 80.5. Of farm families in Maine 69.2 per cent own their farms unencumbered. In Massachusetts only 53.8 per cent so hold them.

"The liquor traffic is the most prolific and potential source of insanity, pauperism, and crime. These, to quote Mr. Garvin, are 'the evils of drunkenness' that 'are so common and so potent and make the loss to society seem so vast.' Their connection with the subject under discussion is close enough to warrant examination and analysis in this connection.

"In 1903 Maine had 885 insane in its hospitals, 125.3 for every 100,000 people. Massachusetts had 8,679, or 288.5 for every 100,000, more than twice as many as Maine, notwithstanding the fact that the death record in Massachusetts for insane in hospitals was 1,025, with only 96 in Maine, nearly eleven times as many when there should only have been four times as many. Maine shows a decrease of the number of insane, with her relatively small death rate of insane, since 1880 of 112.3 in every 100,000 people, while Massachusetts shows an increase of 1 in every 100,000.

"In the Maine almshouses there were, December 31, 1903, 1,152 paupers, or 163.1 for every 100,000 people, and in Massachusetts 5,934, or 197.3 for every 100,000; and here again the death rate in Massachusetts was 1,398, and only 181 in Maine. Maine shows from 1890 to 1903 a decrease in paupers of 9, and Massachusetts an increase during the same time of 1,209.

"Maine's death rate from alcoholism in 1900 for every 100,000 people was 2.2; that of Massachusetts was 6.8, three times as great. Maine's rate is lower than that of any other State in the Union except New Hampshire's, which is the same. There were of prisoners in Maine, June 1, 1890, 512, or 774 for every 100,000; in Massachusetts, 5,227, or 2,335 for every 100,000; three times as many as in Maine. Among the offenses were: Against the public peace, Maine, 3; Massachusetts, 47. Against the public morals, Maine, 163; Massachusetts, 1,712. Assaults, Maine, 36; Massachusetts, 345. Drunk and disorderly, Maine, 146; Massachusetts, 1,811.

"June 30, 1904, there were of prisoners for drunkenness in Maine 120 and in Massachusetts 2,110, a proportion of more than ten to one, when if parallel it should be four to one. This is a record with which Maine has no occasion to be discouraged.

"These are splendid and unparalleled results, and demonstrate an actual progress in Maine markedly in excess of Massachusetts and elsewhere. Whether these results are attributed to the unusual intelligence and the natural energy, enterprise, thrift, and capacity with which the people of Maine are fortunately endowed to a degree not found elsewhere, or whether they are to be accounted for by the fact that, because of the policy of prohibiting the liquor traffic, they are able more effectively to conserve and utilize their energies, or both, I leave to be answered by the critics.

"The facts exist. If the critics propose to eliminate the prohibition of the liquor traffic as an important and controlling factor, the burden is upon them to do so. What is the differentiating cause? While the suggestion is not intended to apply to Mr. Garvin, it ought perhaps to be said that an opinion upon a question like this is not entitled to any great weight when it is based simply upon a flying trip through the State, stopping at a few of its hotels, or upon whiling away an elegant leisure on the comfortable veranda of some luxurious summer cottage, reasoning from superficial and sometimes imaginary premises, nonchalantly ignoring all careful investigation of the essential facts involved.

"It is not difficult under such circumstances to reach conclusions you are looking for, and in this manner many of the adverse judgments that have been rendered upon the law have been reached by worthy people.

"All of these facts are not only consistent, but they are entirely in harmony with, and are important factors in furnishing a most adequate and ample foundation for, an article in the Century Magazine for November, 1904, on 'The Brain of the Nation,' in which Mr. Gustave Michaud says: 'A steady fall in the birth rate of men of talent is met with in going from New England westward. While in New England out of every 100,000 births 54 are those of men of talent, in New York that number falls to 34, in Ohio to 19, in Indiana to 11, in Illinois to 10, in Missouri to 6, in Kansas to 2, and in Colorado to 1.'

"In further elaborating his proposition it is significant, as indicating the potential portion of New England, that he uses the State of Maine for his most effective illustrations. He says: 'The State of Ohio is comparable in area to the State of Maine. In 1826 there were in Ohio 5 universities and colleges (Ohio University, Miami University, Franklin College, Kenyon College, and Western Reserve University) against two in Maine (Bowdoin College and Colby University). Twenty years later there were in Ohio eight times the number of colleges and universities then found in Maine; yet the present birth rate of celebrities is more than twice as great in Maine as in Ohio. Nor has the State of Indiana remained behind in educational matters. In 1840 the generation that is now eighty years old founded in Indiana six universities and colleges against two in Maine, one in New Hampshire, and two in Vermont. In spite of such advantages that generation and the following show but one-fifth of the birth rate of men of talent observed in northern New England.' Maine's fifty-six years of experience under the prohibitory law does not appear to have begun to produce any very marked result in the line of the deterioration of the character and quality of her people.

"In this connection it is interesting to note that the record of Maine and Massachusetts in the production of teachers for every 100,000 persons from five to twenty-four years of age is as follows:

	1870.	1880.	1890.	1900.
Maine.....	161	221	253	259
Massachusetts.....	126	148	164	188
Excess.....	35	73	89	71

"In the consideration of any analysis like the foregoing it is always to be remembered that there is nothing in the policy or law of Maine that differentiates her from her sister States except the prohibitory law.

"No reason is perceived why the people of Maine should not feel well satisfied with the result of this comparison and analysis, as, instead of showing that she is 'one of the least prosperous of all the States,' it demonstrates that she is easily one of the most prosperous.

"The third reason given by Mr. Garvin seems to proceed upon the hypothesis that while the 'sobriety of the head of a family' is undoubtedly a blessing to himself and its members, 'its immediate effect would be to injure the men and families already sober and industrious,' and is therefore to be deprecated. He clearly demonstrates to his own satisfaction, at least, that, 'should the inebriates become sober and industrious, they would

enter the labor market in competition with those already at work, wages would fall, and the family of the sober laborer would get the minimum wage, which now goes to the family afflicted with an intemperate and idle head; therefore men should remain inebriates, and anything that tends to change them from inebriates is 'superficial.'

"It is no doubt true that 'political economy teaches that wages tend to a minimum;' but, if Mr. Garvin means to be understood that by reason of that general axiom political economy teaches that inebriates should remain inebriates, as otherwise, if they became sober, their competition would reduce the sober to the inebriates 'minimum wage,' then I feel obliged vigorously to dissent from such a conclusion, as I know of no political economy that teaches the essentially false and brutal proposition that, in order for a man to contribute to the welfare of the community in which he lives, he must make of himself a repulsive and expensive burden upon it. All sound political economy that is worthy of the name teaches the best methods of promoting the general welfare, and is based upon the fundamental axiom that each individual is bound to make the most of himself, and to develop the maximum of his capacity as a producer. Producers and not consumers are the great factors in conserving the public weal. A theory that makes of a man a consumer, and deliberately deprives him of the capacity to produce, is contrary to all teachings of political economy.

"It is true that, where an inebriate becomes sober, he has some tendency to revive a competition hitherto dormant, and that a condition that has some tendency to reduce wages is a factor in the whole equation of the general welfare; but it is only one, and a minor one at that. To predicate a general conclusion upon such a minor factor is to reach a conclusion that instinctively repels every right-thinking person, and could not be the result of the operations of a well-ordered mind acting upon sound premises.

"If the argument that, if inebriates are made sober, sober men will have more unjustifiable competition, and be compelled to work for less wages, be meritorious, then inebriates should remain inebriates. More than that, in order that the welfare of the sober man should be more effectively promoted, more sober men should be made inebriates, thus relieving the remaining sober of a part of the competition they now have, and enabling them to increase their wages. Then, while it may be, as seems to be admitted, that a young man may be 'wise in being a total abstainer,' he could hardly be said on this refined theory to be inspired by any laudable desire to promote the welfare of his 'sober' fellows, as by that course he engages in competition with them. If this theory is sound altruistically, everybody but the favored few should be an inebriate, thus conserving the welfare of the sober at the expense of the drunken.

"Instead of this imaginary deleterious competition resulting in a change from inebriety to sobriety (caused or tending to be caused, it is assumed, by prohibition) being a reason why prohibition is a 'superficial reform,' it furnishes one of the most persuasive and potential reasons why prohibition, as effectively minimizing the evils flowing from the traffic in intoxicating liquors, is well worthy the support of all who are desirous of promoting the general welfare, as such a change is clearly from every point of view wise and desirable.

"When inebriety is preferable to sobriety then there will be something in the third reason. A mere statement of this reason shows that the reason, and not the proposition which it is sought to sustain by it, is 'superficial.'

"ROCKLAND, ME."

The following is a very brief synopsis of an address by Maj. J. B. Merwin, of St. Louis, Mo., who was an intimate friend of Abraham Lincoln:

"It should be stated distinctly, squarely, and fairly, and repeated often, that Mr. Lincoln was a practical total-abstinence man—wrote for it, worked for it, taught it both by precept and by example; and when from a long and varied experience he found that the greed and selfishness of the liquor dealers and the saloon keepers overleaped and disregarded all barriers and every other restraint taught by the lessons of experience, that nothing short of the entire prohibition of the traffic and the saloon would settle the question, he became an earnest, unflinching prohibitionist.

"It has been said by those most competent to judge that Mr. Lincoln surpassed all orators in eloquence, all diplomats in wisdom, all statesmen in foresight; and this makes him and his name a power not to be resisted as a political prohibitionist.

"The gist of Mr. Lincoln's argument was contained in this fearless declaration: 'This legalized liquor traffic, as carried on in the saloons and grogshops, is the tragedy of civilization. Good citizenship demands and requires that what is right should not only be made known, but be made prevalent; that

what is evil should not only be detected and defeated, but destroyed. The saloon has proved itself to be the greatest foe, the most blighting curse, of our modern civilization, and this is the reason why I am a practical prohibitionist.

"We must not be satisfied until the public sentiment of this State and the individual conscience shall be instructed to look upon the saloon keeper and the liquor seller, with all the license earth can give him, as simply and only a privileged malefactor—a criminal."

"Mr. Lincoln used, in advocating the entire prohibition of the liquor traffic, nearly the same language, and in many instances the same illustrations, that he used later on in his arguments against slavery. At another place he said: 'The real issue in this controversy, the one pressing upon every mind that gives the subject careful consideration, is that legalizing the manufacture, sale, and use of intoxicating liquors as a beverage is wrong—as all history and every development of the traffic prove it to be—a moral, social, and political wrong.'

"Mr. Merwin stated that on the morning of April 14, 1865—the morning before Mr. Lincoln's assassination—he talked with the 'Martyred President' regarding the situation in the country. Among other things Mr. Lincoln said:

"After reconstruction, the next great question will be the overthrow of the liquor traffic."

"A speech on the anniversary of Washington's birthday on February 22, 1842, before the Washingtonian Temperance Society, of Springfield, Ill., was delivered by Abraham Lincoln, extracts of which follow and which was printed on the first page of the Sangamon Weekly Journal in the issue of March 26, 1842: 'Of our political revolution of 1776 we are all justly proud. It has given us a degree of political freedom far exceeding any other nation of the earth. Turn now to the temperance revolution. In it we shall find a stronger bondage broken, a viler slavery manumitted, a greater tyranny deposed; in it, more of want supplied, more disease healed, more sorrow assuaged. By it, no orphans starving, no widows weeping; by it, none wounded in feeling, none injured in interest. Even the dram maker and dramseller will have glided into other occupations so gradually as never to have felt the change, and will stand ready to join all others in the universal song of gladness. And what a noble ally this to the cause of political freedom! With such an aid, its march can not fail to be on and on, till every son of earth shall drink in rich fruition the sorrow-quenching drafts of perfect liberty. Happy day when, all appetites controlled, all passions subdued, all matter subjugated, mind—all-conquering mind—shall live and move, the monarch of the world! Glorious consummation! Hail fall of fury! Reign of reason, all hail!

"And when the victory shall be complete—when there shall be neither a slave nor a drunkard on the earth—how proud the title of that land which may truly claim to be the birthplace and the cradle of both those revolutions that shall have ended in that victory! How nobly distinguished that people who shall have planted and nurtured to maturity both the political and moral freedom of their species!"

Eulogies on the Late Senators Morgan and Pettus.

SPEECH

OF

HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1908.

The House having under consideration the following resolutions: "Resolved, That the House now proceed to pay tribute to the memory of Hon. JOHN T. MORGAN and Hon. EDMUND W. PETTUS, late Senators from the State of Alabama.

"Resolved, That, as a special mark of respect to the memory of the deceased Senators and in recognition of their distinguished public services, the House at the conclusion of the exercises to-day shall stand in recess until 11 o'clock and 30 minutes a. m., on Monday next.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk send a copy of these resolutions to the families of the deceased Senators."

Mr. HEFLIN said:

Mr. SPEAKER: In listening to the addresses touching the lives and character of Senators MORGAN and PETTUS, my thoughts went back to the South and her momentous problems of the sixties—aye, further still, to the early history-making days of the Republic.

That section of our common country that produced MORGAN and PETTUS has given to the nation some of its most illustrious

sons—men whose names are radiant on the brightest page of American history.

Mr. Speaker, two Republican Members at this session of Congress have indulged in uncomplimentary references to the South and her part in the war between the States. Had they been living, neither Senator MORGAN or Senator PETTUS would have permitted these unkind and unwarranted allusions to go unchallenged.

As an ardent believer in the South's right to secede and as a Representative of the State that these two Confederate soldiers loved and served so well, I decline to be silent on the subject. Let us dispassionately and in the interest of truth inquire briefly, What has been the South's contribution to civil liberty and constitutional government? Go ask the historian, and he will tell you that the first expression of legislative liberty came from Virginia, when she elected an assembly and established trial by jury; and when Great Britain levied taxes against the colonies without their consent that it was the Virginia assembly that declared that none but the representatives of the colonies could lawfully tax them. Our fathers declined to pay the taxes, and the British Parliament ordered them carried to England to be tried for treason. Again the South responded, and Patrick Henry denounced that high-handed exercise of arbitrary power.

It was this bold and righteous conduct on the part of a Southerner that led to a political union of the colonies and hastened a declaration of colonial rights.

The exigencies of the times demanded legislation of a general character, and a Continental Congress was called. Again the South responded, and Peyton Randolph, of Virginia, was chosen president of that congress, and it was his splendid genius and constructive statesmanship that guided the deliberations of that patriotic body of men. When recounting the wrongs inflicted upon his countrymen, it was Richard Henry Lee, a Southerner, who introduced a resolution declaring the independence of the colonies. The passage of that resolution involved a stupendous task. Again the South responded, and Thomas Jefferson, the "father of Democracy," wrote that immortal document—the Declaration of Independence. The die was cast, and in the dim distance could be heard the muttering thunder of British guns. Who now, in all the colonies, should lead in the clash of arms? In a moment the answer comes, and George Washington, a Southerner, is commander in chief of the continental forces.

Mr. Speaker, I wish, in passing, to correct a bit of history as written by Mr. Bancroft. The first tea party was held not at Boston Harbor, but at Wilmington, N. C. The first blow for American liberty was struck not at Concord, Mass., but at the battle of Alamance, in North Carolina, and there "the embattled farmers stood and fired the shot heard round the world." It was on Southern soil, at Yorktown, Va., that Lord Cornwallis surrendered to Washington. There the British lion crouched at the feet of the American eagle, and from that historic spot truth spoke with the thunder's voice and liberty walked with unfettered step. When the roar of musketry and the thunders of artillery had died away and peace was declared a Constitutional Convention was called. Who now should preside over the deliberations of that brave and patriotic body of men? Again the South responded, and George Washington was chosen President of the Convention.

Mr. Speaker, who was to perform the most signal and conspicuous service in that Convention? Again the South responded, and James Madison, of Virginia, wrote the Constitution of the United States. When the infant Republic had been christened in the name of the people and was making ready to take her place in the family of nations, into whose hands was she committed for safe and conservative guidance? Into the hands of him lovingly acclaimed "Father of his Country," and George Washington, a Southerner, was the first President of the United States. For more than half a century from that time John Marshall, of Virginia, and Roger B. Taney, of Maryland, as Chief Justices of the Supreme Court, construed the law. Southern men were the leaders in the House and in the Senate of the National Congress; Southern men, under Jackson, who triumphed in the war of 1812, and Southern men who followed the blades of Winfield Scott and Jefferson Davis into the heritage of the Montezumas. I would show to the gentleman from New York [Mr. SHERMAN] and the gentleman from Pennsylvania [Mr. DALZELL], and I would show to the world that in the light of these patriotic truths Southern men could never have fought as they did at Gettysburg and perished as they did at Crampton's Gap unless they had fought for the love of principle.

Mr. Speaker, both of our dear dead Senators MORGAN and PETTUS were Confederate soldiers, and no man ever donned a uniform or drew a battle blade who could point with more pride and devotion to his flag than did these two knightly Southern-

ers to the starry cross of the Confederacy. It represented to them the dearest rights and privileges that the fathers had planted in the Constitution of our common country.

The idea of States rights was the dominating idea in the Constitutional Convention. It was the golden thread running through the magnificent fabric of that marvelous instrument—the Federal Constitution. When the question of citizenship came up for consideration—when the power touching the qualification of voters was up for discussion—some of the delegates contended that there should be one standard of qualification and that that standard should be fixed by the General Government. This idea was overwhelmingly defeated, under the splendid leadership of Benjamin Franklin, who took the position that the State and the State alone should say who shall or shall not exercise the elective franchise. When the work of the Convention had been completed and the Constitution submitted to the various States for ratification, it was conceded everywhere, and public speakers on the hustings proclaimed it from the stump, that the State could withdraw from the Union whenever its people decided to do so. The doctrine of the Constitution, the doctrine of State sovereignty, was handed down from sire to son, and especially was this true of the South. "Light Horse Harry" Lee, the father of Robert E. Lee, and a devoted follower of Washington, wrote Mr. Madison in 1792, saying:

For no consideration on earth would I do anything that could be construed into a disregard of or faithlessness to this Commonwealth.

Again, in 1788, he declared:

Virginia is my country; her will I obey, however lamentable the fate to which it may subject me.

Rawles's view of the Constitution was the accepted textbook at the academy when Robert E. Lee was a cadet at West Point, and it expressly taught that "The secession of a State depends upon the will of the people of such State."

Charles Francis Adams, of Massachusetts, said recently that: "Prior to the war between the States the opinion was universal that in case of an unavoidable conflict between the State and Federal Government sovereignty resided with the State and to it allegiance was due."

When the South saw her people denied communion in the churches because of what the North styled the leprosy of slavery; when she saw her people denied a share of the territory acquired by her diplomacy, blood, and treasure; when she saw the common Constitution of all the States violated, acting in her sovereign capacity and exercising a constitutional right, she sought a quiet and peaceable separation from the General Government. This course the North opposed, and the war followed.

But, Mr. Speaker, never until Lee surrendered at Appomattox and the Lord God laid on the shoulder of every soldier in gray the sword of his imperishable knighthood was the right to secede withdrawn from the State.

Senators MORGAN and PETTUS accepted the verdict of the sword, and they returned to Alabama to start life over again on the ruins that the war had wrought. They were in the midst of a new order of things. The slaves bought of our white brethren in the North were without authority set free. The labor system upon which our people had so long depended had been destroyed, and the ballot, that which represented privileges and powers for which the quick-witted Celt and the thoughtful Saxon had struggled a thousand years to achieve, was given in the twinkling of an eye to the unfit hordes of an inferior race.

Senators MORGAN and PETTUS passed through bitter and trying experiences—experiences, Mr. Speaker, that made the heart sick. They saw the slave of yesterday go up and occupy the seat of civic authority; defile the temple of the Anglo-Saxon; make and administer the law, and this was reconstruction mantled in a saturnalia of crime that shocked and astounded the civilized world.

No two men in Alabama, or in the South, did more to stay the hideous tide of negro domination than the two dearly beloved Senators whose death the House mourns to-day.

In the dark and trying days of reconstruction these two men were foremost among the defenders of Anglo-Saxon civilization. They realized that submission to the reign of the carpetbagger meant the overthrow—the destruction of all that was sacred to the white man in the South—and knowing this they dared to do things from which the timid would shrink and the coward would flee.

When the ruthless hand of political injustice grappled at the vitals of our social order, Senators MORGAN and PETTUS went about among the people pleading with them to stand firm and fear not—that it were better to die defending the institutions of the white man than to live to see that imperial race submerged in the degradation that negro domination would bring.

Mr. Speaker, in conclusion let me say, the wealth of a State or a nation consists not in fertile soil, mineral land, or hoarded

gold, but it consists in the manhood of her men and the womanhood of her women.

Senators MORGAN and PETTUS were able, courageous, manly men. They were men of high purpose and strong convictions. No power on earth could intimidate or terrorize either of them. As private citizens, as Confederate soldiers, and as public servants they were faithful and fearless in the discharge of every duty as God gave them the power to see it. Neither of them was blessed with material wealth, but both of them were rich in all that is best and bravest in man. Alabama delighted to honor these grand old men, and in honoring them she honored herself, and felt at all times that when they responded to her name in the Senate of the United States that her highest and best interests were in the hands of able and incorruptible men—men of heroic mold.

Rich indeed in priceless jewels is the country that can boast them her sons. Fortunate indeed are we that we can claim them as countrymen and feel the quickening inspiration of the example to high-minded, noble endeavor. [Applause.]

On Bill to Amend the Immigration Law.

SPEECH

OF

HON. HENRY M. GOLDFOGLE,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 2, 1908.

The House having under consideration the bill (H. R. 13079) to amend section 21 of the immigration law—

Mr. GOLDFOGLE said:

Mr. SPEAKER: The bill before us is so drastic in its terms, so unqualified in its provisions, so sweeping in its effects, and so promotive of many hardships when we come to analyze it carefully, that I can not give it my approval.

I indulged in the hope that my esteemed colleague from New York [Mr. BENNET] would accept the amendment offered. That amendment safeguards to some extent an alien against deportation, where really the offense charged would be an ordinary one as distinguished from a grievous or heinous crime, and where the interests of the public do not at all require deportation. The amendment provides that the Secretary of the Department of Commerce and Labor may, if he deems that the interest of the public will not be injured thereby, allow the convicted alien to remain in the United States. If the measure now proposed by my colleague from New York [Mr. BENNET] is to pass, such an amendment as I suggested should be added to the bill. The passage of the bill is asked under a motion to suspend the rules. Such motion, under the ruling of the Chair, the correctness of which I concede, prevents consideration of my amendment, and the gentleman from New York [Mr. BENNET] has stated his refusal to accept the amendment.

Under the rules of the House we must accept the bill just as it is, or vote it down.

Many Members of this House, who are distinguished constitutional lawyers, have seriously doubted the bill in its present form to be constitutional. Indeed, the gentleman from Illinois [Mr. MANN], an eminent lawyer, the other gentleman from Illinois [Mr. SABATH], another able lawyer, who is one of the Committee on Immigration, and the distinguished gentleman from Kentucky [Mr. SHERLEY], another authority on constitutional law, have all seriously expressed their doubt of the constitutionality of the measure before us. Some of them have insisted that in its present form it is unconstitutional. That question, however, has been sufficiently discussed on this floor and will not be further considered by me.

I shall endeavor to point out some of the many reasons why this bill ought not to pass. No well-disposed citizen desires that any alien criminal shall be admitted to our shores. We all agree that the criminal classes must be kept out; we have no place in this wide land to harbor criminals from abroad. The immigration law sufficiently provides for their exclusion. It invests full authority in the immigration officers to deport any immigrant who, in his country, was convicted of crime. If the law be properly enforced, as I believe it is, criminals coming from foreign countries can not be admitted, and if, somehow, they do come in, they can be deported under the present immigration law.

But this bill, which we are now considering, deals entirely with another and different class of alien offenders. It presents altogether a new feature in our immigration system. On its face the bill appears very simple. It looks so simple on its face that it seems to some, who have not carefully considered

it and not carefully analyzed it, to be a popular measure. Let us, however, carefully consider it as lawyers. Let us carefully consider it as legislators. Let us calmly consider its effect in the different States and as it would operate upon aliens in the different States of the Union. Then we will be better able to judge whether it is a wise or prudent or even a carefully drawn measure.

Before proceeding further, I want to say I favor the prompt punishment of violators of the law. I yield to no man in the earnest desire to see our criminal laws promptly, surely, swiftly, and impartially enforced. I want them enforced upon the great as well as the humble; upon the rich as well as the poor; upon the citizen as well as the alien. If any of these violate the criminal laws, they deserve the punishment which the law provides. When, however, the sentence of the court has been served and the penalty for the crime been paid and the offender has expiated his crime, that should as a general rule be the end of the matter. That has been the policy of the law and the spirit of our American institutions. The spirit of our American institutions, the policy of our Government, has been always against the punishment of transporting the offender beyond the seas. Up to this time we have stood firmly against the policy of exile.

This bill does not point out for what particular or specific crimes the alien criminal is to be deported. It applies to all felonies. It makes no exception. If the bill pointed out any particular class of crimes, so we could tell whether the crimes were grave or grievous, threatening the welfare of the State or menacing the well-being of the land or the life of man or nation, we would better be able to legislate upon the measure. The laws in the different States are not uniform as to what constitutes felony. They differ widely. In some States the stealing of a sheep, though it be worth but a dollar, is made a felony. In some States gambling is a felony. In some States larceny, large and small alike, is a felony, though the punishment varies according to the degree of crime. In some States breaking open of poultry crates and stealing poultry therefrom is a felony. So I could go on and multiply instances showing some so-called ordinary crimes felonies, while the same kind of offenses in other States are not felonies at all.

If Congress is to enter upon a policy of making laws to exile men and women and transport them beyond the sea; if we are to impose one kind of penalty on citizens who commit crime and another kind of penalty on aliens who commit the same kind of crime, surely we must discriminate between crimes exceedingly grave, heinous, and dangerous, and those usually regarded among men as ordinary or minor offenses, even though some States call them felonies.

Suppose, driven by want and poverty in a State where larceny of every kind is a felony, a man should, to satisfy his hunger or the hunger of wife or child, happen to steal an article of comparatively small value, would anyone here be willing to deport such a criminal after he served his sentence? Would any humane man wish to tear him away from wife and family, perhaps forever? Suppose, again, that in a State where gambling is a felony the offender served his sentence for gambling, would anyone here be willing to exile him because he happened to be an alien? Would you be willing, too, to part him from wife and family forever? Suppose, in a State where sheep stealing is a felony, the offender stole a sheep of small value, would anyone here be willing to add to his punishment, exile him from the country, even if constitutional power existed to exile him? Suppose, too, that one guilty of these minor and ordinary crimes, committed by him through want, through poverty or folly, but who had lived a good and blameless life for three, four, or five years before, and yielded to temptation in a weak moment, would you be willing to deport him after he had served his sentence or paid his fines? And yet this is the very thing that would be done under the bill if it be enacted into law. To such an unusual, unprecedented, harsh, and cruel measure I will not lend my approval. [Applause.]

The bill does not recognize the differences between the laws of the different States on the subject of felonies. In our State, perhaps, only grievous and aggravated and very serious crimes are felonies. In other States, again, laws have been passed that make a variety of offenses felonies, but for which there exists no reason in justice or fairness to deport the offender after he served his sentence, especially if before he committed the offense he was regarded by the community, or by his neighbors, as a man of good character. Such cases, we know, are many. They often happen.

The bill leaves no discretion in any officer of the Government. Regardless of what the felony, whether, as I pointed out, it be for aggravated crime or for a comparatively ordinary offense, deportation would necessarily follow. No power on earth could keep the offender in the country. The bill leaves no alternative,

though he have wife and family; not though he repented of his crime and desired again to become a useful citizen of the land.

Suppose, too, that the sentence be only a fine, or a very short time of imprisonment, would you be willing to deport the offender even though he, before he committed the offense, lived uprightly and had borne a good character, and though he have an American-born wife or children born here, who, under the Constitution, are citizens of the United States?

Hundreds of just such questions and similar ones arise under this imperfect bill.

Though there is no uniformity among the States on the classification of crimes, nor as to the particular things that may or may not be felonies, yet, under this law, the Federal Government would be compelled to deport every one convicted of felony regardless of whether the crime is classed as a minor offense in some of the other States or not.

Some of those distinguished and able Members of this House have suggested during this debate that serious international complications may arise from such a law as this. The alien may have declared his intention of becoming a citizen of the United States before he committed any crime whatever. He may have been a well-behaved man up to that time. He may have renounced his allegiance to his native land. He may have married and had children born here. To where would such an alien be sent? Would his native country be willing to receive him back? Is there anyone who can answer that question? How would you enforce, in such a case, deportation? These complicated questions surely would arise upon this measure as has already been suggested by distinguished Members of this House.

Take the case of an alien coming from Russia, Roumania, or other country, where he had been subjected to cruel and inhuman treatment, from the horrors of which he may have fled. Suppose that very man lived a good life here a number of years up to the time that he committed some one single infraction of the law, not of a dangerous or aggravated kind, should he be sent back to the land of persecution, tyranny, bigotry, and intolerance? In the name of justice, mercy, and humanity I answer, No. Would you send him back to such a country, compelling him either to take with him wife and family, taking the doubtful chance of their not being received in that country, or else leave wife and child behind to become a burden upon us and endure the hardships of poverty, and undergo, perhaps, untold miseries. Such a condition is opposed to the enlightened civilization of the age. It will not stand the test of fair, calm reasoning. It certainly is not deliberate legislation.

Then again, Russia, Roumania, or these other countries might not be willing to receive back one of their subjects after he had come lawfully into this country, resided here for years, established his home and family here, and kept here by our own authorities, under sentence of our law. It is extremely doubtful whether foreign countries would receive him back. Treaty regulations to that end would be required.

If the alien married in this country one of our own women, or if the alien was a woman and married a citizen of our country, or, being married, children were born to the alien, would you separate forever husband from wife, or wife from husband; would you tear children from parents, would you separate them forever, sending the alien parent into exile and establish a policy of exile hitherto unknown to our American Government?

And would you, after the offender served his sentence for an ordinary, single, solitary offense, cast him into exile, separate him from his nearest and dearest, although the offense was one not manifesting such a depraved state of mind as would make his stay here a danger to the country or a menace to our people.

Severe measures may be required to deter the commission of dangerous crimes that threaten the welfare of the community and are a grievous menace to the life of our individuals or to the nation. That proposition, however, is not before us. This bill makes no distinction between felonies. It does not even give the President power to prevent deportation. Under it convicted aliens in one State must be deported, while aliens, convicted of the same crime in another State where the crime is not classed as felony, can remain in the country. Such a discrimination is not only unfair, but makes the law absurd.

The intention of those who seek this measure is good. I do not question that intention. In its present shape the bill would give rise to cases of severe cruelty, hardship, and injustice, the very things that some of the advocates of the measure would, no doubt, desire to avoid. It is opposed to the principle of justice, of fairness, of humanity. These are elements that essentially enter into the grand structure of the American Republic, and closely interwoven into our system of American laws that make for strength of country and love for our American institutions.

Virginia Tobacco Experiments.

SPEECH

OF

HON. HENRY D. FLOOD,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 30, 1908.

Mr. FLOOD said:

Mr. SPEAKER: Four years ago I succeeded in getting the Agricultural Department to establish an experiment station at Appomattox, Va., looking toward the improvement in tobacco and to the making of its production more profitable. The Agricultural Department has done all in its power to make this station as beneficial as possible to the farmers of the dark-tobacco belt of Virginia. This station was put in charge of Mr. E. H. Mathewson, an intelligent, energetic, and finely educated gentleman. He applied his energy, learning, and intelligence to the work of developing a system of raising tobacco and of crop rotation which has been a great benefit to the farmers in that county and section.

Subsequently the State of Virginia became interested in this work and supplemented the amount furnished by the National Government, with a view to having an experiment station in the bright-tobacco belt and in what is known as the sun-cured district. The station for the bright-tobacco section is located at Chatham, Va., and that for the sun-cured district will be located in Louisa County, Va.

The general assembly of Virginia made an annual appropriation of \$5,000 at its last session to aid in carrying on this work, and nothing that the Department of Agriculture has done seems destined to result in larger profit to the agricultural classes than does the demonstration work done in tobacco.

For the benefit of those who have not had the opportunity to see this demonstration work I desire to incorporate in my remarks the report made to the Department by Mr. Mathewson:

[Conducted cooperatively by United States Department of Agriculture and Virginia Experiment Station.]

RETROSPECT AND PROSPECT.

Experiments with tobacco looking toward its improvement and making its production more profitable were begun by the United States Department of Agriculture in 1904 at Appomattox—a favorable location in the heart of the "dark-fired" tobacco district of the State. Very little work of this kind has been undertaken in a systematic manner by trained investigators in any of the older tobacco regions of the United States. The ground to be covered, from an experimental viewpoint, was almost completely virgin territory. The experiments were conducted at first upon a very simple plan, and consisted in 1904 and 1905 of a series of 1-acre plat tests with fertilizers differing widely in the proportions and amount of plant food which they contained. The results of these two years' tests, and also those obtained by further trials in 1906 and 1907, furnish impressive evidence that farmers would gain much by reducing the acreage, cultivating only those soils most suitable for tobacco, and using much more intensive methods of fertilization and cultivation than is the custom.

As the work has progressed it has become apparent that to accomplish the best results it would be necessary to conduct the experiments on a more comprehensive scale. Those having the direction of the work began to see plainly that the real weakness in the situation lay quite as much in the deficiencies of the general farming system as a whole as in the tobacco alone. It is also true, perhaps, that too exclusive attention in the past to the production of tobacco only, has unconsciously led to a one-sided and unscientific system of farming, the injurious results of which are now beginning to dawn upon us very clearly. The present system was handed down to us from antebellum times, when labor and other economic conditions were upon an entirely different footing from what they are now. It is also evident that these economic changes are still going on perhaps at a faster rate than ever before. To adjust his plan of farming to these changing conditions has become for every farmer a most complex, discouraging, and costly operation. Readjustments are surely impending of a most fundamental and far-reaching nature. The agricultural methods of the future will differ radically from those of the past. Diversification of crops, a greatly improved rotation system, and the introduction of an effective livestock husbandry will certainly constitute the fundamental basis for the better, more enlightened, and more profitable methods of the future. It is no doubt true that the perplexing problems involved in this change will, in time, be worked out more or less satisfactorily by the farmers themselves, unassisted by outside aid, but it will be for them a very tedious and costly process, involving a great amount of unnecessary sacrifice on the part of present and succeeding generations. Could there be a more inviting opportunity offered to State or nation to extend its benevolent aid and do its utmost to ease the burdens and promote the welfare of its citizens?

Through the liberality of its legislators the State of Virginia, in 1905, made an appropriation of \$5,000 to cover a period of two years (\$2,500 yearly) for the purpose of assisting tobacco growers. This fund was put into the hands of the Virginia Experiment Station, for use as in its judgment most good would be done. The National Department had already made a start at Appomattox, and it was considered wise by those having the matter in charge to unite the State and national forces. This was accordingly done. The State appropriation became available July 1, 1906, and expires June 30, 1908. It overlapped into three crop seasons, but covered only one full year, that of 1907. The combination of State and national resources permitted a considerable extension of the scope of the work at Appomattox, which is in the "dark fired" section of the State, and also the beginning of a new line of work in

the "bright" or "flue cured" section at Chatham, in Pittsylvania County.

At Chatham a series of plot experiments with fertilizers have been conducted in 1906 and 1907. Very suggestive and important results have already been obtained, and they indicate strongly that there is yet a great amount to learn regarding the best and most profitable use of fertilizers in the production of "bright" tobacco.

At Appomattox, as a result of the State appropriations, the work begun by the National Department has been extended so as to include experiments not only with tobacco itself, but also with other crops grown, or suggesting themselves as desirable to be grown, in rotation with tobacco. The aim should be to build up general farm practice as a whole, as more real and permanent good can be done in this way than by working strictly with tobacco alone. One important point is that the full effects of the fertilizers tested can be determined only by carrying the experiment through the full rotation of all the crops to be grown in connection with the tobacco. Another very important point is that under the better and more intensive general system of farming aimed at it seems highly probable that important changes in the character of the rotation system itself is impending and very desirable. At Appomattox, therefore, the work has been extended somewhat in this direction, and promising results with wheat and grass have already been obtained. During the past season, 1907, 29 bushels of wheat per acre was produced on one field, and as high as 5.06 tons of flue-cured hay on another, the large yields in both instances being largely due to the after effects of the more intensive system of fertilization and cultivation which the preceding crops of tobacco had received. No fertilizer was applied directly to either the wheat or grass, except a top dressing of 300 pounds of nitrate of soda to the acre, which was given the grass early in the spring. Under identical conditions of soil and season, where the fertilizing crop of tobacco had received only an application of the time-honored 3-8-3 fertilizer, the yield of wheat was but 12 bushels to the acre and the grass practically nothing. It would be hard to overestimate the importance of results of this kind, especially in the case of the grass. Good grass crops make live stock husbandry possible and profitable, and the attendant benefits to a farming region of a successful live-stock husbandry are so obvious and well understood by well-informed men as to need no repetition here. The ultimate beneficial results which seem likely to come finally from a continuance of these crop-rotation experiments, at present only barely started, it would indeed be hard to overvalue. (For a further discussion of crop rotation and a more detailed account of results with wheat and grass already obtained from the Appomattox experiments, see copy of a paper read before the Virginia State Farmers' Institute, held in August, 1907.)

There is another very attractive and promising line of work which has been only touched upon in the work thus far undertaken either at Appomattox or Chatham. The reference is to the lasting benefits and increase in profits which seem certain to result from a vigorous, systematic, and extended campaign for the introduction of better methods of seed saving and selection; the introduction of the method of separating the light from the heavy seed, and the improving of the native tobacco by systematic selective methods or by cross-breeding and hybridization. If anyone will look into the breeding results obtained in other parts of the United States with tobacco, and other crops as well, the evidence will be found most convincing that work in this line promises to be well worth while. Almost every other tobacco-growing State is working at this problem of improved seed—in many cases already with most gratifying results. No less a plant-breeding authority than Professor Hays, now Assistant Secretary of Agriculture, has asserted repeatedly that for every dollar which the States or nation expend in plant-breeding work the returns will be numbered in the hundreds. (For a more extended discussion of methods and opportunities for improvements by seed selection and breeding, see copy of a paper read before the North Carolina State Farmers' Institute, held at Raleigh in August, 1907.)

The tobacco crop is subject to the attacks of a number of annoying and destructive insect pests. Here also is offered a most promising field for experiments or investigations seeking for better methods of controlling or preventing their attack. Take, for example, that insidious and destructive enemy of newly set tobacco, the so-called "wire worm" (*Crambus* sp.). It is entirely possible, and perhaps probable, that as a result of making a close study of the life cycle and habits of the insect in its several metamorphic forms it may be discovered that the moth has decided preferences as to the character of the vegetation on which to deposit its eggs. With such accurate knowledge it might be simply a problem of crop rotation to exclude this pest from the field completely in the year when the field is to be set in tobacco. The loss to the farmers of Virginia amounts to many thousands of dollars yearly as the result of the depredations of this insect pest alone, and with strong probability that it might be entirely prevented as the result of a few years of carefully conducted investigations with the object of determining the habits of the insect and the character of the vegetation which the moth will seek or shun as a place for the deposit of its eggs during the previous summer. Almost all farmers are well aware of the increased prospects for profitable outturn from early as compared with late set crops of tobacco. This is due to at least four causes. Early crops usually give a larger yield, the quality is better, the worm damage is normally less, and the curing weather is apt to be much more favorable. The general prevalence of the wire worm, however, deters many, if not most, farmers from planting as early as it would otherwise be for their advantage to do. Early settings are, indeed, so frequently destroyed by this worm as to discourage almost anyone. If this pest could be prevented from infesting the fields, the greatly increased profits obtainable from earlier settings (enormous in the aggregate for the whole State) would in itself be an end much more than justifying the trouble and expense of all the experimental work contemplated.

To summarize briefly, there already stands out clearly in the minds of those having the work in charge the following more or less distinct and definite proposed lines of work, although they are of necessity interdependent and closely related one to the other:

1. Experiments to determine and demonstrate the best possible system of crop rotation and method of conducting the same.
2. Experiments to determine the relative effects of the different fertilizing units, to determine the most effective proportions and combinations in which to use them, and the most profitable quantity to use. Important and suggestive results have already been obtained for this part of the problem, but it is only as the result of a large number of repetitions under a great variety of soils and seasonal conditions that the most comprehensive and reliable results can be obtained.
3. The improvement of the existing varieties of tobacco by systematic seed selection and cross breeding or hybridization; the introduction by

demonstration and explanation of the method of saving seed under bag and separating light from heavy seed.

4. Investigations to determine the life cycle and habits of insect pests, especially the so-called "wire worm," with a view to eradication or control.

5. As the work goes on other definite problems will doubtless suggest themselves. In any case there will be such incidental, but none the less important, secondary problems, as methods of cultivation, curing, handling, etc.

Broadly speaking, there are three more or less distinct types of tobacco produced in the State of Virginia, each representing clearly defined, yet somewhat overlapping sectional differentiations, each having its own peculiarities of soil, crop adaptations, and general style of farming.

Appomattox and Chatham are locations respectively in the "dark fired" and the "bright" or "flue cured" sections of the State, and for their purposes are considered satisfactory. Nothing, however, has as yet been done in the important "sun" or "air cured" counties in the neighborhood of Richmond on the North. There seems to be a most inviting and promising field for work in that section and the people there are as much entitled to assistance as in either of the other sections and the work ought to be extended so as to include not only the "dark fired" and "flue cured" sections of the State but the "sun cured" section as well.

The problems to be solved are fundamentally very much the same in each of these districts, but the methods of procedure and ultimate results will of necessity be modified to meet the requirements of the type of tobacco produced, and also adapted to the peculiarities of the soil and general agricultural conditions of each section.

However, in order to extend the experiments to the "sun cured" section and to develop the work in all of the sections as it should be developed, it will be necessary for the legislature to materially increase the appropriation available for the purpose. The appropriation should be at least \$5,000 annually and it should be made in a way to insure its permanence in as complete a degree as possible. It is difficult to plan and conduct work in the way to do the most good without some assurance that its source of maintenance will be continued from year to year.

The farm value of the tobacco produced in Virginia varies around seven or eight millions of dollars annually. But other crops grown in connection with tobacco will be affected also by the experiments, so that it seems a reasonable estimate that the experiments will directly influence farm products of at least \$10,000,000 annual value. Five thousand dollars is but one-twentieth of 1 per cent of the annual value of the interest to be affected prospectively by the appropriation, or, stated in another way, the annual value of the interests to be benefited is at least two thousand times as much as the appropriation asked for. Any business or other interests, of any kind, any where, that would not be justified in putting that small proportion of its income into efforts for improvement certainly would not be worthy of its existence, and if it did continue to exist could not reasonably expect more than to bring up the tail end of the procession. A price representing a certain amount of present self-sacrifice must be paid for progress, as for every other good thing in the world.

As previously stated, the experimental work with tobacco as at present conducted, was started by the National Department of Agriculture in 1904. Since 1906 it has been conducted cooperatively by the National Department and the Virginia Experiment Station. This relation possesses many obvious advantages, and it is proposed as very desirable that this relation be continued. There is a growing disposition on the part of the National Department to conduct its work in the several States more and more on a cooperative basis with the States, each bearing a portion of the expense, and it seems probable that the amount of money which the National Department of Agriculture continues to put into tobacco work in Virginia will depend to a degree upon the amount which the State itself puts in. The officials of the National Department have already indicated their willingness and desire to continue the cooperative manner of conducting the work, and it seems likely that they will continue to put in as much, and quite likely somewhat more, than the State does. With the \$5,000 hoped for from the State, there would thus be made available yearly the neat sum of at least \$10,000 for experiments and demonstrations directed to the upbuilding and improvement of general farm practice in those portions of the State where tobacco is an important farm crop.

It should be remembered, however, that it takes time to get work of this kind on an efficient and systematic basis. The special problems to be worked out suggest and formulate themselves clearly as the work progresses. The work or rejuvenating and readjusting agricultural methods in the tobacco districts of Virginia in a way to place it in step, or perhaps even in the foreground of the agricultural progress of the times, is the work not of a year or perhaps of a decade, but rather of a generation.

Those who have the direction of this work at heart do not anticipate any sudden or violent revolution in general farm practice as the result of a few years of experimental work, however efficient and well directed it may be. To be substantial the movement must of necessity be slow, but it is likely to be none the less sure, and it seems probable that it will gather impetus and momentum as it progresses. It takes time to effect changes of such far-reaching and fundamental nature as the changed economic conditions seem to make imperative. There is much ignorance, prejudice, and a vast amount of inertia to be overcome. It is doubtless true that the coming generation will profit more by the contemplated experiments than will the present generation. This is more or less true of all such work undertaken. It is, in essence, really an educational problem, and as such its purpose is greatly ennobled. It is the price of progress for present generations to make sacrifice for the sake of those to come.

The next great advance in rural education seems destined to be in the direction of the establishment of agricultural high schools. But they will be much limited in the scope of their usefulness unless much work of the kind contemplated has been done, in order to furnish a large amount of reliable and accurate information available for teaching purposes.

This report is a logical demonstration. Virginia alone has paid into the National Treasury since our unhappy civil war more than \$110,000,000 as internal tax on tobacco. In time of war the resources of the Government have no other origin and sufficiency than in internal taxes; but in time of peace there is neither necessity nor excuse for the imposition upon the people of this grievous burden—a burden falling upon an agricultural

product which is the money crop of so large a number of our citizens. It is my determined purpose to keep up an unremitting fight for the abolition of this tax as well as for all work of an educational character that will aid the tobacco planters. I shall continue my efforts to spread this demonstration work until it comes within the reach of every tobacco planter in the country, to the end that they may see and adopt what so greatly conduces to their advantage—that every acre planted in tobacco shall produce the highest possible grade and bring the highest possible price per pound.

And then, with a tobacco growers' association composed of men who know the value of their product and are determined to get this value, the tobacco growers will reap the legitimate reward of their investments and labor.

I believe that the tobacco raised in Virginia can not be successfully duplicated elsewhere in the world, and I am thoroughly persuaded that when our planters develop this industry along scientific lines and by intelligent organization shall have secured the legitimate value of their product, they will have a source of revenue the profit of which will be greater than that of any other agricultural product of our entire country.

As I contemplate the consummation of these beneficent ends a picture of surpassing beauty arises before me.

I see that section of the old Commonwealth of Virginia, which has been held in poverty by the bonds of unjust taxation and the burdens of iniquitous monopoly, taking its rightful place in the march of progress and prosperity. I see its impoverished fields revived and fruitful under a system of wise and scientific tillage. I see splendid schoolhouses gracing the hilltops and nestling in the valleys. I see durable and solid roadways traversing the lands. I see a prosperous and contented, a peaceful and sober people—a people animated by the spirit and emulous of the virtues and achievements of their forefathers.

I see a people whose intelligence, industry, and self-reliance constitute the security of a nation in time of peace and are a bulwark and defense in time of peril.

With the prosperity of the ancient Dominion will come back her prestige, and of this I know no more fitting symbol than the beautiful metaphor of Scripture:

Then shall the mountain break forth into singing, and all the trees of the valley shall clasp their hands.

The Widows' Pension Bill.

SPEECH

OF

HON. JOHN W. LANGLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 3, 1908.

The House having under consideration the bill (H. R. 15653) to increase the pension of widows, minor children, etc., of deceased soldiers and sailors of the late civil war, the war with Mexico, the various Indian wars, etc., and to grant a pension to certain widows of the deceased soldiers and sailors of the late civil war—

Mr. LANGLEY said:

Mr. SPEAKER: There has been a time in the history of the American Congress when measures of this character were not received with the unanimity that has been manifested here to-day. I am glad to see this transformation. It means that sectionalism is dead in this country and that the words "North" and "South" no longer have any meaning with us except as geographical designations. [Applause.]

It is manifest that this bill is to receive the unanimous vote of both sides of the House, and therefore there is no necessity for anyone to make a speech in support of it, so far as the question of the vote on the measure is concerned. I want to take advantage of this opportunity, however, to say that I am one of those who believe that this great and rich Government can not do too much for the old veterans and their widows and orphans.

Mr. Speaker, sentiment, as well as justice, pleads for the enactment of legislation to provide more generously for the widows of the men who laid down their lives on the battlefield that the Union might live or who have since succumbed to the effects of wounds or disease—not that our Government has been unmindful of both dictates. Congress, representing the people of the United States, has ever heeded the appeal, either outspoken or silent, preferred by the needs of the widows and orphans of the Union soldiers. Our pension roll contains abundant evidence of this fact. Not only by the enactment of gen-

eral laws, but by the passage of thousands of special acts, where the general statute failed to provide deserved relief, have these wards of the nation been aided. The history of the world presents no parallel to the generosity with which the people of this country have sought to discharge the implied obligation they assumed when a man enrolled himself in the Army or the Navy of the United States. But as the years roll on this obligation increases. Just as the invalid or service-pension list becomes lightened by the passing away of the defenders of the flag, so the list of the widows grows in extent, and their needs become more urgent as the years press upon them and diminish their capacity for earning a livelihood. So long as she is able to acquire an income the few dollars a month now paid her by the Government is a material help and goes quite a little way in making both ends meet. But when the hands become weak and the eyes grow dim, the meager bounty of the Government provided by existing law is not enough to keep her from want.

Mr. Speaker, this is not intended as an arraignment of Congress for anything it has failed to do. It is only a reminder of something yet to be done. Both sentiment and justice command. We Americans glory, and justly, too, in our devotion to woman. We would shield her from harm as far as human foresight can shield her. We would throw about her all the safeguards that aid in protecting her from the hardships of life. This instinct, implanted in every true American breast, finds expression even in those conditions that make for their ease and comfort in more or less trivial circumstances. How much more dominating are those considerations when applied to women bereft of the protection of husbands. How much more strongly do they appeal to our sense of chivalry and justice when we reflect that many of them sent their husbands forth to battle, almost with the Spartan mother's injunction to her son when she handed him his shield and said "With it, or upon it."

The sacrifices made by the women of our land in those terrible years of fratricidal conflict will never be told by half. On both sides of Mason and Dixon's line they were the real heroes of the war. They suffered, yet murmured not. On this side of the Potomac they labored in season and out of season that the boys in blue might not lack all comfort in the field. On the one side they shunned no deprivation, however cruel, so that thereby they could uphold the hands of the men who battled for the right as they saw the right. On both sides of the river they were ever the angels of love and charity and compassionate care, who came to the bedsides of the sick and wounded, cheered them as far as they could, spoke words of hope and comfort, or breathed a prayer as some soul winged its way to beyond the stars. Nor did they recoil before the terrors of the battlefield. You who have grown gray in the service of your country; you who faced the hail of bullets and in whose ears sounded the roar of cannon—you know, better than my feeble tongue can tell, how even on the bloody field those angels of mercy plied their gentle tasks. [Applause.]

Mr. Speaker, the hour is not yet ripe, I fear, for a successful plea that the Government may show more generosity to the "boys in gray" and their widows. That the time will come when the American people will do this, I feel certain; and I hope that God may speed that day. But, sir, I can and do plead with all the fervor I can command for further bounty to the widows of the Union soldiers. In the mountains of Kentucky stands many a humble cottage in which some Union soldier awaits the summons to the final roll call. In those homes, sir, dwell contentment, even with a lot that at best is hard. Those veterans, most of them suffering from wounds or disease, the result of loyal service, are grateful for what consideration the nation has shown them in the way of pensions. How infinitely greater would be their gratitude if, in the evening of life, they could be comforted with the thought that when the night sets in for them the darkness that will close around their loved ones will be made less appalling by the sustaining care of the Government.

These conditions, Mr. Speaker, are multiplied over all this broad land. There is hardly a State in which they do not obtain in some measure. Even down there in Dixie, sir, they prevail. The mountains of East Tennessee and of North Carolina shelter thousands of humble homes tenanted by Union soldiers. Most of the veterans have not many years to live. There is great significance in the fact that the Commissioner of Pensions can get along with less clerks every year. Only a few years ago we had something like a million names on the pension roll, this, of course, including all classes of pensioners, but 75 per cent of these were the veterans. As they drop off their widows claim our attention, and we dare not lose sight of the conditions that surround us and them.

It is not all sentiment that moves me in this matter; it is also the inherent justice of the proposition. Let us, by all means, increase the pension of the widow who only gets \$8 a month, not only because of what we owe to the memory of her dead soldier husband, but because what she receives now is not as much as we thought it was when we gave it to her. The few millions, more or less, which it will take from the Treasury every year will not make Uncle Sam any poorer, for it will be balanced by the steadily decreasing roll of invalid and service pensions. Besides, this country is getting richer all the time, and in spite of the possible deficit in the Treasury at the close of the current fiscal year, everybody is of good cheer and declines to be frightened. [Applause.]

If this bill could be amended under the rule, I should offer several amendments. In the first place, I think if any difference is to be made between the widows of Union soldiers it should be in favor of those who married the soldier before or during his service, and who were left alone to look after the home while the husband was battling for his country. I think, too, that every old veteran of the civil war ought to have a dollar a day with which to provide for himself and wife, and I would like to see the law amended so as to give the widows that I have just referred to one-half of that amount. Then, again, I think the law limiting widows' pensions to cases in which they married the soldier prior to June 27, 1890, ought to be repealed. I am in favor of pensioning the widows of all Union soldiers, whether the marriage occurred before or since June 27, 1890.

There is another amendment that I would like to see made to this bill, and that is that a pension be granted to the widows of those brave and patriotic State militiamen who, though never mustered into the service of the United States, cooperated with its armed military forces and rendered valuable service in the suppression of the rebellion. No good reason can be given why these should not be included, and I intend to offer a bill covering these cases. [Applause.]

I have presented this subject, sir, from various points of view, but that which strikes me most forcibly and which I would urge most earnestly upon Congress is consideration not only for the widows that are, but for the widows that will be. Let us deal fairly and generously by them. Let us do unto them what we would wish to have done unto us. As we deal justly by the living Union veterans of the war between the States, let us mete out an equal measure of justice to those whom the dead veterans have bequeathed to the care of the nation—their widows. [Applause.]

New Orleans Cotton Exchange.

SPEECH

OF

HON. THETUS W. SIMS,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1908.

Mr. SIMS said:

Mr. SPEAKER: I take advantage of the permission to print to place in the RECORD an address by W. B. Thompson, president of the New Orleans Cotton Exchange, before the joint committee on agriculture of the senate and house of representatives of the State of Louisiana on the subject of cotton contracts for future delivery and effects of adverse legislation. This is a valuable contribution to the study of the questions involved in proposed legislation by this House. I suppose it is as able a defense of the so-called "business of dealing in futures" as can be made, and as such I beg to invite the membership of this body to a careful study of this very able address.

I beg to say that it seems to me to present no reasons for the continuance of present practices of the cotton exchanges except in so far as these exchanges are used, if at all, in the nature of insurance or protection against fluctuations in the cotton markets of the country. A close study of the facts connected with dealing in futures convinces me that if actual dealers in spot cotton did not have to provide against violent artificial fluctuations caused by gambling transactions in futures on the cotton exchanges that there would be no need of the so-called "hedge transactions" in futures. The gambling transaction makes the "hedge" necessary and at the same time furnishes the market by which the "hedge" is made possible. Without the gambling transaction in cotton futures the

"hedge" would not be needed by the spot dealer or manufacturer. Investment speculation does not necessarily have an adverse effect on the commodity speculated in. It in fact often is a great help in the way of furnishing a kind of reservoir for surplus products not immediately needed by the manufacturer or consumer. But a gambling speculation that does not take care of the commodity, but does affect the values of the particular commodity made the object of these speculative deals, is an unmitigated evil and has no just cause for existence.

For instance, a bale of cotton that has been inspected and graded may be placed in a warehouse and a certificate issued stating weight and quality. This bale of cotton may remain in the warehouse for a year, and the certificate may be bought and sold a thousand times during that year, and no possible adverse or artificial effect on the value of that bale of cotton can result, because each and every sale is an actual bona fide sale of spot cotton, though each purchase may have been in the nature of a speculative investment and each transaction may have resulted in a profit to each person so buying or selling said bale of cotton. This bale may have been bought on a simple margin, the actual cotton remaining in the warehouse as a security to the holder of the certificate on margin. But, on the other hand, there may be a bale of cotton in a warehouse in New York or New Orleans, certificated as required under the rules, by which cotton may be deliverable on contracts in the exchanges. I buy on the exchange a bale of cotton for October delivery and put up in cash the required margin. The person selling me this mythical bale puts up a cash margin also. In a week, or maybe in one day, the market has gone against me and I sell, losing part or all of my margin. Some other person buys the same contract or another to take its place and puts up another margin in cash.

In a day, week, or month he is called on for additional margin. He declines, and the same contract, in effect, is again sold to another person, who, in like manner, puts up another margin. The price of this mythical bale of cotton may go up and down and be traded in on these cotton exchanges a thousand times during a year, and in that time the losses or profits may, in gross, equal the actual value of a bale of cotton, but not once has any bale of spot cotton ever changed hands actually or potentially. All this time, while many times the value of this mythical bale of cotton, by way of the double margin required, has been locked up in money thus held as margin, while the actual bale in the warehouse has remained as a weight to the extent of its full value in the money markets of the world. In fact, if there were no future dealing in cotton contracts it would require much less money to move and take care of the cotton crops. All these millions invested or held as margins on contemplative dealings are charged up as so much money used in handling the cotton crop, when, in fact, it has no real trade relative to it any more than has the money used in the games of chance at Monte Carlo. I shall not attempt to go any further by way of reply to Mr. Thompson at this time, but on some future occasion I hope to take up this address and reply to it in extenso.

Mr. CHAIRMAN AND GENTLEMEN OF THE JOINT COMMITTEE: The New Orleans Cotton Exchange thanks you for the opportunity given it to protest against the passage of Senate bill No. 4 by Mr. Marston.

I hope I may be excused if, by way of introduction, I spend a few moments in explanation of my interest in this question. I am in the cotton-factorage business. I make advances on the crop and sell consignments on commission. It is a spot business pure and simple. I have no pecuniary interest in any future brokerage concern, and if future trading is abolished it makes no direct pecuniary difference to me. On the contrary, if I took a selfish and a short-sighted view of the matter, I would say that I would be benefited by the prohibition of future trading. The development of the interior markets has been at the expense of the New Orleans market. The interior market and the facilities that the producer enjoys of selling his crop at home are all dependent upon the existence of the future-contract market. If the interior buyer could not hedge, he would not buy. This for two reasons. He could not afford to take the chance of a decline pending the time he could get the cotton to market. He would not be able to secure the money with which to pay for the cotton if he carried that cotton open and without any protection against a decline. Thus if the future-contract market was abolished and buyers were unable to buy in the interior, the result would be that much more cotton than now comes would then come to New Orleans for sale. This would necessarily increase the number of bales handled by the factors. If, therefore, I took a selfish and a superficial view, I would be in favor of abolishing future trading. But in the larger consideration of the question I reach the other conclusion. All I have is invested in the farmer and the crops and in cotton lands. If future trading was abolished, what I would gain in commissions from handling more cotton would be more than offset by what I would lose in the value of my accounts and what lands I own. I am convinced that if you destroy the future market you will decrease the amount realized by the farmer from his crops. From motives of self-interest and from sentiments of patriotism I am against any measure that will bring about this unhappy result.

Briefly, the bill in question aims to prohibit all future trading in all commodities and all securities wherein the element of speculation enters. If its provisions were enforced, its logical effect would be to prevent future trading in all commodities and all securities whether such trading is speculative or not. In an effort to prevent a per-

noxious practice by a limited number of individuals, this bill would not only outlaw a large and comprehensive class of entirely legitimate contracts, but would deny to the owner of property the right to dispose of it as he saw fit under the penalty of a fine or the pain of being accused of misdemeanor. It says that you may buy or sell a commodity for delivery at a future time, but if, in the meantime, you dispose of the rights you have by the contract acquired, you are *prima facie* a rogue. Whether or not the Constitution will permit such an abridgment of the rights of the individual is a question for the lawyers of the committee to answer. The injustice and unwisdom of such a restriction is readily perceived by the untrained mind.

The fact that bills similar to this one have become laws in other States, is no sound argument in its favor. This bill must stand or fall upon its merits here. It is no part of our purpose to assail or even criticize the legislative acts of our sister States. Experience is already recording its judgment. The assembly of the State of Louisiana is well able to protect its constituents and to promote their interests without external comparisons and suggestions. But we do criticize reference to the precedent for a more pertinent reason. The cases are not parallel. The conditions are not the same. The effect of the same legislation in the other States and in Louisiana would be different. The explanation of this statement lies in the fact that the Southern contract market is in Louisiana and not in the other States. The legislation in the other States is restrictive only—in this State the same legislation would be destructive. The purpose and effect of the antifuture laws of the other States was and is to curb the speculative tendencies of its citizens. The evident purpose and anticipated effect of Mr. Marston's bill is to destroy the contract market of the South. The legislation of the other States only restricted the several branches of the stream, the same legislation here would dry up its source. With no contract market in the South all Southern traders would be forced to go to New York or Liverpool for their contracts. This unfortunate result would not only add to the prestige and power of these markets, but would mean the surrender of the cotton producer's destiny to interests inimical to his own. In this view of the matter we seriously doubt that the lawmakers of the other States would indorse Mr. Marston with the same enthusiasm that he indorses them.

But we are not here for the purpose of attacking this bill or the author thereof. We stand upon a higher ground. We desire to meet the issue broadly and fairly. We do not rely upon the weakness of our opponents' case, but upon the strength of our own. We impugn the motives of no man, but we claim the same just consideration for ourselves. We know that there is reason for complaint against some of the developments of contract trading. We are here to go with you carefully and earnestly into an examination of this complex subject, in the hope that together we may reach a better understanding of the problem and find a way to better serve the great producing interests upon which at last we all depend.

MOTIVE AND OBJECT.

We have in mind the pernicious effects and the disastrous results of the mania for speculation that during the past few years has swept this country. We are well aware that the motive behind the antifuture legislation of the several Southern States and the motive behind similar legislation here proposed proceeds from a just condemnation of the evils of excessive speculation. At the outset it is our earnest desire to make it clear, definite, and emphatic that we oppose no legislation that is directed against the evils of speculation. On the contrary, we not only appreciate the essential wrong of the abuses of speculation, but we realize that these same abuses are gravely detrimental to the legitimate cotton trade for which we stand and which it is our mission to conserve. We are not in opposition to any effort to purify and improve any system of trade, but are in earnest sympathy and cooperation with all such efforts. Our object in appearing before you is not to obstruct reform, but to point out to you the truth very plain to us that such legislation as is here proposed would not accomplish the good result intended. We are intent upon showing you that this bill is sweeping and not discriminating, and if enacted into law would, while destroying the evil, also destroy the good which is by the evil already assailed and would result in concrete disaster to the most important interest of the South and one of the greatest and most comprehensive industries of the world. We desire to show you that the benefits of legitimate future trading are inherent and vital, while the evils that have become associated therewith are incidental and parasitic; that the evil and the good may be clearly differentiated and that it is entirely feasible to cast out the evil and retain the good, not only without injury to the latter, but with great benefit thereto.

We shall first ask you to consider the nature of the legitimate contract for the future delivery of cotton. We shall then call your attention to the place that this contract occupies in the economy of the entire cotton trade, and point out its specific beneficial functions which entitle it to its place therein; and, finally, we shall specify the abuses that have been practiced under the name of future-contract trading and suggest the remedies therefor.

THE FUTURE CONTRACT.

A contract for the purchase and sale of cotton for future delivery is not a vicious invention by means of which the parties thereto can sell or buy the farmer's cotton at a price fixed by themselves, without the consent and in opposition to the wishes of the farmer, as is by many persons believed. Nor is it a mere gambling memorandum without any substantial basis of promise and penalty, as many seem to suppose it to be. It is simply an obligation entered into by the two parties thereto that the one will deliver and the other will receive a certain number of bales of cotton at a certain price and at a specified time. It is identical in principle with a contract for the purchase and sale of any other commodity or thing or an obligation to do a certain thing at some specified future time. It shows the date upon which the trade is made, the number of bales of cotton bought and sold, the price to be paid per pound, the time of delivery, the terms and conditions agreed upon by both buyer and seller, and is signed and secured and delivered by the parties thereto or their agents. When thus drawn, signed, secured, and delivered, the contract is enforceable, not only under the rules of the exchange in which the same is made, but in the courts of law. The contract thus becomes an item of personal property which the owner may hold and at maturity demand and enforce specific performance of its terms, or if he finds some one who wishes to assume the owner's place in the contract, he may, if he so desires, transfer the contract to such person for whatever consideration he is willing to accept, just as he could transfer any other item of personal property. The transferee then stands in the place of the original party to the contract and assumes the latter's rights or obligations, and can hold and demand performance or negotiate the contract to another party as

in the first instance. There is nothing nefarious or spurious about the legitimate contract for future delivery. As an item of property it is as valid as a promissory note and, under different rules, as lawfully transferable. We will ask, therefore, for the sake of following our argument and appreciating our point of view, that you consider the contract for future delivery as a contract—legal and binding and transferable, as it truly is—and not as a knavish invention or a memorandum of a bet, either or both of which, unhappily, a number of earnest but uninformed or misinformed persons assume it to be. If we thus consider the future contract itself and disassociate it from the abuses that are ascribed to it, we will be able to form a juster estimate of its value and importance to legitimate business. After this just estimate has been fixed we can more wisely and with less danger of doing harm undertake to proceed against the abuses.

CONTRACT IS AN INSURANCE POLICY.

The contract for the future delivery of cotton is an intrinsic part of the modern system of marketing the crop and distributing the manufactured product. It is not an incident or experiment, it is an elemental factor. To the dealer in cotton and to the manufacturer of cotton goods it is an insurance policy, protecting him from loss by reason of fluctuations in price, just as his fire or marine insurance policy protects him from loss by fire or water. His fire or marine policy protects him from the loss of his property; his future contract protects him from the loss of his profits. His fire or marine policy protects his invested capital; his future contract encourages him to invest his capital. His policy insures the assets of his business; his contract insures the assets of his enterprise. Under this protection the cotton trade has grown to its present enormous proportions; upon the surety of this protection has been built the great modern system of forward trading whereby the market has been broadened, production stimulated, and consumption enlarged. If the future contract should be suddenly eliminated from the American markets, our trade system would be disorganized; both merchant and manufacturer would be cast from their long-used moorings adrift; the American traders, and the American traders alone, would be emasculated and bound, and our entire cotton trade would suffer the same in essence, differing only in extent and degree, what the general business of the country would suffer if suddenly all underwriters in America were prohibited from issuing policies of insurance and all Americans were prohibited from securing this protection from those whose country permitted them to sell it. If the future contract should be eliminated from the Southern market, these evil effects would fall primarily upon the Southern trade and would force our traders to go without protection or else to depend for such protection upon markets whose interests are the reverse of the producers' interests.

DANGER.

Such an interference with the cotton business would be destructive at any time, but it would be disastrous at this time, when we have just passed through an acute commercial and financial crisis and are still held by the grip of stringency and fear. When we consider that the cotton crop of the United States represents more than \$600,000,000 of created value each year, and from the exports of this crop we receive annually \$400,000,000 of foreign wealth in exchange; when we consider the tremendous amount of capital invested in the cotton-manufacturing industry both in the North and South and the hundreds of thousands of employees whose livelihood is dependent upon this industry; when we consider the vast army of cotton-land owners, producers, and laborers whose welfare is directly dependent upon the price of cotton and the stability of the market thereof, and when, finally, we take thought of the danger of the time we must be impressed with our heavy obligation to regulate our courses by wisdom and prudence lest we lay a reckless hand of hurt upon our people and our country.

BENEFITS.

We have made the statement that the future contract is a beneficial and even an indispensable factor in the modern cotton and cotton-goods trade and that the elimination of such contract would be followed by serious and far-reaching injury. It is therefore incumbent upon us to apprise you of the reasons why this statement is true. We will not go exhaustively into the details of this relation, but will content ourselves with a brief review of the salient functions and operation of the future contract.

Future trading releases the producer from the disastrous alternative of carrying the surplus of the crop himself or else of forcing it upon the spinner at the price fixed by the latter, because it makes possible and creates a demand intermediate between the producer and the spinner and thereby provides a more even and gradual transfer of the crop to the spindle from the field.

Future trading sustains and enlarges the market for cotton and cotton goods and thereby stimulates both consumption and production, because through such trading the dealer in cotton and the manufacturer of cotton goods may each provide himself with an insurance against loss by reason of the fluctuations of the market, and each is thereby encouraged to extend and press his business by soliciting orders, not only for the present, but to be filled in the future. From these propositions follow the important corollary that future trading increases the price paid to the producer for his raw material and decreases the price of the manufactured product to the consumer thereof. The price to the producer is increased, because the protection afforded by the future contract enables the cotton merchant to bid for cotton at a price in which is figured only his profit or commission, and he is relieved of the necessity of bidding a lower price in order that he may be protected against any decline in the market that might occur between the time he bought the cotton and the time he was able to dispose of it. The price of the manufactured product is decreased to the consumer thereof because, by reason of the protection afforded by the future contract, the spinner can contract to sell to the cloth merchant who supplies the wearer of the goods at a price covering only the cost of manufacture and the spinner's profit, without the necessity of adding thereto a sufficient margin of protection against an advance in the price of the raw material before he could provide himself with the same wherewith to fill his contract with the cloth merchant. Future trading used as an adjunct of the cotton business is not speculative; it enables the trader in actual cotton to avoid speculation and makes his business stable and safe.

PRACTICAL OPERATION ILLUSTRATED.

The practical operation of the future contract under the foregoing propositions is illustrated as follows: The spinner solicits orders from the cloth merchant to supply the wants of the latter for a long period

ahead. He has neither the goods nor the raw material in hand with which to fill the order solicited. The cotton which he proposes to spin for the order is probably not yet planted. The cloth merchant asks for the price at which the spinner will contract to deliver the goods at the times stated. The spinner consults the quotations of the future market for the several months and finds that he can buy contracts for the desired amount of cotton at certain figures. To these figures he adds the cost of manufacture, the expenses, and his profit, and names the resultant price to the merchant. When the contract between the spinner and the merchant is closed the former gives his broker an order to buy future contracts for enough cotton to fill his contract with the merchant. When these future contracts are bought the spinner is protected and it matters not to him or to the cloth merchant to whom he has sold whether the price of the raw material advances or declines. As he needs the cotton he generally goes into the spot market and buys, for the reason that he can there make his selection and get the exact grade and staple desired. When he has thus made his purchase he orders his broker to sell his future contract, it having performed its mission of insurance. The broker sells the contract to some one who may be either a cotton dealer wanting the same protection that the contract has given the first or a speculator who believes that the price of cotton will advance. If, on the other hand, future trading was not permitted, the spinner in the instant case would be deterred from contracting with the cloth merchant on the basis of the then price, unless he was willing to take a speculative chance that the price of the raw material would decline or would not advance. But the chances are that he would not contract ahead at all unless at a price high enough to cover not only the cost of manufacture, expenses, and his profit, but also a supposable advance in the price of the raw material between the time at which he made his contract and the time at which he would be able to buy the cotton with which to fill the same. Future trading, therefore, broadens the market, increases consumption, and makes the price of the manufactured article lower to the consumer.

Or take the case of the cotton merchant who buys from the producer and sells to the spinner. This merchant may solicit orders from the spinner for specific grades and staples for delivery in the future. The cotton which he proposes to deliver to the spinner might not yet be planted, yet under the protection afforded by the future contract he could name a price which on the market would cover his commissions and profit. When he closed the contract with the spinner he would protect himself against an advance in the market by buying a future contract. When the spinner was ready to take the cotton the merchant would go into the market and buy the specific grades and staples at the then spot market price, if he had not bought them already. When he had so bought the actual cotton the protective mission of the future contract would have expired and he would sell it to some one who probably wanted to use it as he had used it. The producer reaps a share of the benefit from the protective feature of the future contract in the imperative forward demand thus created for his cotton long in advance, possibly, of the planting of his crop.

Or take the case of the cotton merchant who had no forward contract with the spinner and no present orders for specific grades. He could still supply a market to the producer and pay the maximum price, provided he could protect himself with a future contract. He would consult the future market quotations and would bid for the cotton a price which on these quotations would allow him his profit or commissions and a margin for expenses. If his bid was accepted, he would at once sell a future contract to cover the amount of his purchase and hold the cotton in entire security until such time as his spinners came into the market again. Upon the sale of the cotton to the spinner he would buy back his future contract, its protective mission having expired. But if such merchant was prohibited from selling a future contract as a protection against his purchase of spots, he would not buy the spots unless he was willing to take the speculative chance that prices would advance. And he would not take the chance at all unless he could buy the cotton at a price low enough to assure him not only of his commissions and expenses, but low enough to protect him against a supposable decline in price that might occur between the time at which he bought the cotton and the time at which he could place it with the spinner. Future trading therefore enlarges the demand for cotton, distributes the burden of carrying the surplus, and makes the price higher to the producer.

These are the elemental benefits of future trading conducted on legitimate lines. We have heard no denial—and there can be no denial—that these results follow legitimate trading. The beneficial office of the legitimate contract is not debated and it is not debatable. The system is in danger because the good of it and the importance of it are overlooked or purposely ignored.

EVILS.

Up to this point we have asked you to consider only the good that is in future trading and to refrain from passing judgment upon the good and evil in an indiscriminate admixture or average. We ask this because we are sure that by considering the good and the evil separately we can arrive at a more accurate estimate of the nature and importance of each and of the relationship between the two and their dependence upon or independence of each other.

That there are evils in connection with future trading and that iniquities and wrongs have been committed under the name and in the practice of future trading we freely admit. We earnestly condemn these evils and wrongs. We are not only willing but anxious to join hands with all who are endeavoring to destroy these evils and correct these wrongs. We find no fault with the motives of the legislators of the several States of the South, nor with the motives of the gentlemen who are proposing the legislation here, in so far as these motives move toward the destruction of the evils and wrongs of speculation. But we do find fault with and oppose indiscriminating legislation which in a laudable effort to destroy the bad, neglects to take account of the fact that a great good is likewise threatened; which does not perceive, or refuses to perceive, that the two are easily separable, and that not only is it entirely feasible to destroy the evil without injury to the good, but that it is necessary that the evil shall be destroyed in order that the good may survive.

The evils that have become associated with future trading are three in number—the bucket shop, excessive speculation, and the unfair contract. These three abuses have brought the system into disrepute and have provoked the attack that is threatening the life of the system itself. The system is attacked not because the evils are inherent; not because the evils can not be eliminated without destroying the system, but because the aggravating character of the abuses has aroused a feeling of resentment so furious that for the time being discriminating justice has been blinded and silenced.

THE BUCKET SHOP.

A bucket shop is a place where wagers, not contracts, are made. Nothing is ever bought or sold in a bucket shop and no legal or enforceable trades are made there. It is a gambling proposition simply and without qualification. The keeper deals a game against his victims and what they lose he wins. Millions of bales of cotton may be ostensibly bought and sold in a bucket shop, with absolutely no effect upon the market or trade. The sole and only excuse for associating the bucket shop with the future trading system is because the bucket shop has selected the fluctuations of the future market as the issues upon which it makes its bets. The sole and only responsibility of the future trading system for the bucket shop lies in the remote suggestion that the former in legitimate business conduct makes quotations which the latter steals and manipulates for the purpose of fleecing its victims. No legitimate trader or decent merchant willingly tolerates the bucket shop. Unfortunately, because of a misunderstanding of the nature of the bucket shop and because of the adroit efforts of the keepers thereof for self-protection to muddy the waters and confuse identities, many persons erroneously and unjustly call by the name of "bucket shop" any place where future trading is conducted and give the rankest bucket shop the name of "exchange."

The remedy for the bucket-shop evil is simple. The bucket shop is not a part of any system or business—it is a distinct and characteristic institution. It is easily defined and located. A direct law would reach it and pluck it up and cast it out of the State or nation without injuring, involving, or touching any legitimate interest whatever.

SPECULATION.
